 - 1. Sprinkler Cabinets: Finished, wall-mounting, steel cabinet with hinged cover, with space for minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler on Project.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.
 - 2. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 STEEL PIPE AND FITTINGS

- A. Threaded-End, Standard-Weight Steel Pipe: ASTM A 53/A 53M, ASTM A 135, or ASTM A 795, hot-dip galvanized where indicated and with factory- or field-formed threaded ends.
 - 1. Cast-Iron Threaded Flanges: ASME B16.1.
 - 2. Malleable-Iron Threaded Fittings: ASME B16.3.
 - 3. Gray-Iron Threaded Fittings: ASME B16.4.
 - 4. Steel Threaded Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M or ASTM A 106, Schedule 40, seamless steel pipe hot-dip galvanized where indicated. Include ends matching joining method.
 - 5. Steel Threaded Couplings: ASTM A 865 hot-dip galvanized-steel pipe where indicated.
- B. Plain-End, Standard-Weight Steel Pipe: ASTM A 53/A 53M, ASTM A 135, or ASTM A 795 hot-dip galvanized-steel pipe where indicated.
 - 1. Locking-Lug Fittings: UL 213, ductile-iron body with retainer lugs that require one-quarter turn to secure pipe in fitting.

- C. Plain-End, Standard-Weight Steel Pipe: ASTM A 53/A 53M, ASTM A 135, or ASTM A 795 hot-dip galvanized-steel pipe where indicated.
 - 1. Steel Welding Fittings: ASTM A 234/A 234M, and ASME B16.9 or ASME B16.11.
 - 2. Steel Flanges and Flanged Fittings: ASME B16.5.

- D. Grooved-End, Standard-Weight Steel Pipe: ASTM A 53/A 53M, ASTM A 135, or ASTM A 795, hot-dip galvanized where indicated and with factory-formed, square-cut- or roll-grooved ends.
 - 1. Grooved-Joint Piping Systems:
 - a. Manufacturers:
 - 1) Victaulic Co. of America.
 - b. Grooved-End Fittings: UL-listed, ASTM A 536, ductile-iron casting with OD matching steel-pipe OD.
 - c. Grooved-End-Pipe Couplings: UL 213 and AWWA C606, rigid pattern, unless otherwise indicated; gasketed fitting matching steel-pipe OD. Include ductile-iron housing with keys matching steel-pipe and fitting grooves, prelubricated rubber gasket listed for use with housing, and steel bolts and nuts.

2.3 DIELECTRIC FITTINGS

- A. Assembly shall be copper alloy, ferrous, and insulating materials with ends matching piping system.

- B. Dielectric Unions: Factory-fabricated assembly, designed for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C). Include insulating material that isolates dissimilar materials and ends with inside threads according to ASME B1.20.1.
 - 1. Available Manufacturers:
 - a. Watts Industries, Inc.; Water Products Div.

- C. Dielectric Flange Insulation Kits: Components for field assembly shall include CR or phenolic gasket, PE or phenolic bolt sleeves, phenolic washers, and steel backing washers.
 - 1. Available Manufacturers:
 - a. Advance Products and Systems, Inc.
 - b. Calpico, Inc.
 - c. Central Plastics Company.
 - d. Pipeline Seal and Insulator, Inc.

- D. Dielectric Couplings: Galvanized steel with inert and noncorrosive thermoplastic lining and threaded ends and 300-psig (2070-kPa) working-pressure rating at 225 deg F (107 deg C).
 - 1. Available Manufacturers:

- a. Calpico, Inc.
 - b. Lochinvar Corp.
- E. Dielectric Nipples: Electroplated steel with inert and noncorrosive thermoplastic lining, with combination of plain, threaded, or grooved ends and 300-psig (2070-kPa) working-pressure rating at 225 deg F (107 deg C).
- 1. Available Manufacturers:
 - a. Perfection Corporation.
 - b. Precision Plumbing Products, Inc.
 - c. Victaulic Co. of America.

2.4 SPRINKLER SPECIALTY FITTINGS

- A. Sprinkler specialty fittings shall be UL listed or FMG approved, with 175-psig (1200-kPa) minimum working-pressure rating, and made of materials compatible with piping. Sprinkler specialty fittings shall have 250-psig (1725-kPa) minimum working-pressure rating if fittings are components of high-pressure piping system.
- B. Outlet Specialty Fittings:
- 1. Mechanical-T and -Cross Fittings: UL 213, ductile-iron housing with gaskets, bolts and nuts, and threaded, locking-lug, or grooved outlets.
 - 2. Snap-On and Strapless Outlet Fittings: UL 213, ductile-iron housing or casting with gasket and threaded outlet.
- C. Sprinkler Drain and Alarm Test Fittings: Cast- or ductile-iron body; with threaded or locking-lug inlet and outlet, test valve, and orifice and sight glass.
- D. Sprinkler Branch-Line Test Fittings: Brass body with threaded inlet, capped drain outlet, and threaded outlet for sprinkler.
- E. Sprinkler Inspector's Test Fitting: Cast- or ductile-iron housing with threaded inlet and drain outlet and sight glass.
- F. Drop-Nipple Fittings: UL 1474, adjustable with threaded inlet and outlet, and seals.
- G. Dry-Pipe-System Fittings: UL listed for dry-pipe service.

2.5 LISTED FIRE-PROTECTION VALVES

- A. Valves shall be UL listed or FMG approved, with 175-psig (1200 kPa) minimum pressure rating. Valves shall have 250-psig (1725-kPa) minimum pressure rating if valves are components of high-pressure piping system.
- B. Ball Valves: Comply with UL 1091, except with ball instead of disc.
- 1. NPS 1-1/2 (DN 40) and Smaller: Bronze body with threaded ends.

2. NPS 2 and NPS 2-1/2 (DN 50 and DN 65): Bronze body with threaded ends or ductile-iron body with grooved ends.
 3. NPS 3 (DN 80): Ductile-iron body with grooved ends.
 4. Available Manufacturers:
 - a. NIBCO.
 - b. Victaulic Co. of America.
- C. Butterfly Valves: UL 1091.
1. NPS 2 (DN 50) and Smaller: Bronze body with threaded ends.
 - a. Available Manufacturers:
 - 1) Global Safety Products, Inc.
 - 2) Milwaukee Valve Company.
 2. NPS 2-1/2 (DN 65) and Larger: Bronze, cast-iron, or ductile-iron body; wafer type or with flanged or grooved ends.
 - a. Available Manufacturers:
 - 1) Central Sprinkler Corp.
 - 2) Global Safety Products, Inc.
 - 3) McWane, Inc.; Kennedy Valve Div.
 - 4) Mueller Company.
 - 5) NIBCO.
 - 6) Pratt, Henry Company.
 - 7) Victaulic Co. of America.
- D. Check Valves NPS 2 (DN 50) and Larger: UL 312, swing type, cast-iron body with flanged or grooved ends.
1. Available Manufacturers:
 - a. Grinnell Fire Protection.
 - b. NIBCO.
 - c. Reliable Automatic Sprinkler Co., Inc.
 - d. Victaulic Co. of America.
 - e. Watts Industries, Inc.; Water Products Div.
- E. Gate Valves: UL 262, OS&Y type.
1. NPS 2 (DN 50) and Smaller: Bronze body with threaded ends.
 - a. Available Manufacturers:
 - 1) Crane Co.; Crane Valve Group; Crane Valves.
 - 2) Hammond Valve.
 - 3) NIBCO.
 - 4) United Brass Works, Inc.

2. NPS 2-1/2 (DN 65) and Larger: Cast-iron body with flanged ends.

a. Available Manufacturers:

- 1) Milwaukee Valve Company.
- 2) Mueller Company.
- 3) NIBCO.

F. Indicating Valves: UL 1091, with integral indicating device and ends matching connecting piping.

1. Indicator: Electrical, 115-V ac, prewired, single-circuit, supervisory switch.
2. NPS 2 (DN 50) and Smaller: Ball or butterfly valve with bronze body and threaded ends.

a. Available Manufacturers:

- 1) Milwaukee Valve Company.
- 2) NIBCO.
- 3) Victaulic Co. of America.

3. NPS 2-1/2 (DN 65) and Larger: Butterfly valve with cast- or ductile-iron body; wafer type or with flanged or grooved ends.

a. Available Manufacturers:

- 1) Central Sprinkler Corp.
- 2) Grinnell Fire Protection.
- 3) McWane, Inc.; Kennedy Valve Div.
- 4) Milwaukee Valve Company.
- 5) NIBCO.
- 6) Victaulic Co. of America.

2.6 UNLISTED GENERAL-DUTY VALVES

- A. Ball Valves NPS 2 (DN 50) and Smaller: MSS SP-110, 2-piece copper-alloy body with chrome-plated brass ball, 600-psig (4140-kPa) minimum CWP rating, blowout-proof stem, and threaded ends.
- B. Check Valves NPS 2 (DN 50) and Smaller: MSS SP-80, Type 4, Class 125 minimum, swing type with bronze body, nonmetallic disc, and threaded ends.
- C. Gate Valves NPS 2 (DN 50) and Smaller: MSS SP-80, Type 2, Class 125 minimum, with bronze body, solid wedge, and threaded ends.
- D. Globe Valves NPS 2 (DN 50) and Smaller: MSS SP-80, Type 2, Class 125 minimum, with bronze body, nonmetallic disc, and threaded ends.

2.7 SPECIALTY VALVES

- A. Sprinkler System Control Valves: UL listed or FMG approved, cast- or ductile-iron body with flanged or grooved ends, and 175-psig (1200-kPa) minimum pressure rating. Control valves shall have 250-psig (1725-kPa) minimum pressure rating if valves are components of high-pressure piping system.
1. Available Manufacturers:
 - a. Central Sprinkler Corp.
 - b. Grinnell Fire Protection.
 - c. Reliable Automatic Sprinkler Co., Inc.
 - d. Victaulic Co. of America.
 - e. Viking Corp.
 2. Alarm Check Valves: UL 193, designed for horizontal or vertical installation, with bronze grooved seat with O-ring seals, single-hinge pin, and latch design. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, retarding chamber, and fill-line attachment with strainer.
 - a. Drip Cup Assembly: Pipe drain without valves and separate from main drain piping.
 - b. Drip Cup Assembly: Pipe drain with check valve to main drain piping.
 3. Dry-Pipe Valves: UL 260, differential type; with bronze seat with O-ring seals, single-hinge pin, and latch design. Include UL 1486, quick-opening devices, trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
 - a. Air-Pressure Maintenance Device: UL 260, automatic device to maintain correct air pressure in piping. Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range, and 175-psig (1200-kPa) maximum inlet pressure.
 - 1) Available Manufacturers:
 - a) Central Sprinkler Corp.
 - b) Grinnell Fire Protection.
 - c) Reliable Automatic Sprinkler Co., Inc.
 - d) Viking Corp.
 - b. Air Compressor: UL 753, fractional horsepower, 120-V ac, 60 Hz, single phase.
 - 1) Available Manufacturers:
 - a) Grinnell Fire Protection.
 - b) Reliable Automatic Sprinkler Co., Inc.
 - c) Viking Corp.

2.8 SPRINKLERS

- A. Sprinklers shall be UL listed or FMG approved, with 175-psig (1200-kPa) minimum pressure rating. Sprinklers shall have 250-psig (1725-kPa) minimum pressure rating if sprinklers are components of high-pressure piping system.
- B. Available Manufacturers:
1. Central Sprinkler Corp.
 2. Grinnell Fire Protection.
 3. Reliable Automatic Sprinkler Co., Inc.
 4. Victaulic Co. of America.
 5. Viking Corp.
- C. Automatic Sprinklers: With heat-responsive element complying with the following:
1. UL 199, for nonresidential applications.
 2. UL 1626, for residential applications.
 3. UL 1767, for early-suppression, fast-response applications.
- D. Sprinkler Types and Categories: Nominal 1/2-inch (12.7-mm) orifice for "Ordinary" temperature classification rating, unless otherwise indicated or required by application.
1. Open Sprinklers: UL 199, without heat-responsive element.
 - a. Orifice: 1/2 inch (12.7 mm), with discharge coefficient K between 5.3 and 5.8.
 - b. Orifice: 17/32 inch (13.5 mm), with discharge coefficient K between 7.4 and 8.2.
- E. Sprinkler types, features, and options as follows:
1. Concealed ceiling sprinklers, including cover plate.
 2. Extended-coverage sprinklers.
 3. Flow-control sprinklers, with automatic open and shutoff feature.
 4. Flush ceiling sprinklers, including escutcheon.
 5. High-pressure sprinklers.
 6. Open sprinklers.
 7. Pendent sprinklers.
 8. Pendent, dry-type sprinklers.
 9. Quick-response sprinklers.
 10. Recessed sprinklers, including escutcheon.
 11. Sidewall sprinklers.
 12. Sidewall, dry-type sprinklers.
 13. Upright sprinklers.
- F. Sprinkler Finishes: Chrome plated, bronze, and painted.
- G. Special Coatings: Wax, lead, and corrosion-resistant paint.
- H. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.

1. Ceiling Mounting: Chrome-plated steel, one piece, flat with 1-inch (25-mm) vertical adjustment.
 2. Sidewall Mounting: Chrome-plated steel, one piece, flat.
- I. Sprinkler Guards: Wire-cage type, including fastening device for attaching to sprinkler.

2.9 ALARM DEVICES

- A. Alarm-device types shall match piping and equipment connections.
- B. Water-Flow Indicator: UL 346, electrical-supervision, paddle-operated-type, water-flow detector with 250-psig (1725-kPa) pressure rating and designed for horizontal or vertical installation. Include two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
1. Available Manufacturers:
 - a. ADT Security Services, Inc.
 - b. Grinnell Fire Protection.
 - c. ITT McDonnell & Miller.
 - d. Potter Electric Signal Company.
 - e. System Sensor.
 - f. Viking Corp.
 - g. Watts Industries, Inc.; Water Products Div.
- C. Pressure Switch: UL 753, electrical-supervision-type, water-flow switch with retard feature. Include single-pole, double-throw, normally closed contacts and design that operates on rising pressure and signals water flow.
1. Available Manufacturers:
 - a. Grinnell Fire Protection.
 - b. Potter Electric Signal Company.
 - c. System Sensor.
 - d. Viking Corp.
- D. Valve Supervisory Switch: UL 753, electrical, single-pole, double-throw switch with normally closed contacts. Include design that signals controlled valve is in other than fully open position.
1. Available Manufacturers:
 - a. McWane, Inc.; Kennedy Valve Div.
 - b. Potter Electric Signal Company.
 - c. System Sensor.

2.10 PRESSURE GAGES

- A. Description: UL 393, 3-1/2- to 4-1/2-inch- (90- to 115-mm-) diameter, dial pressure gage with range of 0 to 250 psig (0 to 1725 kPa) minimum.
 - 1. Water System Piping: Include caption "WATER" or "AIR/WATER" on dial face.
 - 2. Air System Piping: Include retard feature and caption "AIR" or "AIR/WATER" on dial face.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in Part 1 "Quality Assurance" Article.
- B. Report test results promptly and in writing.

3.2 EARTHWORK

- A. Refer to Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.

3.3 EXAMINATION

- A. Examine roughing-in for hose connections and stations to verify actual locations of piping connections before installation.
- B. Examine walls and partitions for suitable thicknesses, fire- and smoke-rated construction, framing for hose-station cabinets, and other conditions where hose connections and stations are to be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.4 PIPING APPLICATIONS, GENERAL

- A. Shop weld pipe joints where welded piping is indicated.
- B. Do not use welded joints for galvanized-steel pipe.
- C. Flanges, flanged fittings, unions, nipples, and transition and special fittings with finish and pressure ratings same as or higher than system's pressure rating may be used in aboveground applications, unless otherwise indicated.
- D. Piping between Fire Department Connections and Check Valves: Galvanized, standard-weight steel pipe with threaded ends; cast- or malleable-iron threaded fittings; and threaded joints.

3.5 SPRINKLER SYSTEM PIPING APPLICATIONS

A. Standard-Pressure, Wet-Pipe Sprinkler System, 175-psig (1200-kPa) Maximum Working Pressure:

1. Sprinkler-Piping Fitting Option: Specialty sprinkler fittings, [NPS 2 (DN 50)] [NPS 2-1/2 (DN 65)] [NPS 3 (DN 80)] and smaller, including mechanical-T and -cross fittings, may be used downstream from sprinkler zone valves.
2. NPS 1-1/2 (DN 40) and Smaller: Threaded-end, black, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
3. NPS 2 (DN 50): Threaded-end, black, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
4. NPS 2 (DN 50): Plain-end, black, standard-weight steel pipe; steel welding fittings; and welded joints.
5. NPS 2 (DN 50): Grooved-end, black, standard-weight steel pipe; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.
6. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): Threaded-end, black, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
7. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): Plain-end, black, standard-weight steel pipe; steel welding fittings; and welded joints.
8. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): Grooved-end, black, standard-weight steel pipe; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.
9. NPS 4 to NPS 6 (DN 100 to DN 150): Plain-end, black, standard-weight steel pipe; steel welding fittings; and welded joints.
10. NPS 4 to NPS 6 (DN 100 to DN 150): Grooved-end, black, standard-weight steel pipe; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.

B. Standard-Pressure, Dry-Pipe Sprinkler System, 175-psig (1200-kPa) Maximum Working Pressure:

1. NPS 1-1/2 (DN 40) and Smaller: Threaded-end, galvanized, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
2. NPS 2 (DN 50): Threaded-end, galvanized, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
3. NPS 2 (DN 50): Grooved-end, galvanized, standard-weight steel pipe; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.
4. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): Threaded-end, galvanized, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
5. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): Grooved-end, galvanized, standard-weight steel pipe; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.
6. NPS 4 to NPS 6 (DN 100 to DN 150): Grooved-end, galvanized, standard-weight steel pipe; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.

3.6 VALVE APPLICATIONS

A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:

1. Listed Fire-Protection Valves: UL listed and FMG approved for applications where required by NFPA 13.

- a. Shutoff Duty: Use ball or gate valves.

3.7 JOINT CONSTRUCTION

- A. Refer to Division 21 Section "Common Work Results for Fire Suppression" for basic piping joint construction.
- B. Threaded Joints: Comply with NFPA 13 for pipe thickness and threads. Do not thread pipe smaller than NPS 8 (DN 200) with wall thickness less than Schedule 40 unless approved by authorities having jurisdiction and threads are checked by a ring gage and comply with ASME B1.20.1.
- C. Grooved Joints: Assemble joints with listed coupling and gasket, lubricant, and bolts.
 1. Steel Pipe: Square-cut or roll-groove piping as indicated. Use grooved-end fittings and rigid, grooved-end-pipe couplings, unless otherwise indicated.
 2. Dry-Pipe Systems: Use fittings and gaskets listed for dry-pipe service.
- D. Dissimilar-Metal Piping Joints: Construct joints using dielectric fittings compatible with both piping materials.
 1. NPS 2 (DN 50) and Smaller: Use dielectric unions, couplings, or nipples.
 2. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric flanges.
 3. NPS 5 (DN 125) and Larger: Use dielectric flange insulation kits.

3.8 PIPING INSTALLATION

- A. Refer to Division 21 Section "Common Work Results for Fire Suppression" for basic piping installation.
- B. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
 1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.
- C. Use approved fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- D. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller. Unions are not required on flanged devices or in piping installations using grooved joints.
- E. Install flanges or flange adapters on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger connections.
- F. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, sized and located according to NFPA 13.
- G. Install sprinkler piping with drains for complete system drainage.

- H. Install alarm devices in piping systems.
- I. Hangers and Supports: Comply with NFPA 13 for hanger materials.
 - 1. Install sprinkler system piping according to NFPA 13.
- J. Earthquake Protection: Install piping according to NFPA 13 to protect from earthquake damage.
- K. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 (DN 8) and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.
- L. Drain dry-pipe sprinkler piping.
- M. Pressurize and check dry-pipe sprinkler system piping and air-pressure maintenance devices.
- N. Fill wet-pipe sprinkler system piping with water.

3.9 VALVE INSTALLATION

- A. Install listed fire-protection valves, specialty valves and trim, controls, and specialties according to NFPA 13 and authorities having jurisdiction.
- B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water supply sources.
- D. Specialty Valves:
 - 1. Alarm Check Valves: Install in vertical position for proper direction of flow, including bypass check valve and retarding chamber drain-line connection.
 - 2. Dry-Pipe Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
 - a. Air-Pressure Maintenance Devices for Dry-Pipe Systems: Install shutoff valves to permit servicing without shutting down sprinkler system; bypass valve for quick system filling; pressure regulator or switch to maintain system pressure; strainer; pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range; and 175-psig (1200-kPa) maximum inlet pressure.
 - b. Install air compressor and compressed-air supply piping.

3.10 SPRINKLER APPLICATIONS

- A. Drawings indicate sprinkler types to be used. Where specific types are not indicated, use the following sprinkler types:

1. Rooms without Ceilings: Upright sprinklers.
2. Rooms with Suspended Ceilings: Pendent sprinklers.
3. Wall Mounting: Sidewall sprinklers.
4. Spaces Subject to Freezing: Upright, pendent, dry sprinklers; and sidewall, dry sprinklers as indicated.
5. Special Applications: Extended-coverage, flow-control, and quick-response sprinklers where indicated.
6. Sprinkler Finishes:
 - a. Upright, Pendent, and Sidewall Sprinklers: White painted in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.
 - b. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
 - c. Flush Sprinklers: Bright chrome, with painted white escutcheon.
 - d. Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
 - e. Residential Sprinklers: Dull chrome.

3.11 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of narrow dimension of acoustical ceiling panels and tiles.
- B. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing. Use dry-type sprinklers with water supply from heated space.

3.12 MONITOR INSTALLATION

- A. Install monitor bases securely attached to building substrate.

3.13 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Connect piping to specialty valves, hose valves, specialties, fire department connections, and accessories.
- D. Connect air compressor to the following piping and wiring:
 1. Pressure gages and controls.
 2. Electrical power system.
 3. Fire alarm devices, including low-pressure alarm.
- E. Electrical Connections: Power wiring is specified in Division 26.
- F. Connect alarm devices to fire alarm.

- G. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- H. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- I. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.14 LABELING AND IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.

3.15 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 3. Energize circuits to electrical equipment and devices.
 - 4. Start and run air compressors.
 - 5. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
 - 6. Coordinate with fire alarm tests. Operate as required.
- B. Report test results promptly and in writing to Architect and authorities having jurisdiction.

3.16 CLEANING AND PROTECTION

- A. Clean dirt and debris from sprinklers.
- B. Remove and replace sprinklers with paint other than factory finish.
- C. Protect sprinklers from damage until Substantial Completion.

3.17 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain specialty valves. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 211000

SECTION 220500 - COMMON WORK RESULTS FOR PLUMBING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Piping materials and installation instructions common to most piping systems.
2. Joining materials.
3. Dielectric fittings.
4. Mechanical sleeve seals.
5. Sleeves.
6. Escutcheons.
7. Grout.
8. Equipment installation requirements common to equipment sections.
9. Concrete bases.
10. Supports and anchorages.

1.2 DEFINITIONS

- A. Finished Spaces: Spaces other than plumbing and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and plumbing equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.3 SUBMITTALS

- A. Welding certificates.

1.4 QUALITY ASSURANCE

- A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

- B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

- C. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

PART 2 - PRODUCTS

2.1 PIPE, TUBE, AND FITTINGS

- A. Refer to individual Division 22 piping Sections for pipe, tube, and fitting materials and joining methods.

- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

- A. Refer to individual Division 22 piping Sections for special joining materials not listed below.

- B. Pipe-Flange Gasket Materials: ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.

- C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

- E. Brazing Filler Metals: AWS A5.8, BCuP Series or BAg1, unless otherwise indicated.

- F. Welding Filler Metals: Comply with AWS D10.12.

- G. Solvent Cements for Joining Plastic Piping and Tubing:
 - 1. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
 - 2. CPVC Piping: ASTM F 493.

2.3 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C).
- D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.
- E. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).
- F. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).

2.4 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
- B. Sealing Elements: EPDM or NBR interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
- C. Pressure Plates: Carbon steel. Include two for each sealing element.
- D. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.5 SLEEVES

- A. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
- B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.
- C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
 - 1. Underdeck Clamp: Clamping ring with set screws.
- E. Molded PVC: Permanent, with nailing flange for attaching to wooden forms.
- F. PVC Pipe: ASTM D 1785, Schedule 40.
- G. Molded PE: Reusable, PE, tapered-cup shaped, and smooth-outer surface with nailing flange for attaching to wooden forms.

2.6 ESCUTCHEONS

- A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.
- C. One-Piece, Cast-Brass Type: With set screw.
 - 1. Finish: Polished chrome-plated.
- D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
 - 1. Finish: Polished chrome-plated.

2.7 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
 - 1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
 - 3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 22 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping to permit valve servicing.

- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Install escutcheons for penetrations of walls, ceilings, and floors.
- M. Install sleeves for pipes passing through concrete and masonry walls, and concrete floor and roof slabs.
- N. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Install steel pipe for sleeves smaller than 6 inches (150 mm) in diameter.
 - 2. Install cast-iron "wall pipes" for sleeves 6 inches (150 mm) and larger in diameter.
 - 3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- O. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- P. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 07 Section "Penetration Firestopping" for materials.
- Q. Verify final equipment locations for roughing-in.
- R. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.2 PIPING JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 22 Sections specifying piping systems.

- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- I. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
 - 1. Comply with ASTM F 402, for safe-handling practice of cleaners, primers, and solvent cements.
 - 2. PVC Nonpressure Piping: Join according to ASTM D 2855.
- J. Plastic Nonpressure Piping Gasketed Joints: Join according to ASTM D 3212.
- K. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
 - 1. Plain-End Pipe and Fittings: Use butt fusion.
 - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.
- L. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.3 PIPING CONNECTIONS

- A. Make connections according to the following, unless otherwise indicated:
 - 1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.

2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.
3. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
4. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.4 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

3.5 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
 1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base.
 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
 7. Use 3000-psi (20.7-MPa), 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-Place Concrete."

3.6 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 05 Section "Metal Fabrications" for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.
- C. Field Welding: Comply with AWS D1.1.

3.7 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor plumbing materials and equipment.
- B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

3.8 GROUTING

- A. Mix and install grout for plumbing equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

END OF SECTION 220500

SECTION 220519 - METERS AND GAGES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Liquid-in-glass thermometers.
2. Thermowells.
3. Dial-type pressure gages.
4. Gage attachments.

B. Related Sections:

1. Division 21 Section "Facility Fire-Suppression Water-Service Piping" for fire-protection water-service meters outside the building.
2. Division 21 fire-suppression piping Sections for fire-protection pressure gages.
3. Division 22 Section "Facility Water Distribution Piping" for domestic water meters and combined domestic and fire-protection water-service meters outside the building.
4. Division 22 Section "Domestic Water Piping" for water meters inside the building.

1.2 ACTION SUBMITTALS

- ##### A. Product Data:
- For each type of product indicated.

1.3 CLOSEOUT SUBMITTALS

- ##### A. Operation and Maintenance Data:
- For meters and gages to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 LIQUID-IN-GLASS THERMOMETERS

A. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Palmer Wahl Instrumentation Group.
 - b. Terice, H. O. Co.
 - c. Weiss Instruments, Inc.
 - d. Winters Instruments - U.S.

2. Standard: ASME B40.200.
3. Case: Cast aluminum; 7-inch (178-mm) nominal size unless otherwise indicated.
4. Case Form: Adjustable angle unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F and deg C.
7. Window: Glass or plastic.
8. Stem: Aluminum and of length to suit installation.
 - a. Design for Thermowell Installation: Bare stem.
9. Connector: 1-1/4 inches (32 mm), with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.2 THERMOWELLS

A. Thermowells:

1. Standard: ASME B40.200.
2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
3. Material for Use with Copper Tubing: CNR or CUNI.
4. Material for Use with Steel Piping: CSA.
5. Type: Stepped shank unless straight or tapered shank is indicated.
6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, (DN 15, DN 20, or NPS 25,) ASME B1.20.1 pipe threads.
7. Internal Threads: 1/2, 3/4, and 1 inch (13, 19, and 25 mm), with ASME B1.1 screw threads.
8. Bore: Diameter required to match thermometer bulb or stem.
9. Insertion Length: Length required to match thermometer bulb or stem.
10. Lagging Extension: Include on thermowells for insulated piping and tubing.
11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: Mixture of graphite and glycerin.

2.3 PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ashcroft Inc.
 - b. Palmer Wahl Instrumentation Group.
 - c. Terice, H. O. Co.
 - d. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
 - e. Weiss Instruments, Inc.

2. Standard: ASME B40.100.
3. Case: Liquid-filled type(s); cast aluminum or drawn steel; 4-1/2-inch (114-mm) nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2 (DN 8 or DN 15), ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi and kPa.
8. Pointer: Dark-colored metal.
9. Window: Glass or plastic.
10. Ring: Brass.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.4 GAGE ATTACHMENTS

- A. Snubbers: ASME B40.100, brass; with NPS 1/4 or NPS 1/2 (DN 8 or DN 15), ASME B1.20.1 pipe threads and porous-metal-type surge-dampening device. Include extension for use on insulated piping.
- B. Valves: Brass or stainless-steel needle, with NPS 1/4 or NPS 1/2 (DN 8 or DN 15), ASME B1.20.1 pipe threads.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install thermowells with socket extending to center of pipe and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- F. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
- G. Install valve and snubber in piping for each pressure gage for fluids.
- H. Install thermometers in the following locations:
 1. Outlet of each water heater.
 2. Inlet of each circulator pump.

- I. Install pressure gages in the following locations:
 - 1. Building water service entrance into building.
 - 2. Inlet and outlet of each pressure-reducing valve.

3.2 CONNECTIONS

- A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

3.3 ADJUSTING

- A. Adjust faces of meters and gages to proper angle for best visibility.

3.4 THERMOMETER SCALE-RANGE SCHEDULE

- A. Scale Range for Domestic Hot-Water Piping: 0 to 250 deg F and 0 to 150 deg C.

3.5 PRESSURE-GAGE SCALE-RANGE SCHEDULE

- A. Scale Range for Domestic Water Piping: 0 to 100 psi and 0 to 600 kPa.

END OF SECTION 220519

SECTION 220523 - GENERAL-DUTY VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Brass ball valves.
2. Bronze ball valves.
3. Iron, single-flange butterfly valves.
4. Bronze swing check valves.

B. Related Sections:

1. Division 22 plumbing piping Sections for specialty valves applicable to those Sections only.
2. Division 22 Section "Identification for Plumbing Piping and Equipment" for valve tags and schedules.
3. Division 33 water distribution piping Sections for general-duty and specialty valves for site construction piping.

1.2 DEFINITIONS

A. CWP: Cold working pressure.

B. Easy Access: Access to a valve that is either exposed or concealed within a valve box, access panel, above a lay-in type ceiling, or other means not requiring removal of a permanent wall or ceiling and accessed in a squatting, sitting, or standing position, or by use of a ladder with no obstacles preventing direct access.

C. EPDM: Ethylene propylene copolymer rubber.

D. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.

E. SWP: Steam working pressure.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of valve indicated.

1.4 QUALITY ASSURANCE

A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

- B. ASME Compliance:
 - 1. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 - 2. ASME B31.1 for power piping valves.
 - 3. ASME B31.9 for building services piping valves.
- C. NSF Compliance: NSF 61 for valve materials for potable-water service.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, grooves, and weld ends.
 - 3. Set ball valves open to minimize exposure of functional surfaces.
 - 4. Set butterfly valves closed or slightly open.
 - 5. Block check valves in either closed or open position.
- B. Use the following precautions during storage:
 - 1. Maintain valve end protection.
 - 2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Refer to valve schedule articles for applications of valves.
- B. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- C. Valve Sizes: Same as upstream piping unless otherwise indicated.
- D. Valve Actuator Types:
 - 1. Handwheel: For valves other than quarter-turn types.
 - 2. Handlever: For quarter-turn valves NPS 6 (DN 150) and smaller.
- E. Valves in Insulated Piping: With 2-inch (50-mm) stem extensions and the following features:
 - 1. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.
 - 2. Butterfly Valves: With extended neck.

F. Valve-End Connections:

1. Flanged: With flanges according to ASME B16.1 for iron valves.
2. Solder Joint: With sockets according to ASME B16.18.
3. Threaded: With threads according to ASME B1.20.1.

G. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRASS BALL VALVES

A. Two-Piece, Full-Port, Brass Ball Valves with Brass Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Co.; Crane Valve Group; Crane Valves.
 - b. Flow-Tek, Inc.; a subsidiary of Bray International, Inc.
 - c. Hammond Valve.
 - d. Jamesbury; a subsidiary of Metso Automation.
 - e. Kitz Corporation.
 - f. Marwin Valve; a division of Richards Industries.
 - g. Milwaukee Valve Company.
 - h. NIBCO INC.
2. Description:
 - a. Standard: MSS SP-110.
 - b. SWP Rating: 150 psig (1035 kPa).
 - c. CWP Rating: 600 psig (4140 kPa).
 - d. Body Design: Two piece.
 - e. Body Material: Forged brass.
 - f. Ends: Threaded.
 - g. Seats: PTFE or TFE.
 - h. Stem: Brass.
 - i. Ball: Chrome-plated brass.
 - j. Port: Full.

2.3 BRONZE BALL VALVES

A. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Valve, Inc.
 - b. Conbraco Industries, Inc.; Apollo Valves.
 - c. Crane Co.; Crane Valve Group; Crane Valves.
 - d. Hammond Valve.
 - e. Milwaukee Valve Company.

- f. NIBCO INC.
- g. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Bronze.
- i. Ball: Chrome-plated brass.
- j. Port: Full.

2.4 IRON, SINGLE-FLANGE BUTTERFLY VALVES

A. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Ductile-Iron Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Valve, Inc.
- b. Conbraco Industries, Inc.; Apollo Valves.
- c. Crane Co.; Crane Valve Group; Center Line.
- d. Hammond Valve.
- e. Kitz Corporation.
- f. Milwaukee Valve Company.
- g. NIBCO INC.
- h. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: EPDM.
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Nickel-plated ductile iron.

2.5 BRONZE SWING CHECK VALVES

A. Class 125, Bronze Swing Check Valves with Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Valve, Inc.
 - b. Crane Co.; Crane Valve Group; Crane Valves.
 - c. Crane Co.; Crane Valve Group; Jenkins Valves.
 - d. Hammond Valve.
 - e. Kitz Corporation.
 - f. Milwaukee Valve Company.
 - g. NIBCO INC.
 - h. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
2. Description:
- a. Standard: MSS SP-80, Type 3.
 - b. CWP Rating: 200 psig (1380 kPa).
 - c. Body Design: Horizontal flow.
 - d. Body Material: ASTM B 62, bronze.
 - e. Ends: Threaded.
 - f. Disc: Bronze.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.
- E. Install check valves for proper direction of flow and as follows:

1. Swing Check Valves: In horizontal position with hinge pin level.

3.3 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 1. Shutoff Service: Ball or butterfly valves.
 2. Pump-Discharge Check Valves:
 - a. NPS 2 (DN 50) and Smaller: Bronze swing check valves with bronze disc.
- B. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP classes or CWP ratings may be substituted.
- C. Select valves, except wafer types, with the following end connections:
 1. For Copper Tubing, NPS 2 (DN 50) and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
 2. For Copper Tubing, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules below.
 3. For Copper Tubing, NPS 5 (DN 125) and Larger: Flanged ends.

3.5 DOMESTIC, HOT- AND COLD-WATER VALVE SCHEDULE

- A. Pipe NPS 2 (DN 50) and Smaller:
 1. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
 2. Ball Valves: Two piece, full port, brass or bronze with trim of same material.
 3. Bronze Swing Check Valves: Class 125, bronze disc.
- B. Pipe NPS 2-1/2 (DN 65) and Larger:
 1. Bronze and Brass Valves: NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
 2. Iron, Single-Flange Butterfly Valves: 200 CWP, EPDM seat, ductile-iron disc.

3.6 SANITARY-WASTE VALVE SCHEDULE

- A. Pipe NPS 2 (DN 50) and Smaller:
 1. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.

2. Bronze Swing Check Valves: Class 125, bronze disc.
3. Bronze Gate Valves: Class 125, NRS.

SECTION 220529 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal pipe hangers and supports.
2. Trapeze pipe hangers.
3. Metal framing systems.
4. Thermal-hanger shield inserts.
5. Fastener systems.
6. Pipe positioning systems.
7. Equipment supports.

B. Related Sections:

1. Division 05 Section "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
2. Division 21 fire-suppression piping Sections for pipe hangers for fire-suppression piping.
3. Division 22 Section "Expansion Fittings and Loops for Plumbing Piping" for pipe guides and anchors.

1.2 DEFINITIONS

- A. MSS: Manufacturers Standardization Society of The Valve and Fittings Industry Inc.

1.3 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
 3. Design seismic-restraint hangers and supports for piping and equipment and obtain approval from authorities having jurisdiction.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.

B. Shop Drawings: Show fabrication and installation details and include calculations for the following; include Product Data for components:

1. Trapeze pipe hangers.
2. Metal framing systems.
3. Equipment supports.

C. Welding certificates.

1.5 QUALITY ASSURANCE

- A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 - PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

A. Carbon-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.

B. Stainless-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
3. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.

2.2 TRAPEZE PIPE HANGERS

A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 METAL FRAMING SYSTEMS

A. MFMA Manufacturer Metal Framing Systems:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Cooper B-Line, Inc.
 - b. Flex-Strut Inc.
 - c. Power-Strut Div.; Tyco International, Ltd.
 - d. Thomas & Betts Corporation.
 - e. Unistrut Corporation; Tyco International, Ltd.
2. Description: Shop- or field-fabricated pipe-support assembly for supporting multiple parallel pipes.
3. Standard: MFMA-4.
4. Channels: Continuous slotted steel channel with inturned lips.
5. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
6. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.
7. Plastic Coating: Polyurethane.

2.4 THERMAL-HANGER SHIELD INSERTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Carpenter & Paterson, Inc.
 2. National Pipe Hanger Corporation.
 3. PHS Industries, Inc.
 4. Piping Technology & Products, Inc.
 5. Rilco Manufacturing Co., Inc.
- B. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate with 100-psig (688-kPa) minimum compressive strength.
- C. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- D. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- E. Insert Length: Extend 2 inches (50 mm) beyond sheet metal shield for piping operating below ambient air temperature.

2.5 FASTENER SYSTEMS

- A. Mechanical-Expansion Anchors: Insert-wedge-type, stainless-steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.6 PIPE POSITIONING SYSTEMS

- A. Description: IAPMO PS 42, positioning system of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

2.7 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

2.8 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
 - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
 - 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
 - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
 - 2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.
- D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- E. Fastener System Installation:
 - 1. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- F. Pipe Positioning-System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture. See Division 22 plumbing fixture Sections for requirements for pipe positioning systems for plumbing fixtures.

- G. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- H. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- I. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- J. Install lateral bracing with pipe hangers and supports to prevent swaying.
- K. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 (DN 65) and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- L. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- N. Insulated Piping:
 - 1. Attach clamps and spacers to piping.
 - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
 - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
 - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
 - 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
 - 3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
 - 4. Shield Dimensions for Pipe: Not less than the following:
 - a. NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches (305 mm) long and 0.048 inch (1.22 mm) thick.
 - b. NPS 4 (DN 100): 12 inches (305 mm) long and 0.06 inch (1.52 mm) thick.
 - c. NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.
 - d. NPS 8 to NPS 14 (DN 200 to DN 350): 24 inches (610 mm) long and 0.075 inch (1.91 mm) thick.
 - 5. Pipes NPS 8 (DN 200) and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
 - 6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.2 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.3 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.4 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches (40 mm).

3.5 PAINTING

- A. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Division 09 painting Sections.
- B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.6 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.

- B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel metal trapeze pipe hangers and metal framing systems and attachments for general service applications.
- F. Use padded hangers for piping that is subject to scratching.
- G. Use thermal-hanger shield inserts for insulated piping and tubing.
- H. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30 (DN 15 to DN 750).
 - 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F (566 deg C), pipes NPS 4 to NPS 24 (DN 100 to DN 600), requiring up to 4 inches (100 mm) of insulation.
 - 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36 (DN 20 to DN 900), requiring clamp flexibility and up to 4 inches (100 mm) of insulation.
 - 4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 (DN 15 to DN 600) if little or no insulation is required.
 - 5. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
 - 6. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30 (DN 15 to DN 750).
 - 7. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36 (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
 - 8. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30 (DN 25 to DN 750), from two rods if longitudinal movement caused by expansion and contraction might occur.
 - 9. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 (DN 50 to DN 1050) if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
- I. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 - 1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24 (DN 24 to DN 600).
 - 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 (DN 20 to DN 600) if longer ends are required for riser clamps.

- J. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches (150 mm) for heavy loads.
 2. Steel Clevises (MSS Type 14): For 120 to 450 deg F (49 to 232 deg C) piping installations.
- K. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
 3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
 4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
 5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
 6. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb (340 kg).
 - b. Medium (MSS Type 32): 1500 lb (680 kg).
 - c. Heavy (MSS Type 33): 3000 lb (1360 kg).
 7. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
- L. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
 2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
 3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- M. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches (32 mm).
 2. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
 3. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
- N. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

- O. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.
- P. Use mechanical-expansion anchors instead of building attachments where required in concrete construction.
- Q. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

END OF SECTION 220529

This Page Intentionally Left Blank

SECTION 22 05 53 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Equipment labels.
 2. Warning signs and labels.
 3. Pipe labels.
 4. Stencils.
 5. Valve tags.
 6. Warning tags.

1.2 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- C. Valve numbering scheme.
- D. Valve Schedules: For each piping system to include in maintenance manuals.

1.3 COORDINATION

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:
1. Material and Thickness: Brass, 0.032-inch (0.8-mm) Stainless steel, 0.025-inch (0.64-mm) Aluminum, 0.032-inch (0.8-mm) or anodized aluminum, 0.032-inch (0.8-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.

2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
 3. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 4. Fasteners: Stainless-steel rivets or self-tapping screws.
 5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.
- C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch (A4) bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch (3.2 mm) thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Black.
- C. Background Color: Yellow.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
- F. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

- B. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: At least 1-1/2 inches (38 mm) high.

2.4 STENCILS

- A. Stencils: Prepared with letter sizes according to ASME A13.1 for piping; and minimum letter height of 3/4 inch (19 mm) for access panel and door labels, equipment labels, and similar operational instructions.
 - 1. Stencil Material: Aluminum.
 - 2. Stencil Paint: Exterior, gloss, alkyd enamel black unless otherwise indicated. Paint may be in pressurized spray-can form.
 - 3. Identification Paint: Exterior, alkyd enamel in colors according to ASME A13.1 unless otherwise indicated.

2.5 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping system abbreviation and 1/2-inch (13-mm) numbers.
 - 1. Tag Material: Brass, 0.032-inch (0.8-mm) Stainless steel, 0.025-inch (0.64-mm) Aluminum, 0.032-inch (0.8-mm) or anodized aluminum, 0.032-inch (0.8-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.
 - 2. Fasteners: Brass wire-link or beaded chain.
- B. Metal Ceiling Labels for Valves: Engraved with 1/2-inch (13-mm) letters for piping system abbreviation and valve numbers.
 - 1. Material and Thickness: Brass, 0.032-inch (0.8-mm) Stainless steel, 0.025-inch (0.64-mm) Aluminum, 0.032-inch (0.8-mm) or anodized aluminum, 0.032-inch (0.8-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.
 - 2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
 - 3. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- C. Valve Schedules: For each piping system, on 8-1/2-by-11-inch (A4) bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
 - 1. Valve-tag schedule shall be included in operation and maintenance data.

2.6 WARNING TAGS

- A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.
 - 1. Size: 3 by 5-1/4 inches (75 by 133 mm) minimum.
 - 2. Fasteners: Reinforced grommet and wire or string.
 - 3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
 - 4. Color: Yellow background with black lettering.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

3.3 PIPE LABEL INSTALLATION

- A. Piping Color-Coding: Painting of piping is specified in Division 09 Section "Interior Painting."
- B. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 - 1. Near each valve and control device.
 - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
 - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
 - 5. Near major equipment items and other points of origination and termination.
 - 6. Spaced at maximum intervals of 50 feet (15 m) along each run. Reduce intervals to 25 feet (7.6 m) in areas of congested piping and equipment.
 - 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- C. Pipe Label Color Schedule:
 - 1. Domestic Water Piping:

- a. Background Color: Green.
 - b. Letter Color: White.
2. Natural Gas or LP Piping:
 - a. Background Color: Yellow.
 - b. Letter Color: Black.
 3. Sanitary Waste and Storm Drainage Piping:
 - a. Background Color: White.
 - b. Letter Color: Black.

3.4 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.
- B. Provide valve labels with valve tag number on ceiling grid close to valve location for valves concealed above the ceiling.
- C. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
 1. Valve-Tag Size and Shape:
 - a. Cold Water: 1-1/2 inches (38 mm), round.
 - b. Hot Water: 1-1/2 inches (38 mm), round.
 2. Valve-Tag Color:
 - a. Cold Water: Green.
 - b. Hot Water: Green.
 - c. Natural Gas or LPG: Yellow.
 3. Letter Color:
 - a. Cold Water: White.
 - b. Hot Water: White.
 - c. Natural Gas or LPG: Black.

3.5 WARNING-TAG INSTALLATION

- A. Write required message on, and attach warning tags to, equipment and other items where required.

END OF SECTION 220553

This Page Intentionally Left Blank

SECTION 220700 - PLUMBING INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes insulating the following plumbing piping services:
 - 1. Domestic cold-water piping.
 - 2. Domestic hot-water piping.
 - 3. Domestic recirculating hot-water piping.
 - 4. Roof drains and rainwater leaders.

1.2 SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied, if any).
- B. Field quality-control reports.

1.3 QUALITY ASSURANCE

- A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84 by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
 - 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 - 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.4 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."
- B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

1.5 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cell-U-Foam Corporation; Ultra-CUF.
 - b. Pittsburgh Corning Corporation; Foamglas.
 - 2. Block Insulation: ASTM C 552, Type I.
 - 3. Special-Shaped Insulation: ASTM C 552, Type III.
 - 4. Preformed Pipe Insulation with Factory-Applied ASJ: Comply with ASTM C 552, Type II, Class 2.
 - 5. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
- G. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Aeroflex USA, Inc.; Aerocel.
 - b. Armacell LLC; AP Armaflex.

- c. K-Flex USA; Insul-Lock, Insul-Tube, and K-FLEX LS.
- d. RBX Corporation; Insul-Sheet 1800 and Insul-Tube 180.

H. Mineral-Fiber, Preformed Pipe Insulation:

- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fibrex Insulations Inc.; Coreplus 1200.
 - b. Johns Manville; Micro-Lok.
 - c. Knauf Insulation; 1000-Degree Pipe Insulation.
 - d. Owens Corning; Fiberglas Pipe Insulation.
- 2. Type I, 850 Deg F (454 Deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

I. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C 534 or ASTM C 1427, Type I, Grade 1 for tubular materials.

- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Armacell LLC; Tubolit.
 - b. Nomaco Insulation; IMCOLOCK and NOMALOCK.

2.2 INSULATING CEMENTS

A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Insulco, Division of MFS, Inc.; SmoothKote.
 - b. P. K. Insulation Mfg. Co., Inc.; PK No. 127, and Quik-Cote.
 - c. Ramco Insulation, Inc.; Super-Stik.
 - d. Rock Wool Manufacturing Company; Delta One Shot.

B. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449.

- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Insulco, Division of MFS, Inc.; SmoothKote.
 - b. P. K. Insulation Mfg. Co., Inc.; PK No. 127, and Quik-Cote.
 - c. Ramco Insulation, Inc.; Super-Stik.
 - d. Rock Wool Manufacturing Company; Delta One Shot.

2.3 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

- B. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F (minus 73 to plus 93 deg C).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Products, Division of ITW; CP-96.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-84.
- C. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Aeroflex USA, Inc.; Aeroseal.
 - b. Armacell LLC; Armaflex 520 Adhesive.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
 - d. K-Flex USA; R-373 Contact Adhesive.
 - e. RBX Corporation; Rubatex Contact Adhesive.
- D. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-127.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60/85-70.
 - d. Mon-Eco Industries, Inc.; 22-25.
- E. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-20.
 - d. Mon-Eco Industries, Inc.; 22-25.
- F. PVC Jacket Adhesive: Compatible with PVC jacket.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 739, Dow Silicone.
 - b. Johns Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
 - c. P.I.C. Plastics, Inc.; Welding Adhesive.

- d. Speedline Corporation; Polyco VP Adhesive.

2.4 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
- B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below-ambient services.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Products, Division of ITW; CP-35.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-90.
 - c. ITW TACC, Division of Illinois Tool Works; CB-50.
 - d. Marathon Industries, Inc.; 590.
 - e. Mon-Eco Industries, Inc.; 55-40.
 - f. Vimasco Corporation; 749.
 - 2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.
 - 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 - 4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
 - 5. Color: White.

2.5 SEALANTS

- A. Joint Sealants:
 - 1. Joint Sealants for Cellular-Glass Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Pittsburgh Corning Corporation; Pittseal 444.
 - 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 - 3. Permanently flexible, elastomeric sealant.
 - 4. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
 - 5. Color: White or gray.
- B. FSK and Metal Jacket Flashing Sealants:
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.

- b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
 - d. Mon-Eco Industries, Inc.; 44-05.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
 3. Fire- and water-resistant, flexible, elastomeric sealant.
 4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
 5. Color: Aluminum.
- C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 3. Fire- and water-resistant, flexible, elastomeric sealant.
 4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
 5. Color: White.

2.6 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.

2.7 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Polyester Fabric: Approximately 1 oz./sq. yd. (34 g/sq. m) with a thread count of 10 strands by 10 strands/sq. in. (4 strands by 4 strands/sq. mm), in a Leno weave, for pipe.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Mast-A-Fab.
 - b. Vimasco Corporation; Elastafab 894.

2.8 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

- B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Color: White.
 4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.
- C. Metal Jacket:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Metal Jacketing Systems.
 - b. ITW Insulation Systems; Aluminum and Stainless Steel Jacketing.
 - c. RPR Products, Inc.; Insul-Mate.
 2. Aluminum Jacket: Comply with ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005, Temper H-14.
- D. Underground Direct-Buried Jacket: 125-mil- (3.2-mm-) thick vapor barrier and waterproofing membrane consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pittsburgh Corning Corporation; Pittwrap.
 - b. Polyguard Products, Inc.; Insulrap No Torch 125.

2.9 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 428 AWF ASJ.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
 - c. Compac Corporation; 104 and 105.
 - d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.

2. Width: 3 inches (75 mm).
 3. Thickness: 11.5 mils (0.29 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 491 AWF FSK.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
 - c. Compac Corporation; 110 and 111.
 - d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.
 2. Width: 3 inches (75 mm).
 3. Thickness: 6.5 mils (0.16 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 370 White PVC tape.
 - b. Compac Corporation; 130.
 - c. Venture Tape; 1506 CW NS.
 2. Width: 2 inches (50 mm).
 3. Thickness: 6 mils (0.15 mm).
 4. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
 5. Elongation: 500 percent.
 6. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 488 AWF.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
 - c. Compac Corporation; 120.
 - d. Venture Tape; 3520 CW.
 2. Width: 2 inches (50 mm).
 3. Thickness: 3.7 mils (0.093 mm).
 4. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.

5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.

2.10 SECUREMENTS

A. Bands:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ITW Insulation Systems; Gerrard Strapping and Seals.
 - b. RPR Products, Inc.; Insul-Mate Strapping and Seals.
2. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 1/2 inch (13 mm) wide with wing seal or closed seal.

B. Insulation Pins and Hangers:

1. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; Tactoo Insul-Hangers, Series T.
 - 2) GEMCO; Perforated Base.
 - 3) Midwest Fasteners, Inc.; Spindle.
 - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - c. Spindle: Aluminum, fully annealed, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
2. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) GEMCO; Nylon Hangers.
 - 2) Midwest Fasteners, Inc.; Nylon Insulation Hangers.
 - b. Baseplate: Perforated, nylon sheet, 0.030 inch (0.76 mm) thick by 1-1/2 inches (38 mm) in diameter.

- c. Spindle: Nylon, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches (63 mm).
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- (19-mm-) wide, stainless steel or Monel.
- D. Wire: 0.062-inch (1.6-mm) soft-annealed, stainless steel.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. C & F Wire.
 - b. Childers Products.
 - c. PABCO Metals Corporation.
 - d. RPR Products, Inc.

2.11 PROTECTIVE SHIELDING GUARDS

- A. Protective Shielding Pipe Covers:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Engineered Brass Company.
 - b. Insul-Tect Products Co.; a subsidiary of MVG Molded Products.
 - c. McGuire Manufacturing.
 - d. Plumberex.
 - e. Truebro; a brand of IPS Corporation.
 - f. Zurn Industries, LLC; Tubular Brass Plumbing Products Operation.
 - 2. Description: Manufactured plastic wraps for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements.

2.12 CORNER ANGLES

- A. PVC Corner Angles: 30 mils (0.8 mm) thick, minimum 1 by 1 inch (25 by 25 mm), PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: 0.040 inch (1.0 mm) thick, minimum 1 by 1 inch (25 by 25 mm), aluminum according to ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105 or 5005; Temper H-14.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.

- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
1. Install insulation continuously through hangers and around anchor attachments.
 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth.
 2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches (50 mm) o.c.
 - a. For below-ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Cleanouts.

3.4 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.
 - 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches (50 mm).
 - 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
 - 1. Comply with requirements in Division 07 Section "Penetration Firestopping" for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
 - 1. Pipe: Install insulation continuously through floor penetrations.
 - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07 Section "Penetration Firestopping."

3.5 EQUIPMENT, TANK, AND VESSEL INSULATION INSTALLATION

- A. Mineral Fiber, Pipe and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive and anchor pins and speed washers.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of tank and vessel surfaces.
 2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
 3. Protect exposed corners with secured corner angles.
 4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
 - a. Do not weld anchor pins to ASME-labeled pressure vessels.
 - b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
 - c. On tanks and vessels, maximum anchor-pin spacing is 3 inches (75 mm) from insulation end joints, and 16 inches (400 mm) o.c. in both directions.
 - d. Do not overcompress insulation during installation.
 - e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
 - f. Impale insulation over anchor pins and attach speed washers.
 - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
 5. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
 6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches (150 mm) from each end. Install wire or cable between two circumferential girdles 12 inches (300 mm) o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches (1200 mm) o.c. Use this network for securing insulation with tie wire or bands.
 7. Stagger joints between insulation layers at least 3 inches (75 mm).
 8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
 9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
 10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.
- B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
 2. Seal longitudinal seams and end joints.

3.6 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
 5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
 9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

- D. Install removable insulation covers at locations indicated. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
 3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches (50 mm) over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
 5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.7 INSTALLATION OF CELLULAR-GLASS INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward clinched staples at 6 inches (150 mm) o.c.
4. For insulation with factory-applied jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as pipe insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.8 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as pipe insulation when available.
2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.9 INSTALLATION OF MINERAL-FIBER INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward clinched staples at 6 inches (150 mm) o.c.
4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.10 INSTALLATION OF POLYOLEFIN INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Seal split-tube longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyolefin sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of polyolefin pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install cut sections of polyolefin pipe and sheet insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.11 FIELD-APPLIED JACKET INSTALLATION

A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch (50-mm) overlap at seams and joints.
2. Embed glass cloth between two 0.062-inch- (1.6-mm-) thick coats of lagging adhesive.
3. Completely encapsulate insulation with coating, leaving no exposed insulation.

B. Where FSK jackets are indicated, install as follows:

1. Draw jacket material smooth and tight.
2. Install lap or joint strips with same material as jacket.
3. Secure jacket to insulation with manufacturer's recommended adhesive.
4. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

C. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

- D. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.

3.12 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09 painting Sections.
 - 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

3.13 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
 - 1. Drainage piping located in crawl spaces.
 - 2. Underground piping.
 - 3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.14 INDOOR PIPING INSULATION SCHEDULE

- A. Domestic Hot and Recirculated Hot Water:
 - 1. NPS 1-1/4 (DN 32) and Smaller: Insulation shall be one of the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.
 - b. Flexible Elastomeric: 3/4 inch (19 mm).
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch (13 mm) thick.
 - 2. NPS 1-1/2 (DN 40) and Larger: Insulation shall be one of the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.

- b. Flexible Elastomeric: 1 inch (25 mm) thick.
- c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.

B. Stormwater and Overflow:

- 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.
 - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.

C. Roof Drain and Overflow Drain Bodies:

- 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.
 - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.

D. Condensate:

- 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.
 - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.

E. Condensate Receptors and Drain Bodies:

- 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.
 - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.

3.15 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

A. Domestic Water Piping:

- 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Cellular Glass: 2 inches (50 mm) thick.
 - b. Flexible Elastomeric: 2 inches (50 mm) thick.
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches (50 mm) thick.

B. Domestic Hot and Recirculated Hot Water:

- 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Cellular Glass: 2 inches (50 mm) thick.
 - b. Flexible Elastomeric: 2 inches (50 mm) thick.
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches (50 mm) thick.

3.16 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Exposed:
 - 1. PVC: 20 mils (0.5 mm) thick.

END OF SECTION 220700

SECTION 221116 - DOMESTIC WATER PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Copper tube and fittings.
2. CPVC pipe and fittings.
3. Ductile-iron pipe and fittings.
4. Pipe joining materials.
5. Encasement for piping.
6. Dielectric fittings.

1.2 RELATED REQUIREMENTS

- ##### A. Division 22 Section "Facility Water Distribution Piping" for water-service piping and water meters outside the building from source to the point where water-service piping enters the building.

1.3 SUBMITTALS

- ##### A. Product Data: For each type of product indicated.
- ##### B. Field quality-control reports.

1.4 FIELD CONDITIONS

- ##### A. Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:
1. Notify Owner no fewer than two days in advance of proposed interruption of water service.
 2. Do not interrupt water service without Owner's written permission.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- ##### A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

- B. Potable-water piping and components shall comply with NSF 14 and NSF 61.

2.2 COPPER TUBE AND FITTINGS

- A. Hard Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B) or ASTM B 88, Type K (ASTM B 88M, Type A) water tube, drawn temper.
- B. Soft Copper Tube: ASTM B 88, Type K (ASTM B 88M, Type A) water tube, annealed temper.
- C. Cast-Copper, Solder-Joint Fittings: ASME B16.18, pressure fittings.
- D. Wrought-Copper, Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.
- E. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends.
- F. Copper Unions:
 - 1. MSS SP-123.
 - 2. Cast-copper-alloy, hexagonal-stock body.
 - 3. Ball-and-socket, metal-to-metal seating surfaces.
 - 4. Solder-joint or threaded ends.

2.3 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials:
 - 1. AWWA C110/A21.10, rubber, flat face, 1/8 inch (3.2 mm) thick or ASME B16.21, nonmetallic and asbestos free unless otherwise indicated.
 - 2. Full-face or ring type unless otherwise indicated.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Solder Filler Metals: ASTM B 32, lead-free alloys.
- D. Flux: ASTM B 813, water flushable.
- E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

2.4 ENCASEMENT FOR PIPING

- A. Standard: ASTM A 674 or AWWA C105/A21.5.
- B. Form: Sheet or tube.
- C. Color: Black or natural.

2.5 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Capitol Manufacturing Company; member of the Phoenix Forge Group.
 - b. Hart Industries International, Inc.
 - c. Jomar International.
 - d. Matco-Norca.
 - e. Watts; a division of Watts Water Technologies, Inc.
 - f. Wilkins; a Zurn company.
 2. Standard: ASSE 1079.
 3. Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
 4. End Connections: Solder-joint copper alloy and threaded ferrous.
- C. Dielectric Flanges:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Capitol Manufacturing Company; member of the Phoenix Forge Group.
 - b. Matco-Norca.
 - c. Watts; a division of Watts Water Technologies, Inc.
 - d. Wilkins; a Zurn company.
 2. Standard: ASSE 1079.
 3. Factory-fabricated, bolted, companion-flange assembly.
 4. Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
 5. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
- D. Dielectric-Flange Insulating Kits:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. Calpico, Inc.
 - c. Central Plastics Company.
 - d. Pipeline Seal and Insulator, Inc.
 2. Nonconducting materials for field assembly of companion flanges.
 3. Pressure Rating: 150 psig (1035 kPa).
 4. Gasket: Neoprene or phenolic.
 5. Bolt Sleeves: Phenolic or polyethylene.

6. Washers: Phenolic with steel backing washers.

E. Dielectric Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elster Perfection Corporation.
 - b. Grinnell Mechanical Products; Tyco Fire Products LP.
 - c. Matco-Norca.
 - d. Precision Plumbing Products, Inc.
 - e. Victaulic Company.
2. Standard: IAPMO PS 66.
3. Electroplated steel nipple complying with ASTM F 1545.
4. Pressure Rating and Temperature: 300 psig (2070 kPa) at 225 deg F (107 deg C).
5. End Connections: Male threaded or grooved.
6. Lining: Inert and noncorrosive, propylene.

PART 3 - EXECUTION

3.1 EARTHWORK

- A. Comply with requirements in Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.

3.2 PIPING INSTALLATION

- A. Basic piping installation requirements are specified in Division 22 Section "Common Work Results for Plumbing."
- B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."
- C. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight. Sleeves and mechanical sleeve seals are specified in Division 22 Section "Common Work Results for Plumbing."
- D. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve inside the building at each domestic water-service entrance. Comply with requirements for pressure gages in Division 22 Section "Meters and Gages for Plumbing Piping" and with requirements for drain valves and strainers in Division 22 Section "Domestic Water Piping Specialties."
- E. Install domestic water piping level with 0.25 percent slope downward toward drain and plumb.
- F. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.

- G. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.

3.3 JOINT CONSTRUCTION

- A. Basic piping joint construction requirements are specified in Division 22 Section "Common Work Results for Plumbing."
- B. Joints for Dissimilar-Material Piping: Make joints using adapters compatible with materials of both piping systems.

3.4 DIELECTRIC FITTING INSTALLATION

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.

3.5 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for pipe hanger, support products, and installation in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."
 - 1. Vertical Piping: MSS Type 8 or 42, clamps.
 - 2. Individual, Straight, Horizontal Piping Runs:
 - a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
 - b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet (30 m) if Indicated: MSS Type 49, spring cushion rolls.
 - 3. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 - 4. Base of Vertical Piping: MSS Type 52, spring hangers.
- B. Support vertical piping and tubing at base and at each floor.
- C. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch (10 mm).
- D. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
 - 1. NPS 3/4 (DN 20) and Smaller: 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
 - 2. NPS 1 and NPS 1-1/4 (DN 25 and DN 32): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
 - 3. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 - 4. NPS 2-1/2 (DN 65): 108 inches (2700 mm) with 1/2-inch (13-mm) rod.
 - 5. NPS 3 to NPS 5 (DN 80 to DN 125): 10 feet (3 m) with 1/2-inch (13-mm) rod.
 - 6. NPS 6 (DN 150): 10 feet (3 m) with 5/8-inch (16-mm) rod.
 - 7. NPS 8 (DN 200): 10 feet (3 m) with 3/4-inch (19-mm) rod.

- E. Install supports for vertical copper tubing every 10 feet (3 m).
- F. Support piping and tubing not listed in this article according to MSS SP-69 and manufacturer's written instructions.

3.6 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. When installing piping adjacent to equipment and machines, allow space for service and maintenance.
- C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.
- D. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:
 - 1. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
 - 2. Plumbing Fixtures: Cold- and hot-water-supply piping in sizes indicated, but not smaller than that required by plumbing code. Comply with requirements for connection sizes in Division 22 plumbing fixture Sections.
 - 3. Equipment: Cold- and hot-water-supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 (DN 65) and larger.

3.7 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification materials and installation in Division 22 Section "Identification for Plumbing Piping and Equipment."
- B. Label pressure piping with system operating pressure.

3.8 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Piping Inspections:
 - a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
 - b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
 - 1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing in after roughing in and before setting fixtures.

- 2) Final Inspection: Arrange for authorities having jurisdiction to observe tests specified in "Piping Tests" Subparagraph below and to ensure compliance with requirements.
 - c. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
 - d. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
2. Piping Tests:
 - a. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
 - b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
 - c. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 - d. Cap and subject piping to static water pressure of 1 ½ times working pressure but not less than 100 psig, without exceeding pressure rating of piping system materials. Isolate test source and allow it to stand for two hours. Leaks and loss in test pressure constitute defects that must be repaired.
 - e. Repair leaks and defects with new materials, and retest piping or portion thereof until satisfactory results are obtained.
 - f. Prepare reports for tests and for corrective action required.
- B. Domestic water piping will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.9 ADJUSTING

- A. Perform the following adjustments before operation:
 1. Close drain valves, hydrants, and hose bibbs.
 2. Open shutoff valves to fully open position.
 3. Open throttling valves to proper setting.
 4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
 - a. Adjust calibrated balancing valves to flows indicated.
 5. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
 6. Remove and clean strainer screens. Close drain valves and replace drain plugs.
 7. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and are clean and ready for use.
 8. Check plumbing specialties and verify proper settings, adjustments, and operation.

3.10 CLEANING

- A. Clean and disinfect potable domestic water piping as follows:
1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
 2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
 - a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
 - b. Fill and isolate system according to either of the following:
 - 1) Fill system or part thereof with water/chlorine solution with at least 50 ppm (50 mg/L) of chlorine. Isolate with valves and allow to stand for 24 hours.
 - 2) Fill system or part thereof with water/chlorine solution with at least 200 ppm (200 mg/L) of chlorine. Isolate and allow to stand for three hours.
 - c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
 - d. Repeat procedures if biological examination shows contamination.
 - e. Submit water samples in sterile bottles to authorities having jurisdiction.
- B. Clean non-potable domestic water piping as follows:
1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
 2. Use purging procedures prescribed by authorities having jurisdiction or; if methods are not prescribed, follow procedures described below:
 - a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
 - b. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.
- C. Prepare and submit reports of purging and disinfecting activities. Include copies of water-sample approvals from authorities having jurisdiction.
- D. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

3.11 PIPING SCHEDULE

- A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
- B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.
- C. Under-building-slab, domestic water, building-service piping, NPS 3 (DN 80) and smaller, shall be the following:

1. Soft copper tube, ASTM B 88, Type K (ASTM B 88M, Type A); wrought-copper, solder-joint fittings; and brazed joints.
- D. Under-building-slab, domestic water, building-service piping, NPS 4 to NPS 8 (DN 100 to DN 200) and larger, shall be one of the following:
1. Soft copper tube, ASTM B 88, Type K (ASTM B 88M, Type A); wrought-copper, solder-joint fittings; and brazed joints.
- E. Aboveground domestic water piping, NPS 1-1/2 (DN 40) and smaller, shall be one of the following:
1. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B); cast- or wrought-copper, solder-joint fittings; and soldered joints.
- F. Aboveground domestic water piping, NPS 2 to NPS 4 (DN 50 to DN 100), shall be one of the following:
1. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B); cast- or wrought-copper, solder-joint fittings; and soldered joints.

3.12 VALVE SCHEDULE

- A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
1. Shutoff Duty: Use ball valves for piping NPS 2 (DN 50) and smaller. Use butterfly or ball valves with flanged ends for piping NPS 2-1/2 (DN 65) and larger. Use butterfly valves with flanged ends for piping NPS 6 (DN 150) and larger.
 2. Hot-Water Circulation Piping, Balancing Duty: Calibrated balancing valves.
 3. Drain Duty: Hose-end drain valves.
- B. Use check valves to maintain correct direction of domestic water flow to and from equipment.

END OF SECTION 221116

This Page Intentionally Left Blank

SECTION 221119 - DOMESTIC WATER PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Vacuum breakers.
2. Backflow preventers.
3. Balancing valves.
4. Temperature-actuated, water mixing valves.
5. Strainers.
6. Outlet boxes.
7. Hose bibbs.
8. Drain valves.
9. Water-hammer arresters.
10. Water meters.

B. Related Requirements:

1. Division 22 Section "Meters and Gages for Plumbing Piping" for thermometers and pressure gages in domestic water piping.
2. Division 22 Section "Drinking Fountains and Water Coolers" for water filters for water coolers.

1.2 SUBMITTALS

- A. Product Data: For each type of product.
- B. Field quality-control reports.
- C. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR PIPING SPECIALTIES

- A. Potable-water piping and components shall comply with NSF 61 and NSF 14.

2.2 PERFORMANCE REQUIREMENTS

- A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig (860 kPa) unless otherwise indicated.

2.3 VACUUM BREAKERS

A. Pipe-Applied, Atmospheric-Type Vacuum Breakers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
 - b. Conbraco Industries, Inc.
 - c. Toro Company (The); Irrigation Div.
 - d. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
 - e. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
2. Standard: ASSE 1001.
3. Size: NPS 1/4 to NPS 3 (DN 8 to DN 80), as required to match connected piping.
4. Body: Bronze.
5. Inlet and Outlet Connections: Threaded.
6. Finish: Chrome plated.

B. Hose-Connection Vacuum Breakers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Conbraco Industries, Inc.
 - b. MIFAB, Inc.
 - c. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
 - d. Woodford Manufacturing Company; a division of WCM Industries, Inc.
 - e. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
2. Standard: ASSE 1011.
3. Body: Bronze, nonremovable, with manual drain.
4. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.
5. Finish: Rough bronze.

2.4 BACKFLOW PREVENTERS

A. Reduced-Pressure-Principle Backflow Preventers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
 - b. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
 - c. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
2. Standard: ASSE 1013.
3. Operation: Continuous-pressure applications.
4. Size: NPS 3/4 (DN 20).
5. Design Flow Rate: 10 gpm (38 L/s).

6. Pressure Loss at Design Flow Rate: 13 psig (90 kPa).
7. Body: Bronze.
8. End Connections: Threaded.
9. Configuration: Designed for horizontal, straight-through flow.
10. Accessories:
 - a. Valves: Ball type with threaded ends on inlet and outlet.
 - b. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.

2.5 BALANCING VALVES

A. Copper-Alloy Calibrated Balancing Valves <B.V.>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armstrong International, Inc.
 - b. ITT Corporation; Bell & Gossett Div.
 - c. NIBCO Inc.
 - d. TACO Incorporated.
 - e. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
2. Type: Ball or Y-pattern globe valve with two readout ports and memory-setting indicator.
3. Body: Brass or bronze.
4. Size: Same as connected piping.
5. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.

2.6 TEMPERATURE-ACTUATED, WATER MIXING VALVES

A. Primary, Thermostatic, Water Mixing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bradley Corporation.
 - b. Lawler Manufacturing Company, Inc.
 - c. Leonard Valve Company.
 - d. Powers; a division of Watts Water Technologies, Inc.
 - e. Symmons Industries, Inc.
2. Standard: ASSE 1017.
3. Pressure Rating: 125 psig (860 kPa) minimum unless otherwise indicated.
4. Type: Exposed-mounted, thermostatically controlled, water mixing valve.
5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Threaded union inlets and outlet.
7. Accessories: Manual temperature control, check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.
8. Tempered-Water Setting: 110 deg F (43 deg C).

9. Valve Finish: Rough bronze.
10. Piping Finish: Copper.

B. Individual-Fixture, Water Tempering Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bradley Corporation.
 - b. Lawler Manufacturing Company, Inc.
 - c. Leonard Valve Company.
 - d. Powers; a division of Watts Water Technologies, Inc.
 - e. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
 - f. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
2. Standard: ASSE 1070, thermostatically controlled, water tempering valve.
3. Pressure Rating: 125 psig (860 kPa) minimum unless otherwise indicated.
4. Body: Bronze or polysulfone with corrosion-resistant interior components.
5. Temperature Control: Adjustable.
6. Inlets and Outlet: Threaded.
7. Tempered-Water Setting: 110 deg F (43 deg C).

2.7 STRAINERS FOR DOMESTIC WATER PIPING

A. Y-Pattern Strainers:

1. Pressure Rating: 125 psig (860 kPa) minimum unless otherwise indicated.
2. Body: Bronze.
3. End Connections: Threaded.
4. Screen: Stainless steel with round perforations unless otherwise indicated.
5. Perforation Size:
 - a. Strainers NPS 2 (DN 50) and Smaller: 0.020 inch (0.51 mm).
6. Drain: Pipe plug.

2.8 OUTLET BOXES

A. Clothes Washer Outlet Boxes <WB-1>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Acorn Engineering Company.
 - b. Guy Gray Manufacturing Co., Inc.
 - c. IPS Corporation.
 - d. Oatey.
2. Mounting: Recessed.
3. Material and Finish: Enameled-steel or epoxy-painted-steel box and faceplate.

4. Faucet: Combination valved fitting or separate hot- and cold-water valved fittings complying with ASME A112.18.1. Include garden-hose thread complying with ASME B1.20.7 on outlets.
5. Supply Shutoff Fittings: NPS 1/2 (DN 15) ball valves and NPS 1/2 (DN 15) copper, water tubing.
6. Drain: NPS 2 (DN 50) standpipe and P-trap for direct waste connection to drainage piping.

B. Icemaker Outlet Boxes <IB-1>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Acorn Engineering Company.
 - b. Guy Gray Manufacturing Co., Inc.
 - c. IPS Corporation.
 - d. Oatey.
2. Mounting: Recessed.
3. Material and Finish: Enameled-steel or epoxy-painted-steel box and faceplate.
4. Faucet: Valved fitting complying with ASME A112.18.1. Include NPS 1/2 (DN 15) or smaller copper tube outlet.
5. Supply Shutoff Fitting: NPS 1/2 (DN 15) ball valve and NPS 1/2 (DN 15) copper, water tubing.

2.9 HOSE BIBBS

A. Hose Bibbs <HB-1>:

1. Standard: ASME A112.18.1 for sediment faucets.
2. Body Material: Bronze.
3. Seat: Bronze, replaceable.
4. Supply Connections: NPS 3/4 (DN 20) threaded or solder-joint inlet.
5. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
6. Pressure Rating: 125 psig (860 kPa).
7. Vacuum Breaker: Integral or field-installation, nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
8. Finish for Equipment Rooms: Rough bronze, or chrome or nickel plated.
9. Finish for Service Areas: Rough bronze, or chrome or nickel plated.
10. Finish for Finished Rooms: Chrome or nickel plated.
11. Operation for Equipment Rooms: Wheel handle.
12. Operation for Service Areas: Operating key.
13. Operation for Finished Rooms: Operating key.
14. Include operating key with each operating-key hose bibb.
15. Include integral wall flange with each chrome- or nickel-plated hose bibb.

2.10 DRAIN VALVES

A. Ball-Valve-Type, Hose-End Drain Valves:

1. Standard: MSS SP-110 for standard-port, two-piece ball valves.
2. Pressure Rating: 400-psig (2760-kPa) minimum CWP.
3. Size: NPS 3/4 (DN 20).
4. Body: Copper alloy.
5. Ball: Chrome-plated brass.
6. Seats and Seals: Replaceable.
7. Handle: Vinyl-covered steel.
8. Inlet: Threaded or solder joint.
9. Outlet: Threaded, short nipple with garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

2.11 WATER-HAMMER ARRESTERS

A. Water-Hammer Arresters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMTROL, Inc.
 - b. MIFAB, Inc.
 - c. Precision Plumbing Products, Inc.
 - d. Sioux Chief Manufacturing Company, Inc.
 - e. Watts Drainage Products.
 - f. Zurn Industries, LLC; Plumbing Products Group; Specification Drainage Products.
2. Standard: ASSE 1010 or PDI-WH 201.
3. Type: Copper tube with piston.
4. Size: ASSE 1010, Sizes AA and A through F, or PDI-WH 201, Sizes A through F.

2.12 WATER METERS

A. Displacement-Type Water Meters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AALIAN; a Venture Measurement product line.
 - b. Badger Meter, Inc.
 - c. Mueller Co. Ltd.; a subsidiary of Mueller Water Products Inc.
 - d. Sensus.
2. Description:
 - a. Standard: AWWA C700.
 - b. Pressure Rating: 150-psig (1035-kPa) working pressure.
 - c. Body Design: Nutating disc; totalization meter.
 - d. Registration: In gallons (liters) or cubic feet (cubic meters) as required by utility company.
 - e. Case: Bronze.

f. End Connections: Threaded.

- B. Remote Registration System: Direct-reading type complying with AWWA C706; modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install backflow preventers in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.
1. Locate backflow preventers in same room as connected equipment or system.
 2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe-to-floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are unacceptable for this application.
 3. Do not install bypass piping around backflow preventers.
 4. Install backflow preventers 18-36" above finished floor. Test results to be turned over to grounds department within 10 working days for annual inspection scheduling.
- B. Install balancing valves in locations where they can easily be adjusted.
- C. Install temperature-actuated, water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.
1. Install cabinet-type units recessed in or surface mounted on wall as specified.
- D. Install outlet boxes recessed in wall or surface mounted on wall. Install 2-by-4-inch (38-by-89-mm) fire-retardant-treated-wood blocking, wall reinforcement between studs. Comply with requirements for fire-retardant-treated-wood blocking in Division 06 Section "Rough Carpentry."
- E. Install water-hammer arresters in water piping according to PDI-WH 201.

3.2 CONNECTIONS

- A. Comply with requirements for piping specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

3.3 LABELING AND IDENTIFYING

- A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
1. Pressure vacuum breakers.

2. Reduced-pressure-principle backflow preventers.
3. Water pressure-reducing valves.
4. Calibrated balancing valves.
5. Primary, thermostatic, water mixing valves.
6. Outlet boxes.

- B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:

1. Test each reduced-pressure-principle backflow preventer according to authorities having jurisdiction and the device's reference standard.
2. Test results to be turned over to grounds department within 10 working days for annual inspection scheduling.

- B. Domestic water piping specialties will be considered defective if they do not pass tests and inspections.

- C. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Set field-adjustable pressure set points of water pressure-reducing valves.

- B. Set field-adjustable flow set points of balancing valves.

- C. Set field-adjustable temperature set points of temperature-actuated, water mixing valves.

END OF SECTION 221119

SECTION 221316 - SANITARY WASTE AND VENT PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Pipe, tube, and fittings.
2. Specialty pipe fittings.

B. Related Sections:

1. Division 22 Section "Facility Sanitary Sewers" for sanitary sewerage piping and structures outside the building.

1.2 PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:

1. Soil, Waste, and Vent Piping: 10-foot head of water (30 kPa).
2. Waste, Force-Main Piping: 150 psig (1035 kPa).

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Field quality-control reports.

1.4 QUALITY ASSURANCE

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

B. Comply with NSF/ANSI 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-dwv" for plastic drain, waste, and vent piping and "NSF-sewer" for plastic sewer piping.

1.5 PROJECT CONDITIONS

A. Interruption of Existing Sanitary Waste Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:

1. Notify Owner no fewer than two days in advance of proposed interruption of sanitary waste service.
2. Do not proceed with interruption of sanitary waste service without Owner's written permission.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.2 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

- A. Pipe and Fittings: ASTM A 74, Service class.
- B. Gaskets: ASTM C 564, rubber.

2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

- A. Pipe and Fittings: ASTM A 888 or CISPI 301.
- B. CISPI, Hubless-Piping Couplings:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ANACO-Husky.
 - b. Fernco Inc.
 - c. Matco-Norca, Inc.
 - d. MIFAB, Inc.
 - e. Tyler Pipe.
 2. Standards: ASTM C 1277 and CISPI 310.
 3. Description: Stainless-steel corrugated shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.
- C. Heavy-Duty, Hubless-Piping Couplings:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ANACO-Husky.
 - b. Clamp-All Corp.
 - c. MIFAB, Inc.
 - d. Tyler Pipe.
 2. Standards: ASTM C 1277 and ASTM C 1540.

3. Description: Stainless-steel shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

2.4 COPPER TUBE AND FITTINGS

- A. Copper DWV Tube: ASTM B 306, drainage tube, drawn temper.
- B. Copper Drainage Fittings: ASME B16.23, cast copper or ASME B16.29, wrought copper, solder-joint fittings.
- C. Hard Copper Tube: ASTM B 88, Type L and Type M (ASTM B 88M, Type B and Type C), water tube, drawn temper.
- D. Soft Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B), water tube, annealed temper.
- E. Copper Pressure Fittings:
 1. Copper Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint fittings. Furnish wrought-copper fittings if indicated.
 2. Copper Unions: MSS SP-123, copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
- F. Copper Flanges: ASME B16.24, Class 150, cast copper with solder-joint end.
 1. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
 2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- G. Solder: ASTM B 32, lead free with ASTM B 813, water-flushable flux.

2.5 PVC PIPE AND FITTINGS

- A. Solid-Wall PVC Pipe: ASTM D 2665, drain, waste, and vent.
- B. PVC Socket Fittings: ASTM D 2665, made to ASTM D 3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.
- C. Adhesive Primer: ASTM F 656.
 1. Adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Solvent Cement: ASTM D 2564.
 1. Solvent cement shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.6 SPECIALTY PIPE FITTINGS

A. Transition Couplings:

1. General Requirements: Fitting or device for joining piping with small differences in OD's or of different materials. Include end connections same size as and compatible with pipes to be joined.
2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
3. Unshielded, Nonpressure Transition Couplings:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Dallas Specialty & Mfg. Co.
 - 2) Fernco Inc.
 - 3) Mission Rubber Company; a division of MCP Industries, Inc.
 - 4) Plastic Oddities; a division of Diverse Corporate Technologies, Inc.
 - b. Standard: ASTM C 1173.
 - c. Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
 - d. Sleeve Materials:
 - 1) For Cast-Iron Soil Pipes: ASTM C 564, rubber.
 - 2) For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
 - 3) For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.
4. Pressure Transition Couplings:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Cascade Waterworks Mfg. Co.
 - 2) Dresser, Inc.
 - 3) Romac Industries, Inc.
 - 4) Smith-Blair, Inc.; a Sensus company.
 - 5) The Ford Meter Box Company, Inc.
 - 6) Viking Johnson.
 - b. Standard: AWWA C219.
 - c. Description: Metal, sleeve-type same size as, with pressure rating at least equal to, and ends compatible with, pipes to be joined.
 - d. Center-Sleeve Material: Manufacturer's standard.
 - e. Gasket Material: Natural or synthetic rubber.
 - f. Metal Component Finish: Corrosion-resistant coating or material.

B. Dielectric Fittings:

1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
2. Dielectric Unions:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Capitol Manufacturing Company.
 - 2) Jomar International Ltd.
 - 3) Matco-Norca, Inc.
 - 4) Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - 5) Wilkins; a Zurn company.
 - b. Description:
 - 1) Standard: ASSE 1079.
 - 2) Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
 - 3) End Connections: Solder-joint copper alloy and threaded ferrous.
3. Dielectric Flanges:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Capitol Manufacturing Company.
 - 2) Matco-Norca, Inc.
 - 3) Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - 4) Wilkins; a Zurn company.
 - b. Description:
 - 1) Standard: ASSE 1079.
 - 2) Factory-fabricated, bolted, companion-flange assembly.
 - 3) Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
 - 4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

PART 3 - EXECUTION

3.1 EARTH MOVING

- A. Comply with requirements for excavating, trenching, and backfilling specified in Division 31 Section "Earth Moving."

3.2 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction

loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.

- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if two fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
- K. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
- L. Install soil and waste drainage and vent piping at the following minimum slopes unless otherwise indicated:
 - 1. Building Sanitary Drain: 2 percent downward in direction of flow for piping NPS 2-1/2 (DN 65) and smaller; 1 percent downward in direction of flow for piping NPS 3 (DN 80) and larger.
 - 2. Horizontal Sanitary Drainage Piping: 2 percent downward in direction of flow.
 - 3. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.
- M. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
- N. Install aboveground PVC piping according to ASTM D 2665.

- O. Install underground PVC piping according to ASTM D 2321.
- P. Install underground, copper, force-main tubing according to CDA's "Copper Tube Handbook."
- Q. Install force mains at elevations indicated.
- R. Plumbing Specialties:
 - 1. Install backwater valves in sanitary waste gravity-flow piping. Comply with requirements for backwater valves specified in Division 22 Section "Sanitary Waste Piping Specialties."
 - 2. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping. Comply with requirements for cleanouts specified in Division 22 Section "Sanitary Waste Piping Specialties."
 - 3. Install drains in sanitary drainage gravity-flow piping. Comply with requirements for drains specified in Division 22 Section "Sanitary Waste Piping Specialties."
- S. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
- T. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22 Section "Common Work Results for Plumbing."
- U. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22 Section "Common Work Results for Plumbing."
- V. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Common Work Results for Plumbing."

3.3 JOINT CONSTRUCTION

- A. Join hub-and-spigot, cast-iron soil piping with gasket joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
- B. Join hubless, cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.
- C. Join copper tube and fittings with soldered joints according to ASTM B 828. Use ASTM B 813, water-flushable, lead-free flux and ASTM B 32, lead-free-alloy solder.
- D. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in cross pattern.
- E. Plastic, Nonpressure-Piping, Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
2. PVC Piping: Join according to ASTM D 2855 and ASTM D 2665 Appendices.

3.4 SPECIALTY PIPE FITTING INSTALLATION

A. Transition Couplings:

1. Install transition couplings at joints of piping with small differences in OD's.
2. In Drainage Piping: Unshielded, nonpressure transition couplings.
3. In Aboveground Force Main Piping: Fitting-type transition couplings.
4. In Underground Force Main Piping:
 - a. NPS 1-1/2 (DN 40) and Smaller: Fitting-type transition couplings.
 - b. NPS 2 (DN 50) and Larger: Pressure transition couplings.

B. Dielectric Fittings:

1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
2. Dielectric Fittings for NPS 2 (DN 50) and Smaller: Use dielectric unions.
3. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric flanges.

3.5 VALVE INSTALLATION

A. General valve installation requirements are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."

B. Shutoff Valves:

1. Install shutoff valve on each sewage pump discharge.
2. Install gate valve for piping NPS 2 (DN 50) and smaller.
3. Install gate valve for piping NPS 2-1/2 (DN 65) and larger.

C. Check Valves: Install swing check valve, between pump and shutoff valve, on each sewage pump discharge.

D. Backwater Valves: Install backwater valves in piping subject to backflow.

1. Horizontal Piping: Horizontal backwater valves.
2. Floor Drains: Drain outlet backwater valves unless drain has integral backwater valve.
3. Install backwater valves in accessible locations.
4. Comply with requirements for backwater valve specified in Division 22 Section "Sanitary Waste Piping Specialties."

3.6 HANGER AND SUPPORT INSTALLATION

A. Comply with requirements for pipe hanger and support devices and installation specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

1. Vertical Piping: MSS Type 8 or Type 42, clamps.
 2. Install individual, straight, horizontal piping runs:
 - a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
 - b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet (30 m) if Indicated: MSS Type 49, spring cushion rolls.
 3. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 4. Base of Vertical Piping: MSS Type 52, spring hangers.
- B. Support horizontal piping and tubing within 12 inches (300 mm) of each fitting, valve, and coupling.
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.
- E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
 2. NPS 3 (DN 80): 60 inches (1500 mm) with 1/2-inch (13-mm) rod.
 3. NPS 4 and NPS 5 (DN 100 and DN 125): 60 inches (1500 mm) with 5/8-inch (16-mm) rod.
 4. NPS 6 and NPS 8 (DN 150 and DN 200): 60 inches (1500 mm) with 3/4-inch (19-mm) rod.
 5. NPS 10 and NPS 12 (DN 250 and DN 300): 60 inches (1500 mm) with 7/8-inch (22-mm) rod.
 6. Spacing for 10-foot (3 m) lengths may be increased to 10 feet (3 m). Spacing for fittings is limited to 60 inches (1500 mm).
- F. Install supports for vertical cast-iron soil piping every 15 feet (4.5 m).
- G. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/4 (DN 32): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
 2. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 3. NPS 2-1/2 (DN 65): 108 inches (2700 mm) with 1/2-inch (13-mm) rod.
 4. NPS 3 and NPS 5 (DN 80 and DN 125): 10 feet (3 m) with 1/2-inch (13-mm) rod.
 5. NPS 6 (DN 150): 10 feet (3 m) with 5/8-inch (16-mm) rod.
 6. NPS 8 (DN 200): 10 feet (3 m) with 3/4-inch (19-mm) rod.
- H. Install supports for vertical copper tubing every 10 feet (3 m).
- I. Install hangers for PVC piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 48 inches (1200 mm) with 3/8-inch (10-mm) rod.
2. NPS 3 (DN 80): 48 inches (1200 mm) with 1/2-inch (13-mm) rod.
3. NPS 4 and NPS 5 (DN 100 and DN 125): 48 inches (1200 mm) with 5/8-inch (16-mm) rod.
4. NPS 6 and NPS 8 (DN 150 and DN 200): 48 inches (1200 mm) with 3/4-inch (19-mm) rod.
5. NPS 10 and NPS 12 (DN 250 and DN 300): 48 inches (1200 mm) with 7/8-inch (22-mm) rod.

J. Install supports for vertical PVC piping every 48 inches (1200 mm).

K. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.7 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.

C. Connect drainage and vent piping to the following:

1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code.
2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
3. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code.
4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
5. Comply with requirements for backwater valves, cleanouts, and drains specified in Division 22 Section "Sanitary Waste Piping Specialties."
6. Equipment: Connect drainage piping as indicated. Provide shutoff valve if indicated and union for each connection. Use flanges instead of unions for connections NPS 2-1/2 (DN 65) and larger.

D. Connect force-main piping to the following:

1. Sewage Pump: To sewage pump discharge.

E. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

F. Make connections according to the following unless otherwise indicated:

1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.

2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.

3.8 IDENTIFICATION

- A. Identify exposed sanitary waste and vent piping. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.9 FIELD QUALITY CONTROL

- A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
 1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
 2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.
- C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
- D. Test sanitary drainage and vent piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
 1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 2. Leave uncovered and unconcealed new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 3. Roughing-in Plumbing Test Procedure: Test drainage and vent piping except outside leaders on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water (30 kPa). From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
 4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg (250 Pa). Use U-tube or manometer inserted in trap of water closet to measure this pressure. Air pressure must remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.
 5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
 6. Prepare reports for tests and required corrective action.

- E. Test force-main piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
 - 1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 - 2. Cap and subject piping to static-water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
 - 3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
 - 4. Prepare reports for tests and required corrective action.

3.10 CLEANING AND PROTECTION

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.
- D. Exposed PVC Piping: Protect plumbing vents exposed to sunlight with two coats of water-based latex paint.

3.11 PIPING SCHEDULE

- A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
- B. Aboveground, soil and waste piping NPS 4 (DN 100) and smaller shall be any of the following:
 - 1. Hubless, cast-iron soil pipe and fittings; heavy-duty hubless-piping couplings; and coupled joints.
 - 2. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.
- C. Aboveground, soil and waste piping NPS 5 (DN 125) and larger shall be any of the following:
 - 1. Hubless, cast-iron soil pipe and fittings; heavy-duty hubless-piping couplings; and coupled joints.
 - 2. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.
- D. Aboveground, vent piping NPS 4 (DN 100) and smaller shall be any of the following:
 - 1. Hubless, cast-iron soil pipe and fittings; CISPI hubless-piping couplings; and coupled joints.
 - 2. Copper DWV Tube: ASTM B 306, drainage tube, drawn temper, soldered joints.
 - 3. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.

- E. Underground, soil, waste, and vent piping NPS 4 (DN 100) and smaller shall be any of the following:
 - 1. Solid wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
 - 2. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.

- F. Underground, soil and waste piping NPS 5 (DN 125) and larger shall be any of the following:
 - 1. Service class, cast-iron soil piping; gaskets; and gasketed joints.
 - 2. Solid-wall PVC pipe; PVC socket fittings; and solvent-cemented joints.
 - 3. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.

- G. Underground, grease waste and vent piping NPS 4 (DN 100) and smaller shall be the following:
 - 1. Solid wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
 - 2. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.

END OF SECTION 221316

This Page Intentionally Left Blank

SECTION 221319 - SANITARY WASTE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Backwater valves.
2. Cleanouts.
3. Floor drains.
4. Air-admittance valves.
5. Roof flashing assemblies.
6. Through-penetration firestop assemblies.
7. Trap-seal protection devices
8. Miscellaneous sanitary drainage piping specialties.
9. Flashing materials.
10. Solids interceptors.

B. Related Requirements:

1. Division 22 Section "Storm Drainage Piping Specialties" for storm drainage piping inside the building, drainage piping specialties, and drains.
2. Division 33 Section "Storm Utility Drainage Piping" for storm draining piping and piping specialties outside the building.

1.2 DEFINITIONS

- A. FRP: Fiberglass-reinforced plastic.
- B. HDPE: High-density polyethylene plastic.
- C. PE: Polyethylene plastic.
- D. PP: Polypropylene plastic.
- E. PVC: Polyvinyl chloride plastic.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For drainage piping specialties to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.
- B. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic sanitary piping specialty components.

1.7 COORDINATION

- A. Coordinate size and location of roof penetrations.

PART 2 - PRODUCTS

2.1 BACKWATER VALVES

- A. Horizontal, Cast-Iron Backwater Valves:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Smith, Jay R. Mfr. Co.; Division of Smith Industries, Inc.
 - c. Watts Drainage Products Inc.
 - d. Zurn Plumbing Products Group; Specification Drainage Operation.
 - 2. Standard: ASME A112.14.1.
 - 3. Size: Same as connected piping.
 - 4. Body: Cast iron.
 - 5. Cover: Cast iron with bolted access check valve.
 - 6. End Connections: Hub and spigot or hubless.
 - 7. Type Check Valve: Removable, bronze, swing check, factory assembled or field modified to hang open for airflow unless subject to backflow condition.
 - 8. Extension: ASTM A 74, Service class; full-size, cast-iron, soil-pipe extension to field-installed cleanout at floor; replaces backwater valve cover.

2.2 CLEANOUTS

- A. Exposed Metal Cleanouts <CO>:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Josam Company; Josam Div.
 - b. Sioux Chief Manufacturing Company, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Watts Drainage Products Inc.
 - e. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M for cast iron for cleanout test tee.
 3. Size: Same as connected drainage piping
 4. Body Material: Hubless, cast-iron soil pipe test tee as required to match connected piping.
 5. Closure: Countersunk, brass plug.
 6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
- B. Metal Floor Cleanouts <ECO>:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Sioux Chief Manufacturing Company, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Watts Drainage Products Inc.
 - e. Zurn Plumbing Products Group; Specification Drainage Operation.
 2. Standard: ASME A112.36.2M for threaded, adjustable housing cleanout.
 3. Size: Same as connected branch.
 4. Type: Threaded, adjustable housing.
 5. Body or Ferrule: Cast iron.
 6. Clamping Device: Not required.
 7. Outlet Connection: Spigot.
 8. Closure: Plastic plug.
 9. Adjustable Housing Material: Cast iron with threads.
 10. Frame and Cover Material and Finish: Nickel-bronze, copper alloy.
 11. Frame and Cover Shape: Round.
 12. Top Loading Classification: Heavy Duty.
 13. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.
- C. Metal Floor Cleanouts <FCO>:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Sioux Chief Manufacturing Company, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Watts Drainage Products Inc.
 - e. Zurn Plumbing Products Group; Specification Drainage Operation.
 2. Standard: ASME A112.36.2M for threaded, adjustable housing cleanout.
 3. Size: Same as connected branch.
 4. Type: Threaded, adjustable housing.

5. Body or Ferrule: Cast iron.
6. Clamping Device: Not required.
7. Outlet Connection: Spigot.
8. Closure: Plastic plug.
9. Adjustable Housing Material: Cast iron with threads.
10. Frame and Cover Material and Finish: Nickel-bronze, copper alloy.
11. Frame and Cover Shape: Round.
12. Top Loading Classification: Light Duty.
13. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.

D. Cast-Iron Wall Cleanouts <WCO>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Sioux Chief Manufacturing Company, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Watts Drainage Products Inc.
 - e. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk, drilled-and-threaded brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
7. Wall Access: Round, flat, chrome-plated brass or stainless-steel cover plate with screw.

2.3 FLOOR DRAINS

A. Cast-Iron Floor Drains <FD-1>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Sioux Chief Manufacturing Company, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Watts Drainage Products Inc.
 - e. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.6.3.
3. Pattern: Floor drain.
4. Body Material: Gray iron.
5. Seepage Flange: Required.
6. Anchor Flange: Required.
7. Clamping Device: Required.
8. Outlet: Bottom.
9. Coating on Interior and Exposed Exterior Surfaces: Not required.
10. Sediment Bucket: Not required.

11. Top or Strainer Material: Nickel bronze.
12. Top of Body and Strainer Finish: Nickel bronze.
13. Top Shape: Round.
14. Dimensions of Top or Strainer: Per Floor Drain Schedule on drawings.
15. Top Loading Classification: Light Duty.
16. Funnel: Not required.
17. Inlet Fitting: Not required.
18. Trap Material: Same as Sanitary Waste Piping material.
19. Trap Pattern: Standard P-trap.
20. Trap Features: Not required.

B. Cast-Iron Floor Drains <FD-2>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Sioux Chief Manufacturing Company, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Watts Drainage Products Inc.
 - e. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.6.3.
3. Pattern: Floor drain.
4. Body Material: Gray iron.
5. Seepage Flange: Required.
6. Anchor Flange: Required.
7. Clamping Device: Required.
8. Outlet: Bottom.
9. Coating on Interior and Exposed Exterior Surfaces: Not required.
10. Sediment Bucket: Required.
11. Top or Strainer Material: Nickel bronze.
12. Top of Body and Strainer Finish: Nickel bronze.
13. Top Shape: Round.
14. Dimensions of Top or Strainer: Per Floor Drain Schedule on drawings.
15. Top Loading Classification: Heavy Duty.
16. Funnel: Not required.
17. Inlet Fitting: Not required.
18. Trap Material: Same as Sanitary Waste Piping material.
19. Trap Pattern: Standard P-trap.
20. Trap Features: Not required.

C. Cast-Iron Floor Drains <FD-3>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Sioux Chief Manufacturing Company, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Watts Drainage Products Inc.

- e. Zurn Plumbing Products Group; Specification Drainage Operation.
 - 2. Standard: ASME A112.6.3.
 - 3. Pattern: Floor drain.
 - 4. Body Material: Gray iron.
 - 5. Seepage Flange: Required.
 - 6. Anchor Flange: Required.
 - 7. Clamping Device: Required.
 - 8. Outlet: Bottom.
 - 9. Coating on Interior and Exposed Exterior Surfaces: Not required.
 - 10. Sediment Bucket: Required.
 - 11. Top or Strainer Material: Nickel bronze.
 - 12. Top of Body and Strainer Finish: Nickel bronze.
 - 13. Top Shape: Round.
 - 14. Dimensions of Top or Strainer: Per Floor Drain Schedule on drawings.
 - 15. Top Loading Classification: Light Duty.
 - 16. Funnel: Not required.
 - 17. Inlet Fitting: Not required.
 - 18. Trap Material: Same as Sanitary Waste Piping material.
 - 19. Trap Pattern: Standard P-trap.
 - 20. Trap Features: Not required.

2.4 AIR-ADMITTANCE VALVES

A. Fixture Air-Admittance Valves <AAV>:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ayrlett, LLC.
 - b. Oatey.
 - c. ProSet Systems Inc.
 - d. Studor, Inc.
- 2. Standard: ASSE 1051, Type A for single fixture or Type B for branch piping.
- 3. Housing: Plastic.
- 4. Operation: Mechanical sealing diaphragm.
- 5. Size: Same as connected fixture or branch vent piping.

2.5 ROOF FLASHING ASSEMBLIES

A. Roof Flashing Assemblies:

- 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Acorn Engineering Company; Elmdor/Stoneman Div.
 - b. Thaler Metal Industries Ltd.

- B. Description: Manufactured assembly made of 4.0-lb/sq. ft. (20-kg/sq. m), 0.0625-inch- (1.6-mm-) thick, lead flashing collar and skirt extending at least 8 inches (200 mm) from pipe, with galvanized-steel boot reinforcement and counterflashing fitting.

1. Open-Top Vent Cap: Without cap.

2.6 THROUGH-PENETRATION FIRESTOP ASSEMBLIES

- A. Through-Penetration Firestop Assemblies:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ProSet Systems Inc.
2. Standard: UL 1479 assembly of sleeve and stack fitting with firestopping plug.
3. Size: Same as connected soil, waste, or vent stack.
4. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.
5. Stack Fitting: ASTM A 48/A 48M, gray-iron, hubless-pattern, wye branch with neoprene O-ring at base and gray-iron plug in thermal-release harness. Include PVC protective cap for plug.

2.7 TRAP SEAL PROTECTION DEVICES

- A. Barrier Type Trap Seal Protection Devices:

1. Neoprene Diaphragm Type:
 - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) SureSeal Manufacturing.
 - b. Standard: ASSE 1072-2007.
 - c. Body: ABS Plastic
 - d. Diaphragm & Sealing Gasket: Neoprene Rubber
 - e. Size: 2 inch (50 mm), 3 inch (75 mm), or 4 inch (100 mm).
 - f. Gravity Drain Outlet Connection: Compression fit sealing gasket 80 durometer.
2. Elastomeric Membrane Type:
 - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) ProVent Systems, Inc.
 - 2) Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.

b. Description:

- 1) Material: Molded elastomer.
- 2) Operation: Opens for wastewater flowing through floor drain. Closes and returns to original molded shape after wastewater discharge is complete.

2.8 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

A. Open Drains <HD>:

1. Description: Shop or field fabricated from same material used for Sanitary Waste Piping. Include P-trap and no hub riser section.
2. Size: Same as connected waste piping.

B. Air-Gap Fittings:

1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
2. Body: Bronze or cast iron.
3. Inlet: Opening in top of body.
4. Outlet: Larger than inlet.
5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.

C. Sleeve Flashing Device:

1. Description: Manufactured, cast-iron fitting, with clamping device, that forms sleeve for pipe floor penetrations of floor membrane. Include galvanized-steel pipe extension in top of fitting that will extend 1 inch (25 mm) above finished floor and galvanized-steel pipe extension in bottom of fitting that will extend through floor slab.
2. Size: As required for close fit to riser or stack piping.

D. Stack Flashing Fittings:

1. Description: Counterflashing-type, cast-iron fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.
2. Size: Same as connected stack vent or vent stack.

E. Vent Caps:

1. Description: Cast-iron body with threaded or hub inlet and vandal-proof design. Include vented hood and setscrews to secure to vent pipe.
2. Size: Same as connected stack vent or vent stack.

F. Expansion Joints:

1. Standard: ASME A112.21.2M.
2. Body: Cast iron with bronze sleeve, packing, and gland.
3. End Connections: Matching connected piping.
4. Size: Same as connected soil, waste, or vent piping.

2.9 FLASHING MATERIALS

- A. Lead Sheet: ASTM B 749, Type L51121, copper bearing, with the following minimum weights and thicknesses, unless otherwise indicated:
 - 1. General Use: 4.0-lb/sq. ft. (20-kg/sq. m), 0.0625-inch (1.6-mm) thickness.
 - 2. Vent Pipe Flashing: 3.0-lb/sq. ft. (15-kg/sq. m), 0.0469-inch (1.2-mm) thickness.
 - 3. Burning: 6-lb/sq. ft. (30-kg/sq. m), 0.0938-inch (2.4-mm) thickness.
- B. Copper Sheet: ASTM B 152/B 152M, of the following minimum weights and thicknesses, unless otherwise indicated:
 - 1. General Applications: 12 oz./sq. ft. (3.7 kg/sq. m or 0.41-mm thickness).
 - 2. Vent Pipe Flashing: 8 oz./sq. ft. (2.5 kg/sq. m or 0.27-mm thickness).
- C. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04-inch (1.01-mm) minimum thickness, unless otherwise indicated. Include G90 (Z275) hot-dip galvanized, mill-phosphatized finish for painting if indicated.
- D. Elastic Membrane Sheet: ASTM D 4068, flexible, chlorinated polyethylene, 40-mil (1.01-mm) minimum thickness.
- E. Fasteners: Metal compatible with material and substrate being fastened.
- F. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.
- G. Solder: ASTM B 32, lead-free alloy.
- H. Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic.

2.10 SOLIDS INTERCEPTORS

- A. Solids Interceptors:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - c. Watts Drainage Products Inc.
 - d. Zurn Plumbing Products Group; Specification Drainage Operation.
 - 2. Type: Factory-fabricated interceptor made for removing and retaining sediment from wastewater.
 - 3. Body Material: Cast iron or steel.
 - 4. Interior Separation Device: Screens.
 - 5. Interior Lining: Corrosion-resistant enamel.
 - 6. Exterior Coating: Corrosion-resistant enamel.
 - 7. Body Dimensions: 17 inch (432 mm) W x 17 inch (432 mm) L x 16.5 inch (419 mm) H.
 - 8. Flow Rate: 30 GPM (113 LPM).

9. Inlet and Outlet Size: 2 inch (50 mm).
10. End Connections: Threaded.
11. Mounting: Inline.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install backwater valves in building drain piping. For interior installation, provide cleanout deck plate flush with floor and centered over backwater valve cover, and of adequate size to remove valve cover for servicing.
- B. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
 1. Size same as drainage piping up to NPS 4 (DN 100). Use NPS 4 (DN 100) for larger drainage piping unless larger cleanout is indicated.
 2. Locate at each change in direction of piping greater than 45 degrees.
 3. Locate at minimum intervals of 75 feet (23 m) for piping NPS 3 (DN 75) and smaller and 100 feet (30 m) for larger piping.
 4. Locate at base of each vertical soil and waste stack.
- C. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- D. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- E. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
 1. Position floor drains for easy access and maintenance.
 2. Set floor drains below elevation of surrounding finished floor to allow floor drainage. Set with grates depressed according to the following drainage area radii:
 - a. Radius, 30 Inches (750 mm) or Less: Equivalent to 1 percent slope, but not less than 1/4-inch (6.35-mm) total depression.
 - b. Radius, 30 to 60 Inches (750 to 1500 mm): Equivalent to 1 percent slope.
 - c. Radius, 60 Inches (1500 mm) or Larger: Equivalent to 1 percent slope, but not greater than 1-inch (25-mm) total depression.
 3. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
 4. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.
 5. Install trap-seal protection devices in floor drains during trim out stage of project.
- F. Trap-seal protection devices shall be installed in accordance with the manufacturer's instructions and the requirements of the applicable codes.

- G. Install fixture air-admittance valves on fixture drain piping.
- H. Install roof flashing assemblies on sanitary stack vents and vent stacks that extend through roof.
- I. Install through-penetration firestop assemblies in plastic conductors and stacks at floor penetrations.
- J. Assemble open drain fittings and install with top of hub 1 inch (25 mm) above floor.
- K. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.
- L. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.
- M. Install vent caps on each vent pipe passing through roof.
- N. Install expansion joints on vertical stacks and conductors. Position expansion joints for easy access and maintenance.
- O. Install solids interceptors with cleanout immediately downstream from interceptors that do not have integral cleanout on outlet. Install trap on interceptors that do not have integral trap and are connected to sanitary drainage and vent systems.
- P. Install wood-blocking reinforcement for wall-mounting-type specialties.
- Q. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.

3.3 FLASHING INSTALLATION

- A. Fabricate flashing from single piece unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
 - 1. Lead Sheets: Burn joints of lead sheets 6.0-lb/sq. ft. (30-kg/sq. m), 0.0938-inch (2.4-mm) thickness or thicker. Solder joints of lead sheets 4.0-lb/sq. ft. (20-kg/sq. m), 0.0625-inch (1.6-mm) thickness or thinner.
 - 2. Copper Sheets: Solder joints of copper sheets.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.

1. Pipe Flashing: Sleeve type, matching pipe size, with minimum length of 10 inches (250 mm), and skirt or flange extending at least 8 inches (200 mm) around pipe.
 2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around sleeve.
 3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around specialty.
- C. Set flashing on floors and roofs in solid coating of bituminous cement.
- D. Secure flashing into sleeve and specialty clamping ring or device.
- E. Install flashing for piping passing through roofs with counterflashing or commercially made flashing fittings, according to Division 07 Section "Sheet Metal Flashing and Trim."
- F. Extend flashing up vent pipe passing through roofs and turn down into pipe, or secure flashing into cast-iron sleeve having calking recess.
- G. Fabricate and install flashing and pans, sumps, and other drainage shapes.

3.4 LABELING AND IDENTIFYING

- A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each solids interceptors.
- B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.5 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Protect trap-seal protection devices from being touched with solvent cement or primers during installation.
- C. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 221319

SECTION 221413 - FACILITY STORM DRAINAGE PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Pipe, tube, and fittings.
2. Specialty pipe fittings.

B. Related Sections:

1. Division 33 Section "Storm Utility Drainage Piping" for storm drainage piping outside the building.

1.2 PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:

1. Storm Drainage Piping: 10-foot head of water (30 kPa).

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Field quality-control reports.

1.4 QUALITY ASSURANCE

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

B. Comply with NSF/ANSI 14, "Plastics Piping System Components and Related Materials," for plastic piping components. Include marking with "NSF-drain" for plastic drain piping and "NSF-sewer" for plastic sewer piping.

1.5 PROJECT CONDITIONS

A. Interruption of Existing Storm-Drainage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:

1. Notify Owner no fewer than two days in advance of proposed interruption of storm-drainage service.

2. Do not proceed with interruption of storm-drainage service without Owner's written permission.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.2 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

- A. Pipe and Fittings: ASTM A 74, Service class.
- B. Gaskets: ASTM C 564, rubber.

2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

- A. Pipe and Fittings: ASTM A 888 or CISPI 301.
- B. Heavy-Duty, Hubless-Piping Couplings:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ANACO-Husky.
 - b. Clamp-All Corp.
 - c. MIFAB, Inc.
 - d. Mission Rubber Company; a division of MCP Industries, Inc.
 - e. Tyler Pipe.
 2. Standards: ASTM C 1277 and ASTM C 1540.
 3. Description: Stainless-steel shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

2.4 PVC PIPE AND FITTINGS

- A. Solid-Wall PVC Pipe: ASTM D 2665, drain, waste, and vent.
- B. PVC Socket Fittings: ASTM D 2665, made to ASTM D 3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.
- C. Adhesive Primer: ASTM F 656.
 1. Adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

D. Solvent Cement: ASTM D 2564.

1. Solvent cement shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.5 SPECIALTY PIPE FITTINGS

A. Transition Couplings:

1. General Requirements: Fitting or device for joining piping with small differences in OD's or of different materials. Include end connections same size as and compatible with pipes to be joined.
2. Unshielded, Nonpressure Transition Couplings:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Dallas Specialty & Mfg. Co.
 - 2) Fernco Inc.
 - 3) Mission Rubber Company; a division of MCP Industries, Inc.
 - 4) Plastic Oddities; a division of Diverse Corporate Technologies, Inc.
 - b. Standard: ASTM C 1173.
 - c. Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
 - d. Sleeve Materials:
 - 1) For Cast-Iron Soil Pipes: ASTM C 564, rubber.
 - 2) For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
 - 3) For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.

PART 3 - EXECUTION

3.1 EARTH MOVING

- A. Comply with requirements for excavating, trenching, and backfilling specified in Division 31 Section "Earth Moving."

3.2 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations from layout are approved on coordination drawings.

- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Make changes in direction for storm drainage piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
- K. Lay buried building storm drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
- L. Install storm drainage piping at the following minimum slopes unless otherwise indicated:
 - 1. Building Storm Drain: 2 percent downward in direction of flow for piping NPS 2-1/2 (DN 65) and smaller; 1 percent downward in direction of flow for piping NPS 3 (DN 80) and larger.
 - 2. Horizontal Storm-Drainage Piping: 2 percent downward in direction of flow.
- M. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
- N. Install aboveground PVC piping according to ASTM D 2665.
- O. Install underground PVC piping according to ASTM D 2321.
- P. Plumbing Specialties:
 - 1. Install backwater valves in storm drainage gravity-flow piping. Comply with requirements for backwater valves specified in Division 22 Section "Storm Drainage Piping Specialties."
 - 2. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers in storm drainage gravity-flow piping. Install cleanout fitting with closure

- plug inside the building in storm drainage force-main piping. Comply with requirements for cleanouts specified in Division 22 Section "Storm Drainage Piping Specialties."
3. Install drains in storm drainage gravity-flow piping. Comply with requirements for drains specified in Division 22 Section "Storm Drainage Piping Specialties."
- Q. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
- R. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22 Section "Common Work Results for Plumbing."
- S. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22 Section "Common Work Results for Plumbing."
- T. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Common Work Results for Plumbing."

3.3 JOINT CONSTRUCTION

- A. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
- B. Hubless, Cast-Iron Soil Piping Coupled Joints: Join according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.
- C. Plastic, Nonpressure-Piping, Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
 2. PVC Piping: Join according to ASTM D 2855 and ASTM D 2665 Appendixes.

3.4 SPECIALTY PIPE FITTING INSTALLATION

- A. Transition Couplings:
1. Install transition couplings at joints of piping with small differences in OD's.
 2. In Drainage Piping: Unshielded, nonpressure transition couplings.

3.5 VALVE INSTALLATION

- A. General valve installation requirements are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
- B. Backwater Valves: Install backwater valves in piping subject to backflow.
1. Horizontal Piping: Horizontal backwater valves.

2. Install backwater valves in accessible locations.
3. Comply with requirements for backwater valves specified in Division 22 Section "Storm Drainage Piping Specialties."

3.6 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for pipe hanger and support devices and installation specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."
 1. Vertical Piping: MSS Type 8 or Type 42, clamps.
 2. Individual, Straight, Horizontal Piping Runs:
 - a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
 - b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet (30 m) if Indicated: MSS Type 49, spring cushion rolls.
 3. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 4. Base of Vertical Piping: MSS Type 52, spring hangers.
- B. Support horizontal piping and tubing within 12 inches (300 mm) of each fitting and coupling.
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.
- E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
 1. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
 2. NPS 3 (DN 80): 60 inches (1500 mm) with 1/2-inch (13-mm) rod.
 3. NPS 4 and NPS 5 (DN 100 and DN 125): 60 inches (1500 mm) with 5/8-inch (16-mm) rod.
 4. NPS 6 and NPS 8 (DN 150 and DN 200): 60 inches (1500 mm) with 3/4-inch (19-mm) rod.
 5. NPS 10 and NPS 12 (DN 250 and DN 300): 60 inches (1500 mm) with 7/8-inch (22-mm) rod.
 6. Spacing for 10-foot (3 m) pipe lengths may be increased to 10 feet (3 m). Spacing for fittings is limited to 60 inches (1500 mm).
- F. Install supports for vertical cast-iron soil piping every 15 feet (4.5 m).
- G. Install hangers for PVC piping with the following maximum horizontal spacing and minimum rod diameters:
 1. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 48 inches (1200 mm) with 3/8-inch (10-mm) rod.
 2. NPS 3 (DN 80): 48 inches (1200 mm) with 1/2-inch (13-mm) rod.

3. NPS 4 and NPS 5 (DN 100 and DN 125): 48 inches (1200 mm) with 5/8-inch (16-mm) rod.
4. NPS 6 and NPS 8 (DN 150 and DN 200): 48 inches (1200 mm) with 3/4-inch (19-mm) rod.
5. NPS 10 and NPS 12 (DN 250 and DN 300): 48 inches (1200 mm) with 7/8-inch (22-mm) rod.

H. Install supports for vertical PVC piping every 48 inches (1200 mm).

I. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.7 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.

C. Connect storm drainage piping to roof drains and storm drainage specialties.

1. Install test tees (wall cleanouts) in conductors near floor, and floor cleanouts with cover flush with floor.
2. Install horizontal backwater valves with cleanout cover flush with floor.
3. Comply with requirements for backwater valves, cleanouts, and, drains specified in Division 22 Section "Storm Drainage Piping Specialties."

D. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

E. Make connections according to the following unless otherwise indicated:

1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.

3.8 IDENTIFICATION

A. Identify exposed storm drainage piping. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.9 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.

2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.
 - C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
 - D. Test storm drainage piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
 1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 3. Test Procedure: Test storm drainage piping, except outside leaders, on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water (30 kPa). From 15 minutes before inspection starts until completion of inspection, water level must not drop. Inspect joints for leaks.
 4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
 5. Prepare reports for tests and required corrective action.

3.10 CLEANING

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

3.11 PIPING SCHEDULE

- A. Aboveground storm drainage piping NPS 6 (DN 150) and smaller shall be any of the following:
 1. Hubless, cast-iron soil pipe and fittings; heavy-duty, hubless-piping couplings; and coupled joints.
 2. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.
- B. Aboveground, storm drainage piping NPS 8 (DN 200) and larger shall be any of the following:
 1. Hubless, cast-iron soil pipe and fittings; heavy-duty, hubless-piping couplings; and coupled joints.
 2. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.
- C. Underground storm drainage piping NPS 6 (DN 150) and smaller shall be any of the following:
 1. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.

2. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.
- D. Underground, storm drainage piping NPS 8 (DN 200) and larger shall be the following:
1. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
 2. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.
- E. Aboveground condensate piping NPS 6 (DN 150) and smaller shall be any of the following:
1. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
 2. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.
- F. Underground condensate piping NPS 6 (DN 150) and smaller shall be any of the following:
1. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
 2. Dissimilar Pipe-Material Couplings: Unshielded, nonpressure transition couplings.

END OF SECTION 221413

This Page Intentionally Left Blank

SECTION 221423 - STORM DRAINAGE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Roof drains.
 2. Condensate receptors.
 3. Miscellaneous storm drainage piping specialties.
 4. Cleanouts.
 5. Backwater valves.
 6. Roof flashing assemblies.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1.3 QUALITY ASSURANCE

- A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1 METAL ROOF DRAINS

- A. Cast-Iron, Large Sump, General-Purpose, Dual Outlet Primary and Secondary Roof Drains <RD-1>:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Froet Industries, LLC.
 - b. Smith, Jay R. Mfg. Co.
 - c. Watts Drainage Products Inc.
 - d. Zurn Plumbing Products Group; Specification Drainage Operation.
 2. Standard: ASME A112.6.4, for general-purpose roof drains.
 3. Body Material: Cast iron.
 4. Dimension of Body: Nominal 15-inch (381-mm) diameter.
 5. Combination Flashing Ring and Gravel Stop: Required.
 6. Outlet: Bottom or Side.
 7. Extension Collars: Required.

8. Underdeck Clamp: Required.
9. Sump Receiver Plate: Required.
10. Dome Material: Cast iron.
11. Perforated Gravel Guard: Not required.
12. Vandal-Proof Dome: Not required.
13. Water Dam: Integral.

B. Metal, Medium-Sump, Promenade Roof Drains <AD-1>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company.
 - b. Smith, Jay R. Mfg. Co.
 - c. Watts Drainage Products Inc.
 - d. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.6.4, for promenade roof drains.
3. Body Material: Cast iron.
4. Dimension of Body: 8- to 10-inch (215- to 254-mm) diameter.
5. Dimension of Frame and Grate: Nominal 10 inches (254 mm) square.
6. Outlet: Bottom.
7. Grate Material: Nickel-bronze alloy.
8. Vandal-Proof Grate: Required.
9. Extension Collars: Not required.
10. Underdeck Clamp: Not required.
11. Expansion Joint: Not required.
12. Sump Receiver Plate: Not required.

2.2 CONDENSATE RECEPTORS

A. Cast-Iron Condensate Receptors <CR-1>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - c. Watts Drainage Products Inc.
 - d. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.6.3.
3. Pattern: Floor drain.
4. Body Material: Gray iron.
5. Seepage Flange: Required.
6. Anchor Flange: Required.
7. Clamping Device: Required.
8. Outlet: Bottom.
9. Sediment Bucket: Not required.
10. Top or Strainer Material: Nickel bronze.
11. Top of Body and Strainer Finish: Nickel bronze.

12. Top Shape: Round with Raised Flange.
13. Top Loading Classification: Light Duty.
14. Funnel: Not required.

2.3 MISCELLANEOUS STORM DRAINAGE PIPING SPECIALTIES

A. Downspout Covers:

1. Description: Round fabricated stainless steel frame with fabricated secured perforated stainless steel hinged strainer.
2. Size: Same as connected pipe.

2.4 CLEANOUTS

A. Exposed Metal Cleanouts <CO>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Sioux Chief Manufacturing Company, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Watts Drainage Products Inc.
 - e. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M for cast iron for cleanout test tee.
3. Size: Same as connected drainage piping
4. Body Material: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk, brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

B. Metal Floor Cleanouts <ECO>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Sioux Chief Manufacturing Company, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Watts Drainage Products Inc.
 - e. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M for threaded, adjustable housing cleanout.
3. Size: Same as connected branch.
4. Type: Threaded, adjustable housing.
5. Body or Ferrule: Cast iron.
6. Clamping Device: Not required.
7. Outlet Connection: Spigot.
8. Closure: Plastic plug.

9. Adjustable Housing Material: Cast iron with threads.
10. Frame and Cover Material and Finish: Nickel-bronze, copper alloy.
11. Frame and Cover Shape: Round.
12. Top Loading Classification: Heavy Duty.
13. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.

C. Metal Floor Cleanouts <FCO>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Sioux Chief Manufacturing Company, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Watts Drainage Products Inc.
 - e. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M for threaded, adjustable housing cleanout.
3. Size: Same as connected branch.
4. Type: Threaded, adjustable housing.
5. Body or Ferrule: Cast iron.
6. Clamping Device: Not required.
7. Outlet Connection: Spigot.
8. Closure: Plastic plug.
9. Adjustable Housing Material: Cast iron with threads.
10. Frame and Cover Material and Finish: Nickel-bronze, copper alloy.
11. Frame and Cover Shape: Round.
12. Top Loading Classification: Light Duty.
13. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.

D. Cast-Iron Wall Cleanouts <WCO>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Sioux Chief Manufacturing Company, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Watts Drainage Products Inc.
 - e. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk, drilled-and-threaded brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
7. Wall Access: Round, flat, chrome-plated brass or stainless-steel cover plate with screw.

2.5 BACKWATER VALVES

A. Horizontal, Cast-Iron Backwater Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Smith, Jay R. Mfr. Co.; Division of Smith Industries, Inc.
 - c. Watts Drainage Products Inc.
 - d. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.14.1.
3. Size: Same as connected piping.
4. Body: Cast iron.
5. Cover: Cast iron with bolted access check valve.
6. End Connections: Hub and spigot or hubless.
7. Type Check Valve: Removable, bronze, swing check, factory assembled or field modified to hang open for airflow unless subject to backflow condition.
8. Extension: ASTM A 74, Service class; full-size, cast-iron, soil-pipe extension to field-installed cleanout at floor; replaces backwater valve cover.

2.6 ROOF FLASHING ASSEMBLIES

- A. Roof Flashing Assemblies: Refer to Division 7 for roof flashing assemblies.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions. Roofing materials are specified in Division 07 Sections.
 1. Install flashing collar or flange of roof drain to prevent leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
 2. Install expansion joints, if indicated, in roof drain outlets.
 3. Position roof drains for easy access and maintenance.
- B. Install downspout covers at exposed end of overflow storm pipes as shown on plans.
- C. Install cleanouts in aboveground piping and building drain piping according to the following instructions unless otherwise indicated:
 1. Use cleanouts the same size as drainage piping up to NPS 4 (DN 100). Use NPS 4 (DN 100) for larger drainage piping unless larger cleanout is indicated.
 2. Locate cleanouts at each change in direction of piping greater than 45 degrees.
 3. Locate cleanouts at minimum intervals of 75 feet (15 m) for piping NPS 4 (DN 100) and smaller and 75 feet (30 m) for larger piping.
 4. Locate cleanouts at base of each vertical stack.
- D. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

- E. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- F. Install horizontal backwater valves in floor with cover flush with floor.
- G. Install wall cleanouts in vertical conductors. Install access door in wall if indicated.
- H. Install sleeve flashing device with each conductor passing through floors with waterproof membrane.

3.2 CONNECTIONS

- A. Comply with requirements for piping specified in Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

3.3 FLASHING INSTALLATION

- A. Fabricate flashing from single piece of metal unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
 - 1. Lead Sheets: Burn joints of 6.0-lb/sq. ft. (30-kg/sq. m) lead sheets, 0.0938-inch (2.4-mm) thickness or thicker. Solder joints of 4.0-lb/sq. ft. (20-kg/sq. m) lead sheets, 0.0625-inch (1.6-mm) thickness or thinner.
 - 2. Copper Sheets: Solder joints of copper sheets.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
 - 1. Pipe Flashing: Sleeve type, matching the pipe size, with a minimum length of 10 inches (250 mm) and with skirt or flange extending at least 8 inches (200 mm) around pipe.
 - 2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around sleeve.
 - 3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around specialty.
- C. Set flashing on floors and roofs in solid coating of bituminous cement.
- D. Secure flashing into sleeve and specialty clamping ring or device.
- E. Fabricate and install flashing and pans, sumps, and other drainage shapes.

3.4 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 221423

This Page Intentionally Left Blank

SECTION 223300 - ELECTRIC, DOMESTIC-WATER HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Commercial, light-duty, storage, electric, domestic-water heaters.
2. Thermostat-control, electric, tankless, domestic-water heaters.
3. Domestic-water heater accessories.

1.2 SUBMITTALS

- A. Product Data: For each type and size of domestic-water heater indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings:
1. Wiring Diagrams: For power, signal, and control wiring.
- C. Warranty: Sample of special warranty.
- D. Operation and Maintenance Data: For electric, domestic-water heaters to include in emergency, operation, and maintenance manuals.

1.3 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.
- C. ASME Compliance: Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- D. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61, "Drinking Water System Components - Health Effects."

1.4 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.5 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of electric, domestic-water heaters that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures including storage tank and supports.
 - b. Faulty operation of controls.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
 2. Warranty Periods: From date of Substantial Completion.
 - a. Commercial, Light-Duty, Storage, Electric, Domestic-Water Heaters:
 - 1) Storage Tank: Three years.
 - 2) Controls and Other Components: Three years.
 - b. Electric, Tankless, Domestic-Water Heaters: Five year(s).
 - c. Compression Tanks: Five years.

PART 2 - PRODUCTS

2.1 Commercial, Light-Duty, Storage, Electric, Domestic-Water Heaters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bradford White Corporation.
 - b. Lochinvar Corporation.
 - c. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
 - d. State Industries.
2. Standard: UL 174.
3. Storage-Tank Construction: Steel, vertical arrangement.
 - a. Tappings: ASME B1.20.1 pipe thread.
 - b. Pressure Rating: 150 psig (1035 kPa).
 - c. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
4. Factory-Installed Storage-Tank Appurtenances:
 - a. Anode Rod: Replaceable magnesium.
 - b. Dip Tube: Required unless cold-water inlet is near bottom of tank.
 - c. Drain Valve: ASSE 1005.
 - d. Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2.
 - e. Jacket: Steel with enameled finish.

- f. Heat-Trap Fittings: Inlet type in cold-water inlet and outlet type in hot-water outlet.
 - g. Heating Elements: Two; electric, screw-in immersion type; wired for simultaneous operation unless otherwise indicated. Limited to 12 kW total.
 - h. Temperature Control: Adjustable thermostat.
 - i. Safety Control: High-temperature-limit cutoff device or system.
 - j. Relief Valve: ASME rated and stamped for combination temperature-and-pressure relief valves. Include relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.
5. Special Requirements: NSF 5 construction with legs for off-floor installation.

2.2 ELECTRIC, TANKLESS, DOMESTIC-WATER HEATERS

A. Thermostat-Control, Electric, Tankless, Domestic-Water Heaters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bosch Water Heating.
 - b. Chronomite Laboratories, Inc.
 - c. Eemax, Inc.
 - d. Niagara Industries, Inc.
2. Standard: UL 499 for electric, tankless, (domestic-water heater) heating appliance.
3. Construction: Copper piping or tubing complying with NSF 61 barrier materials for potable water, without storage capacity.
 - a. Connections: ASME B1.20.1 pipe thread.
 - b. Pressure Rating: 150 psig (1035 kPa).
 - c. Heating Element: Resistance heating system.
 - d. Temperature Control: Thermostat.
 - e. Safety Control: High-temperature-limit cutoff device or system.
 - f. Jacket: Aluminum or steel with enameled finish or plastic.
4. Support: Bracket for wall mounting.

2.3 DOMESTIC-WATER HEATER ACCESSORIES

A. Domestic-Water Compression Tanks:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMTROL Inc.
 - b. Honeywell International Inc.
 - c. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
 - d. State Industries.

- e. Taco, Inc.
 - 2. Description: Steel pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air precharge to minimum system-operating pressure at tank.
 - 3. Construction:
 - a. Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1 pipe thread.
 - b. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - c. Air-Charging Valve: Factory installed.
 - B. Drain Pans: Corrosion-resistant metal with raised edge. Comply with ANSI/CSA LC 3. Include dimensions not less than base of domestic-water heater, and include drain outlet not less than NPS 3/4 (DN 20) with ASME B1.20.1 pipe threads or with ASME B1.20.7 garden-hose threads.
 - C. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1 or ASHRAE 90.2.
 - D. Heat-Trap Fittings: ASHRAE 90.2.
 - E. Combination Temperature-and-Pressure Relief Valves: ASME rated and stamped. Include relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.
 - F. Vacuum Relief Valves: ANSI Z21.22/CSA 4.4.
 - G. Shock Absorbers: ASSE 1010 or PDI-WH 201, Size A water hammer arrester.
- 2.4 SOURCE QUALITY CONTROL
- A. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 01 Section "Quality Requirements" for retesting and reinspecting requirements and Division 01 Section "Execution" for requirements for correcting the Work.
 - B. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 DOMESTIC-WATER HEATER INSTALLATION

- A. Commercial, Electric, Domestic-Water Heater Mounting: Install commercial, electric, domestic-water heaters on concrete base. Comply with requirements for concrete bases specified in Division 03.

1. Exception: Omit concrete bases for commercial, electric, domestic-water heaters if installation on stand, bracket, suspended platform, or directly on floor is indicated.
 2. Maintain manufacturer's recommended clearances.
 3. Arrange units so controls and devices that require servicing are accessible.
 4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 6. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 7. Install anchor bolts to elevations required for proper attachment to supported equipment.
 8. Anchor domestic-water heaters to substrate.
- B. Electric, Tankless, Domestic-Water Heater Mounting: Install electric, tankless, domestic-water heaters on wall bracket.
1. Maintain manufacturer's recommended clearances.
 2. Arrange units so controls and devices that require servicing are accessible.
 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
 5. Anchor domestic-water heaters to substrate.
- C. Install electric, domestic-water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
1. Install shutoff valves on domestic-water-supply piping to domestic-water heaters and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
- D. Install combination temperature-and-pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- E. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for electric, domestic-water heaters that do not have tank drains. Comply with requirements for hose-end drain valves specified in Division 22 Section "Domestic Water Piping Specialties."
- F. Install thermometers on inlet and outlet piping of electric, domestic-water heaters. Comply with requirements for thermometers specified in Division 22 Section "Meters and Gages for Plumbing Piping."
- G. Install piping-type heat traps on inlet and outlet piping of electric, domestic-water heater storage tanks without integral or fitting-type heat traps.
- H. Fill electric, domestic-water heaters with water.

- I. Charge domestic-water compression tanks with air.

3.2 CONNECTIONS

- A. Comply with requirements for piping specified in Division 22 Section "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to electric, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

3.3 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
 - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 01 Section "Quality Requirements" for retesting and reinspecting requirements and Division 01 Section "Execution" for requirements for correcting the Work.
- C. Prepare test and inspection reports.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain commercial and tankless, electric, domestic-water heaters.

END OF SECTION 223300

SECTION 224000 - PLUMBING FIXTURES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Solid-brass, manually operated lavatory faucets.
2. Sink faucets.
3. Lavatory and sink supply fittings.
4. Lavatory and sink waste fittings.
5. Individual showers. **(not always required)**
6. Shower faucets.
7. Flushometer valves.
8. Toilet seats.
9. Protective shielding guards.
10. Dishwasher air-gap fittings.
11. Water closets.
12. Urinals.
13. Lavatories.
14. Sinks.
15. Emergency Shower with Eyewash Combination Units. **(MS and HS only)**
16. Mop Sinks.

B. Related Sections include the following:

1. Division 22 Section "Drinking Fountains and Water Coolers."

1.2 DEFINITIONS

- A. Accessible Fixture: Plumbing fixture that can be approached, entered, and used by people with disabilities.
- B. FRP: Fiberglass-reinforced plastic.
- C. PMMA: Polymethyl methacrylate (acrylic) plastic.
- D. PVC: Polyvinyl chloride plastic.
- E. Solid Surface: Nonporous, homogeneous, cast-polymer-plastic material with heat-, impact-, scratch-, and stain-resistance qualities.

1.3 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of all plumbing fixtures and related components covered in this specification section that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Faulty operation of fixtures, flush valves and faucets.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal use.
 - 2. Warranty Period(s): From date of Substantial Completion:
 - a. Five years.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Operation and maintenance data.
- D. Warranty.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Regulatory Requirements: Comply with requirements in ICC A117.1, "Accessible and Usable Buildings and Facilities"; Public Law 90-480, "Architectural Barriers Act"; and Public Law 101-336, "Americans with Disabilities Act"; for plumbing fixtures for people with disabilities.
- C. Regulatory Requirements: Comply with requirements in Public Law 102-486, "Energy Policy Act," about water flow and consumption rates for plumbing fixtures.
- D. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.
- E. Select combinations of fixtures and trim, faucets, fittings, and other components that are compatible.
- F. Comply with the following applicable standards and other requirements specified for plumbing fixtures:
 - 1. Enameled, Cast-Iron Fixtures: ASME A112.19.1M.
 - 2. Porcelain-Enameled, Formed-Steel Fixtures: ASME A112.19.4M.

3. Slip-Resistant Bathing Surfaces: ASTM F 462.
 4. Stainless-Steel Residential Sinks: ASME A112.19.3.
 5. Vitreous-China Fixtures: ASME A112.19.2M.
 6. Water-Closet, Flushometer Tank Trim: ASSE 1037.
- G. Comply with the following applicable standards and other requirements specified for lavatory and sink faucets:
1. Backflow Protection Devices for Faucets with Side Spray: ASME A112.18.3M.
 2. Backflow Protection Devices for Faucets with Hose-Thread Outlet: ASME A112.18.3M.
 3. Diverter Valves for Faucets with Hose Spray: ASSE 1025.
 4. Faucets: ASME A112.18.1.
 5. Hose-Connection Vacuum Breakers: ASSE 1011.
 6. Hose-Coupling Threads: ASME B1.20.7.
 7. Integral, Atmospheric Vacuum Breakers: ASSE 1001.
 8. NSF Potable-Water Materials: NSF 61.
 9. Pipe Threads: ASME B1.20.1.
 10. Sensor-Actuated Faucets and Electrical Devices: UL 1951.
 11. Supply Fittings: ASME A112.18.1.
 12. Brass Waste Fittings: ASME A112.18.2.
- H. Comply with the following applicable standards and other requirements specified for shower faucets:
1. Backflow Protection Devices for Hand-Held Showers: ASME A112.18.3M.
 2. Combination, Pressure-Equalizing and Thermostatic-Control Antiscald Faucets: ASSE 1016.
 3. Faucets: ASME A112.18.1.
 4. Hand-Held Showers: ASSE 1014.
 5. High-Temperature-Limit Controls for Thermal-Shock-Preventing Devices: ASTM F 445.
 6. Hose-Coupling Threads: ASME B1.20.7.
 7. Manual-Control Antiscald Faucets: ASTM F 444.
 8. Pipe Threads: ASME B1.20.1.
 9. Pressure-Equalizing-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.
 10. Sensor-Actuated Faucets and Electrical Devices: UL 1951.
 11. Thermostatic-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.
- I. Comply with the following applicable standards and other requirements specified for miscellaneous fittings:
1. Atmospheric Vacuum Breakers: ASSE 1001.
 2. Brass and Copper Supplies: ASME A112.18.1.
 3. Manual-Operation Flushometers: ASSE 1037.
 4. Plastic Tubular Fittings: ASTM F 409.
 5. Brass Waste Fittings: ASME A112.18.2.
- J. Comply with the following applicable standards and other requirements specified for miscellaneous components:
1. Flexible Water Connectors: ASME A112.18.6.

2. Hose-Coupling Threads: ASME B1.20.7.
3. Pipe Threads: ASME B1.20.1.
4. Plastic Toilet Seats: ANSI Z124.5.
5. Supply and Drain Protective Shielding Guards: ICC A117.1.

PART 2 - PRODUCTS

2.1 SOLID-BRASS, MANUALLY OPERATED LAVATORY FAUCETS

- A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for faucet materials that will be in contact with potable water.
- B. Lavatory Faucets <L-1>: Manual-type, single-control non-mixing, vandal resistant, commercial, solid-brass valve.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Bradley Corporation.
 - c. Chicago Faucets.
 - d. Delta Faucet Company.
 - e. Kohler Co.
 - f. T & S Brass and Bronze Works, Inc.
 - g. Zurn Industries, LLC; Commercial Brass and Fixtures.
 2. Standard: ASME A112.18.1/CSA B125.1.
 3. General: Include cold-water indicator; coordinate faucet inlet with supplies and fixture hole punchings; coordinate outlet with spout and fixture receptor.
 4. Body Type: Single hole with deck plate.
 5. Body Material: Commercial, solid brass.
 6. Finish: Polished chrome plate.
 7. Maximum Flow: 0.25 gal. (0.95 L) per metering cycle.
 8. Mounting Type: Deck, exposed.
 9. Valve Handle(s): Push button.
 10. Spout: Rigid type.
 11. Spout Outlet: Aerator.
 12. Operation: Compression, manual.
 13. Drain: Not part of faucet.
- C. Lavatory Faucets <L-2>: Manual-type, single-control mixing, commercial, solid-brass valve.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Bradley Corporation.
 - c. Chicago Faucets.
 - d. Delta Faucet Company.

- e. Kohler Co.
 - f. T & S Brass and Bronze Works, Inc.
 - g. Zurn Industries, LLC; Commercial Brass and Fixtures.
2. Standard: ASME A112.18.1/CSA B125.1.
 3. General: Include cold-water indicator; coordinate faucet inlet with supplies and fixture hole punchings; coordinate outlet with spout and fixture receptor.
 4. Body Type: Centerset.
 5. Body Material: Commercial, solid brass.
 6. Finish: Polished chrome plate.
 7. Maximum Flow: 0.25 gal. (0.95 L) per metering cycle.
 8. Mounting Type: Deck, exposed.
 9. Valve Handle(s): Lever.
 10. Spout: Rigid type.
 11. Spout Outlet: Aerator.
 12. Operation: Compression, manual.
 13. Drain: Not part of faucet.

2.2 SINK FAUCETS

- A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for faucet-spout materials that will be in contact with potable water.
- B. Sink Faucets <**S-1 (ES only)**>: Manual type, single-control, single-temperature valve.
 1. Manufacturers: Subject to compliance with requirements, provide products by the following provide products by one of the following:
 - a. Chicago Faucets.
 - b. Delta Faucet Company.
 - c. Elkay Manufacturing Co.
 - d. Just Manufacturing.
 - e. T & S Brass and Bronze Works, Inc.
 - f. Zurn Industries, LLC; Commercial Brass and Fixtures.
 2. Standard: ASME A112.18.1/CSA B125.1.
 3. General: Include cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and sink receptor.
 4. Body Type: Single hole.
 5. Body Material: Commercial, solid brass.
 6. Finish: Polished chrome plated.
 7. Maximum Flow Rate: 1.5 gpm (5.7 L/min.).
 8. Handle(s): Lever.
 9. Mounting Type: Deck, exposed.
 10. Spout Type: Rigid gooseneck, solid brass.
 11. Vacuum Breaker: Not required for hose outlet.
 12. Spout Outlet: Aerator.
- C. Sink Faucets <**S-1, S-2, S-3, S-4 and S-5 (ES) or S-3, S-4, S-5 and S-6 (MS/HS)**>: Manual type, dual-control mixing valve.

1. Manufacturers: Subject to compliance with requirements, provide products by the following provide products by one of the following:
 - a. Chicago Faucets.
 - b. Delta Faucet Company.
 - c. Elkay Manufacturing Co.
 - d. Just Manufacturing.
 - e. T & S Brass and Bronze Works, Inc.
 - f. Zurn Industries, LLC; Commercial Brass and Fixtures.
 2. Standard: ASME A112.18.1/CSA B125.1.
 3. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and sink receptor.
 4. Body Type: Widespread.
 5. Body Material: Commercial, solid brass.
 6. Finish: Polished chrome plated.
 7. Maximum Flow Rate: 1.5 gpm (5.7 L/min.).
 8. Handle(s): Wristblade.
 9. Mounting Type: Deck, concealed.
 10. Spout Type: Swing, solid brass.
 11. Vacuum Breaker: Not required for hose outlet.
 12. Spout Outlet: Aerator.
- D. Sink Faucets <MS-1 and MS-2 (for can wash)>: Manual type, single-control mixing valve.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Chicago Faucets.
 - b. Delta Faucet Company.
 - c. Elkay Manufacturing Co.
 - d. Just Manufacturing.
 - e. T & S Brass and Bronze Works, Inc.
 - f. Zurn Industries, LLC; Commercial Brass and Fixtures.
 2. Standard: ASME A112.18.1/CSA B125.1.
 3. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and sink receptor.
 4. Body Type: Widespread.
 5. Body Material: Commercial, solid brass.
 6. Finish: Rough chrome finish.
 7. Maximum Flow Rate: 2.5 gpm (9.5 L/min.).
 8. Handle(s): Lever.
 9. Mounting Type: Back/wall, exposed.
 10. Spout Type: Rigid, solid brass with wall brace.
 11. Vacuum Breaker: Required for hose outlet.
 12. Spout Outlet: Hose thread according to ASME B1.20.7.

2.3 LAVATORY AND SINK SUPPLY FITTINGS

- A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for supply-fitting materials that will be in contact with potable water.
- B. Standard: ASME A112.18.1/CSA B125.1.
- C. Supply Piping: Chrome-plated-brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated-brass or stainless-steel wall flange.
- D. Supply Stops: Chrome-plated-brass, one-quarter-turn, ball-type or compression valve with inlet connection matching supply piping.
 - 1. Operation: Loose key.
- E. Risers:
 - 1. NPS 1/2 (DN 15).
 - 2. Chrome-plated, rigid-copper-pipe and brass straight or offset tailpieces riser.

2.4 LAVATORY AND SINK WASTE FITTINGS

- A. Standard: ASME A112.18.2/CSA B125.2.
- B. Drain:
 - 1. Lavatories: Grid type with NPS 1-1/4 (DN 32) offset and straight tailpiece.
 - 2. Sinks: Basket type with NPS 1-1/2 (DN 40) offset and straight tailpiece.
- C. Trap:
 - 1. Size:
 - a. Lavatories: NPS 1-1/4 (DN 32).
 - b. Sinks: NPS 1-1/2 (DN 40).
 - 2. Material: Chrome-plated, two-piece, cast-brass trap and swivel elbow with 17 gauge thick brass tube to wall; and chrome-plated, brass or steel wall flange.

2.5 INDIVIDUAL SHOWERS (**not always required**)

- A. Individual PMMA Showers <SH-1 **and** SH-2>:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aqua Bath Company, Inc.
 - b. Aqua Glass Corporation.
 - c. Aquatic Industries, Inc.
 - d. Crane Plumbing, L.L.C.

- e. Kohler Co.
 - f. LASCO Bathware.
 - g. Praxis Industries, LLC.; Aquarius Bathware.
- 2. General: PMMA shower enclosure with faucet and receptor and appurtenances.
 - 3. Standard: ANSI Z124.1.2.
 - 4. Type: One-piece unit with top.
 - 5. Style: Handicapped/wheelchair.
 - 6. Faucet: <SH-1>.
 - 7. Nominal Size and Shape: 36 by 36 inches (915 by 915 mm) square.
 - 8. Color: White.
 - 9. Bathing Surface: Slip resistant according to ASTM F 462.
 - 10. Outlet: Drain with NPS 2 (DN 50) outlet.
 - 11. Shower Rod and Curtain: Required.
 - 12. Grab Bar: ASTM F 446, mounted on support area back wall.

2.6 SHOWER FAUCETS

- A. NSF Standard: Comply with NSF 61, "Drinking Water System Components - Health Effects," for shower materials that will be in contact with potable water.
- B. Shower Faucets <SH-1 and SH-2>:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Chicago Faucets.
 - c. Kohler Co.
 - d. Moen Incorporated.
 - e. Symmons Industries, Inc.
 - f. Zurn Industries, LLC; AquaSpec Commercial Faucet Products.
 - 2. Description: Single-handle, pressure-balance mixing valve with hot- and cold-water indicators; check stops; and shower head.
 - 3. Faucet:
 - a. Standards: ASME A112.18.1/CSA B125.1 and ASSE 1016.
 - b. Body Material: Solid brass.
 - c. Finish: Polished chrome plate.
 - d. Maximum Flow Rate: 1.5 gpm (5.7 L/min.) unless otherwise indicated.
 - e. Mounting: Concealed.
 - f. Operation: Single-handle, push-pull or twist or rotate control.
 - g. Antiscald Device: Integral with mixing valve.
 - h. Check Stops: Check-valve type, integral with or attached to body; on hot- and cold-water supply connections.
 - 4. Supply Connections: NPS 1/2 (DN 15).
 - 5. Shower Head:

- a. Standard: ASME A112.18.1/CSA B125.1.
- b. Type: Ball joint with arm and flange.
- c. Shower Head Material: Metallic with chrome-plated finish.
- d. Spray Pattern: Fixed.
- e. Integral Volume Control: Required.
- f. Temperature Indicator: Not required.

2.7 FLUSHOMETER VALVES

A. Lever-Handle, Diaphragm Water Closet Flushometer Valves <WC-1, WC-2, (and WC-3 Elementary Schools only)>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Coyne & Delany Co.
 - c. Gerber Plumbing Fixtures LLC.
 - d. Kohler Co.
 - e. Sloan Valve Company.
 - f. Zurn Industries, LLC; Commercial Brass and Fixtures.
2. Standard: ASSE 1037.
3. Minimum Pressure Rating: 125 psig (860 kPa).
4. Features: Include integral check stop and backflow-prevention device.
5. Material: Brass body with corrosion-resistant components.
6. Exposed Flushometer-Valve Finish: Chrome plated.
7. Style: Exposed.
8. Consumption: 1.28 gal. (4.8 L) per flush.
9. Minimum Inlet: NPS 1-1/4 (DN 32).
10. Minimum Outlet: NPS 1-1/4 (DN 32).

B. Lever-Handle, Diaphragm Urinal Flushometer Valves <U-1 and U-2>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Coyne & Delany Co.
 - c. Gerber Plumbing Fixtures LLC.
 - d. Kohler Co.
 - e. Sloan Valve Company.
 - f. Zurn Industries, LLC; Commercial Brass and Fixtures.
2. Standard: ASSE 1037.
3. Minimum Pressure Rating: 125 psig (860 kPa).
4. Features: Include integral check stop and backflow-prevention device.
5. Material: Brass body with corrosion-resistant components.
6. Exposed Flushometer-Valve Finish: Chrome plated.
7. Style: Exposed.

8. Consumption: 0.125 gal. (0.5 L) per flush.
9. Minimum Inlet: NPS 1 (DN 25).
10. Minimum Outlet: NPS 1-1/4 (DN 32).

2.8 TOILET SEATS

A. Toilet Seats <WC-1 and WC-2>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Bemis Manufacturing Company.
 - c. Centoco Manufacturing Corporation.
 - d. Church Seats.
 - e. Kohler Co.
 - f. Sanderson Plumbing Products, Inc.
 - g. Zurn Industries, LLC; Commercial Brass and Fixtures.
2. Standard: IAPMO/ANSI Z124.5.
3. Material: Plastic.
4. Type: Commercial (Heavy duty).
5. Shape: Elongated rim, open front.
6. Hinge: Self-sustaining, check.
7. Hinge Material: Noncorroding metal.
8. Seat Cover: Not required.
9. Color: White.

B. Toilet Seats <WC-3 (Elementary Schools Only)>:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Bemis Manufacturing Company.
 - c. Centoco Manufacturing Corporation.
 - d. Church Seats.
 - e. Kohler Co.
 - f. Sanderson Plumbing Products, Inc.
 - g. Zurn Industries, LLC; Commercial Brass and Fixtures.
2. Standard: IAPMO/ANSI Z124.5.
3. Material: Plastic.
4. Type: Commercial (Heavy duty).
5. Shape: Round, open front.
6. Hinge: Self-sustaining, check.
7. Hinge Material: Noncorroding metal.
8. Seat Cover: Not required.
9. Color: White.

2.9 PROTECTIVE SHIELDING GUARDS

A. Protective Shielding Pipe Covers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Engineered Brass Company.
 - b. McGuire Manufacturing.
 - c. Truebro; a brand of IPS Corporation.
 - d. Zurn Industries, LLC; Tubular Brass Plumbing Products Operation.
2. Description: Manufactured plastic wraps for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements.

2.10 DISHWASHER AIR-GAP FITTINGS

A. Dishwasher Air-Gap Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brass Craft Manufacturing; a subsidiary of Masco Corporation.
 - b. Dearborn Brass.
 - c. Geberit US.
 - d. Sioux Chief Manufacturing Company, Inc.
 - e. Watts Brass & Tubular; a division of Watts Water Technologies, Inc.
2. Standard: ASSE 1021.
3. Description: Device designed to prevent backflow of contaminated liquid into domestic dishwashers.
4. Material: Plastic body with chrome-plated-brass cover.
5. Hose Connections: 5/8-inch- (16-mm-) ID inlet and 7/8-inch- (22-mm-) ID outlet.
6. Capacity: At least 5 gpm (0.32 L/s); at inlet pressure of at least 5 psig (35 kPa) and at temperature of at least 140 deg F (60 deg C).
7. Mounting: Deck.
8. Hoses: Rubber and suitable for temperature of at least 140 deg F (60 deg C).
 - a. Inlet Hose: 5/8 inch (16 mm) ID and 48 inches (1219 mm) long.
 - b. Outlet Hose: 7/8 inch (22 mm) ID and 48 inches (1219 mm) long.

2.11 WATER CLOSETS

A. Water Closets <WC-1>: Floor mounted, bottom outlet, top spud.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.

- b. Crane Plumbing, L.L.C.
 - c. Gerber Plumbing Fixtures LLC.
 - d. Kohler Co.
 - e. Zurn Industries, LLC; Commercial Brass and Fixtures.
2. Bowl:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Type: Siphon jet.
 - d. Style: Flushometer valve.
 - e. Height: Standard.
 - f. Rim Contour: Elongated.
 - g. Water Consumption: 1.28 gal. (4.8 L) per flush.
 - h. Spud Size and Location: NPS 1-1/2 (DN 40); top.
 - i. Color: White.
 3. Bowl-to-Drain Connecting Fitting: ASME A112.4.3.
 4. Flushometer Valve: Same as water closet designation.
 5. Toilet Seat: Same as water closet designation.
- B. Water Closets <WC-2>: Floor mounted, bottom outlet, top spud.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Crane Plumbing, L.L.C.
 - c. Gerber Plumbing Fixtures LLC.
 - d. Kohler Co.
 - e. Zurn Industries, LLC; Commercial Brass and Fixtures.
 2. Bowl:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Type: Siphon jet.
 - d. Style: Flushometer valve.
 - e. Height: Handicapped/elderly, complying with ICC/ANSI A117.1.
 - f. Rim Contour: Elongated.
 - g. Water Consumption: 1.28 gal. (4.8 L) per flush.
 - h. Spud Size and Location: NPS 1-1/2 (DN 40); top.
 - i. Color: White.
 3. Bowl-to-Drain Connecting Fitting: ASME A112.4.3.
 4. Flushometer Valve: Same as water closet designation.
 5. Toilet Seat: Same as water closet designation.
- C. Water Closets <WC-3 (Elementary Schools Only)>: Floor mounted, bottom outlet, top spud.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Crane Plumbing, L.L.C.
 - c. Gerber Plumbing Fixtures LLC.
 - d. Kohler Co.
 - e. Zurn Industries, LLC; Commercial Brass and Fixtures.

2. Bowl:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Type: Siphon jet.
 - d. Style: Flushometer valve.
 - e. Height: Child.
 - f. Rim Contour: Elongated.
 - g. Water Consumption: 1.28 gal. (4.8 L) per flush.
 - h. Spud Size and Location: NPS 1-1/2 (DN 40); top.
 - i. Color: White.

3. Bowl-to-Drain Connecting Fitting: ASME A112.4.3.
4. Flushometer Valve: Same as water closet designation.
5. Toilet Seat: Same as water closet designation.

2.12 URINALS

A. Urinals <U-1>: Wall hung, back outlet, siphon jet.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Crane Plumbing, L.L.C.
 - c. Gerber Plumbing Fixtures LLC.
 - d. Kohler Co.
 - e. Zurn Industries, LLC; Commercial Brass and Fixtures.

2. Fixture:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Type: Siphon jet.
 - d. Strainer or Trapway: Manufacturer's standard strainer with integral trap.
 - e. Water Consumption: Ultra low.
 - f. Spud Size and Location: NPS 3/4 (DN 20); top.
 - g. Outlet Size and Location: NPS 2 (DN 50); back.
 - h. Color: White.

3. Flushometer Valve: Same as water closet designation.

4. Waste Fitting:
 - a. Standard: ASME A112.18.2/CSA B125.2 for coupling.
 - b. Size: NPS 2 (DN 50).
 5. Support: ASME A112.6.1M, Type I, urinal carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture. Include rectangular, steel uprights.
- B. Urinals <U-2>: Wall hung, back outlet, siphon jet, accessible.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Crane Plumbing, L.L.C.
 - c. Gerber Plumbing Fixtures LLC.
 - d. Kohler Co.
 - e. Zurn Industries, LLC; Commercial Brass and Fixtures.
 2. Fixture:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Type: Siphon jet.
 - d. Strainer or Trapway: Manufacturer's standard strainer with integral trap.
 - e. Water Consumption: Ultra low.
 - f. Spud Size and Location: NPS 3/4 (DN 20); top.
 - g. Outlet Size and Location: NPS 2 (DN 50); back.
 - h. Color: White.
 3. Flushometer Valve: Same as water closet designation.
 4. Waste Fitting:
 - a. Standard: ASME A112.18.2/CSA B125.2 for coupling.
 - b. Size: NPS 2 (DN 50).
 5. Support: ASME A112.6.1M, Type I, urinal carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture. Include rectangular, steel uprights.

2.13 LAVATORIES

- A. Lavatory <L-1 and L-2>: Vitreous china, wall mounted, with back.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Crane Plumbing, L.L.C.

- c. Gerber Plumbing Fixtures LLC.
 - d. Kohler Co.
 - e. Zurn Industries, LLC; Commercial Brass and Fixtures.
2. Fixture:
- a. Standard: ASME A112.19.2/CSA B45.1.
 - b. Type: For wall hanging.
 - c. Nominal Size: Rectangular, 20 by 18 inches (508 by 457 mm).
 - d. Faucet-Hole Punching: Three holes, 2-inch (51-mm) centers.
 - e. Faucet-Hole Location: Top.
 - f. Color: White.
 - g. Mounting Material: Chair carrier.
3. Faucet: Same as lavatory designation.
4. Support: ASME A112.6.1M, Type II, concealed-arm lavatory carrier. Include rectangular, steel uprights.

2.14 SINKS

- A. Sinks <S-1 and S-2 (**For MS and HS**)>: Science room cabinet.
1. Manufacturers: Per Division 12 specifications.
 2. Fixture: Per Division 12 specifications.
 3. Faucet: Per Division 12 specifications.
 4. Supply Fittings: Comply with requirements in "Lavatory and Sink Supply Fittings" Article.
 5. Waste Fittings: Comply with requirements in "Lavatory and Sink Waste Fittings" Article, except include continuous waste for multibowl sinks.
- B. Sinks <**S-1, S-2, S-3, S-4, and S-5**>: One or two bowl, countertop mounted, stainless steel.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkay Manufacturing Co.
 - b. Franke Consumer Products, Inc.
 - c. Just Manufacturing.
 - d. Kohler Co.
 - e. Sterling; a Kohler company.
 2. Fixture:
 - a. Standard: ASME A112.19.3/CSA B45.4 for stainless-steel kitchen sinks.
 - b. Overall Dimensions: Refer to drawings.
 - c. Metal Thickness: 18 guage.
 - d. Bowl:
 - 1) Dimensions: Refer to drawings.
 - 2) Drain: 3-1/2-inch (89-mm) crumb cup.

- a) Location: Refer to drawings.
- 3. Faucet: Same as sink designation.
- 4. Supply Fittings: Comply with requirements in "Lavatory and Sink Supply Fittings" Article.
- 5. Waste Fittings: Comply with requirements in "Lavatory and Sink Waste Fittings" Article, except include continuous waste for multibowl sinks.

2.15 Emergency Shower with Eyewash Combination Units <EW-1>:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Acorn Safety; a division of Acorn Engineering Company.
 - b. Bradley Corporation.
 - c. Encon Safety Products.
 - d. Guardian Equipment Co.
 - e. Haws Corporation.
 - f. Speakman Company.
- 2. Piping:
 - a. Material: Galvanized steel.
 - b. Unit Supply: NPS 1-1/4 (DN 32) minimum.
 - c. Unit Drain: Outlet at back or side near bottom.
- 3. Shower:
 - a. Capacity: Not less than 20 gpm (76 L/min.) for at least 15 minutes.
 - b. Supply Piping: NPS 1 (DN 25) with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Pull rod.
 - d. Shower Head: Chrome-plated brass or stainless steel.
- 4. Eyewash Unit:
 - a. Capacity: Not less than 0.4 gpm (1.5 L/min.) for at least 15 minutes.
 - b. Supply Piping: NPS 1/2 (DN 15) with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Paddle.
 - d. Spray-Head Assembly: Two receptor-mounted spray heads.
 - e. Receptor: Chrome-plated brass or stainless-steel bowl.
 - f. Mounting: Attached shower pedestal.

2.16 MOP SINKS

- A. Mop Sinks <MS-1>: Plastic, floor mounted.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Plumbing, L.L.C.

- b. Fiat Products.
 - c. Mustee, E. L., & Sons, Inc.
 - d. Zurn Industries, LLC; Light Commercial Specialty Plumbing Products.
2. Fixture:
 - a. Standard: IAPMO/ANSI Z124.6.
 - b. Material: Cast polymer.
 - c. Nominal Size: 24 by 24 by 10 inches (610 by 610 mm by 255 mm), as listed in Plumbing Fixture Schedule.
 - d. Rim Guard: Stainless steel. On front top surfaces.
 - e. Wall Guard: Stainless steel.
 - f. Mop Hanger.
 - g. Hose and Hose Bracket.
 - h. Drain: Grid with NPS 3 (DN 80) outlet.
 3. Mounting: On floor and flush to wall.
 4. Faucet: <MS-1>.
- B. Mop Sinks <MS-2 (for when Can Wash is needed)>: Plastic, floor mounted.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Plumbing, L.L.C.
 - b. Fiat Products.
 - c. Mustee, E. L., & Sons, Inc.
 - d. Zurn Industries, LLC; Light Commercial Specialty Plumbing Products.
 2. Fixture:
 - a. Standard: IAPMO/ANSI Z124.6.
 - b. Material: Cast polymer.
 - c. Nominal Size: 24 by 36 by 10 inches (610 by 915 mm by 255 mm), as listed in Plumbing Fixture Schedule.
 - d. Rim Guard: Stainless steel. On front top surfaces.
 - e. Wall Guard: Stainless steel.
 - f. Mop Hanger.
 - g. Hose and Hose Bracket.
 - h. Drain: Grid with NPS 3 (DN 80) outlet.
 3. Mounting: On floor and flush to wall.
 4. Faucet: <MS-2>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before plumbing-fixture installation.
- B. Examine walls, floors, cabinets, and counters for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Assemble plumbing fixtures, trim, fittings, and other components according to manufacturers' written instructions.
- B. Support Installation:
 - 1. Install supports, affixed to building substrate, for wall-mounting fixtures.
 - 2. Use carrier supports with waste fitting and seal for back-outlet fixtures.
 - 3. Use carrier supports without waste fitting for fixtures with tubular waste piping.
 - 4. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.
- C. Install back-outlet, wall-mounting fixtures onto waste fitting seals and attached to supports.
- D. Install floor-mounting fixtures on closet flanges or other attachments to piping or building substrate.
- E. Install wall-mounting fixtures with tubular waste piping attached to supports.
- F. Install counter-mounting fixtures in and attached to casework.
- G. Install fixtures level and plumb according to roughing-in drawings.
- H. Install accessible fixtures at mounting height for the handicapped/elderly, according to ICC/ANSI A117.1.
- I. Set floor-mounted sinks in leveling bed of cement grout.
- J. Install water-supply piping with stop on each supply to each fixture to be connected to water distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.
 - 1. Exception: Use ball valves if supply stops are not specified with fixture. Comply with valve requirements specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
 - 2. Exception: Omit shutoff valve on supply to emergency equipment if prohibited by authorities having jurisdiction.
 - 3. Install stops in locations where they can be easily reached for operation.

- K. Install trap and tubular waste piping on drain outlet of each fixture to be directly connected to sanitary drainage system.
 - L. Install tubular waste piping on drain outlet of each fixture to be indirectly connected to drainage system.
 - M. Flushometer-Valve Installation:
 - 1. Install flushometer-valve, water-supply fitting on each supply to each water closet.
 - 2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
 - 3. Install lever-handle flushometer valves for accessible water closets with handle mounted on open side of water closet.
 - 4. Install actuators in locations that are easy for people with disabilities to reach.
 - N. Install toilet seats on water closets.
 - O. Install dishwasher air-gap fitting at each sink receiving dishwasher drainage.
 - P. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible lavatories and sinks.
 - Q. Install faucet-spout fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.
 - R. Install traps on fixture outlets.
 - 1. Exception: Omit trap on fixtures with integral traps.
 - 2. Exception: Omit trap on indirect wastes unless otherwise indicated.
 - S. Install escutcheons at piping wall and ceiling penetrations in exposed, finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding fittings. Escutcheons are specified in Division 22 Section "Common Work Results for Plumbing."
 - T. Install dielectric fitting in supply piping to plumbing fixtures if piping and equipment connections are made of different metals. Comply with requirements for dielectric fittings specified in Division 22 Section "Domestic Water Piping."
 - U. Seal joints between fixtures and walls, floors, and countertops using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Sealants are specified in Division 07 Section "Joint Sealants."
- 3.3 CONNECTIONS
- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
 - B. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

- C. Comply with water piping requirements specified in Division 22 Section "Domestic Water Piping."
- D. Comply with soil and waste piping requirements specified in Division 22 Section "Sanitary Waste and Vent Piping."
- E. Ground equipment according to Division 26 Section "Grounding and Bonding."
- F. Connect wiring according to Division 26 Section "Low Voltage Conductors and Cables."

3.4 IDENTIFICATION

- A. Install equipment nameplates or equipment markers on emergency plumbing fixtures. Comply with requirements for identification materials specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.5 FIELD QUALITY CONTROL

- A. Verify that installed plumbing fixtures are categories and types specified for locations where installed.
- B. Check that plumbing fixtures are complete with trim, faucets, fittings, and other specified components.
- C. Inspect installed plumbing fixtures for damage. Replace damaged fixtures and components.
- D. Test installed fixtures after water systems are pressurized for proper operation. Replace malfunctioning fixtures and components, then retest. Repeat procedure until units operate properly.

3.6 ADJUSTING

- A. Operate and adjust plumbing fixtures and controls. Replace damaged and malfunctioning fixtures, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.

3.7 CLEANING AND PROTECTION

- A. After completing installation of plumbing fixtures, inspect and repair damaged finishes.
- B. Clean plumbing fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed plumbing fixtures and fittings.
- D. Do not allow use of plumbing fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION 224000

This Page Intentionally Left Blank

SECTION 224700 - DRINKING FOUNTAINS AND WATER COOLERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Drinking fountains.
 - 2. Pressure water coolers.

1.2 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Operation and maintenance data.

1.3 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Regulatory Requirements: Comply with requirements in ICC A117.1, "Accessible and Usable Buildings and Facilities"; Public Law 90-480, "Architectural Barriers Act"; and Public Law 101-336, "Americans with Disabilities Act"; for fixtures for people with disabilities.
- C. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.
- D. ARI Standard: Comply with ARI's "Directory of Certified Drinking Water Coolers" for style classifications.
- E. ARI Standard: Comply with ARI 1010, "Self-Contained, Mechanically Refrigerated Drinking-Water Coolers," for water coolers and with ARI's "Directory of Certified Drinking Water Coolers" for type and style classifications.
- F. ASHRAE Standard: Comply with ASHRAE 34, "Designation and Safety Classification of Refrigerants" for water coolers. Provide HFC 134a (tetrafluoroethane) refrigerant unless otherwise indicated.

PART 2 - PRODUCTS

2.1 DRINKING FOUNTAINS

- A. Drinking Fountains <DF-1 and DF-2>: Stainless steel, wall mounted.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkay Manufacturing Co.
 - b. Halsey Taylor.
 - c. Haws Corporation.
 - d. Murdock-Super Secur; a division of Acorn Engineering Company.
 - e. Tri Palm International, LLC; Oasis Brand.
 2. Standards:
 - a. Comply with ASME A112.19.3/CSA B45.4.
 - b. Comply with NSF 61.
 3. Type Receptor: With back.
 4. Receptor Shape: Rectangular.
 5. Bubblers: One, with adjustable stream regulator, located on deck, vandal-resistant and keyed into position.
 6. Control: Push button or push bar.
 7. Drain: Grid type with NPS 1-1/4 (DN 32) tailpiece.
 8. Supply: NPS 3/8 (DN 10) with shutoff valve.
 9. Waste Fitting: ASME A112.18.2/CSA B125.2, NPS 1-1/4 (DN 32) chrome-plated brass P-trap and waste.
 10. Support: ASME A112.6.1M, Type III lavatory carrier.
- B. Drinking Fountains <DF-3>: Stainless steel, pedestal, wheelchair accessible.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Belson Outdoors, Inc.
 - b. Halsey Taylor.
 - c. Haws Corporation.
 - d. Murdock-Super Secur; a division of Acorn Engineering Company.
 - e. Tri Palm International, LLC; Oasis Brand.
 2. Standards: Comply with ICC A117.1 and NSF 61.
 3. Pedestal: Square, with offset to receptor.
 4. Receptor(s):
 - a. Number: Two.
 - b. Material: Chrome-plated brass or stainless steel.
 - c. Shape: Square.
 - d. Bubbler: One for each receptor, with adjustable stream regulator.

- e. Drain: Grid type with NPS 1-1/4 (DN 32) tailpiece.
- 5. Controls: Push button.
- 6. Access to Internal Components: Panel in pedestal.
- 7. Supply Piping: NPS 1/2 (DN 15) with shutoff valve.
- 8. Drain Piping: NPS 1-1/4 (DN 32) minimum trap and waste.

2.2 PRESSURE WATER COOLERS

A. Pressure Water Coolers <EWC-1>: Wall mounted, wheelchair accessible.

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkay Manufacturing Co.
 - b. Halsey Taylor.
 - c. Haws Corporation.
 - d. Tri Palm International, LLC; Oasis Brand.
- 2. Cabinet: Bi-level with two attached cabinets, all stainless steel.
- 3. Bubbler: One, with adjustable stream regulator, located on each cabinet deck, vandal-resistant and keyed into position.
- 4. Control: Push button or push bar.
- 5. Drain: Grid with NPS 1-1/4 (DN 32) tailpiece.
- 6. Supply: NPS 3/8 (DN 10) with shutoff valve.
- 7. Waste Fitting: ASME A112.18.2/CSA B125.2, NPS 1-1/4 (DN 32) brass P-trap.
- 8. Filter: One or more water filters complying with NSF 42 and NSF 53 for cyst and lead reduction to below EPA standards; with capacity sized for unit peak flow rate.
- 9. Cooling System: Electric, with hermetically sealed compressor, cooling coil, air-cooled condensing unit, corrosion-resistant tubing, refrigerant, corrosion-resistant-metal storage tank, and adjustable thermostat.
 - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- 10. Capacities and Characteristics:
 - a. Cooled Water: 8 gph (0.0084 L/s).
 - b. Ambient-Air Temperature: 90 deg F (32 deg C).
 - c. Inlet-Water Temperature: 80 deg F (27 deg C).
 - d. Cooled-Water Temperature: 50 deg F (10 deg C).
 - e. Electrical Characteristics:
 - 1) Volts: 120-V ac.
 - 2) Phase: Single.
 - 3) Hertz: 60.
- 11. Support: ASME A112.6.1M, Type I water-cooler carrier.

- B. Pressure Water Coolers <EWC-2>: Wall mounted, wheelchair accessible.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkay Manufacturing Co.
 - b. Halsey Taylor.
 - c. Haws Corporation.
 - d. Tri Palm International, LLC; Oasis Brand.
 2. Cabinet: Single, all stainless steel.
 3. Bubbler: One, with adjustable stream regulator, located on each cabinet deck, vandal-resistant and keyed into position.
 4. Control: Push button or push bar.
 5. Drain: Grid with NPS 1-1/4 (DN 32) tailpiece.
 6. Supply: NPS 3/8 (DN 10) with shutoff valve.
 7. Waste Fitting: ASME A112.18.2/CSA B125.2, NPS 1-1/4 (DN 32) brass P-trap.
 8. Filter: One or more water filters complying with NSF 42 and NSF 53 for cyst and lead reduction to below EPA standards; with capacity sized for unit peak flow rate.
 9. Cooling System: Electric, with hermetically sealed compressor, cooling coil, air-cooled condensing unit, corrosion-resistant tubing, refrigerant, corrosion-resistant-metal storage tank, and adjustable thermostat.
 - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 10. Capacities and Characteristics:
 - a. Cooled Water: 8 gph (0.0084 L/s).
 - b. Ambient-Air Temperature: 90 deg F (32 deg C).
 - c. Inlet-Water Temperature: 80 deg F (27 deg C).
 - d. Cooled-Water Temperature: 50 deg F (10 deg C).
 - e. Electrical Characteristics:
 - 1) Volts: 120-V ac.
 - 2) Phase: Single.
 - 3) Hertz: 60.
 11. Support: ASME A112.6.1M, Type I water-cooler carrier.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.
- B. Examine walls and floors for suitable conditions where fixtures will be installed.

- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install fixtures level and plumb. For fixtures indicated for children, install at height required by authorities having jurisdiction.
- B. Install chrome-plated brass or copper tube, fittings, and valves in locations exposed to view.
- C. Install off-the-floor carrier supports, affixed to building substrate, for wall-mounted fixtures.
- D. Install water-supply piping with shutoff valve on supply to each fixture to be connected to water distribution piping. Use ball or gate valve. Install valves in locations where they can be easily reached for operation. Valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
- E. Install trap and waste piping on drain outlet of each fixture to be connected to sanitary drainage system.
- F. Install pipe escutcheons at wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding pipe fittings. Escutcheons are specified in Division 22 Section "Common Work Results for Plumbing."
- G. Seal joints between fixtures and walls and floors using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color. Sealants are specified in Division 07 Section "Joint Sealants."

3.3 CONNECTIONS

- A. Connect fixtures with water supplies, traps, and risers, and with soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Division 22 Section "Domestic Water Piping."
- C. Install ball or gate shutoff valve on water supply to each fixture. Install valve upstream from filter for water cooler. Comply with valve requirements specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
- D. Comply with soil and waste piping requirements specified in Division 22 Section "Sanitary Waste and Vent Piping."
- E. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- F. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 ADJUSTING

- A. Adjust fixture flow regulators for proper flow and stream height.
- B. Adjust pressure water cooler temperature settings.

3.5 CLEANING

- A. After installing fixture, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.
- B. Clean fixtures, on completion of installation, according to manufacturer's written instructions.
- C. Provide protective covering for installed fixtures.
- D. Do not allow use of fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION 224700

SECTION 230513 - COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.3 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS

- A. Comply with requirements in this Section except when stricter requirements are specified in HVAC equipment schedules or Sections.
- B. Comply with NEMA MG 1 unless otherwise indicated.
- C. Comply with IEEE 841 for severe-duty motors.

2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.

- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
 - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
 - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Rotor: Random-wound, squirrel cage.
- F. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- G. Temperature Rise: Match insulation rating.
- H. Insulation: Class F.
- I. Code Letter Designation:
 - 1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
 - 2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.
- J. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
 - 1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
 - 2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
 - 3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
 - 4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
- B. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.5 SINGLE-PHASE MOTORS

- A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
 - 1. Permanent-split capacitor.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.
- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 230513

This Page Intentionally Left Blank

SECTION 230517 - SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Sleeves.
 - 2. Sleeve-seal systems.
 - 3. Grout.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
- B. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- C. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
- D. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

2.2 SLEEVE-SEAL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Advance Products & Systems, Inc.
 - 2. CALPICO, Inc.

3. Metraflex Company (The).
4. Pipeline Seal and Insulator, Inc.
5. Proco Products, Inc.

B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.

1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Carbon steel.
3. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

2.3 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch (25-mm) annular clear space between piping and concrete slabs and walls.
 1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
 1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
 2. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level.
 3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.

1. Cut sleeves to length for mounting flush with both surfaces.
2. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Division 07 Section "Joint Sealants."

- E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07 Section "Penetration Firestopping."

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.3 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
1. Exterior Concrete Walls above Grade:
 - a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel-pipe sleeves.
 - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel-pipe sleeves.
 2. Exterior Concrete Walls below Grade:
 - a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel wall sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel wall sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 3. Concrete Slabs-on-Grade:
 - a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel-pipe sleeves with sleeve-seal system.

- 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel-pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
4. Concrete Slabs above Grade:
- a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel-pipe sleeves.
 - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel-pipe sleeves.
5. Interior Partitions:
- a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel-pipe sleeves.
 - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel-sheet sleeves.

END OF SECTION 230517

SECTION 230518 - ESCUTCHEONS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Escutcheons.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

- A. One-Piece, Cast-Brass Type: With rough-brass finish and setscrew fastener.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
- C. Split-Casting Brass Type: With rough-brass finish and with concealed hinge and setscrew.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. Escutcheons for New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.

- b. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass or split-casting brass type with rough-brass finish.
- c. Bare Piping in Equipment Rooms: One-piece, cast-brass or split-casting brass type with rough-brass finish.

END OF SECTION 230518

SECTION 230519 - METERS AND GAGES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following meters and gages for mechanical systems:
 - 1. Thermometers.
 - 2. Gages.
 - 3. Test plugs.
 - 4. Flowmeters.
 - 5. Thermal-energy meters.

1.3 DEFINITIONS

- A. CR: Chlorosulfonated polyethylene synthetic rubber.
- B. EPDM: Ethylene-propylene-diene terpolymer rubber.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated; include performance curves.
- B. Shop Drawings: Schedule for thermometers, gages and flowmeters indicating manufacturer's number, scale range, and location for each.
- C. Product Certificates: For each type of thermometer, gage and flowmeter, signed by product manufacturer.
- D. Operation and Maintenance Data: For flowmeters and thermal-energy meters to include in emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 METAL-CASE, LIQUID-IN-GLASS THERMOMETERS

- A. Manufacturers:
1. Palmer - Wahl Instruments Inc.
 2. Terice, H. O. Co.
 3. Weiss Instruments, Inc.
 4. Weksler Instruments Operating Unit; Dresser Industries; Instrument Div.
- B. Case: Die-cast aluminum or brass, 7 inches (178 mm) long.
- C. Tube: blue reading, organic-liquid filled, with magnifying lens.
- D. Tube Background: Satin-faced, nonreflective aluminum with permanently etched scale markings.
- E. Window: Glass or plastic .
- F. Connector: Adjustable type, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device.
- G. Stem: Copper-plated steel, aluminum, or brass for thermowell installation and of length to suit installation.
- H. Accuracy: Plus or minus 1 percent of range or plus or minus 1 scale division to maximum of 1.5 percent of range.

2.3 PLASTIC-CASE, LIQUID-IN-GLASS THERMOMETERS

- A. Manufacturers:
1. Ernst Gage Co.
 2. Eugene Ernst Products Co.
 3. Marsh Bellofram.
 4. Miljoco Corp.
 5. Terice, H. O. Co.
 6. Weksler Instruments Operating Unit; Dresser Industries; Instrument Div.
 7. Winters Instruments.
- B. Case: Plastic, 7 inches (178 mm) long.
- C. Tube: Blue reading, mercury or organic-liquid filled, with magnifying lens.

- D. Tube Background: Satin-faced, nonreflective aluminum with permanently etched scale markings.
- E. Window: Glass or plastic.
- F. Connector: Adjustable type, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device.
- G. Stem: Metal, for thermowell installation and of length to suit installation.
- H. Accuracy: Plus or minus 1 percent of range or plus or minus 1 scale division to maximum of 1.5 percent of range.

2.4 DUCT-TYPE, LIQUID-IN-GLASS THERMOMETERS

- A. Available Manufacturers:
 - 1. Miljoco Corp.
 - 2. Palmer - Wahl Instruments Inc.
 - 3. Trerice, H. O. Co.
 - 4. Weiss Instruments, Inc.
- B. Case: Die-cast aluminum , 7 inches (178 mm) long.
- C. Tube: blue reading with magnifying lens.
- D. Tube Background: Satin-faced, nonreflective aluminum with permanently etched scale markings.
- E. Window: Glass or plastic .
- F. Connector: Adjustable type, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device .
- G. Stem: Metal, for installation in mounting bracket and of length to suit installation.
- H. Mounting Bracket: Flanged fitting for attachment to duct and made to hold thermometer stem.
- I. Accuracy: Plus or minus 1 percent of range or plus or minus 1 scale division to maximum of 1.5 percent of range.

2.5 THERMOWELLS

- A. Available Manufacturers:
 - 1. AMETEK, Inc.; U.S. Gauge Div.
 - 2. Ashcroft Commercial Instrument Operations; Dresser Industries; Instrument Div.
 - 3. Ernst Gage Co.
 - 4. Marsh Bellofram.

5. Miljoco Corp.
6. NANMAC Corporation.
7. Noshok, Inc.
8. Palmer - Wahl Instruments Inc.
9. REO TEMP Instrument Corporation.
10. Tel-Tru Manufacturing Company.
11. Trerice, H. O. Co.
12. Weiss Instruments, Inc.
13. Weksler Instruments Operating Unit; Dresser Industries; Instrument Div.
14. WIKA Instrument Corporation.
15. Winters Instruments.

B. Manufacturers: Same as manufacturer of thermometer being used.

C. Description: Pressure-tight, socket-type metal fitting made for insertion into piping and of type, diameter, and length required to hold thermometer.

2.6 PRESSURE GAGES

A. Available Manufacturers:

1. AMETEK, Inc.; U.S. Gauge Div.
2. Ashcroft Commercial Instrument Operations; Dresser Industries; Instrument Div.
3. Ernst Gage Co.
4. Eugene Ernst Products Co.
5. KOBOLD Instruments, Inc.
6. Marsh Bellofram.
7. Miljoco Corp.
8. Noshok, Inc.
9. Palmer - Wahl Instruments Inc.
10. REO TEMP Instrument Corporation.
11. Trerice, H. O. Co.
12. Weiss Instruments, Inc.
13. Weksler Instruments Operating Unit; Dresser Industries; Instrument Div.
14. WIKA Instrument Corporation.
15. Winters Instruments.

B. Direct-Mounting, Dial-Type Pressure Gages: Indicating-dial type complying with ASME B40.100.

1. Case: Liquid-filled type, drawn steel or cast aluminum , 4-1/2-inch (114-mm) diameter.
2. Pressure-Element Assembly: Bourdon tube, unless otherwise indicated.
3. Pressure Connection: Brass, NPS 1/4 (DN 8), bottom-outlet type unless back-outlet type is indicated.
4. Movement: Mechanical, with link to pressure element and connection to pointer.
5. Dial: Satin-faced, nonreflective aluminum with permanently etched scale markings.
6. Pointer: Red metal.
7. Window: Glass or plastic.
8. Ring: Metal Brass Stainless steel.

9. Accuracy: Grade A, plus or minus 1 percent of middle half scale.
10. Vacuum-Pressure Range: 30-in. Hg of vacuum to 15 psig of pressure (100 kPa of vacuum to 103 kPa of pressure).
11. Range for Fluids under Pressure: Two times operating pressure.

C. Pressure-Gage Fittings:

1. Valves: NPS 1/4 (DN 8) brass or stainless-steel needle type.
2. Syphons: NPS 1/4 (DN 8) coil of brass tubing with threaded ends.
3. Snubbers: ASME B40.5, NPS 1/4 (DN 8) brass bushing with corrosion-resistant, porous-metal disc of material suitable for system fluid and working pressure.

2.7 TEST PLUGS

- A. Description: Corrosion-resistant brass or stainless-steel body with core inserts and gasketed and threaded cap, with extended stem for units to be installed in insulated piping.
- B. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F (3450 kPa at 93 deg C).
- C. Core Inserts: One or two self-sealing rubber valves.
 1. Insert material for air, water, oil, or gas service at 20 to 200 deg F (minus 7 to plus 93 deg C) shall be CR.
 2. Insert material for air or water service at minus 30 to plus 275 deg F (minus 35 to plus 136 deg C) shall be EPDM.
- D. Test Kit: Furnish one test kit(s) containing one pressure gage and adaptor, two thermometer(s), and carrying case. Pressure gage, adapter probes, and thermometer sensing elements shall be of diameter to fit test plugs and of length to project into piping. Manufacturer: Peterson Equipment Co., Inc, Model 1500
 1. Pressure Gage: Small bourdon-tube insertion type with 2- to 3-inch- (51- to 76-mm-) diameter dial and probe. Dial range shall be 0 to 200 psig (0 to 1380 kPa) .
 2. Low-Range Thermometer: Small bimetallic insertion type with 1- to 2-inch- (25- to 51-mm-) diameter dial and tapered-end sensing element. Dial ranges shall be 25 to 125 deg F (minus 4 to plus 52 deg C).
 3. High-Range Thermometer: Small bimetallic insertion type with 1- to 2-inch- (25- to 51-mm-) diameter dial and tapered-end sensing element. Dial ranges shall be 0 to 220 deg F (minus 18 to plus 104 deg C) .
 4. Carrying case shall have formed instrument padding.
 5. Kit shall be per national and OCPS standards.

2.8 WAFER-ORIFICE FLOWMETERS

A. Available Manufacturers:

1. ABB, Inc.; ABB Instrumentation.

2. Armstrong Pumps, Inc.
 3. Badger Meter, Inc.; Industrial Div.
 4. Bell & Gossett; ITT Industries.
 5. Meriam Instruments Div.; Scott Fetzer Co.
- B. Description: Differential-pressure-design orifice insert for installation between pipe flanges; with calibrated flow-measuring element, separate flowmeter, hoses or tubing, valves, fittings, and conversion chart compatible with flow-measuring element, flowmeter, and system fluid.
- C. Construction: Cast-iron body, brass valves with integral check valves and caps, and calibrated nameplate.
- D. Pressure Rating: 300 psig (2070 kPa) .
- E. Temperature Rating: 250 deg F (121 deg C) .
- F. Range: Flow range of flow-measuring element and flowmeter shall cover operating range of equipment or system served.
- G. Permanent Indicators: Suitable for wall or bracket mounting, calibrated for connected flowmeter element, and having 6-inch- (150-mm-) diameter, or equivalent, dial with fittings and copper tubing for connecting to flowmeter element.
1. Scale: Gallons per minute (Liters per second).
 2. Accuracy: Plus or minus 1 percent between 20 and 80 percent of range.
- H. Portable Indicators: Differential-pressure type calibrated for connected flowmeter element and having two 12-foot (3.7-m) hoses in carrying case.
1. Scale: Gallons per minute (Liters per second).
 2. Accuracy: Plus or minus 2 percent between 20 and 80 percent of range.
- I. Operating Instructions: Include complete instructions with each flowmeter.

2.9 FLOW INDICATORS

- A. Available Manufacturers:
1. Brooks Instrument Div.; Emerson Electric Co.
 2. Dwyer Instruments, Inc.
 3. Ernst Gage Co.
 4. Eugene Ernst Products Co.
 5. McCrometer, Inc.
 6. OPW Engineered Systems; Dover Corp.
 7. Penberthy, Inc.
- B. Description: Instrument for installation in piping systems for visual verification of flow.

- C. Construction: Bronze or stainless-steel body; with sight glass and plastic pelton-wheel indicator, and threaded or flanged ends.
- D. Pressure Rating: 125 psig (860 kPa) .
- E. Temperature Rating: [200 deg F (93 deg C)] .
- F. End Connections for NPS 2 (DN 50) and Smaller: Threaded.
- G. End Connections for NPS 2-1/2 (DN 65) and Larger: Flanged.

PART 3 - EXECUTION

3.1 THERMOMETER APPLICATIONS

- A. Install liquid-in-glass thermometers in the following locations:
 - 1. Inlet and outlet of each hydronic zone.
 - 2. Inlet and outlet of each hydronic chiller.
 - 3. Inlet and outlet of each hydronic coil in air-handling units and built-up central systems.
 - 4. Outside-air, return-air, and mixed-air ducts.
- B. Provide the following temperature ranges for thermometers:
 - 1. Domestic Hot Water: 30 to 180 deg F, with 2-degree scale divisions (Minus 1 to plus 82 deg C, with 1-degree scale divisions) .
 - 2. Chilled Water: 0 to 100 deg F, with 2-degree scale divisions (Minus 18 to plus 38 deg C, with 1-degree scale divisions) .

3.2 GAGE APPLICATIONS

- A. Install dry-case-type pressure gages for discharge of each pressure-reducing valve.
- B. Install liquid-filled-case-type pressure gages at chilled- -water inlets and outlets of chillers.
- C. Install liquid-filled-case-type pressure gages at suction and discharge of each pump.

3.3 INSTALLATIONS

- A. Install direct-mounting thermometers and adjust vertical and tilted positions.
- B. Install remote-mounting dial thermometers on panel, with tubing connecting panel and thermometer bulb supported to prevent kinks. Use minimum tubing length.
- C. Install thermowells with socket extending a minimum of 2 inches (51 mm) into fluid and in vertical position in piping tees where thermometers are indicated.

- D. Duct Thermometer Support Flanges: Install in wall of duct where duct thermometers are indicated. Attach to duct with screws.
- E. Install direct-mounting pressure gages in piping tees with pressure gage located on pipe at most readable position.
- F. Install remote-mounting pressure gages on panel.
- G. Install needle-valve and snubber fitting in piping for each pressure gage for fluids (except steam).
- H. Install needle-valve and syphon fitting in piping for each pressure gage for steam.
- I. Install test plugs in tees in piping.
- J. Install flow indicators, in accessible positions for easy viewing, in piping systems.
- K. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters as prescribed by manufacturer's written instructions.
- L. Install flowmeter elements in accessible positions in piping systems.
- M. Install differential-pressure-type flowmeter elements with at least minimum straight lengths of pipe upstream and downstream from element as prescribed by manufacturer's written instructions.
- N. Install wafer-orifice flowmeter elements between pipe flanges.
- O. Install permanent indicators on walls or brackets in accessible and readable positions.
- P. Install connection fittings for attachment to portable indicators in accessible locations.
- Q. Install flowmeters at discharge of hydronic system pumps and at inlet of hydronic air coils.
- R. Assemble components and install thermal-energy meters.
- S. Mount meters on wall if accessible; if not, provide brackets to support meters.

3.4 CONNECTIONS

- A. Install meters and gages adjacent to machines and equipment to allow service and maintenance for meters, gages, machines, and equipment.
- B. Connect flowmeter-system elements to meters.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding."
- D. Connect wiring according to Division 26 Section "Conductors and Cables."

3.5 ADJUSTING

- A. Calibrate meters according to manufacturer's written instructions, after installation.
- B. Adjust faces of meters and gages to proper angle for best visibility.

END OF SECTION 230519

This Page Intentionally Left Blank

SECTION 230523 - VALVES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following general-duty valves:
 - 1. Copper-alloy ball valves.
 - 2. Ferrous-alloy ball valves.
 - 3. Ferrous-alloy butterfly valves.
 - 4. High-pressure butterfly valves.
 - 5. Bronze check valves.
 - 6. Bronze gate valves.

1.3 DEFINITIONS

- A. The following are standard abbreviations for valves:
 - 1. CWP: Cold working pressure.
 - 2. EPDM: Ethylene-propylene-diene terpolymer rubber.
 - 3. PTFE: Polytetrafluoroethylene plastic.
 - 4. SWP: Steam working pressure.
 - 5. TFE: Tetrafluoroethylene plastic.

1.4 SUBMITTALS

- A. Product Data: For each type of valve indicated. Include body, seating, and trim materials; valve design; pressure and temperature classifications; end connections; arrangement; dimensions; and required clearances. Include list indicating valve and its application. Include rated capacities; shipping, installed, and operating weights; furnished specialties; and accessories.

1.5 QUALITY ASSURANCE

- A. ASME Compliance: ASME B31.9 for building services piping valves.
 - 1. Exceptions: Domestic hot- and cold-water piping valves unless referenced.
- B. ASME Compliance for Ferrous Valves: ASME B16.10 and ASME B16.34 for dimension and design criteria.

- C. NSF Compliance: NSF 61 for valve materials for potable-water service.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:

1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, grooves, and weld ends.
3. Set angle, gate, and globe valves closed to prevent rattling.
4. Set ball and plug valves open to minimize exposure of functional surfaces.
5. Set butterfly valves closed or slightly open.
6. Block check valves in either closed or open position.

- B. Use the following precautions during storage:

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher than ambient dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 VALVES, GENERAL

- A. Refer to Part 3 "Valve Applications" Article for applications of valves.
- B. Bronze Valves: NPS 2 (DN 50) and smaller with threaded ends, unless otherwise indicated.
- C. Ferrous Valves: NPS 2-1/2 (DN 65) and larger with flanged ends, unless otherwise indicated.
- D. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- E. Valve Sizes: Same as upstream pipe, unless otherwise indicated.
- F. Valve Actuators:
 1. Gear Drive: For quarter-turn valves NPS 8 (DN 200) and larger.
 2. Handwheel: For valves other than quarter-turn types.
 3. Lever Handle: For quarter-turn valves NPS 6 (DN 150) and smaller, except plug valves.
- G. Extended Valve Stems: On insulated valves.
- H. Valve Flanges: ASME B16.1 for cast-iron valves, ASME B16.5 for steel valves, and ASME B16.24 for bronze valves.
- I. Valve Grooved Ends: AWWA C606.

1. Solder Joint: With sockets according to ASME B16.18.
 - a. Caution: Use solder with melting point below 840 deg F (454 deg C) for angle, check, gate, and globe valves; below 421 deg F (216 deg C) for ball valves.
2. Threaded: With threads according to ASME B1.20.1.

J. Valve Bypass and Drain Connections: MSS SP-45.

2.2 COPPER-ALLOY BALL VALVES

- A. Copper-Alloy Ball Valves, General: MSS SP-110.
- B. Two-Piece, Copper-Alloy Ball Valves: Brass or bronze body with full or regular-port, chrome-plated bronze ball; PTFE or TFE seats; and 600-psig (4140-kPa) minimum CWP rating and blowout-proof stem.

2.3 FERROUS-ALLOY BALL VALVES

- A. Ferrous-Alloy Ball Valves, General: MSS SP-72, with flanged ends.
- B. Ferrous-Alloy Ball Valves: Class 150, full or regular port.

2.4 FERROUS-ALLOY BUTTERFLY VALVES

- A. Ferrous-Alloy Butterfly Valves, General: MSS SP-67, Type I, for tight shutoff, with disc and lining suitable for potable water, unless otherwise indicated.
- B. Flanged, 200-psig (1380-kPa) CWP Rating, Ferrous-Alloy Butterfly Valves: Flanged-end type with one- or two-piece stem.

2.5 BRONZE CHECK VALVES

- A. Bronze Check Valves, General: MSS SP-80.
- B. Type 2, Class 125, Bronze, Horizontal Lift Check Valves: Bronze body with nonmetallic disc and bronze seat.
- C. Type 2, Class 125, Bronze, Vertical Lift Check Valves: Bronze body with nonmetallic disc and bronze seat.

2.6 BRONZE GATE VALVES

- A. Bronze Gate Valves, General: MSS SP-80, with ferrous-alloy handwheel.
- B. Type 1, Class 125, Bronze Gate Valves: Bronze body with nonrising stem and bronze solid wedge and union-ring bonnet.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine piping system for compliance with requirements for installation tolerances and other conditions affecting performance.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- C. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- D. Examine threads on valve and mating pipe for form and cleanliness.
- E. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- F. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE APPLICATIONS

- A. Refer to piping Sections for specific valve applications. If valve applications are not indicated, use the following:
 - 1. Shutoff Service: Ball, butterfly **or gate** valves.
 - 2. Throttling Service: Angle, ball, butterfly, or globe valves.
- B. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP class or CWP ratings may be substituted.
- C. Chilled-Water & Hot-Water Piping: Use the following types of valves:
 - 1. Ball Valves, NPS 2 (DN 50) and Smaller: **Two**-piece, 600-psig (4140-kPa) CWP rating, copper alloy.
 - 2. Butterfly Valves, NPS 2-1/2 (DN 65) and Larger: Flanged, 200-psig (1380-kPa) CWP rating, ferrous alloy, with EPDM liner.
- D. Select valves, except wafer and flangeless types, with the following end connections:
 - 1. For Copper Tubing, NPS 2 (DN 50) and Smaller: Solder-joint or threaded ends, except provide valves with threaded ends for heating hot water, steam, and steam condensate services.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged or threaded ends.
 - 3. For Copper Tubing, NPS 5 (DN 125) and Larger: Flanged ends.
 - 4. For Steel Piping, NPS 2 (DN 50) and Smaller: Threaded ends.

5. For Steel Piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged or threaded ends.
6. For Steel Piping, NPS 5 (DN 125) and Larger: Flanged ends.
7. For Grooved-End, Copper Tubing and Steel Piping: Valve ends may be grooved. Do not use for steam or steam condensate piping.

3.3 VALVE INSTALLATION

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- C. Locate valves for easy access and provide separate support where necessary.
- D. Install valves in horizontal piping with stem at or above center of pipe.
- E. Install valves in position to allow full stem movement.

3.4 JOINT CONSTRUCTION

- A. Grooved Joints: Assemble joints with keyed coupling housing, gasket, lubricant, and bolts according to coupling and fitting manufacturer's written instructions.
- B. Soldered Joints: Use ASTM B 813, water-flushable, lead-free flux; ASTM B 32, lead-free-alloy solder; and ASTM B 828 procedure, unless otherwise indicated.

3.5 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

END OF SECTION 230523

This Page Intentionally Left Blank

SECTION 230529 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Metal pipe hangers and supports.
 - 2. Trapeze pipe hangers.
 - 3. Metal framing systems.
 - 4. Thermal-hanger shield inserts.
 - 5. Fastener systems.
 - 6. Pipe stands.

1.3 DEFINITIONS

- A. MSS: Manufacturers Standardization Society of The Valve and Fittings Industry Inc.

1.4 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
 - 1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
 - 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

1.5 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Show fabrication and installation details and include calculations for the following; include Product Data for components:
 - 1. Trapeze pipe hangers.
 - 2. Metal framing systems.
 - 3. Pipe stands.

- C. Welding certificates.

1.6 QUALITY ASSURANCE

- A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 - PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
 - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 - 2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
 - 3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
 - 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 - 5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.

2.2 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 METAL FRAMING SYSTEMS

- A. Non-MFMA Manufacturer Metal Framing Systems:
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Anvil International; a subsidiary of Mueller Water Products Inc.
 - b. Empire Industries, Inc.
 - c. ERICO International Corporation.
 - d. Haydon Corporation; H-Strut Division.
 - e. PHD Manufacturing, Inc.
 - f. PHS Industries, Inc.
 - 2. Description: Shop- or field-fabricated pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.
 - 3. Standard: Comply with MFMA-4.

4. Channels: Continuous slotted steel channel with inturred lips.
5. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
6. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
7. Coating: Zinc.

2.4 THERMAL-HANGER SHIELD INSERTS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Carpenter & Paterson, Inc.
 2. Clement Support Services.
 3. ERICO International Corporation.
 4. National Pipe Hanger Corporation.
 5. PHS Industries, Inc.
 6. Pipe Shields, Inc.; a subsidiary of Piping Technology & Products, Inc.
 7. Piping Technology & Products, Inc.
 8. Rilco Manufacturing Co., Inc.
 9. Value Engineered Products, Inc.
- B. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig (688-kPa) or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig (862-kPa) minimum compressive strength and vapor barrier.
- C. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- D. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- E. Insert Length: Extend 2 inches (50 mm) beyond sheet metal shield for piping operating below ambient air temperature.

2.5 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
- B. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.6 PIPE STANDS

- A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
- B. High-Type, Single-Pipe Stand:

1. Description: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
2. Base: Stainless steel.
3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.

C. High-Type, Multiple-Pipe Stand:

1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
2. Bases: One or more; plastic.
3. Vertical Members: Two or more protective-coated-steel channels.
4. Horizontal Member: Protective-coated-steel channel.
5. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.

2.7 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
 1. Properties: Nonstaining, noncorrosive, and nongaseous.
 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
 2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.

- D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- E. Fastener System Installation:
 - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches (100 mm) thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
 - 2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- F. Pipe Stand Installation:
 - 1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
- G. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- H. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- I. Install lateral bracing with pipe hangers and supports to prevent swaying.
- J. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 (DN 65) and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- K. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- L. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- M. Insulated Piping:
 - 1. Attach clamps and spacers to piping.
 - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
 - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
 - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
 - 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.

- a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.
3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.
4. Shield Dimensions for Pipe: Not less than the following:
 - a. NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches (305 mm) long and 0.048 inch (1.22 mm) thick.
 - b. NPS 4 (DN 100): 12 inches (305 mm) long and 0.06 inch (1.52 mm) thick.
 - c. NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.
 - d. NPS 8 to NPS 14 (DN 200 to DN 350): 24 inches (610 mm) long and 0.075 inch (1.91 mm) thick.
 - e. NPS 16 to NPS 24 (DN 400 to DN 600): 24 inches (610 mm) long and 0.105 inch (2.67 mm) thick.
5. Pipes NPS 8 (DN 200) and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.2 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.3 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches (40 mm).

3.4 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils (0.05 mm).
- B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.5 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports and attachments for general service applications.
- F. Use padded hangers for piping that is subject to scratching.
- G. Use thermal-hanger shield inserts for insulated piping and tubing.
- H. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30 (DN 15 to DN 750).
 - 2. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36 (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
- I. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 - 1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24 (DN 24 to DN 600).
- J. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joint construction, to attach to top flange of structural shape.
 3. C-Clamps (MSS Type 23): For structural shapes.
- K. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
- L. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- M. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.
- N. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.

END OF SECTION 230529

SECTION 230548 - VIBRATION AND SEISMIC CONTROLS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Isolation pads.
 - 2. Isolation mounts.
 - 3. Freestanding and restrained spring isolators.
 - 4. Spring hangers.
 - 5. Inertia, vibration isolation equipment bases.

1.3 DEFINITIONS

- A. IBC: International Building Code.
- B. ICC-ES: ICC-Evaluation Service.
- C. OSHPD: Office of Statewide Health Planning and Development for the State of California.

1.4 PERFORMANCE REQUIREMENTS

- A. Wind-Restraint Loading:
 - 1. Basic Wind Speed: 153 MPH.
 - 2. Building Classification Category: III.
 - 3. Minimum 10 lb/sq. ft. (48.8 kg/sq. m) multiplied by the maximum area of the HVAC component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.

1.5 SUBMITTALS

- A. Product Data: For the following:
 - 1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
 - 2. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.

- B. Delegated-Design Submittal: For vibration isolation and seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, wind forces required to select vibration isolators, wind restraints, and for designing vibration isolation bases.
 - a. Coordinate design calculations with wind load calculations required for equipment mounted outdoors. Comply with requirements in other Division 22 Sections for equipment mounted outdoors.
 - 2. Vibration Isolation Base Details: Detail overall dimensions, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, base weights, equipment static loads, power transmission, component misalignment, and cantilever loads.
- C. Qualification Data: For professional engineer.

1.6 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATORS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Ace Mountings Co., Inc.
 - 2. Amber/Booth Company, Inc.
 - 3. California Dynamics Corporation.
 - 4. Isolation Technology, Inc.
 - 5. Kinetics Noise Control.
 - 6. Mason Industries.
 - 7. Vibration Eliminator Co., Inc.
 - 8. Vibration Isolation.
 - 9. Vibration Mountings & Controls, Inc.
- B. Pads: Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
 - 1. Resilient Material: Oil- and water-resistant neoprene.
- C. Mounts: Double-deflection type, with molded, oil-resistant rubber, hermetically sealed compressed fiberglass, or neoprene isolator elements with factory-drilled, encapsulated top plate

for bolting to equipment and with baseplate for bolting to structure. Color-code or otherwise identify to indicate capacity range.

1. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
2. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.

D. Spring Isolators: Freestanding, laterally stable, open-spring isolators.

1. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
2. Minimum Additional Travel: 50 percent of the required deflection at rated load.
3. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
5. Baseplates: Factory drilled for bolting to structure and bonded to 1/4-inch- (6-mm-) thick, rubber isolator pad attached to baseplate underside. Baseplates shall limit floor load to 500 psig (3447 kPa).
6. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.

E. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic or limit-stop restraint.

1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled baseplate bonded to 1/4-inch- (6-mm-) thick, neoprene or rubber isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
2. Restraint: Seismic or limit stop as required for equipment and authorities having jurisdiction.
3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

F. Spring Hangers: Combination coil-spring and elastomeric-insert hanger with spring and insert in compression.

1. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

6. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
7. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.

2.2 VIBRATION ISOLATION EQUIPMENT BASES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Amber/Booth Company, Inc.
 2. California Dynamics Corporation.
 3. Isolation Technology, Inc.
 4. Kinetics Noise Control.
 5. Mason Industries.
 6. Vibration Eliminator Co., Inc.
 7. Vibration Isolation.
 8. Vibration Mountings & Controls, Inc.
- B. Inertia Base: Factory-fabricated, welded, structural-steel bases and rails ready for placement of cast-in-place concrete.
 1. Design Requirements: Lowest possible mounting height with not less than 1-inch (25-mm) clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.
 - a. Include supports for suction and discharge elbows for pumps.
 2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.
 3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
 4. Fabrication: Fabricate steel templates to hold equipment anchor-bolt sleeves and anchors in place during placement of concrete. Obtain anchor-bolt templates from supported equipment manufacturer.

2.3 FACTORY FINISHES

- A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.
 1. Powder coating on springs and housings.
 2. All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
 3. Baked enamel or powder coat for metal components on isolators for interior use.
 4. Color-code or otherwise mark vibration isolation control devices to indicate capacity range.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation and wind-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION

- A. Comply with requirements in Division 07 Section "Roof Accessories" for installation of roof curbs, equipment supports, and roof penetrations.
- B. Equipment Restraints:
 - 1. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
- C. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

3.3 ADJUSTING

- A. Adjust isolators after piping system is at operating weight.
- B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
- C. Adjust active height of spring isolators.
- D. Adjust restraints to permit free movement of equipment within normal mode of operation.

END OF SECTION 230548

This Page Intentionally Left Blank

SECTION 230553 - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Equipment labels.
2. Pipe labels.
3. Duct labels.
4. Valve tags.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- C. Valve numbering scheme.
- D. Valve Schedules: For each piping system to include in maintenance manuals.

1.4 COORDINATION

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch (1.6 mm) thick, and having predrilled holes for attachment hardware.
 2. Letter Color: White.
 3. Background Color: Black.
 4. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
 5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
 6. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 7. Fasteners: Stainless-steel rivets or self-tapping screws.
 8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules).
- C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch (A4) bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
 2. Lettering Size: At least 1-1/2 inches ((38 mm) high).

2.3 DUCT LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch ((1.6 mm)) thick, and having predrilled holes for attachment hardware.
- B. Letter Color: White.
- C. Background Color: Per section 3.4.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).

- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 2-1/2inch (64 by 69 mm).
- F. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- G. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, duct size, and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions, or as separate unit on each duct label to indicate flow direction.
 - 2. Lettering Size: At least 1-1/2 inches ((38 mm) high).

2.4 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping system abbreviation and 1/2-inch (13-mm) numbers.
 - 1. Tag Material: Brass, 0.032-inch (0.8-mm) or anodized aluminum, 0.032-inch (0.8-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.
 - 2. Fasteners: Brass wire-link or beaded chain; or S-hook.
- B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch (A4) bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
 - 1. Valve-tag schedule shall be included in operation and maintenance data.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.
- C. When equipment is located above the ceiling install label on the ceiling grid T-bar below the equipment.

3.3 PIPE LABEL INSTALLATION

- A. Piping Color-Coding: Painting of piping is specified in Division 09.
- B. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 - 1. Near each valve and control device.
 - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
 - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
 - 5. Near major equipment items and other points of origination and termination.
 - 6. Spaced at maximum intervals of 50 feet (15 m) along each run. Reduce intervals to 25 feet (7.6 m) in areas of congested piping and equipment.
 - 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- C. Pipe Label Color Schedule:
 - 1. Chilled-Water Piping:
 - a. Background Color: Green.
 - b. Letter Color: White.
 - 2. Hot-Water Piping:
 - a. Background Color: Yellow.
 - b. Letter Color: Black.
 - 3. Refrigerant Piping:
 - a. Background Color: Black.
 - b. Letter Color: White
 - 4. Gas Piping.
 - a. Background Color: Yellow.
 - b. Letter Color: Black.

3.4 DUCT LABEL INSTALLATION

- A. Install duct labels with permanent adhesive on air ducts in the following color codes:
 - 1. Blue: For cold-air supply ducts.
 - 2. Yellow: For hot-air supply ducts.
 - 3. Green: For exhaust-, outside-, relief-, return-, and mixed-air ducts.
 - 4. ASME A13.1 Colors and Designs: For hazardous material exhaust.
- B. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 50 feet (15 m) in each space where ducts are exposed or concealed by removable ceiling system.

3.5 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
 - 1. Valve-Tag Size and Shape:
 - a. Chilled Water: 1-1/2 inches (38 mm), round.
 - b. Condenser Water: 1-1/2 inches (38 mm), round.
 - c. Gas: 1-1/2 inches (38 mm), round.
 - 2. Valve-Tag Color:
 - a. Chilled Water: Natural.
 - b. Condenser Water: Natural.
 - c. Gas: Yellow.
 - 3. Letter Color:
 - a. Chilled Water: Black.
 - b. Condenser Water: Black.
 - c. Gas: Black.

END OF SECTION 230553

This Page Intentionally Left Blank

SECTION 230593- TESTING, ADJUSTING, AND BALANCING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes TAB to produce design objectives for the following:
 - 1. Air Systems:
 - a. Constant-volume air systems.
 - b. Variable-air-volume systems.
 - 2. Hydronic Piping Systems:
 - a. Constant-flow systems.
 - b. Variable-flow systems.
 - c. Primary-secondary systems.
 - 3. HVAC equipment quantitative-performance settings.
 - 4. Kitchen hood airflow balancing.
 - 5. Vibration measuring.
 - 6. Indoor-air quality measuring.
 - 7. Verifying that automatic control devices are functioning properly.
 - 8. Reporting results of activities and procedures specified in this Section.

1.3 DEFINITIONS

- A. Adjust: To regulate fluid flow rate and air patterns at the terminal equipment, such as to reduce fan speed or adjust a damper.
- B. Balance: To proportion flows within the distribution system, including submains, branches, and terminals, according to indicated quantities.
- C. Barrier or Boundary: Construction, either vertical or horizontal, such as walls, floors, and ceilings that are designed and constructed to restrict the movement of airflow, smoke, odors, and other pollutants.
- D. Draft: A current of air, when referring to localized effect caused by one or more factors of high air velocity, low ambient temperature, or direction of airflow, whereby more heat is withdrawn from a person's skin than is normally dissipated.

- E. Procedure: An approach to and execution of a sequence of work operations to yield repeatable results.
- F. Report Forms: Test data sheets for recording test data in logical order.
- G. Static Head: The pressure due to the weight of the fluid above the point of measurement. In a closed system, static head is equal on both sides of the pump.
- H. Suction Head: The height of fluid surface above the centerline of the pump on the suction side.
- I. System Effect: A phenomenon that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
- J. System Effect Factors: Allowances used to calculate a reduction of the performance ratings of a fan when installed under conditions different from those presented when the fan was performance tested.
- K. TAB: Testing, adjusting, and balancing.
- L. Terminal: A point where the controlled medium, such as fluid or energy, enters or leaves the distribution system.
- M. Test: A procedure to determine quantitative performance of systems or equipment.
- N. Testing, Adjusting, and Balancing (TAB) Firm: The entity responsible for performing and reporting TAB procedures.

1.4 SUBMITTALS

- A. Qualification Data: Within 30 days from Contractor's Notice to Proceed, submit 2 copies of evidence that TAB firm and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.
- B. Contract Documents Examination Report: Within 45 days from Contractor's Notice to Proceed, submit 6 copies of the Contract Documents review report as specified in Part 3.
- C. Strategies and Procedures Plan: Within 60 days from Contractor's Notice to Proceed, submit 2 copies of TAB strategies and step-by-step procedures as specified in Part 3 "Preparation" Article. Include a complete set of report forms intended for use on this Project.
- D. Certified TAB Reports: Submit two copies of reports prepared, as specified in this Section, on approved forms certified by TAB firm.
- E. Sample Report Forms: Submit two sets of sample TAB report forms.
- F. Warranties specified in this Section.

1.5 QUALITY ASSURANCE

- A. TAB Firm Qualifications: Engage a TAB firm certified by either AABC or NEBB.

- B. Certification of TAB Reports: Certify TAB field data reports. This certification includes the following:
 - 1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
 - 2. Certify that TAB team complied with approved TAB plan and the procedures specified and referenced in this Specification.
- C. TAB Report Forms: Use standard forms from AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems."
- D. Instrumentation Type, Quantity, and Accuracy: As described in AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems."
- E. Instrumentation Calibration: Calibrate instruments at least every six months or more frequently if required by instrument manufacturer.
 - 1. Keep an updated record of instrument calibration that indicates date of calibration and the name of party performing instrument calibration.

1.6 PROJECT CONDITIONS

- A. Owner Occupancy: Owner will not occupy the building during entire TAB period. T&B reports shall be finalized and approved prior to owner occupancy.
- B. T&B firm shall be independent from the mechanical contractor.

1.7 COORDINATION

- A. Coordinate the efforts of factory-authorized service representatives for systems and equipment, HVAC controls installers, and other mechanics to operate HVAC systems and equipment to support and assist TAB activities.
- B. Notice: Provide seven days' advance notice for each test. Include scheduled test dates and times.
- C. Perform TAB after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.

1.8 WARRANTY

- A. National Project Performance Guarantee: Provide a guarantee on AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems" forms stating that AABC will assist in completing requirements of the Contract Documents if TAB firm fails to comply with the Contract Documents. Guarantee includes the following provisions:
 - 1. The certified TAB firm has tested and balanced systems according to the Contract Documents.

2. Systems are balanced to optimum performance capabilities within design and installation limits.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment.
 1. Contract Documents are defined in the General and Supplementary Conditions of Contract.
 2. Verify that balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers, are required by the Contract Documents. Verify that quantities and locations of these balancing devices are accessible and appropriate for effective balancing and for efficient system and equipment operation.
- B. Examine approved submittal data of HVAC systems and equipment.
- C. Examine Project Record Documents described in Division 1 Section "Project Record Documents."
- D. Examine design data, including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.
- E. Examine equipment performance data including fan and pump curves. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system. Calculate system effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from those presented when the equipment was performance tested at the factory. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," Sections 7 through 10; or in SMACNA's "HVAC Systems--Duct Design," Sections 5 and 6. Compare this data with the design data and installed conditions.
- F. Examine system and equipment installations to verify that they are complete and that testing, cleaning, adjusting, and commissioning specified in individual Sections have been performed.
- G. Examine system and equipment test reports.
- H. Examine HVAC system and equipment installations to verify that indicated balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers, are properly installed, and that their locations are accessible and appropriate for effective balancing and for efficient system and equipment operation.

- I. Examine systems for functional deficiencies that cannot be corrected by adjusting and balancing.
- J. Examine HVAC equipment to ensure that clean filters have been installed, bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.
- K. Examine terminal units, such as variable-air-volume boxes, to verify that they are accessible and their controls are connected and functioning.
- L. Examine plenum ceilings used for supply air to verify that they are airtight. Verify that pipe penetrations and other holes are sealed.
- M. Examine strainers for clean screens and proper perforations.
- N. Examine three-way valves for proper installation for their intended function of diverting or mixing fluid flows.
- O. Examine system pumps to ensure absence of entrained air in the suction piping.
- P. Examine equipment for installation and for properly operating safety interlocks and controls.
- Q. Examine automatic temperature system components to verify the following:
 - 1. Dampers, valves, and other controlled devices are operated by the intended controller.
 - 2. Dampers and valves are in the position indicated by the controller.
 - 3. Integrity of valves and dampers for free and full operation and for tightness of fully closed and fully open positions. This includes dampers in multizone units, mixing boxes, and variable-air-volume terminals.
 - 4. Automatic modulating and shutoff valves, including two-way valves and three-way mixing and diverting valves, are properly connected.
 - 5. Thermostats and humidistats are located to avoid adverse effects of sunlight, drafts, and cold walls.
 - 6. Sensors are located to sense only the intended conditions.
 - 7. Sequence of operation for control modes is according to the Contract Documents.
 - 8. Controller set points are set at indicated values.
 - 9. Interlocked systems are operating.
 - 10. Changeover from heating to cooling mode occurs according to indicated values.
- R. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

3.2 PREPARATION

- A. Prepare a TAB plan that includes strategies and step-by-step procedures.
- B. Complete system readiness checks and prepare system readiness reports. Verify the following:
 - 1. Permanent electrical power wiring is complete.
 - 2. Hydronic systems are filled, clean, and free of air.

3. Automatic temperature-control systems are operational.
4. Equipment and duct access doors are securely closed.
5. Balance, smoke, and fire dampers are open.
6. Isolating and balancing valves are open and control valves are operational.
7. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
8. Windows and doors can be closed so indicated conditions for system operations can be met.

3.3 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems" and this Section.
- B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary to allow adequate performance of procedures. After testing and balancing, close probe holes and patch insulation with new materials identical to those removed. Restore vapor barrier and finish according to insulation Specifications for this Project.
- C. Mark equipment and balancing device settings with paint or other suitable, permanent identification material, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, to show final settings.
- D. Take and report testing and balancing measurements in inch-pound (IP) units.

3.4 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

- A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' "as-built" duct layouts.
- C. For variable-air-volume systems, develop a plan to simulate diversity.
- D. Determine the best locations in main and branch ducts for accurate duct airflow measurements.
- E. Check airflow patterns from the outside-air louvers and dampers and the return- and exhaust-air dampers, through the supply-fan discharge and mixing dampers.
- F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
- G. Verify that motor starters are equipped with properly sized thermal protection.
- H. Check dampers for proper position to achieve desired airflow path.
- I. Check for airflow blockages.
- J. Check condensate drains for proper connections and functioning.

- K. Check for proper sealing of air-handling unit components.
- L. Check for proper sealing of air duct system.

3.5 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

- A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
 - 1. Measure fan static pressures to determine actual static pressure as follows:
 - a. Measure outlet static pressure as far downstream from the fan as practicable and upstream from restrictions in ducts such as elbows and transitions.
 - b. Measure static pressure directly at the fan outlet or through the flexible connection.
 - c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from flexible connection and downstream from duct restrictions.
 - d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.
 - 2. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.
 - a. Simulate dirty filter operation and record the point at which maintenance personnel must change filters.
 - 3. Measure static pressures entering and leaving other devices such as sound traps, heat recovery equipment, and air washers, under final balanced conditions.
 - 4. Compare design data with installed conditions to determine variations in design static pressures versus actual static pressures. Compare actual system effect factors with calculated system effect factors to identify where variations occur. Recommend corrective action to align design and actual conditions.
 - 5. Obtain approval from Architect for adjustment of fan speed higher or lower than indicated speed. Make required adjustments to pulley sizes, motor sizes, and electrical connections to accommodate fan-speed changes.
 - 6. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full cooling, full heating, economizer, and any other operating modes to determine the maximum required brake horsepower.
- B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows within specified tolerances.
 - 1. Measure static pressure at a point downstream from the balancing damper and adjust volume dampers until the proper static pressure is achieved.
 - a. Where sufficient space in submain and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.

2. Remeasure each submain and branch duct after all have been adjusted. Continue to adjust submain and branch ducts to indicated airflows within specified tolerances.
- C. Measure terminal outlets and inlets without making adjustments.
1. Measure terminal outlets using a direct-reading hood or outlet manufacturer's written instructions and calculating factors.
- D. Adjust terminal outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Make adjustments using volume dampers rather than extractors and the dampers at air terminals.
1. Adjust each outlet in same room or space to within specified tolerances of indicated quantities without generating noise levels above the limitations prescribed by the Contract Documents.
 2. Adjust patterns of adjustable outlets for proper distribution without drafts.

3.6 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

- A. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at a maximum set-point airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced airflow terminal units so they are distributed evenly among the branch ducts.
- B. Pressure-Independent, Variable-Air-Volume Systems: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
1. Set outside-air dampers at minimum, and return- and exhaust-air dampers at a position that simulates full-cooling load.
 2. Select the terminal unit that is most critical to the supply-fan airflow and static pressure. Measure static pressure. Adjust system static pressure so the entering static pressure for the critical terminal unit is not less than the sum of terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
 3. Measure total system airflow. Adjust to within indicated airflow.
 4. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Use terminal-unit manufacturer's written instructions to make this adjustment. When total airflow is correct, balance the air outlets downstream from terminal units as described for constant-volume air systems.
 5. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow as described for constant-volume air systems.
 - a. If air outlets are out of balance at minimum airflow, report the condition but leave outlets balanced for maximum airflow.
 6. Remeasure the return airflow to the fan while operating at maximum return airflow and minimum outside airflow. Adjust the fan and balance the return-air ducts and inlets as described for constant-volume air systems.

7. Measure static pressure at the most critical terminal unit and adjust the static-pressure controller at the main supply-air sensing station to ensure that adequate static pressure is maintained at the most critical unit.
 8. Record the final fan performance data.
- C. Pressure-Dependent, Variable-Air-Volume Systems without Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
1. Balance systems similar to constant-volume air systems.
 2. Set terminal units and supply fan at full-airflow condition.
 3. Adjust inlet dampers of each terminal unit to indicated airflow and verify operation of the static-pressure controller. When total airflow is correct, balance the air outlets downstream from terminal units as described for constant-volume air systems.
 4. Readjust fan airflow for final maximum readings.
 5. Measure operating static pressure at the sensor that controls the supply fan, if one is installed, and verify operation of the static-pressure controller.
 6. Set supply fan at minimum airflow if minimum airflow is indicated. Measure static pressure to verify that it is being maintained by the controller.
 7. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow as described for constant-volume air systems.
 - a. If air outlets are out of balance at minimum airflow, report the condition but leave the outlets balanced for maximum airflow.
 8. Measure the return airflow to the fan while operating at maximum return airflow and minimum outside airflow. Adjust the fan and balance the return-air ducts and inlets as described for constant-volume air systems.
- D. Pressure-Dependent, Variable-Air-Volume Systems with Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
1. Set system at maximum indicated airflow by setting the required number of terminal units at minimum airflow. Select the reduced airflow terminal units so they are distributed evenly among the branch ducts.
 2. Adjust supply fan to maximum indicated airflow with the variable-airflow controller set at maximum airflow.
 3. Set terminal units at full-airflow condition.
 4. Adjust terminal units starting at the supply-fan end of the system and continuing progressively to the end of the system. Adjust inlet dampers of each terminal unit to indicated airflow. When total airflow is correct, balance the air outlets downstream from terminal units as described for constant-volume air systems.
 5. Adjust terminal units for minimum airflow.
 6. Measure static pressure at the sensor.
 7. Measure the return airflow to the fan while operating at maximum return airflow and minimum outside airflow. Adjust the fan and balance the return-air ducts and inlets as described for constant-volume air systems.

3.7 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

- A. Prepare test reports with pertinent design data and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against approved pump flow rate. Correct variations that exceed plus or minus 5 percent.
- B. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:
 - 1. Open all manual valves for maximum flow.
 - 2. Check expansion tank liquid level.
 - 3. Check makeup-water-station pressure gage for adequate pressure for highest vent.
 - 4. Check flow-control valves for specified sequence of operation and set at indicated flow.
 - 5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
 - 6. Set system controls so automatic valves are wide open to heat exchangers.
 - 7. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
 - 8. Check air vents for a forceful liquid flow exiting from vents when manually operated.

3.8 PROCEDURES FOR HYDRONIC SYSTEMS

- A. Measure water flow at pumps. Use the following procedures, except for positive-displacement pumps:
 - 1. Verify impeller size by operating the pump with the discharge valve closed. Read pressure differential across the pump. Convert pressure to head and correct for differences in gage heights. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
 - 2. Check system resistance. With all valves open, read pressure differential across the pump and mark pump manufacturer's head-capacity curve. Adjust pump discharge valve until indicated water flow is achieved.
 - 3. Verify pump-motor brake horsepower. Calculate the intended brake horsepower for the system based on pump manufacturer's performance data. Compare calculated brake horsepower with nameplate data on the pump motor. Report conditions where actual amperage exceeds motor nameplate amperage.
 - 4. Report flow rates that are not within plus or minus 5 percent of design.
- B. Set calibrated balancing valves, if installed, at calculated presettings.
- C. Measure flow at all stations and adjust, where necessary, to obtain first balance.
 - 1. System components that have Cv rating or an accurately cataloged flow-pressure-drop relationship may be used as a flow-indicating device.
- D. Measure flow at main balancing station and set main balancing device to achieve flow that is 5 percent greater than indicated flow.
- E. Adjust balancing stations to within specified tolerances of indicated flow rate as follows:
 - 1. Determine the balancing station with the highest percentage over indicated flow.

2. Adjust each station in turn, beginning with the station with the highest percentage over indicated flow and proceeding to the station with the lowest percentage over indicated flow.
3. Record settings and mark balancing devices.

F. Measure pump flow rate and make final measurements of pump amperage, voltage, rpm, pump heads, and systems' pressures and temperatures including outdoor-air temperature.

G. Measure the differential-pressure control valve settings existing at the conclusions of balancing.

3.9 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS

A. Balance systems with automatic two- and three-way control valves by setting systems at maximum flow through heat-exchange terminals and proceed as specified above for hydronic systems.

3.10 PROCEDURES FOR PRIMARY-SECONDARY-FLOW HYDRONIC SYSTEMS

A. Balance the primary system crossover flow first, then balance the secondary system.

3.11 PROCEDURES FOR MOTORS

A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:

1. Manufacturer, model, and serial numbers.
2. Motor horsepower rating.
3. Motor rpm.
4. Efficiency rating.
5. Nameplate and measured voltage, each phase.
6. Nameplate and measured amperage, each phase.
7. Starter thermal-protection-element rating.

B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass for the controller to prove proper operation. Record observations, including controller manufacturer, model and serial numbers, and nameplate data.

3.12 PROCEDURES FOR CONDENSING UNITS

- A. Verify proper rotation of fans.
- B. Measure entering- and leaving-air temperatures.
- C. Record compressor data.

3.13 PROCEDURES FOR TEMPERATURE MEASUREMENTS

- A. During TAB, report the need for adjustment in temperature regulation within the automatic temperature-control system.
- B. Measure indoor wet- and dry-bulb temperatures every other hour for a period of two successive eight-hour days, in each separately controlled zone, to prove correctness of final temperature settings. Measure when the building or zone is occupied.
- C. Measure outside-air, wet- and dry-bulb temperatures.

3.14 TEMPERATURE-CONTROL VERIFICATION

- A. Verify that controllers are calibrated and commissioned.
- B. Check transmitter and controller locations and note conditions that would adversely affect control functions.
- C. Record controller settings and note variances between set points and actual measurements.
- D. Check the operation of limiting controllers (i.e., high- and low-temperature controllers).
- E. Check free travel and proper operation of control devices such as damper and valve operators.
- F. Check the sequence of operation of control devices. Note air pressures and device positions and correlate with airflow and water flow measurements. Note the speed of response to input changes.
- G. Check the interaction of electrically operated switch transducers.
- H. Check the interaction of interlock and lockout systems.
- I. Check main control supply-air pressure and observe compressor and dryer operations.
- J. Record voltages of power supply and controller output. Determine whether the system operates on a grounded or nongrounded power supply.
- K. Note operation of electric actuators using spring return for proper fail-safe operations.

3.15 TOLERANCES

- A. Set HVAC system airflow and water flow rates within the following tolerances:
 - 1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus 5 to plus 10 percent.
 - 2. Air Outlets and Inlets: 0 to minus 10 percent.
 - 3. Heating-Water Flow Rate: 0 to minus 10 percent.
 - 4. Cooling-Water Flow Rate: 0 to minus 5 percent.

3.16 REPORTING

- A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems' balancing devices. Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.
- B. Status Reports: As Work progresses, prepare reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.17 FINAL REPORT

- A. General: Typewritten, or computer printout in letter-quality font, on standard bond paper, in three-ring binder, tabulated and divided into sections by tested and balanced systems.
- B. Include a certification sheet in front of binder signed and sealed by the certified testing and balancing engineer.
 - 1. Include a list of instruments used for procedures, along with proof of calibration.
- C. Final Report Contents: In addition to certified field report data, include the following:
 - 1. Pump curves.
 - 2. Fan curves.
 - 3. Manufacturers' test data.
 - 4. Field test reports prepared by system and equipment installers.
 - 5. Other information relative to equipment performance, but do not include Shop Drawings and Product Data.
- D. General Report Data: In addition to form titles and entries, include the following data in the final report, as applicable:
 - 1. Title page.
 - 2. Name and address of TAB firm.
 - 3. Project name.
 - 4. Project location.
 - 5. Architect's name and address.
 - 6. Engineer's name and address.
 - 7. Contractor's name and address.
 - 8. Report date.
 - 9. Signature of TAB firm who certifies the report.
 - 10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
 - 11. Summary of contents including the following:
 - a. Indicated versus final performance.
 - b. Notable characteristics of systems.

- c. Description of system operation sequence if it varies from the Contract Documents.
12. Nomenclature sheets for each item of equipment.
 13. Data for terminal units, including manufacturer, type size, and fittings.
 14. Notes to explain why certain final data in the body of reports varies from indicated values.
 15. Test conditions for fans and pump performance forms including the following:
 - a. Settings for outside-, return-, and exhaust-air dampers.
 - b. Conditions of filters.
 - c. Cooling coil, wet- and dry-bulb conditions.
 - d. Face and bypass damper settings at coils.
 - e. Fan drive settings including settings and percentage of maximum pitch diameter.
 - f. Inlet vane settings for variable-air-volume systems.
 - g. Settings for supply-air, static-pressure controller.
 - h. Other system operating conditions that affect performance.
- E. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outside, supply, return, and exhaust airflows.
 2. Water and steam flow rates.
 3. Duct, outlet, and inlet sizes.
 4. Pipe and valve sizes and locations.
 5. Terminal units.
 6. Balancing stations.
 7. Position of balancing devices.
- F. Air-Handling Unit Test Reports: For air-handling units with coils, include the following:
1. Unit Data: Include the following:
 - a. Unit identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and unit size.
 - e. Manufacturer's serial number.
 - f. Unit arrangement and class.
 - g. Discharge arrangement.
 - h. Sheave make, size in inches (mm), and bore.
 - i. Sheave dimensions, center-to-center, and amount of adjustments in inches (mm).
 - j. Number of belts, make, and size.
 - k. Number of filters, type, and size.
 2. Motor Data:
 - a. Make and frame type and size.
 - b. Horsepower and rpm.
 - c. Volts, phase, and hertz.
 - d. Full-load amperage and service factor.

- e. Sheave make, size in inches (mm), and bore.
 - f. Sheave dimensions, center-to-center, and amount of adjustments in inches (mm).
3. Test Data (Indicated and Actual Values):
- a. Total airflow rate in cfm (L/s).
 - b. Total system static pressure in inches wg (Pa).
 - c. Fan rpm.
 - d. Discharge static pressure in inches wg (Pa).
 - e. Filter static-pressure differential in inches wg (Pa).
 - f. Preheat coil static-pressure differential in inches wg (Pa).
 - g. Cooling coil static-pressure differential in inches wg (Pa).
 - h. Heating coil static-pressure differential in inches wg (Pa).
 - i. Outside airflow in cfm (L/s).
 - j. Return airflow in cfm (L/s).
 - k. Outside-air damper position.
 - l. Return-air damper position.
 - m. Vortex damper position.

G. Apparatus-Coil Test Reports:

1. Coil Data:
 - a. System identification.
 - b. Location.
 - c. Coil type.
 - d. Number of rows.
 - e. Fin spacing in fins per inch (mm) o.c.
 - f. Make and model number.
 - g. Face area in sq. ft. (sq. m).
 - h. Tube size in NPS (DN).
 - i. Tube and fin materials.
 - j. Circuiting arrangement.
2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in cfm (L/s).
 - b. Average face velocity in fpm (m/s).
 - c. Air pressure drop in inches wg (Pa).
 - d. Outside-air, wet- and dry-bulb temperatures in deg F (deg C).
 - e. Return-air, wet- and dry-bulb temperatures in deg F (deg C).
 - f. Entering-air, wet- and dry-bulb temperatures in deg F (deg C).
 - g. Leaving-air, wet- and dry-bulb temperatures in deg F (deg C).
 - h. Water flow rate in gpm (L/s).
 - i. Water pressure differential in feet of head or psig (kPa).
 - j. Entering-water temperature in deg F (deg C).
 - k. Leaving-water temperature in deg F (deg C).
 - l. Refrigerant expansion valve and refrigerant types.
 - m. Refrigerant suction pressure in psig (kPa).
 - n. Refrigerant suction temperature in deg F (deg C).
 - o. Inlet steam pressure in psig (kPa).

H. Electric-Coil Test Reports: For electric furnaces, duct coils, and electric coils installed in central-station air-handling units, include the following:

1. Unit Data:
 - a. System identification.
 - b. Location.
 - c. Coil identification.
 - d. Capacity in **Btuh (kW)**.
 - e. Number of stages.
 - f. Connected volts, phase, and hertz.
 - g. Rated amperage.
 - h. Airflow rate in **cfm (L/s)**.
 - i. Face area in **sq. ft. (sq. m)**.
 - j. Minimum face velocity in **fpm (m/s)**.

2. Test Data (Indicated and Actual Values):
 - a. Heat output in **Btuh (kW)**.
 - b. Airflow rate in **cfm (L/s)**.
 - c. Air velocity in **fpm (m/s)**.
 - d. Entering-air temperature in **deg F (deg C)**.
 - e. Leaving-air temperature in **deg F (deg C)**.
 - f. Voltage at each connection.
 - g. Amperage for each phase.

I. Fan Test Reports: For supply, return, and exhaust fans, include the following:

1. Fan Data:
 - a. System identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and size.
 - e. Manufacturer's serial number.
 - f. Arrangement and class.
 - g. Sheave make, size in **inches (mm)**, and bore.
 - h. Sheave dimensions, center-to-center, and amount of adjustments in **inches (mm)**.
2. Motor Data:
 - a. Make and frame type and size.
 - b. Horsepower and rpm.
 - c. Volts, phase, and hertz.
 - d. Full-load amperage and service factor.
 - e. Sheave make, size in **inches (mm)**, and bore.
 - f. Sheave dimensions, center-to-center, and amount of adjustments in **inches (mm)**.
 - g. Number of belts, make, and size.

3. Test Data (Indicated and Actual Values):

- a. Total airflow rate in **cfm (L/s)**.
 - b. Total system static pressure in **inches wg (Pa)**.
 - c. Fan rpm.
 - d. Discharge static pressure in **inches wg (Pa)**.
 - e. Suction static pressure in **inches wg (Pa)**.
- J. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
1. Report Data:
 - a. System and air-handling unit number.
 - b. Location and zone.
 - c. Traverse air temperature in **deg F (deg C)**.
 - d. Duct static pressure in **inches wg (Pa)**.
 - e. Duct size in **inches (mm)**.
 - f. Duct area in **sq. ft. (sq. m)**.
 - g. Indicated airflow rate in **cfm (L/s)**.
 - h. Indicated velocity in **fpm (m/s)**.
 - i. Actual airflow rate in **cfm (L/s)**.
 - j. Actual average velocity in **fpm (m/s)**.
 - k. Barometric pressure in **psig (Pa)**.
- K. Air-Terminal-Device Reports:
1. Unit Data:
 - a. System and air-handling unit identification.
 - b. Location and zone.
 - c. Test apparatus used.
 - d. Area served.
 - e. Air-terminal-device make.
 - f. Air-terminal-device number from system diagram.
 - g. Air-terminal-device type and model number.
 - h. Air-terminal-device size.
 - i. Air-terminal-device effective area in **sq. ft. (sq. m)**.
 2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in **cfm (L/s)**.
 - b. Air velocity in **fpm (m/s)**.
 - c. Preliminary airflow rate as needed in **cfm (L/s)**.
 - d. Preliminary velocity as needed in **fpm (m/s)**.
 - e. Final airflow rate in **cfm (L/s)**.
 - f. Final velocity in **fpm (m/s)**.
 - g. Space temperature in **deg F (deg C)**.
- L. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:
1. Unit Data:

- a. Unit identification.
 - b. Location.
 - c. Service.
 - d. Make and size.
 - e. Model and serial numbers.
 - f. Water flow rate in **gpm (L/s)**.
 - g. Water pressure differential in **feet of head or psig (kPa)**.
 - h. Required net positive suction head in **feet of head or psig (kPa)**.
 - i. Pump rpm.
 - j. Impeller diameter in **inches (mm)**.
 - k. Motor make and frame size.
 - l. Motor horsepower and rpm.
 - m. Voltage at each connection.
 - n. Amperage for each phase.
 - o. Full-load amperage and service factor.
 - p. Seal type.
2. Test Data (Indicated and Actual Values):
- a. Static head in **feet of head or psig (kPa)**.
 - b. Pump shutoff pressure in **feet of head or psig (kPa)**.
 - c. Actual impeller size in **inches (mm)**.
 - d. Full-open flow rate in **gpm (L/s)**.
 - e. Full-open pressure in **feet of head or psig (kPa)**.
 - f. Final discharge pressure in **feet of head or psig (kPa)**.
 - g. Final suction pressure in **feet of head or psig (kPa)**.
 - h. Final total pressure in **feet of head or psig (kPa)**.
 - i. Final water flow rate in **gpm (L/s)**.
 - j. Voltage at each connection.
 - k. Amperage for each phase.
- M. Instrument Calibration Reports:
1. Report Data:
 - a. Instrument type and make.
 - b. Serial number.
 - c. Application.
 - d. Dates of use.
 - e. Dates of calibration.
- 3.18 INSPECTIONS
- A. Initial Inspection:
1. After testing and balancing are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the Final Report.
 2. Randomly check the following for each system:

- a. Measure airflow of at least 10 percent of air outlets.
- b. Measure water flow of at least 5 percent of terminals.
- c. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the set point.
- d. Measure sound levels at two locations.
- e. Measure space pressure of at least 10 percent of locations.
- f. Verify that balancing devices are marked with final balance position.
- g. Note deviations to the Contract Documents in the Final Report.

B. Final Inspection:

1. After initial inspection is complete and evidence by random checks verifies that testing and balancing are complete and accurately documented in the final report, request that a final inspection be made by Architect.
2. TAB firm test and balance engineer shall conduct the inspection in the presence of Owner.
3. Architect shall randomly select measurements documented in the final report to be rechecked. The rechecking shall be limited to either 10 percent of the total measurements recorded, or the extent of measurements that can be accomplished in a normal 8-hour business day.
4. If the rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
5. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.
6. TAB firm shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes and resubmit the final report.
7. Request a second final inspection. If the second final inspection also fails, Owner shall contract the services of another TAB firm to complete the testing and balancing in accordance with the Contract Documents and deduct the cost of the services from the final payment.

3.19 ADDITIONAL TESTS

- A. Within 90 days of completing TAB, perform additional testing and balancing to verify that balanced conditions are being maintained throughout and to correct unusual conditions.
- B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional testing, inspecting, and adjusting during near-peak summer and winter conditions.

END OF SECTION 230593

SECTION 230713 - DUCT INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes insulating the following duct services:
 - 1. Indoor, concealed supply and outdoor air.
 - 2. Indoor, exposed supply and outdoor air.
 - 3. Indoor, concealed return located in unconditioned space.
 - 4. Indoor, exposed return located in unconditioned space.
 - 5. Indoor, concealed, Type I, commercial, kitchen hood exhaust.
 - 6. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
 - 7. Indoor, exposed exhaust between isolation damper and penetration of building exterior.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).
- B. Qualification Data: For qualified Installer.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
 - 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 - 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.6 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with duct Installer for duct insulation application. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.7 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Duct Insulation Schedule, General," "Indoor Duct and Plenum Insulation Schedule," and "Aboveground, Outdoor Duct and Plenum Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type III with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. CertainTeed Corp.; SoftTouch Duct Wrap.
 - b. Johns Manville; Microlite.
 - c. Knauf Insulation; Friendly Feel Duct Wrap.
 - d. Manson Insulation Inc.; Alley Wrap.
 - e. Owens Corning; SOFTR All-Service Duct Wrap.

G. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For duct and plenum applications, provide insulation with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. CertainTeed Corp.; Commercial Board.
 - b. Fibrex Insulations Inc.; FBX.
 - c. Johns Manville; 800 Series Spin-Glas.
 - d. Knauf Insulation; Insulation Board.
 - e. Manson Insulation Inc.; AK Board.
 - f. Owens Corning; Fiberglas 700 Series.

2.2 FIRE-RATED INSULATION SYSTEMS

A. Fire-Rated Blanket: High-temperature, flexible, blanket insulation with FSK jacket that is tested and certified to provide a 2-hour fire rating by an NRTL acceptable to authorities having jurisdiction.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. CertainTeed Corp.; FlameChek.
 - b. Johns Manville; Firetemp Wrap.
 - c. Nelson Fire Stop Products; Nelson FSB Flameshield Blanket.
 - d. Thermal Ceramics; FireMaster Duct Wrap.
 - e. 3M; Fire Barrier Wrap Products.
 - f. Unifrax Corporation; FyreWrap.

2.3 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-127.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60/85-70.
 - d. Mon-Eco Industries, Inc.; 22-25.
- C. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-50.
 - d. Mon-Eco Industries, Inc.; 22-25.

2.4 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below ambient services.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-80/30-90.
 - b. Vimasco Corporation; 749.
 2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
 5. Color: White.

2.5 SEALANTS

- A. FSK and Metal Jacket Flashing Sealants:
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
 - d. Mon-Eco Industries, Inc.; 44-05.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
 3. Fire- and water-resistant, flexible, elastomeric sealant.
 4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
 5. Color: Aluminum.

2.6 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
 1. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.

2.7 TAPES

- A. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ABI, Ideal Tape Division; 491 AWF FSK.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
 - c. Compac Corporation; 110 and 111.
 - d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.
 2. Width: 3 inches (75 mm).
 3. Thickness: 6.5 mils (0.16 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

2.8 SECUREMENTS

- A. Insulation Pins and Hangers:
 1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.

- a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) AGM Industries, Inc.; CWP-1.
 - 2) GEMCO; CD.
 - 3) Midwest Fasteners, Inc.; CD.
 - 4) Nelson Stud Welding; TPA, TPC, and TPS.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch (38-mm) galvanized carbon-steel washer.
 - a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) AGM Industries, Inc.; CHP-1.
 - 2) GEMCO; Cupped Head Weld Pin.
 - 3) Midwest Fasteners, Inc.; Cupped Head.
 - 4) Nelson Stud Welding; CHP.
 3. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick, galvanized-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
 - a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) AGM Industries, Inc.; RC-150.
 - 2) GEMCO; R-150.
 - 3) Midwest Fasteners, Inc.; WA-150.
 - 4) Nelson Stud Welding; Speed Clips.
 - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
 4. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
 - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) GEMCO.
 - 2) Midwest Fasteners, Inc.

B. Staples: Outward-clinching insulation staples, nominal 3/4-inch- (19-mm-) wide, stainless steel or Monel.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.
- B. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during application and finishing.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.
- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.

3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth.
 2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches (50 mm) o.c.
 - a. For below ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.
- L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- 3.4 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION
- A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- 3.5 INSTALLATION OF MINERAL-FIBER INSULATION
- A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.

3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches (450 mm) and smaller, place pins along longitudinal centerline of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) o.c.
 - b. On duct sides with dimensions larger than 18 inches (450 mm), place pins 16 inches (400 mm) o.c. each way, and 3 inches (75 mm) maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Impale insulation over pins and attach speed washers.
 - f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
 4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches (50 mm) from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch (13-mm) outward-clinching staples, 1 inch (25 mm) o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
 - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F (10 deg C) at 18-foot (5.5-m) intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches (75 mm).
 5. Overlap unfaced blankets a minimum of 2 inches (50 mm) on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches (450 mm) o.c.
 6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
 7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- (150-mm-) wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches (150 mm) o.c.
- B. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.

3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches (450 mm) and smaller, place pins along longitudinal centerline of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) o.c.
 - b. On duct sides with dimensions larger than 18 inches (450 mm), space pins 16 inches (400 mm) o.c. each way, and 3 inches (75 mm) maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches (50 mm) from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch (13-mm) outward-clinching staples, 1 inch (25 mm) o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
 - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F (10 deg C) at 18-foot (5.5-m) intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches (75 mm).
5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- (150-mm-) wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches (150 mm) o.c.

3.6 FIRE-RATED INSULATION SYSTEM INSTALLATION

- A. Where fire-rated insulation system is indicated, secure system to ducts and duct hangers and supports to maintain a continuous fire rating.
- B. Insulate duct access panels and doors to achieve same fire rating as duct.
- C. Install firestopping at penetrations through fire-rated assemblies. Fire-stop systems are specified in Division 07 Section "Penetration Firestopping."

3.7 DUCT INSULATION SCHEDULE, GENERAL

A. Plenums and Ducts Requiring Insulation:

1. Indoor, concealed supply and outdoor air.
2. Indoor, exposed supply and outdoor air.
3. Indoor, concealed return located in unconditioned space.
4. Indoor, exposed return located in unconditioned space.
5. Indoor, concealed, Type I, commercial, kitchen hood exhaust.
6. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
7. Indoor, exposed exhaust between isolation damper and penetration of building exterior.

B. Items Not Insulated:

1. Fibrous-glass ducts.
2. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
3. Factory-insulated flexible ducts.
4. Factory-insulated plenums and casings.
5. Factory-insulated access panels and doors.

3.8 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

A. Concealed, round and flat-oval, supply-air duct insulation shall be the following:

1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

B. Concealed, round and flat-oval, return-air duct insulation shall be the following:

1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

C. Concealed, round and flat-oval, outdoor-air duct insulation shall be the following:

1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

D. Concealed, rectangular, supply-air duct insulation shall be the following:

1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

E. Concealed, rectangular, return-air duct insulation shall be the following:

1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

F. Concealed, rectangular, outdoor-air duct insulation shall be the following:

1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- G. Concealed, rectangular, exhaust-air duct insulation between isolation damper and penetration of building exterior shall be the following:
1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- H. Concealed, Type I, Commercial, Kitchen Hood Exhaust Duct and Plenum Insulation: Fire-rated blanket; thickness as required to achieve 2-hour fire rating.
- I. Concealed, return-air plenum insulation shall be the following:
1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- J. Concealed, outdoor-air plenum insulation shall be the following:
1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- K. Exposed, round and flat-oval, supply-air duct insulation shall be the following:
1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- L. Exposed, round and flat-oval, return-air duct insulation shall be one of the following:
1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- M. Exposed, round and flat-oval, outdoor-air duct insulation shall be one of the following:
1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- N. Exposed, round, flat-oval and rectangular, exhaust-air duct insulation between isolation damper and penetration of building exterior shall be the following:
1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- O. Exposed, rectangular, supply-air duct insulation shall be one of the following:
1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- P. Exposed, rectangular, return-air duct insulation shall be one of the following:

1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- Q. Exposed, rectangular, outdoor-air duct insulation shall be one of the following:
1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- R. Exposed, return-air plenum insulation shall be one of the following:
1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.
- S. Exposed, outdoor-air plenum insulation shall be one of the following:
1. Mineral-Fiber Blanket: 1-1/2 inches (38 mm) thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

END OF SECTION 230713

This Page Intentionally Left Blank

SECTION 230716 - HVAC EQUIPMENT INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes insulating the following HVAC equipment that is not factory insulated:
 - 1. Heat exchangers.
 - 2. Chilled-water pumps.
 - 3. Expansion/compression tanks.
 - 4. Air separators.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).
- B. Qualification Data: For qualified Installer.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
 - 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 - 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.6 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with equipment Installer for equipment insulation application.

1.7 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Breeching Insulation Schedule" and "Equipment Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Pittsburgh Corning Corporation; Foamglas.
 - 2. Block Insulation: ASTM C 552, Type I.
 - 3. Special-Shaped Insulation: ASTM C 552, Type III.
 - 4. Board Insulation: ASTM C 552, Type IV.
 - 5. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.

- G. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Aeroflex USA, Inc.; Aerocel.
 - b. Armacell LLC; AP Armaflex.
 - c. K-Flex USA; Insul-Sheet and K-FLEX LS.

2.2 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F (minus 73 to plus 93 deg C).
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-84.
- C. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Aeroflex USA, Inc.; Aeroseal.
 - b. Armacell LLC; Armaflex 520 Adhesive.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
 - d. K-Flex USA; R-373 Contact Adhesive.
- D. ASJ Adhesive, and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-50.
 - d. Mon-Eco Industries, Inc.; 22-25.

2.3 MASTICS

- A. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H .B. Fuller Company; 30-80/30-90.
 - b. Vimasco Corporation; 749.
 2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
 5. Color: White.

2.4 SEALANTS

A. Joint Sealants:

1. Joint Sealants for Cellular-Glass, Phenolic, and Polyisocyanurate Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Pittsburgh Corning Corporation; Pittseal 444.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Permanently flexible, elastomeric sealant.
4. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
5. Color: White or gray.

B. FSK and Metal Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
 - d. Mon-Eco Industries, Inc.; 44-05.
2. Materials shall be compatible with insulation materials, jackets, and substrates.

3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
5. Color: Aluminum.

C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
5. Color: White.

2.5 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.

2.6 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. Metal Jacket:
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Metal Jacketing Systems.
 - b. ITW Insulation Systems; Aluminum and Stainless Steel Jacketing.
 - c. RPR Products, Inc.; Insul-Mate.
 2. Aluminum Jacket: Comply with ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005, Temper H-14.
 - a. Sheet and roll stock ready for shop or field sizing.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: 1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper.
 - d. Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.
 - e. Factory-Fabricated Fitting Covers:

- 1) Same material, finish, and thickness as jacket.
- 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
- 3) Tee covers.
- 4) Flange and union covers.
- 5) End caps.
- 6) Beveled collars.
- 7) Valve covers.
- 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

2.7 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ABI, Ideal Tape Division; 428 AWF ASJ.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
 - c. Compac Corporation; 104 and 105.
 - d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
 2. Width: 3 inches (75 mm).
 3. Thickness: 11.5 mils (0.29 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ABI, Ideal Tape Division; 488 AWF.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
 - c. Compac Corporation; 120.
 - d. Venture Tape; 3520 CW.
 2. Width: 2 inches (50 mm).
 3. Thickness: 3.7 mils (0.093 mm).
 4. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.
 5. Elongation: 5 percent.
 6. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.

2.8 SECUREMENTS

A. Bands:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ITW Insulation Systems; Gerrard Strapping and Seals.
 - b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.
2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316; 0.015 inch (0.38 mm) thick, 1/2 inch (13 mm) wide with wing seal or closed seal.
3. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 1/2 inch (13 mm) wide with wing seal or closed seal.
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. Wire: 0.080-inch (2.0-mm) nickel-copper alloy.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. C & F Wire.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 1. Verify that systems and equipment to be insulated have been tested and are free of defects.
 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
 1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils (0.127 mm) thick and an epoxy finish 5 mils (0.127 mm) thick if operating in a temperature range between 140 and 300 deg F (60 and 149 deg C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
 2. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

- B. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during application and finishing.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.
- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 - 4. Cover inserts with jacket material matching adjacent insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth.
 - 2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.

3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches (50 mm) o.c.
 - a. For below ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints.
- L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- O. For above ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Manholes.
 5. Handholes.
 6. Cleanouts.

3.4 INSTALLATION OF EQUIPMENT, TANK, AND VESSEL INSULATION

- A. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
 2. Seal longitudinal seams and end joints.
- B. Insulation Installation on Pumps:
1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch (150-mm) centers, starting at corners. Install 3/8-inch- (10-mm-) diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
 2. Fabricate boxes from aluminum, at least 0.040 inch (1.0 mm) thick.
 3. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

3.5 FIELD-APPLIED JACKET INSTALLATION

- A. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.

3.6 FINISHES

- A. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- B. Do not field paint aluminum or stainless-steel jackets.

3.7 EQUIPMENT INSULATION SCHEDULE

- A. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option.
- B. Insulate indoor and outdoor equipment that is not factory insulated.
- C. Heat-exchanger (water-to-water for cooling service) insulation shall be the following:
 - 1. Flexible Elastomeric: 2 inches (50 mm) thick.
- D. Chilled-water pump insulation shall be the following:
 - 1. Cellular Glass: 3 inches (75 mm) thick.
- E. Chilled-water expansion/compression tank insulation shall be the following:
 - 1. Flexible Elastomeric: 1 inch (25 mm) thick.
- F. Chilled-water air-separator insulation shall be the following:
 - 1. Flexible Elastomeric: 1 inch (25 mm) thick.
- G. Chilled-water chemical by-pass feeder insulation shall be the following:
 - 1. Flexible Elastomeric: 1 inch (25 mm) thick.
- H. Chilled-water filters insulation shall be the following:
 - 1. Flexible Elastomeric: 1 inch (25 mm) thick.

3.8 FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Equipment, Exposed, up to 48 Inches (1200 mm) in Diameter or with Flat Surfaces up to 72 Inches (1800 mm):
 - 1. Aluminum, Corrugated with Z-Shaped Locking Seam: 0.020 inch (0.51 mm) thick.
- D. Equipment, Exposed, Larger Than 48 Inches (1200 mm) in Diameter or with Flat Surfaces Larger Than 72 Inches (1800 mm):
 - 1. Aluminum, Stucco Embossed with 1-1/4-Inch- (32-mm-) Deep Corrugations: 0.032 inch (0.81 mm) thick.

END OF SECTION 230716

This Page Intentionally Left Blank

SECTION 230719 - HVAC PIPING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes insulating the following HVAC piping systems:
 - 1. Condensate drain piping, indoors.
 - 2. Chilled-water and brine piping, indoors and outdoors.
 - 3. Ho-water piping.
 - 4. Refrigerant suction and hot-gas piping, indoors and outdoors.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied if any).
- B. Qualification Data: For qualified Installer.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
 - 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 - 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.6 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

1.7 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

- a. Pittsburgh Corning Corporation; Foamglas.
 2. Block Insulation: ASTM C 552, Type I.
 3. Special-Shaped Insulation: ASTM C 552, Type III.
 4. Board Insulation: ASTM C 552, Type IV.
 5. Preformed Pipe Insulation with Factory-Applied ASJ: Comply with ASTM C 552, Type II, Class 2.
 6. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
- G. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Aeroflex USA, Inc.; Aerocel.
 - b. Armacell LLC; AP Armaflex.
 - c. K-Flex USA; Insul-Lock, Insul-Tube, and K-FLEX LS.

2.2 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F (minus 73 to plus 93 deg C).
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-84.
- C. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Aeroflex USA, Inc.; Aeroseal.
 - b. Armacell LLC; Armaflex 520 Adhesive.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
 - d. K-Flex USA; R-373 Contact Adhesive.
- D. PVC Jacket Adhesive: Compatible with PVC jacket.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Dow Corning Corporation; 739, Dow Silicone.
 - b. Johns Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
 - c. P.I.C. Plastics, Inc.; Welding Adhesive.
 - d. Speedline Corporation; Polyco VP Adhesive.
- E. Mineral-Fiber, Preformed Pipe Insulation:
 1. Products: Subject to compliance with requirements, **available products that may be incorporated into the Work include, but are not limited to, the following:**
 - a. Johns Manville; Micro-Lok.
 - b. Knauf Insulation; 1000 Pipe Insulation.
 - c. Owens Corning; Fiberglas Pipe Insulation.
 2. Type I, **850 deg F (454 deg C)** Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, **with factory-applied ASJ**. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.3 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
 1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below-ambient services.
 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-80/30-90.
 - b. Vimasco Corporation; 749.
 2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
 5. Color: White.
- C. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below-ambient services.
 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Encacel.
 - b. Eagle Bridges - Marathon Industries; 570.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 60-95/60-96.
2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.033 metric perm) at 30-mil (0.8-mm) dry film thickness.
 3. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).
 4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
 5. Color: White.

2.4 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.
 1. For indoor applications, use lagging adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-50 AHV2.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-36.
 - c. Vimasco Corporation; 713 and 714.
 3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over pipe insulation.
 4. Service Temperature Range: 0 to plus 180 deg F (Minus 18 to plus 82 deg C).
 5. Color: White.

2.5 SEALANTS

- A. Joint Sealants:
 1. Joint Sealants for Cellular-Glass Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
 - d. Mon-Eco Industries, Inc.; 44-05.

- e. Pittsburgh Corning Corporation; Pittseal 444.
 - 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 - 3. Permanently flexible, elastomeric sealant.
 - 4. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
 - 5. Color: White or gray.
- B. FSK and Metal Jacket Flashing Sealants:
- 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 - 3. Fire- and water-resistant, flexible, elastomeric sealant.
 - 4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
 - 5. Color: Aluminum.
- C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
- 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 - 3. Fire- and water-resistant, flexible, elastomeric sealant.
 - 4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
 - 5. Color: White.
- 2.6 FACTORY-APPLIED JACKETS
- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
 - 1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.

2.7 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Glass-Fiber Fabric: Approximately 2 oz./sq. yd. (68 g/sq. m) with a thread count of 10 strands by 10 strands/sq. in. (4 strands by 4 strands/sq. mm) for covering pipe and pipe fittings.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Chil-Glas Number 10.

2.8 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd. (271 g/sq. m).
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Alpha Associates, Inc.; Alpha-Maritex 84215 and 84217/9485RW, Luben 59.

2.9 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
 - 2. Adhesive: As recommended by jacket material manufacturer.
 - 3. Color: White.
 - 4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.
- C. Metal Jacket:
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Metal Jacketing Systems.
 - b. ITW Insulation Systems; Aluminum and Stainless Steel Jacketing.
 - c. RPR Products, Inc.; Insul-Mate.
2. Aluminum Jacket: Comply with ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005, Temper H-14.
- a. Sheet and roll stock ready for shop or field sizing.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.
 - d. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

2.10 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ABI, Ideal Tape Division; 428 AWF ASJ.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
 - c. Compac Corporation; 104 and 105.
 - d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
 2. Width: 3 inches (75 mm).
 3. Thickness: 11.5 mils (0.29 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ABI, Ideal Tape Division; 370 White PVC tape.
 - b. Compac Corporation; 130.
 - c. Venture Tape; 1506 CW NS.
2. Width: 2 inches (50 mm).
3. Thickness: 6 mils (0.15 mm).
4. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
5. Elongation: 500 percent.
6. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.

2.11 SECUREMENTS

A. Bands:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ITW Insulation Systems; Gerrard Strapping and Seals.
 - b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.
2. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 1/2 inch (13 mm) wide with wing seal or closed seal.
3. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

PART 3 - EXECUTION

3.1 EXAMINATION

- #### A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
1. Verify that systems to be insulated have been tested and are free of defects.
 2. Verify that surfaces to be insulated are clean and dry.
 3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A.

- #### B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, for outdoor pipe apply a corrosion coating to insulated surfaces as follows:

1. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 1. Install insulation continuously through hangers and around anchor attachments.
 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
 1. Draw jacket tight and smooth.

2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches (50 mm) o.c.
 - a. For below-ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Manholes.
 5. Handholes.
 6. Cleanouts.

3.4 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.
 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches (50 mm).
 - 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
 - 1. Comply with requirements in Division 07 Section "Penetration Firestopping" for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
 - 1. Pipe: Install insulation continuously through floor penetrations.
 - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07 Section "Penetration Firestopping."

3.5 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
 - 1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
 - 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
 - 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 - 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets,

- valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
 9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers at locations indicated. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
 3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches (50 mm) over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
 5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.6 INSTALLATION OF CELLULAR-GLASS INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches (150 mm) o.c.
4. For insulation with factory-applied jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as pipe insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.7 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as pipe insulation when available.
2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.8 MINERAL-FIBER INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at **6 inches (150 mm)** o.c.
4. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least **1 inch (25 mm)**, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.

2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.9 FIELD-APPLIED JACKET INSTALLATION

- A. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints; for horizontal applications. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

- B. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.

3.10 FINISHES

- A. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended UV protective coating for exterior installation.

- B. Do not field paint aluminum or stainless-steel jackets.

3.11 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.

- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:

1. Drainage piping located in crawl spaces.
2. Underground piping.
3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.12 INDOOR PIPING INSULATION SCHEDULE

- A. Condensate and Equipment Drain Water below 60 Deg F (16 Deg C):

1. All Pipe Sizes: Insulation shall be the following:
 - a. Flexible Elastomeric: 3/4 inch (19 mm) thick.
 - B. Chilled Water and Brine, 40 Deg F (5 Deg C) and below:
 1. NPS 12 (DN 300) and Smaller: Insulation shall be the following:
 - a. Cellular Glass: 2 inches (50 mm) thick.
 2. NPS 14 (DN 350) and Larger: Insulation shall be the following:
 - a. Cellular Glass: 3 inches (75 mm) thick.
 - C. Heating-Hot-Water Supply and Return, 200 Deg F (93 Deg C) and below:
 1. NPS 12 (DN 300) and Smaller: Insulation shall be one of the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.
 - b. Mineral-Fiber, Preformed Pipe, Type I: 1 inch (25 mm) thick.
 - D. Chilled Water and Brine, above 40 Deg F (5 Deg C):
 1. NPS 12 (DN 300) and Smaller: Insulation shall be the following:
 - a. Cellular Glass: 1-1/2 inches (38 mm) thick.
 - E. Refrigerant Suction and Hot-Gas Piping:
 1. All Pipe Sizes: Insulation shall be the following:
 - a. Flexible Elastomeric: 1 inch (25 mm) thick.
 - F. Refrigerant Suction and Hot-Gas Flexible Tubing:
 1. All Pipe Sizes: Insulation shall be the following:
 - a. Flexible Elastomeric: 1 inch (25 mm) thick.
- 3.13 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE
- A. Chilled Water and Brine:
 1. All Pipe Sizes: Insulation shall be the following:
 - a. Cellular Glass: 3 inches (75 mm) thick.
 - B. Refrigerant Suction and Hot-Gas Piping:
 1. All Pipe Sizes: Insulation shall be the following:

- a. Flexible Elastomeric: 2 inches (50 mm) thick.
- C. Refrigerant Suction and Hot-Gas Flexible Tubing:
- 1. All Pipe Sizes: Insulation shall be the following:
 - a. Flexible Elastomeric: 2 inches (50 mm) thick.
- 3.14 INDOOR, FIELD-APPLIED JACKET SCHEDULE
- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
 - B. If more than one material is listed, selection from materials listed is Contractor's option.
 - C. Piping, Concealed:
 - 1. None.
 - D. Piping, Exposed:
 - 1. PVC: 20 mils (0.5 mm) thick.
- 3.15 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE
- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
 - B. If more than one material is listed, selection from materials listed is Contractor's option.
 - C. Piping, Concealed:
 - 1. None.
 - D. Piping, Exposed:
 - 1. Aluminum, Corrugated with Z-Shaped Locking Seam: 0.020 inch (0.51 mm) thick.

END OF SECTION 230719

This Page Intentionally Left Blank

SECTION 230900 - INSTRUMENTATION AND CONTROL FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes open protocol DDC control equipment for HVAC systems and components, including control components for terminal heating and cooling units not supplied with factory-wired controls, lighting in new and existing facilities, generators, freezer, coolers and make-up water meter.

1.3 DEFINITIONS

- A. DDC: Direct digital control.
- B. I/O: Input/output.
- C. BACnet: ASHRAE Standard 135/2004 open protocol standards.
- D. MS/TP: Master slave/token passing. BACnet standard for 485 communications
- E. PC: Personal computer.
- F. PID: Proportional plus integral plus derivative.
- G. LonWorks: A control network technology platform for designing and implementing interoperable control devices and networks.

1.4 SYSTEM PERFORMANCE

- A. Comply with the following performance requirements:
 - 1. Graphic Display: Display graphic with minimum 20 dynamic points with current data within 10 seconds.
 - 2. Graphic Refresh: Update graphic with minimum 20 dynamic points with current data within 8 seconds.
 - 3. Object Command: Reaction time of less than two seconds between operator command of a binary object and device reaction.
 - 4. Object Scan: Transmit change of state and change of analog values to control units or workstation within six seconds.

5. Alarm Response Time: Annunciate alarm at workstation within 45 seconds. Multiple workstations must receive alarms within five seconds of each other.
6. Program Execution Frequency: Run capability of applications as often as five seconds, but selected consistent with mechanical process under control.
7. Performance: Programmable controllers shall execute DDC PID control loops, and scan and update process values and outputs at least once per second.
8. Reporting Accuracy and Stability of Control: Report values and maintain measured variables within tolerances as follows:
 - a. Water Temperature: Plus or minus 1 deg F (0.5 deg C).
 - b. Water Flow: Plus or minus 5 percent of full scale.
 - c. Water Pressure: Plus or minus 2 percent of full scale.
 - d. Space Temperature: Plus or minus 0.35 deg F (0.5 deg C).
 - e. Ducted Air Temperature: Plus or minus 0.35 deg F (0.5 deg C).
 - f. Outside Air Temperature: Plus or minus 0.35 deg F (1.0 deg C).
 - g. Dew Point Temperature: Plus or minus 0.35 deg F (1.5 deg C).
 - h. Temperature Differential: Plus or minus 0.25 deg F (0.15 deg C).
 - i. Relative Humidity: Plus or minus 2 percent.
 - j. Airflow (Measuring Stations): Plus or minus 5 percent of full scale.
 - k. Airflow (Terminal): Plus or minus 10 percent of full scale.
 - l. Air Pressure (Ducts): Plus or minus 0.1-inch wg (25 Pa).
 - m. Carbon Dioxide: Plus or minus 50 ppm.
 - n. Electrical: Plus or minus 5 percent of reading.

1.5 SUBMITTALS

- A. Product Data: Include manufacturer's technical literature for each control device. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated.
 1. DDC System Hardware: Bill of materials of equipment indicating quantity, manufacturer, and model number. Include technical data for operator workstation equipment, interface equipment, control units, transducers/transmitters, sensors, actuators, valves, relays/switches, control panels, and operator interface equipment.
 2. Control System Software: Include technical data for operating system software, operator interface, color graphics, and other third-party applications.
 3. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 1. Bill of materials of equipment indicating quantity, manufacturer, and model number.
 2. Schematic flow diagrams showing fans, pumps, coils, dampers, valves, and control devices.
 3. Wiring Diagrams: Power, signal, and control wiring.
 4. Details of control panel faces, including controls, instruments, and labeling.
 5. Written description of sequence of operation.

6. Schedule of dampers including size, leakage, and flow characteristics.
 7. Schedule of valves including flow characteristics.
 8. DDC System Hardware:
 - a. Wiring diagrams for control units with termination numbers.
 - b. Schematic diagrams and floor plans for field sensors and control hardware.
 - c. Schematic diagrams for control, communication, and power wiring, showing trunk data conductors and wiring between operator workstation and control unit locations.
 9. Control System Software: List of color graphics indicating monitored systems, data (connected and calculated) point addresses, output schedule, and operator notations.
 10. Controlled Systems:
 - a. Schematic diagrams of each controlled system with control points labeled and control elements graphically shown, with wiring.
 - b. Scaled drawings showing mounting, routing, and wiring of elements including bases and special construction.
 - c. Written description of sequence of operation including schematic diagram.
 - d. Points list.
- C. Data Communications Protocol Certificates: Certify that each proposed DDC system component complies with ASHRAE 135 and that system is Open Protocol.
- D. Software and Firmware Operational Documentation: Include the following:
1. Software operating and upgrade manuals.
 2. Program Software Backup: On a magnetic media or compact disc, complete with data files.
 3. Device address list.
 4. Printout of software application and graphic screens.
 5. Software license required by and installed for DDC workstations and control systems.
- E. Software Upgrade Kit: For Owner to use in modifying software to suit future systems revisions or monitoring and control revisions.
- F. Operation and Maintenance Data: For HVAC instrumentation and control system to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
1. Maintenance instructions and lists of spare parts for each type of control device and compressed-air station.
 2. Interconnection wiring diagrams with identified and numbered system components and devices.
 3. Keyboard illustrations and step-by-step procedures indexed for each operator function.
 4. Inspection period, cleaning methods, cleaning materials recommended, and calibration tolerances.
 5. Calibration records and list of set points.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Automatic control system manufacturer's authorized representative who is trained and approved for installation of system components required for this Project.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with ASHRAE 135 (BACnet) for DDC system components.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory mounted on equipment, arrange for shipping of control devices to equipment manufacturer.
- B. System Software: Update to latest version of software at Project completion.

1.8 COORDINATION

- A. Coordinate location of thermostats, humidistats, and other exposed control sensors with plans and room details before installation.
- B. Coordinate equipment with Division 26 Section "Lighting Controls" to achieve compatibility with equipment that interfaces with that system.
- C. Coordinate equipment with Division 28 Section "Fire Detection and Alarm" to achieve compatibility with equipment that interfaces with that system.
- D. Coordinate supply of conditioned electrical branch circuits for control units and operator workstation.
- E. Coordinate equipment with Division 26 Section "Motor-Control Centers" to achieve compatibility with motor starters and annunciation devices.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 CONTROL SYSTEM

- A. Manufacturers:

1. Siemens.

- B. Control system shall consist of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, accessories, and software connected to distributed controllers operating in multiuser, multitasking environment on token-passing network and programmed to control mechanical systems. An operator workstation permits interface with the network via dynamic color graphics with each mechanical system, building floor plan, and control device depicted by point-and-click graphics.

2.3 DDC EQUIPMENT

- A. Control Units: Modular, comprising processor board with programmable, nonvolatile, random-access memory; local operator access and display panel; integral interface equipment; and backup power source.
1. Units monitor or control each I/O point; process information; execute commands from other control units, devices, and operator stations; and download from or upload to operator workstation.
 2. Stand-alone mode control functions operate regardless of network status. Functions include the following:
 - a. Global communications.
 - b. Discrete/digital, analog, and pulse I/O.
 - c. Monitoring, controlling, or addressing data points.
 - d. Software applications, scheduling, and alarm processing.
 - e. Testing and developing control algorithms without disrupting field hardware and controlled environment.
 3. Standard Application Programs:
 - a. Electric Control Programs: Demand limiting, duty cycling, automatic time scheduling, start/stop time optimization, night setback/setup, on-off control with differential sequencing, staggered start, antishort cycling, PID control, DDC with fine tuning, and trend logging.
 - b. HVAC Control Programs: Optimal run time, supply-air reset, and enthalpy switchover.
 - c. Chiller Control Programs: Control function of condenser-water reset, chilled-water reset, and equipment sequencing.
 - d. Programming Application Features: Include trend point; alarm processing and messaging; weekly, monthly, and annual scheduling; energy calculations; run-time totalization; and security access.
 - e. Remote communications.
 - f. Maintenance management.
 - g. Units of Measure: Inch-pound.
 4. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.
 5. ASHRAE 135 – BACnet Compliance: Control units shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.

6. LonWorks Compliance: Control units shall use LonTalk protocol and communicate using EIA/CEA 709.1 datalink/physical layer protocol.
- B. Local Control Units: Modular, comprising processor board with electronically programmable, nonvolatile, read-only memory; and backup power source.
1. Units monitor or control each I/O point, process information, and download from or upload to operator workstation or diagnostic terminal unit.
 2. Stand-alone mode control functions operate regardless of network status. Functions include the following:
 - a. Global communications.
 - b. Discrete/digital, analog, and pulse I/O.
 - c. Monitoring, controlling, or addressing data points.
 3. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.
 4. ASHRAE 135 – BACnet Compliance: Control units shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.
 5. LonWorks Compliance: Control units shall use LonTalk protocol and communicate using EIA/CEA 709.1 datalink/physical layer protocol.
- C. I/O Interface: Hardwired inputs and outputs may tie into system through controllers. Protect points so that shorting will cause no damage to controllers.
1. Binary Inputs: Allow monitoring of on-off signals without external power.
 2. Pulse Accumulation Inputs: Accept up to 10 pulses per second.
 3. Analog Inputs: Allow monitoring of low-voltage (0- to 10-V dc), current (4 to 20 mA), or resistance signals.
 4. Binary Outputs: Provide on-off or pulsed low-voltage signal, selectable for normally open or normally closed operation with three-position (on-off-auto) override switches and status lights.
 5. Analog Outputs: Provide modulating signal, either low voltage (0- to 10-V dc) or current (4 to 20 mA) with status lights, two-position (auto-manual) switch, and manually adjustable potentiometer.
 6. Tri-State Outputs: Provide two coordinated binary outputs for control of three-point, floating-type electronic actuators.
 7. Universal I/Os: Provide software selectable binary or analog outputs.
- D. Power Supplies: Transformers with Class 2 current-limiting type or overcurrent protection; limit connected loads to 80 percent of rated capacity. DC power supply shall match output current and voltage requirements and be full-wave rectifier type with the following:
1. Output ripple of 5.0 mV maximum peak to peak.
 2. Combined 1 percent line and load regulation with 100-mic.sec. response time for 50 percent load changes.
 3. Built-in overvoltage and overcurrent protection and be able to withstand 150 percent overload for at least 3 seconds without failure.
- E. Power Line Filtering: Internal or external transient voltage and surge suppression for workstations or controllers with the following:

1. Minimum dielectric strength of 1000 V.
2. Maximum response time of 10 nanoseconds.
3. Minimum transverse-mode noise attenuation of 65 dB.
4. Minimum common-mode noise attenuation of 150 dB at 40 to 100 Hz.

2.4 SYSTEM SOFTWARE

A. General:

1. Contractor shall provide all software required for efficient operation of all functions required by this specification. Software shall be modular in design for flexibility in expansion or revision of the system. Software shall, as a minimum, include:
 - a. Complete database entry.
 - b. Configuration of all application programs to provide the sequence of operation indicated.
 - c. Complete graphics package, including graphics floor plans and individual graphics, for each system.
 - d. Alarm limits and alarm messages for all critical and non-critical alarms.
 - e. Configuration of all reports and point summaries indicated.
2. System software shall be complete such that each control loop shall function as specified in the Sequence of Operation.
3. Building control system manufacturer shall be required to write the software program and test the operation of every control loop. A letter certifying that the system is ready for inspection shall be submitted to the engineer prior to the controllers being shipped to the field. The Engineer may at his option visit the contractor's office and witness proper operation of each control loop prior to shipping from the contractor's point of fabrication. The control contractor shall provide a means of simulating every input to the system as a requirement for debugging the software. Prior to shipping of the microprocessor controller, the debugged software shall be transmitted to the owner for approval.
4. After all field connections have been made and control power is available in the control panel, the owner shall be notified and the control system shall be energized. Any required reloading of the software shall be performed and start-up of the mechanical system and building control system shall commence.
5. Building control contractor shall be responsible for all necessary revisions to the software as required to provide a complete and workable system consistent with the letter and intent of the specification. All control performance criteria are specified in the Sequence of Operations section of the specification.
6. After the system has operated properly for 90 days following start-up of the final component of the heating and air conditioning systems, an as-built copy of the software shall be transmitted to the owner for permanent record purposes. Any software upgrading or enhancements to improve the system operation or as required for proper operation of the system during the first year of operation is the responsibility of the building control system contractor. Any changes to the software shall be immediately transmitted to the Owner.
7. The Building Network Controller shall incorporate the GUI (Graphical User Interface) via a standard web browser. Use of hardware keys or special licenses requirements to access the system with a browser is unacceptable. The Building controller will serve up the web pages on a standalone per building application for the intent that if the WAN is not working, an operator can access the system on site via the building internal network using an IP. A server computer will be located at the energy management office to

- supervise the remote panels and alarm if the communication is lost as well as any control function alarm. This server computer will also be the area of trending archives.
8. Software required to provide the initial operation routines shall not consume more than 70% of the programmable capability of the controller.
 9. Software shall be provided in these five categories:
 - a. System executive software.
 - b. Software for user control over system configuration at the Central Site location, and by Maintenance Personnel in the field.
 - c. Facility monitoring functions.
 - d. Direct digital control.
 - e. Application software.
 10. Each category of software shall consist of interactive software modules. Each module shall have an associated priority level and shall execute as determined by the program controller as defined in the real time operating system.
 11. Building operator shall be able to communicate and direct all control functions through the use of a 2-button "mouse" operator interface to monitor and control all functions and sequences within the system.
 12. Central site shall allow receipt of alarms and messages while in a functional mode other than energy management. I.e. incoming alarms shall be displayed while the operator is in a word processing, spreadsheet or other operating mode. The system must automatically switch from a non- energy management mode, respond to an alarm, and return to the exact position left in the previous functional mode.
 13. Central site must be able to generate standard ASCII file formats to allow use with third-party software (**Microsoft Excel**) to generate and store owner-designed reports.

B. Systems Software:

1. Central site shall display graphically, in up to 64 different colors, the following system information:
 - a. Floor plan maps shall show heating and cooling zones throughout the buildings in a range of colors which provide a visual display of temperature relative to their respective setpoints. The colors shall be updated dynamically as zones' comfort condition change. Locations of space sensors shall also be shown for each zone. Setpoint adjustment and color band displays shall be provided as specified.
 - b. Lighting floor plan maps shall show the status of each individual lighting circuit. When the lights are "on", the area served shall respond in a pre-selected color. When the lights are "off", the area served shall appear gray.
 - c. Mechanical system graphics shall show the type of mechanical system components serving any zone through the use of a pictorial representation of components. It shall also provide a current status of all I/O points being controlled and applicable to each piece of equipment including analog readouts in appropriate engineering units at appropriate locations on the graphic representation.
 - d. The following information shall be selected from a "pop- up" menu available on various graphics:
 - 1) Alarms.
 - 2) Messages.
 - 3) Module Status.
 - 4) Programming Parameters.
 - 5) Quit.
 - 6) Schedules.
 - 7) Schedule Graphs.
 - 8) Schedule Groups.

- 9) Setpoints.
 - 10) Trends.
 - 11) Utilities.
 - e. Programming, scheduling and set-point changes shall be accessible for modification on each menu for the associated equipment. Operator shall be able to automatically download changes from the central site to the appropriate program for the equipment being controlled. Operator shall be able to upload information from the field modules to the central site.
2. Input Format:
 - a. Allowable operators, as defined under user access, shall be able to control system functions by their inputs at an appropriate user terminal. Primary operator interface shall be via two button mouse.
 3. Verification of Operator Input:
 - a. System shall acknowledge all inputs as functions or commands to be performed. System's handling of operator inputs, such as requests to start a motor, output a log, change a time program, acknowledge an alarm, or do any of the other commands described in this specification, shall be in a similar format.
 4. Operator Commands:
 - a. All operator commands shall be in graphics data base and menu driven. After the operator selects the desired object item or menu, the system shall display either the status of selected object item or the allowable options available. Upon entry of a command to the point or points desired as described above, the system shall, before performing any command requested and any entered data. System shall include error monitoring software for user's input error.
 5. Output Format:
 - a. The system shall operate on a System Format basis, regardless of the manner or hardware configuration in which the data is acquired. A "system" shall consist of a logical grouping of data points, related to a piece of mechanical equipment, an energy distribution system, or an architectural area. For example, in some cases, it may be desired to display, as a single system, a space temperature with its associated air handling unit, and in other cases to display all space temperatures on a floor or in a building. The DDC shall allow such determinations to be made without regard to the physical hardware locations of a point or group of points. Likewise, the system shall accommodate future changes of system grouping and operations without field hardware changes.
 - b. All displays and logs shall contain a header line indicating date, day-of-week, and time.
 - c. All output displays or logs of a point or group of points shall contain, as a minimum, the following information:
 - 1) Graphic presentation of the System.
 - 2) User name of point.
 - 3) Point descriptor.
 - 4) Current value/status.
 - 5) Associated engineering units.
 - 6) Alarm description.
 - d. User names, point descriptors, and engineering units shall be operator definable on a per point basis.
 6. Set points:
 - a. System shall utilize a contiguous band of colors each corresponding to actual zone temperatures relative to the desired heating and cooling setpoints. The ideal temperature shall be shown as a green color band. This color band corresponds to

the dead band between the onset of mechanical heating or cooling. Temperatures warmer than ideal shall be shown in orange.

- b. Temperatures cooler than ideal shall be blue. All alarm colors shall be in red.
 - c. System shall be capable of utilizing the mouse operator interface device to change individual zone temperature setpoints. The change shall be accomplished by pointing to a graphic temperature bar and by depressing a button, moving the mouse cursor to an increased or decreased temperature set-point within that zone. System shall also be capable of utilizing the mouse interface device or a conventional keyboard to change a numeric temperature set-point value instead of utilizing the graphic temperature bar. Floor plan graphic shall then be able to change colors on a zone by zone basis to reflect the actual temperature in each zone relative to the changed desired heating or cooling set-point.
 - d. System shall be capable of globally changing all setpoints. The global change capability shall be accessed via a "pop up menu" called by depressing a button on the mouse.
7. Graphic Structure and Hardware:
- a. The intent of the graphics is to ensure the operator is always aware of his position within the system as well as how to logically progress through the graphical hierarchy to select any desired graphic or other source of information. The GUI will be served as a web page and access from any computer without any special software or hardware keys. The building network controller will hold the graphics for standalone operation. A computer on site will not be acceptable to serve the graphics. The sever computer will have the ability to access the system for engineering from the owner, alarming archives and alarms, remote monitoring of the health of the communications to the field devices and to archive the trend collection data from the building controllers. The web pages will follow a minimum Graphical layout shall be as follows:
 - (1) Main greeting page will have links for all building monitored for quick access.
 - (2) Once a building is selected a picture of the building will be displayed along with a menu of all systems controlled from this section. There will also be links for the floor plans.
 - (3) Once the floor plan has been chosen, the selected graphic page will display the architectural floor plan. This plan will have temperature readings and Setpoints of all VAV's within this floor. There will also be links or button depicting the location and equipment number that is serving that area. This link will hyperlink into the graphic of the AHU. The temperatrre and setpoint reading will hyperlink to the selected VAV grahic for further review. If the floor has too many VAV data readings to display for an easy reading the floor plan may be broken into sections so that the view is easily readable.
 - (4) Graphical VAV – The VAV box will be a graphical representation of a VAV box. The data shown on the box will be as follows:
 - i. Box Flow
 - ii. Box Flow Trend hyperlink
 - iii. Box Flow Setpoint
 - iv. Box Flow Trend hyperlink

- v. Box Flow Min Setpoint
 - vi. Box Flow Max Setpoint
 - vii. Box Flow Reheat Min Setpoint (if applicable)
 - viii. Reheat Stage Commands (if applicable)
 - ix. Supply Air Temperature (with reheat)
 - x. Room Setpoint
 - xi. Room Setpoint Trend hyperlink
 - xii. Room Temperature
 - xiii. Room Temperature Trend hyperlink
 - xiv. Room Humidity (If applicable)
 - xv. Room Humidity Trend hyperlink
 - xvi. Room Humidity Setpoint (if applicable)
 - xvii. Room Humidity Setpoint Trend hyperlink
 - xviii. All points above to show a different status color if overridden
- (5) Graphical AHU – The AHU will be a graphical representation of the physical air handling unit specified. The data will be located on the AHU as physically located on the unit. The data on the AHU will be as follows:
- i. Schedule for Unit hyperlink – link to the scheduling editor
 - ii. Schedule for Ventilation hyperlink – link to the scheduling editor.
 - iii. Occupied/Unoccupied status for each schedule
 - iv. Fan command
 - v. Fan status
 - vi. Fan speed
 - vii. Fan VFD alarm
 - viii. Temperature sensors as specified in the control sequence of operation and trending points
 - ix. All setpoints as specified in the sequence of operation
 - 1. Example – VAV AHU will have a supply air temperature and setpoint
 - x. Supply air static and trend hyperlink
 - xi. Supply air static Setpoint and trend hyperlink
 - xii. Return air damper position
 - xiii. Outside air damper position
 - xiv. Outside air flow and trend hyperlink
 - xv. Outside air flow setpoint and trend hyperlink
 - xvi. Outside air heater command
 - xvii. Outside air heater setpoint
 - xviii. Any misc points needed from a sequence of operation
 - xix. All points above to show a different status color if overridden
- (6) Graphical Chiller plant – The plant will be a graphical representation of the physical chiller plant as specified and installed. The data will be located on the graphical screen as physically installed in the plant.
- i. All Chiller interface data
 - ii. Enable/Disable of Chillers and isolation valves
 - iii. Primary pump command and status

- iv. Secondary Pump command, status, speed, and general alarm from the VFD.
 - v. Flow meters
 - vi. Temperature sensors
 - (7) Misc. Points and graphical screens
 - b. Graphical representation of text on these screens – The text blocks will have an opposing color for easier reading
 - c. Graphical representation of the trends – each point to be trended will have a icon next to the point being trended. This icon will hyperlink to the trending chart builder for the individual trend screen. A trend icon on the main building screen will be a trendchart builder. This trend builder will allow to select multiple trends from a list, pick whether recent trending data or archived (in the server), date range, etc. Then after selection the trend chart builder will compile the data and build the trend for viewing or exporting to a spread sheet. This all happens with a standard web browser.
 - d. A text block for an overridable point shall be highlighted when a mouse is scrolled over an object. When the text block and or point is overridden the graphical point will turn to a different color. This allows for easy viewing of which points are overridden on a graphic screen.
 - 1)
- 8. User Access Restriction. Operator sign-on shall require an assignable password. Passwords shall have six (6) levels of system access **or user defined**:
 - a. Level 1 - Trainee: The level shall allow readout of data only. System shall display all operation data base.
 - b. Level 2 - Maintenance 1: This level shall allow all of Level 1 functions plus the changing of all schedules.
 - c. Level 3 - Maintenance 2: This level shall allow performance of Level 2 functions plus the changing of all set points.
 - d. Level 4 - Supervisor: This level shall allow performance of Level 3 functions plus the changing of all system parameters.
 - e. Level 5 - System Programmer: This level shall allow performance of Level 4 functions plus the modifying the system configuration.
 - f. Level 6 - System Manager: This level shall allow performance of Level 5 functions plus the changing of passwords.
- 9. Power Failure/Automatic Restart:
 - a. Power failures shall cause the system to go into an orderly shutdown with no loss of program memory.
 - b. Upon resumption of power, the system shall automatically restart and printout the time and date of the power failure and restoration at the Central Site. “Restart” program shall automatically restart affected field equipment. Operator shall be able to define an automatic power up time delay for each piece of equipment under control.
 - c. User Control Over System Configuration:
 - 1) Database Creation and Modification. All changes shall be done utilizing standard procedures and be capable of being done while the system is on-line and operational. The system shall allow changes to be made through the portable operator terminal and from the central site. To aid the user, instructive prompting software shall be provided.
 - 2) System shall permit the operator, with proper password, to perform as a minimum the following:

- a) Add and delete points.
 - b) Modify point parameters.
 - c) Create and modify control sequences.
 - d) Reconfigure application programs.
 - e) Add and/or modify graphics.
- 3) All data points within the database shall be completely accessible as independent or dependent variables for custom programming, calculation, interlocking, or manipulation.
- 4) Graphics Software:
- a) Graphics software shall permit the easy construction of infinitely variable shapes and sizes through the use of the mouse pointing device.
 - b) A selection of 64 colors and various fill textures, line types and text styles shall all be accessible through the use of the mouse interface. The software shall resemble many of the computer aided design programs currently available and allow graphics to be easily moved, edited, added or deleted.
 - c) Graphics software shall be fully implemented and operational to accomplish the following:
 1. Create a new graphic picture.
 2. Modify a portion of a graphic picture.
 3. Delete a graphic picture, or any portion thereof.
 4. Call up a graphic picture.
 5. Cancel the display of a graphic picture.
 6. Assign conditions which automatically initiate the display.
 7. Overlay alphanumeric and graphics.
 8. Save the graphic picture.
 9. Display latest process data fully integrated with the graphic display
- d. Facility Management Functions:
- 1) Trend Logging:
 - a) System shall be able to trend and display either numerically or graphically any analog or digital points in the system.
 - b) System shall be able to simultaneously graphically display any two trended points within a module function block or any point in the module versus the outside air temperature, enthalpy or relative humidity.
 - c) Each field module shall be capable of storing the most recent 60 samples for each single trend point or the most recent 30 samples for each of two trended points from one module function block.
 - d) Each module shall be capable of automatically uploading on a daily basis all accumulated trend data to the central site for permanent storage on hard disk.
 - 2) Run Time:
 - a) System shall provide run time information for all digital output and input points on command from the operator. Maximum run time limits shall be operator definable and shall be capable of automatically issuing a **visual** when the run time maximum is exceeded. Operator shall be able to reset the run time accumulator.

- b) Run time hours and start time date shall be retained in non-volatile module memory.
- c) Each module shall be capable of automatically uploading all accumulated data to the central site for permanent storage on hard disk.
- 3) Alarm Conditions and Maintenance Messages:
 - a) Central site shall allow receipt of alarms and messages while in a functional mode other than energy management. i.e., Incoming alarms shall be displayed **and generate an audible alarm** while the operator is utilizing another mode such as word processing and allow the operator to automatically return to word processing after the alarm is received.
 - b) System shall distinguish between alarms and messages with alarms having a higher priority.
 - c) System shall be capable of calling up to three different remote locations to deliver an alarm or message **through E-Mail, E-Page or alphanumeric page**. Operator shall determine if alarms or messages are to be based on temperature limit, status or off-normal reporting.
 - d) System shall be capable of printing maintenance messages when run time accumulation maximum limits are exceeded.
 - e) Text for operator alarm and messages shall be operator definable. System shall be capable of storing at least 100 messages each of any length. Generic messages used for multiple points throughout the system shall only count as one message. In the event the central site is powered down, alarms shall be stored in the modules until the central site is restored.
 - f) Central site shall be capable of transferring all alarms to hard disk for storage.
- 4) Reports and Archiving:
 - a) Field modules shall be capable of calling the central site during off peak phone rate hours to automatically upload all current and accumulated data. This shall be delivered to the central site for printing and/or permanent storage on hard disk. The system shall further be capable of transferring hard disk information onto a CD or USB external drive for remote site storage.
 - b) System shall be capable of reporting and archiving the following information as a minimum:
 - 1. Outside air temperature history and degree day history.
 - 2. Electric demand and usage history.
 - 3. All trended points.
 - 4. All alarms and messages.
 - 5. Equipment runtime information.
 - c) The system shall also provide the following additional reports for which archiving is not applicable:
 - 1. All points summary.
 - 2. Building operating schedules.
 - 3. Printout of any graphic screen.
 - d) System shall be capable of providing all points summaries on a hierarchical basis. e.g., only the points associated with a particular graphic shall be selectable and printed. For example, if the operator is viewing an air handling unit (AHU), he may request an all points

summary at this level and receive only the points associated with the AHU. If the building is being viewed and an all points summary selected, all building points will be listed. Similarly, the system shall print building operating schedules pertinent to the graphic level being viewed. e.g., if a zone or tenant zone group is being viewed on the graphic display, then the system shall be capable of printing the building operating schedules for the zone or tenant zone group. If the entire building graphic is being viewed, the system shall be capable of printing schedules at the building level. All systems reports shall be capable of being viewed at the operators' terminal and printed at the operator's discretion.

- e. Direct Digital Control Software:
 - 1) System shall continuously perform DDC functions at the local DDC controller in a stand-alone mode. The operator shall be able to design and modify the control loops to meet the requirements of the system being operated. Operators shall use system provided displays for tuning of PID loops. These displays shall include the past three input variable values, the set point for the loop as well as the sample interval and the results of the proportional, integral and derivative effects of the final output.
 - 2) Each Controller shall perform the following functions:
 - a) Identify and report alarm conditions.
 - b) Execute DDC algorithms.
 - c) Execute all application programs indicated on the I/O Summary table.
 - d) Trend and store data.
 - 3) In the event of a Controller failure, all points under its control shall be commanded to the failure mode.
 - 4) All DDC software shall reside in the respective DDC Controller.
- f. Application Software:
 - 1) Application software shall be as required to produce the sequence of operation specified.

2.5 ELECTRONIC SENSORS

- A. Description: Vibration and corrosion resistant; for wall, immersion, or duct mounting as required.
- B. Temperature Sensors: 10K resistor style.
 - 1. Accuracy: Plus or minus 0.35 deg F (0.2 deg C) at calibration point.
 - 2. Wire: Twisted, shielded-pair cable.
 - 3. Insertion Elements in Ducts: Single point, 8 inches (200 mm) long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft. (0.84 sq. m).
 - 4. Averaging Elements in Ducts: 36 inches (915 mm) long, flexible; use where prone to temperature stratification or where ducts are larger than 10 sq. ft. (1 sq. m).
 - 5. Insertion Elements for Liquids: Brass or stainless-steel socket with minimum insertion length of 2-1/2 inches (64 mm).
 - 6. Room Sensor Cover Construction: Manufacturer's standard covers.
 - a. Set-Point Adjustment: Exposed but disable.

- b. Set-Point Indication: Exposed.
 - c. Thermometer: Digital temperature display.
 - d. Color: Beige
 - e. Orientation: Vertical.
 - f. Occupancy Override: Exposed only for office and classrooms.
7. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.
- C. Humidity Sensors: Bulk polymer sensor element.
- 1. Accuracy: 2 percent full range with linear output.
 - 2. Room Sensor Range: 0 to 100 percent relative humidity.
 - 3. Room Sensor Cover Construction: Manufacturer's standard covers.
 - a. Set-Point Adjustment: Concealed.
 - b. Set-Point Indication: Exposed.
 - c. Humidity: Digital humidity display
 - d. Color: Beige.
 - e. Orientation: Vertical.
 - 4. Calibration: Single point.
- D. Pressure Transmitters/Transducers:
- 1. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.
 - a. Accuracy: 2 percent of full scale with repeatability of 0.5 percent.
 - b. Output: 4 to 20 mA.
 - c. Building Static-Pressure Range: 0- to 0.25-inch wg (0 to 62 Pa).
 - d. Duct Static-Pressure Range: 0- to 5-inch wg (0 to 1240 Pa).
 - 2. Water Pressure Transducers: Stainless-steel diaphragm construction, suitable for service; minimum 150-psig (1034-kPa) operating pressure; linear output 4 to 20 mA.
 - 3. Water Differential-Pressure Transducers: Stainless-steel diaphragm construction, suitable for service; minimum 150-psig (1034-kPa) operating pressure and tested to 300-psig (2070-kPa); linear output 4 to 20 mA.
 - 4. Differential-Pressure Switch (Air or Water): Snap acting, with pilot-duty rating and with suitable scale range and differential.
 - 5. Pressure Transmitters: Direct acting for gas, liquid, or steam service; range suitable for system; linear output 4 to 20 mA.
- E. Room sensor accessories include the following:
- 1. Guards: Metal wire, tamperproof for sensors located in gymnasiums, locker room, corridors, cafeteria, media center and multipurpose rooms.

2.6 STATUS SENSORS

- A. Status Inputs for Fans: Differential-pressure switch with pilot-duty rating and with adjustable range of 0- to 5-inch wg (0 to 1240 Pa).

- B. Status Inputs for Pumps: Differential-pressure switch with pilot-duty rating and with adjustable pressure-differential range of 8 to 60 psig (55 to 414 kPa), piped across pump.
- C. Current Switches: Self-powered, solid-state with adjustable trip current, selected to match current and system output requirements.
- D. Electronic Valve/Damper Position Indicator: Visual scale indicating percent of travel and 2- to 10-V dc, feedback signal.
- E. Water-Flow Switches: Bellows-actuated mercury or snap-acting type with pilot-duty rating, stainless-steel or bronze paddle, with appropriate range and differential adjustment, in NEMA 250, Type 1 enclosure.

2.7 GAS DETECTION EQUIPMENT

- A. Carbon Dioxide Sensor and Transmitter: Single detectors using solid-state infrared sensors; suitable over a temperature range of 23 to 130 deg F (minus 5 to plus 55 deg C) and calibrated for 0 to 2 percent, with continuous or averaged reading, 4- to 20-mA output, for wall mounting.

2.8 FLOW MEASURING STATIONS

- A. Duct Airflow Station: Thermal Dispersion Technology.
 - 1. Manufacturers:
 - a. Ebtron.
 - b. Tekair.
 - 2. Each measuring device shall consist of one or more multi-point measuring probes and single microprocessor-base transmitter. Each transmitter shall have an LCD display capable of displaying airflow and temperature. Airflow shall be field configurable to display as a velocity or volumetric rate. Each transmitter shall operate at 24V.
 - 3. Each sensing point shall independently determine the airflow rate and temperature, which shall be equally weighted and average by the transmitter prior to the output. Devices, which average multiple non-linear sensing points signals, are not acceptable. Pitot tubes arrays are not acceptable.
 - 4. The operation air flow range shall be 0 – 5,000 FPM.
 - 5. The operation temperature range for the measuring probes shall be -20°F to 160°F.
 - 6. Accuracy: Each independent airflow sensor shall have a laboratory accuracy of $\pm 2\%$ and each independent temperature sensor shall have a laboratory accuracy of $\pm 0.15^\circ\text{F}$.
 - 7. The transmitter shall be capable of communicating with the host controls using the following interface options:
 - a. Linear analog output signal: Field selectable, fuse protected and isolated, 0-10VDC and 4-20mA (4-wire).
 - b. LonWorks Free Topology.
 - 8.

- B. Pipe Flow Meter: Electromagnetic Flow Meter.
 - 1. Manufacturer:
 - a. Onicon.
 - 2. Accuracy: $\pm 1.0\%$ of reading at calibration velocity.
 - 3. Sensing Method: Electromagnetic sensing (no moving parts).
 - 4. Pipe Size Range: 3" through 72".
 - 5. Supply Voltage: 24 V AC/DC at 250 mA.
 - 6. Liquid Temperature Range: 15°F to 250°F peak.
 - 7. Operating Pressure: 400 psi.

2.9 ENERGY METER

- A. BTU Meter.
 - 1. Manufacturer:
 - a. Onicon
 - 2. Accuracy: Differential temperature accuracy $\pm 0.15^\circ\text{F}$.
 - 3. Memory: Non-volatile EEPROM memory retains all parameters and totalized values in the event of power loss.
 - 4. Flow meter: Flow meter by Onicon. Flow meter shall meet the requirements of section 2.7.C on these specifications.
 - 5. Temperature sensors: Solid state sensors.
 - 6. Temperature Range: 32°F to 200°F.
 - 7. Display: Alphanumeric LCD display total energy, total flow, energy rate, flow rate, supply temperature and return temperature.
 - 8. Output Signal: LonWorks or BACnet.

2.10 THERMOSTATS

- A. Line-Voltage, On-Off Thermostats: Bimetal-actuated, open contact or bellows-actuated, enclosed, snap-switch or equivalent solid-state type, with heat anticipator; listed for electrical rating of 125% of service equipment; with exposed set-point adjustment, 55 to 85 deg F (13 to 30 deg C) set-point range, and 2 deg F (1 deg C) maximum differential.

2.11 ACTUATORS

- A. Electric Motors: Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.
 - 1. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
 - 2. Permanent Split-Capacitor or Shaded-Pole Type: Gear trains completely oil immersed and sealed. Equip spring-return motors with integral spiral-spring mechanism in housings designed for easy removal for service or adjustment of limit switches, auxiliary switches, or feedback potentiometer.
 - 3. Nonspring-Return Motors for Valves Larger Than NPS 2-1/2 (DN 65): Size for running torque of 150 in. x lbf (16.9 N x m) and breakaway torque of 300 in. x lbf (33.9 N x m).

4. Spring-Return Motors for Valves Larger Than NPS 2-1/2 (DN 65): Size for running and breakaway torque of 150 in. x lbf (16.9 N x m).
 5. Nonspring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running torque of 150 in. x lbf (16.9 N x m) and breakaway torque of 300 in. x lbf (33.9 N x m).
 6. Spring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running and breakaway torque of 150 in. x lbf (16.9 N x m).
- B. Electronic Actuators: Direct-coupled type designed for minimum 60,000 full-stroke cycles at rated torque.
1. Manufacturers:
 - a. Belimo Aircontrols (USA), Inc.
 - b. Schneider Electric Dura Drive
 2. Valves: Size for torque required for valve close off at maximum pump differential pressure.
 3. Dampers: Size for running torque calculated as follows:
 - a. Parallel-Blade Damper with Edge Seals: 7 inch-lb/sq. ft. (86.8 kg-cm/sq. m) of damper.
 - b. Opposed-Blade Damper with Edge Seals: 5 inch-lb/sq. ft. (62 kg-cm/sq. m) of damper.
 - c. Parallel-Blade Damper without Edge Seals: 4 inch-lb/sq. ft (49.6 kg-cm/sq. m) of damper.
 - d. Opposed-Blade Damper without Edge Seals: 3 inch-lb/sq. ft. (37.2 kg-cm/sq. m) of damper.
 - e. Dampers with 2- to 3-Inch wg (500 to 750 Pa) of Pressure Drop or Face Velocities of 1000 to 2500 fpm (5 to 13 m/s): Increase running torque by 1.5.
 - f. Dampers with 3- to 4-Inch wg (750 to 1000 Pa) of Pressure Drop or Face Velocities of 2500 to 3000 fpm (13 to 15 m/s): Increase running torque by 2.0.
 4. Coupling: V-bolt and V-shaped, toothed cradle.
 5. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
 6. Fail-Safe Operation: Mechanical, spring-return mechanism. Provide external, manual gear release on nonspring-return actuators.
 7. Power Requirements (Two-Position Spring Return): 24-V ac.
 8. Power Requirements (Modulating): Maximum 10 VA at 24-V ac or 8 W at 24-V dc.
 9. Proportional Signal: 2- to 10-V dc or 4 to 20 mA, and 2- to 10-V dc position feedback signal.
 10. Temperature Rating: Minus 22 to plus 122 deg F (Minus 30 to plus 50 deg C).
 11. Temperature Rating (Smoke Dampers): Minus 22 to plus 250 deg F (Minus 30 to plus 121 deg C).
 12. Run Time: 12 seconds open, 5 seconds closed.

2.12 CONTROL VALVES

- A. Manufacturers:

1. Belimo.
 2. Schneider Electric
- B. Control Valves: Factory fabricated, of type, body material, and pressure class based on maximum pressure and temperature rating of piping system, unless otherwise indicated.
- C. Butterfly Valves: 200-psig (1380-kPa), 150-psig (1034-kPa) maximum pressure differential, ASTM A 126 cast-iron or ASTM A 536 ductile-iron body and bonnet, extended neck, stainless-steel stem, field-replaceable EPDM or Buna N sleeve and stem seals.
1. Body Style: Wafer or Grooved.
 2. Disc Type: Nickel-plated ductile iron.
 3. Sizing: 1-psig (7-kPa) maximum pressure drop at design flow rate.
- D. Terminal Unit Control Valves: Bronze body, bronze trim, two or three ports as indicated, replaceable plugs and seats, and union and threaded ends.
1. Rating: Class 125 for service at 125 psig (860 kPa) and 250 deg F (121 deg C) operating conditions.
 2. Sizing: 3-psig (21-kPa) maximum pressure drop at design flow rate, to close against pump shutoff head.
 3. Flow Characteristics: Two-way valves shall have equal percentage characteristics; three-way valves shall have linear characteristics.

2.13 DAMPERS

- A. Dampers: AMCA-rated, parallel-blade for return air damper and opposed blade for outside air and relief air design; 0.108-inch- (2.8-mm-) minimum thick, galvanized-steel or 0.125-inch- (3.2-mm-) minimum thick, extruded-aluminum frames with holes for duct mounting; damper blades shall not be less than 0.064-inch- (1.6-mm-) thick galvanized steel with maximum blade width of 8 inches (200 mm) and length of 48 inches (1220 mm).
1. Secure blades to 1/2-inch- (13-mm-) diameter, zinc-plated axles using zinc-plated hardware, with oil-impregnated sintered bronze blade bearings, blade-linkage hardware of zinc-plated steel and brass, ends sealed against spring-stainless-steel blade bearings, and thrust bearings at each end of every blade.
 2. Operating Temperature Range: From minus 40 to plus 200 deg F (minus 40 to plus 93 deg C).
 3. Edge Seals, Standard Pressure Applications: Closed-cell neoprene.
 4. Edge Seals, Low-Leakage Applications: Use replaceable rubber blade seals and spring-loaded stainless-steel side seals, rated for leakage at less than 10 cfm per sq. ft. (50 L/s per sq. m) of damper area, at differential pressure of 4-inch wg (1000 Pa) when damper is held by torque of 50 in. x lbf (5.6 N x m); when tested according to AMCA 500D.

2.14 CONTROL CABLE

- A. Electronic and fiber-optic cables for control wiring are specified in Division 27 Section "Data Communications Integrations."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that power supply is available to control units and operator workstation.

3.2 INSTALLATION

- A. Install software in control units and operator workstation(s). Implement all features of programs to specified requirements and as appropriate to sequence of operation.
- B. Connect and configure equipment and software to achieve sequence of operation specified.
- C. Verify location of thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation. Install devices 48 inches (1220 mm) above the floor.
 - 1. Install averaging elements in ducts and plenums in crossing or zigzag pattern.
- D. Install automatic dampers according to Division 23 Section "Air Duct Accessories."
- E. Install damper motors on outside of duct in warm areas, not in locations exposed to outdoor temperatures.
- F. Install labels and nameplates to identify control components according to Division 23 Section "Identification for HVAC Piping and Equipment."
- G. Install hydronic instrument wells, valves, and other accessories according to Division 23 Section "Hydronic Piping."
- H.
- I. Install duct volume-control dampers according to Division 23 Sections specifying air ducts.
- J. Install electronic and fiber-optic cables according to Division 27 Section "Communications Horizontal Cabling."

3.3 ELECTRICAL WIRING AND CONNECTION INSTALLATION

- A. Install raceways, boxes, and cabinets according to Division 26 Section "Raceway and Boxes for Electrical Systems."
- B. Install building wire and cable according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. Install signal and communication cable according to Division 27 Section "Communications Horizontal Cabling."
 - 1. Conceal cable, except in mechanical rooms and areas where other conduit and piping are exposed.

2. Install exposed cable in raceway.
 3. Install concealed cable in raceway.
 4. Bundle and harness multiconductor instrument cable in place of single cables where several cables follow a common path.
 5. Fasten flexible conductors, bridging cabinets and doors, along hinge side; protect against abrasion. Tie and support conductors.
 6. Number-code or color-code conductors for future identification and service of control system, except local individual room control cables.
 7. Install wire and cable with sufficient slack and flexible connections to allow for vibration of piping and equipment.
- D. Connect manual-reset limit controls independent of manual-control switch positions. Automatic duct heater resets may be connected in interlock circuit of power controllers.
- E. Connect hand-off-auto selector switches to override automatic interlock controls when switch is in hand position.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
1. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove and replace malfunctioning units and retest.
 2. Test and adjust controls and safeties.
 3. Test calibration of electronic controllers by disconnecting input sensors and stimulating operation with compatible signal generator.
 4. Test each point through its full operating range to verify that safety and operating control set points are as required.
 5. Test each control loop to verify stable mode of operation and compliance with sequence of operation. Adjust PID actions.
 6. Test each system for compliance with sequence of operation.
 7. Test software and hardware interlocks.
- C. DDC Verification:
1. Verify that instruments are installed before calibration, testing, and loop or leak checks.
 2. Check instruments for proper location and accessibility.
 3. Check instrument installation for direction of flow, elevation, orientation, insertion depth, and other applicable considerations.
 4. Check instrument tubing for proper fittings, slope, material, and support.
 5. Check installation of air supply for each instrument.
 6. Check flow instruments. Inspect tag number and line and bore size, and verify that inlet side is identified and that meters are installed correctly.
 7. Check pressure instruments, piping slope, installation of valve manifold, and self-contained pressure regulators.
 8. Check temperature instruments and material and length of sensing elements.

9. Check control valves. Verify that they are in correct direction.
 10. Check DDC system as follows:
 - a. Verify that DDC controller power supply is from emergency power supply, if applicable.
 - b. Verify that wires at control panels are tagged with their service designation and approved tagging system.
 - c. Verify that spare I/O capacity has been provided.
 - d. Verify that DDC controllers are protected from power supply surges.
- D. Replace damaged or malfunctioning controls and equipment and repeat testing procedures.

3.5 ADJUSTING

A. Calibrating and Adjusting:

1. Calibrate instruments.
2. Make three-point calibration test for both linearity and accuracy for each analog instrument.
3. Calibrate equipment and procedures using manufacturer's written recommendations and instruction manuals. Use test equipment with accuracy at least double that of instrument being calibrated.
4. Control System Inputs and Outputs:
 - a. Check analog inputs at 0, 50, and 100 percent of span.
 - b. Check analog outputs using milliamper meter at 0, 50, and 100 percent output.
 - c. Check digital inputs using jumper wire.
 - d. Check digital outputs using ohmmeter to test for contact making or breaking.
 - e. Check resistance temperature inputs at 0, 50, and 100 percent of span using a precision-resistant source.
5. Flow:
 - a. Set differential pressure flow transmitters for 0 and 100 percent values with 3-point calibration accomplished at 50, 90, and 100 percent of span.
 - b. Manually operate flow switches to verify that they make or break contact.
6. Pressure:
 - a. Calibrate pressure transmitters at 0, 50, and 100 percent of span.
 - b. Calibrate pressure switches to make or break contacts, with adjustable differential set at minimum.
7. Temperature:
 - a. Calibrate resistance temperature transmitters at 0, 50, and 100 percent of span using a precision-resistance source.
 - b. Calibrate temperature switches to make or break contacts.

8. Stroke and adjust control valves and dampers without positioners, following the manufacturer's recommended procedure, so that valve or damper is 100 percent open and closed.
 9. Stroke and adjust control valves and dampers with positioners, following manufacturer's recommended procedure, so that valve and damper is 0, 50, and 100 percent closed.
 10. Provide diagnostic and test instruments for calibration and adjustment of system.
 11. Provide written description of procedures and equipment for calibrating each type of instrument. Submit procedures review and approval before initiating startup procedures.
- B. Adjust initial temperature and humidity set points.
- C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to three visits to Project during other than normal occupancy hours for this purpose.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain HVAC instrumentation and controls. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 230900

SECTION 231123 - FACILITY NATURAL-GAS PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Pipes, tubes, and fittings.
 - 2. Piping specialties.
 - 3. Piping and tubing joining materials.
 - 4. Valves.
 - 5. Pressure regulators.
 - 6. Mechanical sleeve seals.

1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

1.4 PERFORMANCE REQUIREMENTS

- A. Minimum Operating-Pressure Ratings:
 - 1. Piping and Valves: 100 psig (690 kPa) minimum unless otherwise indicated.
 - 2. Service Regulators: 65 psig (450 kPa) minimum unless otherwise indicated.
- B. Natural-Gas System Pressure within Buildings: More than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa).

1.5 SUBMITTALS

- A. Product Data: For each type of the following:

1. Piping specialties.
 2. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
 3. Pressure regulators. Indicate pressure ratings and capacities.
 4. Dielectric fittings.
 5. Mechanical sleeve seals.
 6. Escutcheons.
- B. Shop Drawings: For facility natural-gas piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.
1. Shop Drawing Scale: 1/4 inch per foot (1:50).
 2. Detail mounting, supports, and valve arrangements for service meter assembly and pressure regulator assembly.
- C. Coordination Drawings: Plans and details, drawn to scale, on which natural-gas piping is shown and coordinated with other installations, using input from installers of the items involved.
- D. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities.
- E. Qualification Data: For qualified professional engineer.
- F. Welding certificates.
- G. Field quality-control reports.
- H. Operation and Maintenance Data: For pressure regulators to include in emergency, operation, and maintenance manuals.
- 1.6 QUALITY ASSURANCE
- A. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
 - C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping according to requirements of authorities having jurisdiction.

- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.
- D. Protect stored PE pipes and valves from direct sunlight.

1.8 PROJECT CONDITIONS

- A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.
- B. Interruption of Existing Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide purging and startup of natural-gas supply according to requirements indicated:
 - 1. Notify Owner no fewer than two days in advance of proposed interruption of natural-gas service.
 - 2. Do not proceed with interruption of natural-gas service without Owner's written permission.

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces. Comply with requirements in Division 08 Section "Access Doors and Frames."

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
 - 1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
 - 2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M for butt welding and socket welding.
 - 3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
 - 4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - a. Material Group: 1.1.

- b. End Connections: Threaded or butt welding to match pipe.
 - c. Lapped Face: Not permitted underground.
 - d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum o-rings, and spiral-wound metal gaskets.
 - e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.
- B. Annealed-Temper Copper Tube: Comply with ASTM B 88, Type K (ASTM B 88M, Type A).
- 1. Copper Fittings: ASME B16.22, wrought copper, and streamlined pattern.
 - 2. Flare Fittings: Comply with ASME B16.26 and SAE J513.
 - a. Copper fittings with long nuts.
 - b. Metal-to-metal compression seal without gasket.
 - c. Dryseal threads complying with ASME B1.20.3.
 - 3. Protective Coating for Underground Tubing: Factory-applied, extruded PE a minimum of 0.022 inch (0.56 mm) thick.

2.2 PIPING SPECIALTIES

- A. Y-Pattern Strainers:
- 1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
 - 2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
 - 3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
- B. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.3 JOINING MATERIALS

- A. Joint Compound and Tape: Suitable for natural gas.
- B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F (540 deg C) complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.

2.4 MANUAL GAS SHUTOFF VALVES

- A. General Requirements for Metallic Valves, NPS 2 (DN 50) and Smaller: Comply with ASME B16.33.

1. CWP Rating: 125 psig (862 kPa).
 2. Threaded Ends: Comply with ASME B1.20.1.
 3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
 4. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 5. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch (25 mm) and smaller.
 6. Service Mark: Valves 1-1/4 inches (32 mm) to NPS 2 (DN 50) shall have initials "WOG" permanently marked on valve body.
- B. General Requirements for Metallic Valves, NPS 2-1/2 (DN 65) and Larger: Comply with ASME B16.38.
1. CWP Rating: 125 psig (862 kPa).
 2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
 3. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 4. Service Mark: Initials "WOG" shall be permanently marked on valve body.
- C. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. BrassCraft Manufacturing Company; a Masco company.
 - b. Conbraco Industries, Inc.; Apollo Div.
 - c. Lyall, R. W. & Company, Inc.
 - d. McDonald, A. Y. Mfg. Co.
 - e. Perfection Corporation; a subsidiary of American Meter Company.
 2. Body: Bronze, complying with ASTM B 584.
 3. Ball: Chrome-plated bronze.
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE; blowout proof.
 6. Packing: Threaded-body packnut design with adjustable-stem packing.
 7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 8. CWP Rating: 600 psig (4140 kPa).
 9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- D. Valve Boxes:
1. Cast-iron, two-section box.
 2. Top section with cover with "GAS" lettering.
 3. Bottom section with base to fit over valve and barrel a minimum of 5 inches (125 mm) in diameter.

4. Adjustable cast-iron extensions of length required for depth of bury.
5. Include tee-handle, steel operating wrench with socket end fitting valve nut or flat head, and with stem of length required to operate valve.

2.5 MOTORIZED GAS VALVES

A. Automatic Gas Valves: Comply with ANSI Z21.21.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ASCO Power Technologies, LP; Division of Emerson.
 - b. Dungs, Karl, Inc.
 - c. Eaton Corporation; Controls Div.
 - d. Eclipse Combustion, Inc.
 - e. Honeywell International Inc.
 - f. Johnson Controls.
2. Body: Brass or aluminum.
3. Seats and Disc: Nitrile rubber.
4. Springs and Valve Trim: Stainless steel.
5. Normally closed.
6. Visual position indicator.
7. Electrical operator for actuation by appliance automatic shutoff device.

B. Electrically Operated Valves: Comply with UL 429.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ASCO Power Technologies, LP; Division of Emerson.
 - b. Dungs, Karl, Inc.
 - c. Eclipse Combustion, Inc.
 - d. Goyen Valve Corp.; Tyco Environmental Systems.
 - e. Magnatrol Valve Corporation.
 - f. Parker Hannifin Corporation; Climate & Industrial Controls Group; Skinner Valve Div.
 - g. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
2. Pilot operated.
3. Body: Brass or aluminum.
4. Seats and Disc: Nitrile rubber.
5. Springs and Valve Trim: Stainless steel.
6. 120-V ac, 60 Hz, Class B, continuous-duty molded coil, and replaceable.
7. NEMA ICS 6, Type 4, coil enclosure.
8. Normally closed.
9. Visual position indicator.

2.6 PRESSURE REGULATORS

A. General Requirements:

1. Single stage and suitable for natural gas.
2. Steel jacket and corrosion-resistant components.
3. Elevation compensator.
4. End Connections: Threaded for regulators NPS 2 (DN 50) and smaller; flanged for regulators NPS 2-1/2 (DN 65) and larger.

B. Line Pressure Regulators: Comply with ANSI Z21.80.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Actaris.
 - b. American Meter Company.
 - c. Eclipse Combustion, Inc.
 - d. Fisher Control Valves and Regulators; Division of Emerson Process Management.
 - e. Invensys.
 - f. Maxitrol Company.
 - g. Richards Industries; Jordan Valve Div.
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: 2 psig (13.8 kPa).

2.7 DIELECTRIC FITTINGS

A. Dielectric Unions:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.

- c. Hart Industries International, Inc.
 - d. McDonald, A. Y. Mfg. Co.
 - e. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
 - f. Wilkins; Zurn Plumbing Products Group.
2. Minimum Operating-Pressure Rating: 150 psig (1034 kPa).
 3. Combination fitting of copper alloy and ferrous materials.
 4. Insulating materials suitable for natural gas.
 5. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.
- B. Dielectric Flanges:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
 - d. Wilkins; Zurn Plumbing Products Group.
 2. Minimum Operating-Pressure Rating: 150 psig (1034 kPa).
 3. Combination fitting of copper alloy and ferrous materials.
 4. Insulating materials suitable for natural gas.
 5. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.
- C. Dielectric-Flange Kits:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Advance Products & Systems, Inc.
 - b. Calpico Inc.
 - c. Central Plastics Company.
 - d. Pipeline Seal and Insulator, Inc.
 2. Minimum Operating-Pressure Rating: 150 psig (1034 kPa).
 3. Companion-flange assembly for field assembly.
 4. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or PE bolt sleeves, phenolic washers, and steel backing washers.
 5. Insulating materials suitable for natural gas.
 6. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

2.8 SLEEVES

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

2.9 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Advance Products & Systems, Inc.
 - b. Calpico Inc.
 - c. Metraflex Company (The).
 - d. Pipeline Seal and Insulator, Inc.
 - 2. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe and sleeve.
 - 3. Pressure Plates: Stainless steel.
 - 4. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one nut and bolt for each sealing element.

2.10 ESCUTCHEONS

- A. General Requirements for Escutcheons: Manufactured wall and ceiling escutcheons and floor plates, with ID to fit around pipe or tube, and OD that completely covers opening.
- B. One-Piece, Deep-Pattern Escutcheons: Deep-drawn, box-shaped brass with polished chrome-plated finish.
- C. One-Piece, Cast-Brass Escutcheons: With set screw.
 - 1. Finish: Polished chrome-plated or rough brass.
- D. Split-Casting, Cast-Brass Escutcheons: With concealed hinge and set screw.
 - 1. Finish: Polished chrome-plated or rough brass.
- E. One-Piece, Floor-Plate Escutcheons: Cast-iron floor plate.
- F. Split-Casting, Floor-Plate Escutcheons: Cast brass with concealed hinge and set screw.

2.11 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
 - 1. Characteristics: Post-hardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
 - 3. Packaging: Premixed and factory packaged.

2.12 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches (150 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches (750 mm) deep; colored yellow.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Close equipment shutoff valves before turning off natural gas to premises or piping section.
- B. Inspect natural-gas piping according to Florida Fuel Gas Code to determine that natural-gas utilization devices are turned off in piping section affected.
- C. Comply with Florida Fuel Gas Code requirements for prevention of accidental ignition.

3.3 OUTDOOR PIPING INSTALLATION

- A. Comply with Florida Fuel Gas Code for installation and purging of natural-gas piping.
- B. Steel Piping:
 - 1. Apply anti-corrosive coating to pipe and joints.
- C. Install fittings for changes in direction and branch connections.

- D. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Install steel pipe for sleeves smaller than 6 inches (150 mm) in diameter.
 - 2. Install cast-iron "wall pipes" for sleeves 6 inches (150 mm) and larger in diameter.
- E. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- F. Install pressure gage upstream and downstream from each service regulator. Pressure gages are specified in Division 23 Section "Meters and Gages for HVAC Piping."

3.4 INDOOR PIPING INSTALLATION

- A. Comply with Florida Fuel Gas Code for installation and purging of natural-gas piping.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access.
- H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Install escutcheons at penetrations of interior walls, ceilings, and floors.
 - 1. New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
 - b. Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.

- c. Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
 - d. Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
 - e. Piping in Unfinished Service Spaces: One-piece, cast-brass type with rough-brass finish.
 - f. Piping in Equipment Rooms: One-piece, cast-brass type.
 - g. Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.
2. Existing Piping:
- a. Piping at Wall and Floor Penetrations in Finished Spaces: Split-casting, cast-brass type with chrome-plated finish.
 - b. Piping at Wall and Floor Penetrations in Finished Spaces: Split-plate, stamped-steel type with concealed hinge and spring clips.
 - c. Piping at Ceiling Penetrations in Finished Spaces: Split-casting, cast-brass type with chrome-plated finish.
 - d. Piping in Unfinished Service Spaces: Split-casting, cast-brass type with rough-brass finish.
 - e. Piping in Equipment Rooms: Split-casting, cast-brass type.
 - f. Piping at Floor Penetrations in Equipment Rooms: Split-casting, floor-plate type.
- L. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping."
- M. Verify final equipment locations for roughing-in.
- N. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.
- O. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
- 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches (75 mm) long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
- P. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- Q. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.
- R. Concealed Location Installations: Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.

1. Above Accessible Ceilings: Natural-gas piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit.
 2. In Floors: Install natural-gas piping with welded or brazed joints and protective coating in cast-in-place concrete floors. Cover piping to be cast in concrete slabs with minimum of 1-1/2 inches (38 mm) of concrete. Piping may not be in physical contact with other metallic structures such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quick-set additives or cinder aggregate.
 3. In Floor Channels: Install natural-gas piping in floor channels. Channels must have cover and be open to space above cover for ventilation.
 4. In Walls or Partitions: Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.
 - a. Exception: Tubing passing through partitions or walls does not require striker barriers.
 5. Prohibited Locations:
 - a. Do not install natural-gas piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
 - b. Do not install natural-gas piping in solid walls or partitions.
- S. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- T. Connect branch piping from top or side of horizontal piping.
- U. Install unions in pipes NPS 2 (DN 50) and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
- V. Do not use natural-gas piping as grounding electrode.
- W. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
- X. Install pressure gage upstream and downstream from each line regulator. Pressure gages are specified in Division 23 Section "Meters and Gages for HVAC Piping."
- 3.5 VALVE INSTALLATION
- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.
 - B. Install underground valves with valve boxes.
 - C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
 - D. Install earthquake valves aboveground outside buildings according to listing.

3.6 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
 - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
 - 2. Cut threads full and clean using sharp dies.
 - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
 - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
 - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints:
 - 1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
 - 2. Bevel plain ends of steel pipe.
 - 3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
- F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.

3.7 HANGER AND SUPPORT INSTALLATION

- A. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:
 - 1. NPS 1 (DN 25) and Smaller: Maximum span, 96 inches (2438 mm); minimum rod size, 3/8 inch (10 mm).
 - 2. NPS 1-1/4 (DN 32): Maximum span, 108 inches (2743 mm); minimum rod size, 3/8 inch (10 mm).
 - 3. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): Maximum span, 108 inches (2743 mm); minimum rod size, 3/8 inch (10 mm).
 - 4. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): Maximum span, 10 feet (3 m); minimum rod size, 1/2 inch (13 mm).
 - 5. NPS 4 (DN 100) and Larger: Maximum span, 10 feet (3 m); minimum rod size, 5/8 inch (15.8 mm).
- B. Install hangers for horizontal drawn-temper copper tubing with the following maximum spacing and minimum rod sizes:

1. NPS 3/8 (DN 10): Maximum span, 48 inches (1220 mm); minimum rod size, 3/8 inch (10 mm).
2. NPS 1/2 and NPS 5/8 (DN 15 and DN 18): Maximum span, 72 inches (1830 mm); minimum rod size, 3/8 inch (10 mm).
3. NPS 3/4 and NPS 7/8 (DN 20 and DN 22): Maximum span, 84 inches (2134 mm); minimum rod size, 3/8 inch (10 mm).
4. NPS 1 (DN 25): Maximum span, 96 inches (2440 mm); minimum rod size, 3/8 inch (10 mm).

3.8 CONNECTIONS

- A. Connect to utility's gas main according to utility's procedures and requirements.
- B. Install natural-gas piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.
- C. Install piping adjacent to appliances to allow service and maintenance of appliances.
- D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches (1800 mm) of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.
- E. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

3.9 LABELING AND IDENTIFYING

- A. Comply with requirements in Division 23 Section "Identification for HVAC Piping and Equipment" for piping and valve identification. Install detectable warning tape directly above gas piping, 12 inches (300 mm) below finished grade, except 6 inches (150 mm) below subgrade under pavements and slabs.

3.10 PAINTING

- A. Comply with requirements in Division 09 painting Sections for painting interior and exterior natural-gas piping.
- B. Paint exposed, exterior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.
 1. Alkyd System: MPI EXT 5.1D.
 - a. Prime Coat: Alkyd anticorrosive metal primer.
 - b. Intermediate Coat: Exterior alkyd enamel matching topcoat.
 - c. Topcoat: Exterior alkyd enamel (gloss).
 - d. Color: Gray.

- C. Paint exposed, interior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.
 - 1. Latex Over Alkyd Primer System: MPI INT 5.1Q.
 - a. Prime Coat: Alkyd anticorrosive metal primer.
 - b. Intermediate Coat: Interior latex matching topcoat.
 - c. Topcoat: Interior latex (gloss).
 - d. Color: Gray.
- D. Damage and Touchup: Repair marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

3.11 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain earthquake valves.

3.12 OUTDOOR PIPING SCHEDULE

- A. Aboveground natural-gas piping shall be one of the following:
 - 1. 2-1/2" and smaller shall be steel pipe with malleable-iron fittings and threaded joints.
 - 2. 3" and above shall be steel pipe with wrought-steel fittings and welded joints.

3.13 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES LESS THAN 5.0 PSIG

- A. Aboveground, branch piping NPS 1 (DN 25) and smaller shall be one of the following:
 - 1. Annealed-temper, copper tube with wrought-copper fittings and brazed joints.
 - 2. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping 1-1/4" and above shall be one of the following:
 - 1. Steel pipe with malleable-iron fittings and threaded joints.
 - 2. Steel pipe with wrought-steel fittings and welded joints.
- C. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat underground pipe and fittings with protective coating for steel piping.
- D. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

3.14 ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

- A. Valves for pipe sizes NPS 2 (DN 50) and smaller at service meter shall be the following:

1. Two-piece, full-port, bronze ball valves with bronze trim.
- B. Valves for pipe sizes NPS 2-1/2 (DN 65) and larger at service meter shall be the following:
1. Two-piece, full-port, bronze ball valves with bronze trim.
- C. Distribution piping valves for pipe sizes NPS 2 (DN 50) and smaller shall be the following:
1. Two-piece, full-port, bronze ball valves with bronze trim.
 2. Bronze plug valve.
- D. Distribution piping valves for pipe sizes NPS 2-1/2 (DN 65) and larger shall be the following:
1. Two-piece, full-port, bronze ball valves with bronze trim.
- E. Valves in branch piping for single appliance shall be the following:
1. Two-piece, full-port, bronze ball valves with bronze trim.
 2. Bronze plug valve.

END OF SECTION 231123

This Page Intentionally Left Blank

SECTION 232113 - HYDRONIC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes pipe and fitting materials, joining methods, special-duty valves, and specialties for the following:
 - 1. Chilled-water piping.
 - 2. Hot-water piping
 - 3. Condensate-drain piping.
 - 4. Air-vent piping.

1.3 DEFINITIONS

- A. PTFE: Polytetrafluoroethylene.

1.4 PERFORMANCE REQUIREMENTS

- A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature:
 - 1. Chilled-Water Piping: 125 psig (862 kPa) at 200 deg F (93 deg C).
 - 2. Condenser-Water Piping: 125 psig (862 kPa) at 150 deg F (66 deg C).
 - 3. Glycol Cooling-Water Piping: 125 psig (862 kPa) at 150 deg F (66 deg C).
 - 4. Makeup-Water Piping: 80 psig (552 kPa) at 150 deg F (66 deg C).
 - 5. Condensate-Drain Piping: 150 deg F (66 deg C).
 - 6. Air-Vent Piping: 200 deg F (93 deg C).

1.5 SUBMITTALS

- A. Product Data: For each type of the following:
 - 1. Valves. Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.
 - 2. Air control devices.
 - 3. Chemical treatment.
 - 4. Hydronic specialties.

- B. Welding certificates.
- C. Field quality-control test reports.
- D. Operation and Maintenance Data: For air control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.
- E. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project site.

1.6 QUALITY ASSURANCE

- A. Steel Support Welding: Qualify processes and operators according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- C. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 01.

1.7 EXTRA MATERIALS

- A. Water-Treatment Chemicals: Furnish enough chemicals for initial system startup and for preventive maintenance for one year from date of Substantial Completion.
- B. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flowmeter, probes, hoses, flow charts, and carrying case.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

- A. Drawn-Temper Copper Tubing: ASTM B 88, Type L (ASTM B 88M, Type B).
- B. Annealed-Temper Copper Tubing: ASTM B 88, Type K (ASTM B 88M, Type A).
- C. Copper, Mechanically Formed Tee Option: For forming T-branch on copper water tube.
- D. Wrought-Copper Unions: ASME B16.22.

2.2 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; type, grade, and wall thickness as indicated in Part 3 "Piping Applications" Article.
- B. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.
- C. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - 1. Material Group: 1.1.
 - 2. End Connections: Butt welding.
 - 3. Facings: Raised face.
- D. Steel Pipe Nipples: ASTM A 733, made of same materials and wall thicknesses as pipe in which they are installed.

2.3 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- D. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.
- E. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- F. Gasket Material: Thickness, material, and type suitable for fluid to be handled and working temperatures and pressures.

2.4 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. Capitol Manufacturing Company.
- b. Central Plastics Company.
- c. Hart Industries International, Inc.
- d. Jomar International Ltd.
- e. Matco-Norca, Inc.
- f. McDonald, A. Y. Mfg. Co.
- g. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- h. Wilkins; a Zurn company.

2. Description:

- a. Standard: ASSE 1079.
- b. Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
- c. End Connections: Solder-joint copper alloy and threaded ferrous.

C. Dielectric Flanges:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. Capitol Manufacturing Company.
- b. Central Plastics Company.
- c. Matco-Norca, Inc.
- d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- e. Wilkins; a Zurn company.

2. Description:

- a. Standard: ASSE 1079.
- b. Factory-fabricated, bolted, companion-flange assembly.
- c. Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
- d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

2.5 VALVES

A. Gate, Globe, Check, Ball, and Butterfly Valves: Comply with requirements specified in Division 23 Section "General-Duty Valves for HVAC Piping."

B. Automatic Temperature-Control Valves, Actuators, and Sensors: Comply with requirements specified in Division 23 Section "Instrumentation and Control for HVAC."

C. Bronze, Calibrated-Orifice, Balancing Valves:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. Armstrong Pumps, Inc.

- b. Bell & Gossett Domestic Pump; a division of ITT Industries.
 - c. Flow Design Inc.
 - d. Gerand Engineering Co.
 - e. Griswold Controls.
 - f. Taco.
2. Body: Bronze, ball or plug type with calibrated orifice or venturi.
 3. Ball: Brass or stainless steel.
 4. Plug: Resin.
 5. Seat: PTFE.
 6. End Connections: Threaded or socket.
 7. Pressure Gage Connections: Integral seals for portable differential pressure meter.
 8. Handle Style: Lever, with memory stop to retain set position.
 9. CWP Rating: Minimum 125 psig (860 kPa).
 10. Maximum Operating Temperature: 250 deg F (121 deg C).
- D. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Armstrong Pumps, Inc.
 - b. Bell & Gossett Domestic Pump; a division of ITT Industries.
 - c. Flow Design Inc.
 - d. Gerand Engineering Co.
 - e. Griswold Controls.
 - f. Taco.
 - g. Tour & Andersson; available through Victaulic Company.
 2. Body: Cast-iron or steel body, ball, plug, or globe pattern with calibrated orifice or venturi.
 3. Ball: Brass or stainless steel.
 4. Stem Seals: EPDM O-rings.
 5. Disc: Glass and carbon-filled PTFE.
 6. Seat: PTFE.
 7. End Connections: Flanged or grooved.
 8. Pressure Gage Connections: Integral seals for portable differential pressure meter.
 9. Handle Style: Lever, with memory stop to retain set position.
 10. CWP Rating: Minimum 125 psig (860 kPa).
 11. Maximum Operating Temperature: 250 deg F (121 deg C).

2.6 AIR CONTROL DEVICES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Amtrol, Inc.
 2. Armstrong Pumps, Inc.
 3. Bell & Gossett Domestic Pump; a division of ITT Industries.

4. Taco.

B. Automatic Air Vents:

1. Body: Bronze or cast iron.
2. Internal Parts: Nonferrous.
3. Operator: Noncorrosive metal float.
4. Inlet Connection: NPS 1/2 (DN 15).
5. Discharge Connection: NPS 1/4 (DN 8).
6. CWP Rating: 150 psig (1035 kPa).
7. Maximum Operating Temperature: 240 deg F (116 deg C).

C. Diaphragm-Type Expansion Tanks:

1. Tank: Welded steel, rated for 125-psig (860-kPa) working pressure and 375 deg F (191 deg C) maximum operating temperature. Factory test with taps fabricated and supports installed and labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
2. Diaphragm: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
3. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

D. In-Line Air Separators:

1. Tank: One-piece cast iron with an integral weir constructed to decelerate system flow to maximize air separation.
2. Maximum Working Pressure: Up to 175 psig (1207 kPa).
3. Maximum Operating Temperature: Up to 300 deg F (149 deg C).

2.7 CHEMICAL TREATMENT

A. Bypass Chemical Feeder: Welded steel construction; 125-psig (860-kPa) working pressure; 5-gal. (19-L) capacity; with fill funnel and inlet, outlet, and drain valves.

1. Chemicals: Specially formulated, based on analysis of makeup water, to prevent accumulation of scale and corrosion in piping and connected equipment.

B. Ethylene and Propylene Glycol: Industrial grade with corrosion inhibitors and environmental-stabilizer additives for mixing with water in systems indicated to contain antifreeze or glycol solutions.

2.8 HYDRONIC PIPING SPECIALTIES

A. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.

3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
 4. CWP Rating: 125 psig (860 kPa).
- B. Stainless-Steel Bellow, Flexible Connectors:
1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
 2. End Connections: Threaded or flanged to match equipment connected.
 3. Performance: Capable of 3/4-inch (20-mm) misalignment.
 4. CWP Rating: 150 psig (1035 kPa).
 5. Maximum Operating Temperature: 250 deg F (121 deg C).

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

- A. Chilled-water and hot-water piping, aboveground, NPS 2 (DN 50) and smaller, shall be the following:
1. Type L (B), drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
- B. Chilled-water and hot-water piping, aboveground, NPS 2-1/2 (DN 65) and larger, shall be any of the following:
1. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- C. Makeup-water piping installed aboveground shall be the following:
1. Type L (B), drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
- D. Condensate-Drain Piping: Type M (C), drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
- E. Air-Vent Piping:
1. Inlet: Same as service where installed with metal-to-plastic transition fittings for plastic piping systems according to the piping manufacturer's written instructions.
 2. Outlet: Type K (A), annealed-temper copper tubing with soldered or flared joints.

3.2 VALVE APPLICATIONS

- A. Install shutoff-duty valves at each branch connection to supply mains, and at supply connection to each piece of equipment.
- B. Install calibrated-orifice, balancing valves in the return pipe of each heating or cooling terminal.
- C. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

3.3 PIPING INSTALLATIONS

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Select system components with pressure rating equal to or greater than system operating pressure.
- K. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
- L. Install drains, consisting of a tee fitting, **NPS 3/4 (DN 20)** ball valve, and short NPS 3/4 (DN 20) threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- M. Install piping at a uniform grade of 0.2 percent upward in direction of flow.
- N. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
- O. Install branch connections to mains using mechanically formed tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.
- P. Install valves according to Division 23 Section "General-Duty Valves for HVAC Piping."
- Q. Install unions in piping, NPS 2 (DN 50) and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
- R. Install flanges in piping, NPS 2-1/2 (DN 65) and larger, at final connections of equipment and elsewhere as indicated.

- S. Install strainers on inlet side of each control valve, pressure-reducing valve, solenoid valve, in-line pump, and elsewhere as indicated. Install NPS 3/4 (DN 20) nipple and ball valve in blowdown connection of strainers NPS 2 (DN 50) and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2 (DN 50).
- T. Identify piping as specified in Division 23 Section "Identification for HVAC Piping and Equipment."
- U. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 23 Section "Sleeves and Sleeve Seals for HVAC Piping."
- V. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 23 Section "Sleeves and Sleeve Seals for HVAC Piping."
- W. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 23 Section "Escutcheons for HVAC Piping."

3.4 HANGERS AND SUPPORTS

- A. Hanger, support, and anchor devices are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment." Comply with the following requirements for maximum spacing of supports.
- B. Install the following pipe attachments:
 - 1. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet (6 m) long.
 - 2. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
- C. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:
 - 1. NPS 3/4 (DN 20): Maximum span, 7 feet (2.1 m); minimum rod size, 1/4 inch (6.4 mm).
 - 2. NPS 1 (DN 25): Maximum span, 7 feet (2.1 m); minimum rod size, 1/4 inch (6.4 mm).
 - 3. NPS 1-1/2 (DN 40): Maximum span, 9 feet (2.7 m); minimum rod size, 3/8 inch (10 mm).
 - 4. NPS 2 (DN 50): Maximum span, 10 feet (3 m); minimum rod size, 3/8 inch (10 mm).
 - 5. NPS 2-1/2 (DN 65): Maximum span, 11 feet (3.4 m); minimum rod size, 3/8 inch (10 mm).
 - 6. NPS 3 (DN 80): Maximum span, 12 feet (3.7 m); minimum rod size, 3/8 inch (10 mm).
 - 7. NPS 4 (DN 100): Maximum span, 12 feet (3.7 m); minimum rod size, 1/2 inch (13 mm).
 - 8. NPS 6 (DN 150): Maximum span, 12 feet (3.7 m); minimum rod size, 1/2 inch (13 mm).
 - 9. NPS 8 (DN 200): Maximum span, 12 feet (3.7 m); minimum rod size, 5/8 inch (16 mm).
 - 10. NPS 10 (DN 250): Maximum span, 12 feet (3.7 m); minimum rod size, 3/4 inch (19 mm).
 - 11. NPS 12 (DN 300): Maximum span, 12 feet (3.7 m); minimum rod size, 7/8 inch (22 mm).
 - 12. NPS 14 (DN 350): Maximum span, 12 feet (3.7 m); minimum rod size, 1 inch (25 mm).
 - 13. NPS 16 (DN 400): Maximum span, 12 feet (3.7 m); minimum rod size, 1 inch (25 mm).

14. NPS 18 (DN 450): Maximum span, 12 feet (3.7 m); minimum rod size, 1-1/4 inches (32 mm).
 15. NPS 20 (DN 500): Maximum span, 12 feet (3.7 m); minimum rod size, 1-1/4 inches (32 mm).
- D. Install hangers for drawn-temper copper piping with the following maximum spacing and minimum rod sizes:
1. NPS 3/4 (DN 20): Maximum span, 5 feet (1.5 m); minimum rod size, 1/4 inch (6.4 mm).
 2. NPS 1 (DN 25): Maximum span, 6 feet (1.8 m); minimum rod size, 1/4 inch (6.4 mm).
 3. NPS 1-1/2 (DN 40): Maximum span, 8 feet (2.4 m); minimum rod size, 3/8 inch (10 mm).
 4. NPS 2 (DN 50): Maximum span, 8 feet (2.4 m); minimum rod size, 3/8 inch (10 mm).
 5. NPS 2-1/2 (DN 65): Maximum span, 9 feet (2.7 m); minimum rod size, 3/8 inch (10 mm).
 6. NPS 3 (DN 80): Maximum span, 10 feet (3 m); minimum rod size, 3/8 inch (10 mm).
- E. Support vertical runs at roof, at each floor, and at 10-foot (3-m) intervals between floors.

3.5 PIPE JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- F. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- G. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.6 HYDRONIC SPECIALTIES INSTALLATION

- A. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Manual vents at heat-transfer coils and elsewhere as required for air venting.
- B. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.

- C. Install in-line air separators in pump suction. Install drain valve on air separators NPS 2 (DN 50) and larger.
- D. Install bypass chemical feeders in each hydronic system where indicated, in upright position with top of funnel not more than 48 inches (1200 mm) above the floor. Install feeder in minimum NPS 3/4 (DN 20) bypass line, from main with full-size, full-port, ball valve in the main between bypass connections. Install NPS 3/4 (DN 20) pipe from chemical feeder drain, to nearest equipment drain and include a full-size, full-port, ball valve.
- E. Install expansion tanks on the floor. Vent and purge air from hydronic system, and ensure tank is properly charged with air to suit system Project requirements.

3.7 TERMINAL EQUIPMENT CONNECTIONS

- A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.
- B. Install control valves in accessible locations close to connected equipment.
- C. Install ports for pressure gages and thermometers at coil inlet and outlet connections according to Division 23 Section "Meters and Gages for HVAC Piping."

3.8 CHEMICAL TREATMENT

- A. Perform an analysis of makeup water to determine type and quantities of chemical treatment needed to keep system free of scale, corrosion, and fouling, and to sustain the following water characteristics:
 - 1. pH: 9.0 to 10.5.
 - 2. "P" Alkalinity: 100 to 500 ppm.
 - 3. Boron: 100 to 200 ppm.
 - 4. Chemical Oxygen Demand: Maximum 100 ppm. Modify this value if closed system contains glycol.
 - 5. Corrosion Inhibitor:
 - a. Sodium Nitrate: 1000 to 1500 ppm.
 - b. Molybdate: 200 to 300 ppm.
 - c. Chromate: 200 to 300 ppm.
 - d. Sodium Nitrate Plus Molybdate: 100 to 200 ppm each.
 - e. Chromate Plus Molybdate: 50 to 100 ppm each.
 - 6. Soluble Copper: Maximum 0.20 ppm.
 - 7. Tolyriazole Copper and Yellow Metal Corrosion Inhibitor: Minimum 10 ppm.
 - 8. Total Suspended Solids: Maximum 10 ppm.
 - 9. Ammonia: Maximum 20 ppm.
 - 10. Free Caustic Alkalinity: Maximum 20 ppm.
 - 11. Microbiological Limits:
 - a. Total Aerobic Plate Count: Maximum 1000 organisms/ml.

- b. Total Anaerobic Plate Count: Maximum 100 organisms/ml.
 - c. Nitrate Reducers: 100 organisms/ml.
 - d. Sulfate Reducers: Maximum 0 organisms/ml.
 - e. Iron Bacteria: Maximum 0 organisms/ml.
- B. Fill system with fresh water and add liquid alkaline compound with emulsifying agents and detergents to remove grease and petroleum products from piping. Circulate solution for a minimum of 24 hours, drain, clean strainer screens, and refill with fresh water.
- C. Add initial chemical treatment and maintain water quality in ranges noted above for the first year of operation.
- D. Fill systems indicated to have antifreeze or glycol solutions with the following concentrations:
- 1. Glycol Cooling-Water Piping: Minimum 25 percent propylene glycol.

3.9 FIELD QUALITY CONTROL

- A. Prepare hydronic piping according to ASME B31.9 and as follows:
- 1. Leave joints, including welds, uninsulated and exposed for examination during test.
 - 2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
 - 3. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
 - 4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
 - 5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.
- B. Perform the following tests on hydronic piping:
- 1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
 - 2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
 - 3. Isolate expansion tanks and determine that hydronic system is full of water.
 - 4. Subject piping system to hydrostatic test pressure that is not less than 100 psig. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
 - 5. After hydrostatic test pressure has been applied for at least 15 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
 - 6. Prepare written report of testing.
- C. Perform the following before operating the system:

1. Open manual valves fully.
2. Inspect pumps for proper rotation.
3. Set makeup pressure-reducing valves for required system pressure.
4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
5. Set temperature controls so all coils are calling for full flow.
6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
7. Verify lubrication of motors and bearings.

END OF SECTION 232113

This Page Intentionally Left Blank

SECTION 232116 - HYDRONIC PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes special-duty valves and specialties for the following:
 - 1. Chilled-water piping.
 - 2. Condensate-drain piping.
 - 3. Air-vent piping.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of the following:
 - 1. Valves: Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.
 - 2. Air-control devices.
 - 3. Hydronic specialties.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air-control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flowmeter, probes, hoses, flow charts, and carrying case.

1.6 QUALITY ASSURANCE

- A. Pipe Welding: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
 - 1. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature unless otherwise indicated:
1. Chilled-Water and Hot-Water Piping: 125 psig (860 kPa) at 200 deg F (93 deg C).
 2. Makeup-Water Piping: 80 psig (552 kPa) at 150 deg F (66 deg C).
 3. Condensate-Drain Piping: 150 deg F (66 deg C).
 4. Air-Vent Piping: 200 deg F (93 deg C).
 5. Safety-Valve-Inlet and -Outlet Piping: Equal to the pressure of the piping system to which it is attached.

2.2 VALVES

- A. Gate, Globe, Check, Ball, and Butterfly Valves: Comply with requirements specified in Section 230523 "General-Duty Valves for HVAC Piping." Section 15112 "General-Duty Valves for HVAC Piping."
- B. Automatic Temperature-Control Valves, Actuators, and Sensors: Comply with requirements specified in Section 230900 "Instrumentation and Control for HVAC."
- C. Bronze, Calibrated-Orifice, Balancing Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bell & Gossett Domestic Pump.
 - b. Flow Design Inc.
 - c. Gerand Engineering Co.
 - d. Griswold Controls.
 - e. Taco.
 2. Body: Bronze, ball or plug type with calibrated orifice or venturi.
 3. Ball: Brass or stainless steel.
 4. Plug: Resin.
 5. Seat: PTFE.
 6. End Connections: Threaded or socket.
 7. Pressure Gage Connections: Integral seals for portable differential pressure meter.
 8. Handle Style: Lever, with memory stop to retain set position.
 9. CWP Rating: Minimum 125 psig (860 kPa).
 10. Maximum Operating Temperature: 250 deg F (121 deg C).
- D. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bell & Gossett Domestic Pump.

- b. Flow Design Inc.
 - c. Griswold Controls.
 - d. Taco.
 2. Body: Cast-iron or steel body, ball, plug, or globe pattern with calibrated orifice or venturi.
 3. Ball: Brass or stainless steel.
 4. Stem Seals: EPDM O-rings.
 5. Disc: Glass and carbon-filled PTFE.
 6. Seat: PTFE.
 7. End Connections: Flanged or grooved.
 8. Pressure Gage Connections: Integral seals for portable differential pressure meter.
 9. Handle Style: Lever, with memory stop to retain set position.
 10. CWP Rating: Minimum 125 psig (860 kPa).
 11. Maximum Operating Temperature: 250 deg F (121 deg C).
- E. Diaphragm-Operated, Pressure-Reducing Valves: ASME labeled.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amtrol, Inc.
 - b. Bell & Gossett Domestic Pump.
 - c. Conbraco Industries, Inc.
 - d. Spence Engineering Company, Inc.
 - e. Watts Regulator Co.
 2. Body: Bronze or brass.
 3. Disc: Glass and carbon-filled PTFE.
 4. Seat: Brass.
 5. Stem Seals: EPDM O-rings.
 6. Diaphragm: EPT.
 7. Low inlet-pressure check valve.
 8. Inlet Strainer: stainless steel, removable without system shutdown.
 9. Valve Seat and Stem: Noncorrosive.
 10. Valve Size, Capacity, and Operating Pressure: Selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.
- F. Automatic Flow-Control Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flow Design Inc.
 - b. Griswold Controls.
 - c. Nexus Valve, Inc.
 2. Body: Brass or ferrous metal.
 3. Piston and Spring Assembly: Stainless steel, tamper proof, self-cleaning, and removable.
 4. Combination Assemblies: Include bronze or brass-alloy ball valve.

5. Identification Tag: Marked with zone identification, valve number, and flow rate.
6. Size: Same as pipe in which installed.
7. Performance: Maintain constant flow, plus or minus 5 percent over system pressure fluctuations.
8. Minimum CWP Rating: 175 psig (1207 kPa).
9. Maximum Operating Temperature: 200 deg F (93 deg C).

2.3 AIR-CONTROL DEVICES

A. Manual Air Vents:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amtrol, Inc.
 - b. Armstrong Pumps, Inc.
 - c. Bell & Gossett Domestic Pump.
 - d. Nexus Valve, Inc.
 - e. Taco, Inc.
2. Body: Bronze.
3. Internal Parts: Nonferrous.
4. Operator: Screwdriver or thumbscrew.
5. Inlet Connection: NPS 1/2 (DN 15).
6. Discharge Connection: NPS 1/8 (DN 6).
7. CWP Rating: 150 psig (1035 kPa).
8. Maximum Operating Temperature: 225 deg F (107 deg C).

B. Automatic Air Vents:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amtrol, Inc.
 - b. Armstrong Pumps, Inc.
 - c. Bell & Gossett Domestic Pump.
 - d. Nexus Valve, Inc.
 - e. Taco, Inc.
2. Body: Bronze or cast iron.
3. Internal Parts: Nonferrous.
4. Operator: Noncorrosive metal float.
5. Inlet Connection: NPS 1/2 (DN 15).
6. Discharge Connection: NPS 1/4 (DN 8).
7. CWP Rating: 150 psig (1035 kPa).
8. Maximum Operating Temperature: 240 deg F (116 deg C).

C. Diaphragm-Type Expansion Tanks:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amtrol, Inc.
 - b. Armstrong Pumps, Inc.
 - c. Bell & Gossett Domestic Pump.
 - d. Taco, Inc.
2. Tank: Welded steel, rated for 125-psig (860-kPa) working pressure and 375 deg F (191 deg C) maximum operating temperature. Factory test after taps are fabricated and supports installed and are labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
3. Diaphragm: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
4. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

D. Tangential-Type Air Separators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amtrol, Inc.
 - b. Armstrong Pumps, Inc.
 - c. Bell & Gossett Domestic Pump.
 - d. Taco, Inc.
2. Tank: Welded steel; ASME constructed and labeled for 125-psig (860-kPa) minimum working pressure and 375 deg F (191 deg C) maximum operating temperature.
3. Air Collector Tube: Perforated stainless steel, constructed to direct released air into expansion tank.
4. Tangential Inlet and Outlet Connections: Threaded for NPS 2 (DN 50) and smaller; flanged connections for NPS 2-1/2 (DN 65) and larger.
5. Blowdown Connection: Threaded.
6. Size: Match system flow capacity.

E. Air Purgers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amtrol, Inc.
 - b. Armstrong Pumps, Inc.
 - c. Bell & Gossett Domestic Pump.
 - d. Taco, Inc.
2. Body: Cast iron with internal baffles that slow the water velocity to separate the air from solution and divert it to the vent for quick removal.
3. Maximum Working Pressure: 150 psig (1035 kPa).
4. Maximum Operating Temperature: 250 deg F (121 deg C).

2.4 HYDRONIC PIPING SPECIALTIES

A. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
3. Strainer Screen: Stainless-steel, 20-mesh strainer, or perforated stainless-steel basket.
4. CWP Rating: 125 psig (860 kPa).

B. Stainless-Steel Bellow, Flexible Connectors:

1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
2. End Connections: Threaded or flanged to match equipment connected.
3. Performance: Capable of 3/4-inch (20-mm) misalignment.
4. CWP Rating: 150 psig (1035 kPa).
5. Maximum Operating Temperature: 250 deg F (121 deg C).

C. Spherical, Rubber, Flexible Connectors:

1. Body: Fiber-reinforced rubber body.
2. End Connections: Steel flanges drilled to align with Classes 150 and 300 steel flanges.
3. Performance: Capable of misalignment.
4. CWP Rating: 150 psig (1035 kPa).
5. Maximum Operating Temperature: 250 deg F (121 deg C).

PART 3 - EXECUTION

3.1 VALVE APPLICATIONS

- A. Install shutoff-duty valves at each branch connection to supply mains and at supply connection to each piece of equipment.
- B. Install calibrated-orifice, balancing or automatic balancing valves at each branch connection to return main.
- C. Install calibrated-orifice or automatic, balancing valves in the return pipe of each heating or cooling terminal.
- D. Install check valves at each pump discharge and elsewhere as required to control flow direction.
- E. Install pressure-reducing valves at make-up-water connection to regulate system fill pressure.

3.2 HYDRONIC SPECIALTIES INSTALLATION

- A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.

- B. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Install manual vents at heat-transfer coils and elsewhere as required for air venting.
- C. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.
- D. Install tangential air separator in pump suction. Install blowdown piping with gate or full-port ball valve; extend full size to nearest floor drain.
- E. Install expansion tanks on the floor. Vent and purge air from hydronic system and ensure that tank is properly charged with air to suit system Project requirements.

END OF SECTION 232116

SECTION 233113 - METAL DUCTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Single-wall rectangular ducts and fittings.
2. Double-wall rectangular ducts and fittings.
3. Single-wall round ducts and fittings.
4. Double-wall round and flat-oval ducts and fittings.
5. Sheet metal materials.
6. Sealants and gaskets.
7. Hangers and supports.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Duct Design: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, shall comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and performance requirements and design criteria indicated in "Duct Schedule" Article.
- B. Structural Performance: Duct hangers and supports shall withstand the effects of gravity loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"
- C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of the following products:

1. Sealants and gaskets.

- B. Shop Drawings:

1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
2. Factory- and shop-fabricated ducts and fittings.

3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
4. Elevation of top of ducts.
5. Dimensions of main duct runs from building grid lines.
6. Fittings.
7. Reinforcement and spacing.
8. Seam and joint construction.
9. Penetrations through fire-rated and other partitions.
10. Equipment installation based on equipment being used on Project.
11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
12. Hangers and supports, including methods for duct and building attachment and vibration isolation.

C. Delegated-Design Submittal:

1. Sheet metal thicknesses.
2. Joint and seam construction and sealing.
3. Reinforcement details and spacing.
4. Materials, fabrication, assembly, and spacing of hangers and supports.
5. Design Calculations: Calculations for selecting hangers and supports.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
2. Suspended ceiling components.
3. Structural members to which duct will be attached.
4. Size and location of initial access modules for acoustical tile.
5. Penetrations of smoke barriers and fire-rated construction.
6. Items penetrating finished ceiling including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. Perimeter moldings.

B. Field quality-control reports.

1.6 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.

- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 - 2. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.
- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-up."
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."

PART 2 - PRODUCTS

2.1 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
- B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.2 DOUBLE-WALL RECTANGULAR DUCTS AND FITTINGS

- A. Rectangular Ducts: Fabricate ducts with indicated dimensions for the inner duct.
- B. Outer Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
- C. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

- D. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- E. Interstitial Insulation: Fibrous-glass liner complying with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
 - 1. Maximum Thermal Conductivity: at 75 deg F mean temperature.
 - 2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
 - 3. Coat insulation with antimicrobial coating.
 - 4. Cover insulation with polyester film complying with UL 181, Class 1.
- F. Inner Duct: Minimum 0.028-inch perforated galvanized sheet steel having 3/32-inch- diameter perforations, with overall open area of 23 percent.
- G. Formed-on Transverse Joints (Flanges): Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Traverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- H. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.3 DOUBLE-WALL ROUND AND FLAT-OVAL DUCTS AND FITTINGS

- A. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension) of the inner duct.
- B. Outer Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on static-pressure class unless otherwise indicated.
 - 1. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - a. Transverse Joints in Ducts Larger Than 60 Inches in Diameter: Flanged.
 - 2. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials

involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

- a. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
 - b. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.
3. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- C. Inner Duct: Minimum 0.028-inch perforated galvanized sheet steel having 3/32-inch- diameter perforations, with overall open area of 23 percent.
- D. Interstitial Insulation: Fibrous-glass liner complying with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
1. Maximum Thermal Conductivity: at 75 deg F mean temperature.
 2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
 3. Coat insulation with antimicrobial coating.
 4. Cover insulation with polyester film complying with UL 181, Class 1.

2.4 SHEET METAL MATERIALS

- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
1. Galvanized Coating Designation: G90 .
 2. Finishes for Surfaces Exposed to View: Mill phosphatized.
- C. Carbon-Steel Sheets: Comply with ASTM A 1008/A 1008M, with oiled, matte finish for exposed ducts.
- D. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304 or 316, as indicated in the "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish shall be No. 2B, No. 2D, No. 3, or No. 4 as indicated in the "Duct Schedule" Article.
- E. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.

- F. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches .

2.5 SEALANT AND GASKETS

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
- B. Water-Based Joint and Seam Sealant:
 - 1. Application Method: Brush on.
 - 2. Solids Content: Minimum 65 percent.
 - 3. Shore A Hardness: Minimum 20.
 - 4. Water resistant.
 - 5. Mold and mildew resistant.
 - 6. VOC: Maximum 75 g/L (less water).
 - 7. Maximum Static-Pressure Class: 10-inch wg , positive and negative.
 - 8. Service: Indoor or outdoor.
 - 9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.
- C. Flanged Joint Sealant: Comply with ASTM C 920.
 - 1. General: Single-component, acid-curing, silicone, elastomeric.
 - 2. Type: S.
 - 3. Grade: NS.
 - 4. Class: 25.
 - 5. Use: O.
 - 6. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- D. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.
- E. Round Duct Joint O-Ring Seals:
 - 1. Seal shall provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg and shall be rated for 10-inch wg static-pressure class, positive or negative.
 - 2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
 - 3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

2.6 HANGERS AND SUPPORTS

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.

- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1 , "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."
- D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.
- E. Steel Cables for Stainless-Steel Ducts: Stainless steel complying with ASTM A 492.
- F. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- G. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- H. Trapeze and Riser Supports:
 - 1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
 - 2. Supports for Stainless-Steel Ducts: Stainless-steel shapes and plates.
 - 3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

PART 3 - EXECUTION

3.1 DUCT INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.
- B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- C. Install round and flat-oval ducts in maximum practical lengths.
- D. Install ducts with fewest possible joints.
- E. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- F. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
- G. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- H. Install ducts with a clearance of 1 inch , plus allowance for insulation thickness.

- I. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.
- J. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches .
- K. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers. Comply with requirements in Division 23 Section "Air Duct Accessories" for fire and smoke dampers.
- L. Protect duct interiors from moisture, construction debris and dust, and other foreign materials.

3.2 INSTALLATION OF EXPOSED DUCTWORK

- A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
- B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.
- C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.
- D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Repair or replace damaged sections and finished work that does not comply with these requirements.

3.3 ADDITIONAL INSTALLATION REQUIREMENTS FOR COMMERCIAL KITCHEN HOOD EXHAUST DUCT

- A. Install commercial kitchen hood exhaust ducts without dips and traps that may hold grease, and sloped a minimum of 2 percent to drain grease back to the hood.
- B. Install fire-rated access panel assemblies at each change in direction and at maximum intervals of 20 feet in horizontal ducts, and at every floor for vertical ducts, or as indicated on Drawings. Locate access panel on top or sides of duct a minimum of 1-1/2 inches from bottom of duct.
- C. Do not penetrate fire-rated assemblies except as allowed by applicable building codes and authorities having jurisdiction.

3.4 DUCT SEALING

- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

3.5 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
 - 1. Where practical, install concrete inserts before placing concrete.
 - 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
 - 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches thick.
 - 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
- C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1 , "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.
- D. Hangers Exposed to View: Threaded rod and angle or channel supports.
- E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet .
- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.6 CONNECTIONS

- A. Make connections to equipment with flexible connectors complying with Division 23 Section "Air Duct Accessories."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.7 PAINTING

- A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Division 09 painting Sections.

3.8 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Leakage Tests:

1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test.
 2. Test the following systems:
 - a. Supply Ducts with a Pressure Class of 3-Inch wg or Higher: Test representative duct sections totaling no less than 100 percent of total installed duct area for each designated pressure class.
 3. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
 4. Test for leaks before applying external insulation.
 5. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
 6. Give seven days' advance notice for testing.
- C. Duct system will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- 3.9 START UP
- A. Air Balance: Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC."
- 3.10 DUCT SCHEDULE
- A. Supply Ducts:
1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:
 - a. Pressure Class: Positive 1-inch wg.
 - b. Minimum SMACNA Seal Class: C.
 - c. SMACNA Leakage Class for Rectangular: 24.
 - d. SMACNA Leakage Class for Round and Flat Oval: 12.
 2. Ducts Connected to Constant-Volume Air-Handling Units:
 - a. Pressure Class: Positive 2-inch wg .
 - b. Minimum SMACNA Seal Class: B.
 - c. SMACNA Leakage Class for Rectangular: 12.
 - d. SMACNA Leakage Class for Round and Flat Oval: 6.
 3. Ducts Connected to Variable-Air-Volume Air-Handling Units:
 - a. Pressure Class: Positive 3-inch wg .
 - b. Minimum SMACNA Seal Class: B.
 - c. SMACNA Leakage Class for Rectangular: 6.
 - d. SMACNA Leakage Class for Round and Flat Oval: 3.

B. Return Ducts:

1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:
 - a. Pressure Class: Positive or negative 1-inch wg .
 - b. Minimum SMACNA Seal Class: C.
 - c. SMACNA Leakage Class for Rectangular: 24.
 - d. SMACNA Leakage Class for Round and Flat Oval: 12.
2. Ducts Connected to Air-Handling Units:
 - a. Pressure Class: Positive or negative 2-inch wg.
 - b. Minimum SMACNA Seal Class: B.
 - c. SMACNA Leakage Class for Rectangular: 12.
 - d. SMACNA Leakage Class for Round and Flat Oval: 6.

C. Exhaust Ducts:

1. Ducts Connected to Fans Exhausting (ASHRAE 62.1, Class 1 and 2) Air:
 - a. Pressure Class: Negative 1-inch wg .
 - b. Minimum SMACNA Seal Class: C if negative pressure, and A if positive pressure.
 - c. SMACNA Leakage Class for Rectangular: 12.
 - d. SMACNA Leakage Class for Round and Flat Oval: 6.
2. Ducts Connected to Commercial Kitchen Hoods: Comply with NFPA 96.
 - a. Exposed to View: Type 304, stainless-steel sheet, No. 4 finish.
 - b. Concealed: Carbon-steel sheet.
 - c. Welded seams and joints.
 - d. Pressure Class: Positive or negative 3-inch wg .
 - e. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
 - f. SMACNA Leakage Class: 3.
3. Ducts Connected to Dishwasher Hoods:
 - a. Type 304, stainless-steel sheet.
 - b. Exposed to View: No. 4 finish.
 - c. Concealed: No. 2D finish.
 - d. Welded seams and flanged joints with watertight EPDM gaskets.
 - e. Pressure Class: Positive or negative 3-inch wg .
 - f. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
 - g. SMACNA Leakage Class: 3.

D. Outdoor-Air (Not Filtered, Heated, or Cooled) Ducts:

1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:
 - a. Pressure Class: Positive or negative 1-inch wg .
 - b. Minimum SMACNA Seal Class: C.

- c. SMACNA Leakage Class for Rectangular: 24.
 - d. SMACNA Leakage Class for Round and Flat Oval: 12.
 - 2. Ducts Connected to Air-Handling Units:
 - a. Pressure Class: Positive or negative 2-inch wg .
 - b. Minimum SMACNA Seal Class: B.
 - c. SMACNA Leakage Class for Rectangular: 12.
 - d. SMACNA Leakage Class for Round and Flat Oval: 6.
- E. Intermediate Reinforcement:
 - 1. Galvanized-Steel Ducts: Galvanized steel.
 - 2. Stainless-Steel Ducts:
 - a. Exposed to Airstream: Match duct material.
 - b. Not Exposed to Airstream: Match duct material.
- F. Double-Wall Duct Interstitial Insulation:
 - 1. Supply Air Ducts: 1 inch thick.
 - 2. Return Air Ducts: 1 inch thick.
 - 3. Exhaust Air Ducts: 1 inch thick.
- G. Elbow Configuration:
 - 1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
 - a. Velocity 1000 fpm or Lower:
 - 1) Radius Type RE 1 with minimum 0.5 radius-to-diameter ratio.
 - 2) Mitered Type RE 4 without vanes.
 - b. Velocity 1000 to 1500 fpm :
 - 1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
 - c. Velocity 1500 fpm or Higher:
 - 1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - 2. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
 - a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - 3. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
 - a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-

1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.

1) Radius-to Diameter Ratio: 1.5.

- b. Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
- c. Round Elbows, 14 Inches and Larger in Diameter: Standing seam.

H. Branch Configuration:

- 1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."
 - a. Rectangular Main to Rectangular Branch: 45-degree entry.
 - b. Rectangular Main to Round Branch: Spin in.
- 2. Round and Flat Oval: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees." Saddle taps are permitted in existing duct.
 - a. Velocity 1000 fpm or Lower: 90-degree tap.
 - b. Velocity 1000 to 1500 fpm : Conical tap.
 - c. Velocity 1500 fpm or Higher: 45-degree lateral.

END OF SECTION 233113

SECTION 233300 - DUCT ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Backdraft dampers.
 - 2. Barometric Relief Damper
 - 3. Manual-volume dampers.
 - 4. Fire dampers.
 - 5. Flexible ducts.
 - 6. Flexible connectors.
 - 7. Duct accessory hardware.
 - 8. Flange Connectors
 - 9. Duct Mounted Access Door

1.3 SUBMITTALS

- A. Product Data: For the following:
 - 1. Backdraft dampers.
 - 2. Barometric Relief Damper
 - 3. Manual-volume dampers.
 - 4. Fire and smoke dampers.
 - 5. Flexible ducts.
 - 6. Flange Connector
 - 7. Duct Mounted Access Door
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loadings, required clearances, method of field assembly, components, location, and size of each field connection. Detail the following:
 - 1. Special fittings and manual- and automatic-volume-damper installations.
 - 2. Fire- and smoke-damper installations, including sleeves and duct-mounted access doors and panels.
- C. Product Certificates: Submit certified test data on dynamic insertion loss; self-noise power levels; and airflow performance data, static-pressure loss, dimensions, and weights.

1.4 QUALITY ASSURANCE

- A. NFPA Compliance: Comply with the following NFPA standards:
 - 1. NFPA 90A, "Installation of Air Conditioning and Ventilating Systems."
 - 2. NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."

PART 2 - PRODUCTS

2.1 SHEET METAL MATERIALS

- A. Galvanized, Sheet Steel: Lock-forming quality; ASTM A 653, G90 coating designation; mill-phosphatized finish for surfaces of ducts exposed to view.
- B. Carbon-Steel Sheets: ASTM A 366/A 366M, cold-rolled sheets, commercial quality, with oiled, exposed matte finish.
- C. Aluminum Sheets: ASTM B 209, Alloy 3003, Temper H14, sheet form; with standard, one-side bright finish for ducts exposed to view and mill finish for concealed ducts.
- D. Extruded Aluminum: ASTM B 221, Alloy 6063, Temper T6.
- E. Reinforcement Shapes and Plates: Galvanized steel reinforcement where installed on galvanized, sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.
- F. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for 36-inch length or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.2 BACKDRAFT DAMPERS

- A. Description: Suitable for horizontal or vertical installations.
- B. Frame: 0.052-inch thick, galvanized, sheet steel, with welded corners and mounting flange.
- C. Blades: 0.050-inch thick aluminum sheet.
- D. Blade Seals: Vinyl 01, Neoprene.
- E. Blade Axles: Galvanized steel.
- F. Tie Bars and Brackets: Galvanized steel.
- G. Return Spring: Adjustable tension.

2.3 BAROMETRIC RELIEF DAMPERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Cesco Products; a division of Mestek, Inc.
 2. Greenheck Fan Corporation.
 3. Nailor Industries Inc.
 4. Ruskin Company.
- B. Suitable for horizontal or vertical mounting.
- C. Maximum Air Velocity: 1250 fpm (6.4 m/s).
- D. Maximum System Pressure: 2-inch wg (0.5 kPa).
- E. Frame: Hat-shaped, 0.05-inch- (1.3-mm-) thick, galvanized sheet steel, with welded corners or mechanically attached.
- F. Blades:
1. Multiple, 0.025-inch- (0.6-mm-) thick, roll-formed aluminum.
 2. Maximum Width: 6 inches (150 mm).
 3. Action: Parallel.
 4. Balance: Gravity.
 5. Eccentrically pivoted.
- G. Blade Seals: Neoprene.
- H. Blade Axles: Galvanized steel.
- I. Tie Bars and Brackets:
1. Material: Aluminum.
 2. Rattle free with 90-degree stop.
- J. Return Spring: Adjustable tension.
- K. Bearings: Synthetic.
- L. Accessories:
1. Flange on intake.
 2. Adjustment device to permit setting for varying differential static pressures.
- 2.4 MANUAL-VOLUME DAMPERS
- A. General: Factory fabricated with required hardware and accessories. Stiffen damper blades for stability. Include locking device to hold single-blade dampers in a fixed position without vibration. Close duct penetrations for damper components to seal duct consistent with pressure class.
1. Pressure Classifications of 3-Inch wg or Higher: End bearings or other seals for ducts with axles full length of damper blades and bearings at both ends of operating shaft.

- B. Standard Volume Dampers: Multiple- or single-blade, parallel- or opposed-blade design as indicated, standard leakage rating, with linkage outside airstream, and suitable for horizontal or vertical applications.
- C. Standard Volume Dampers: Multiple- or single-blade, parallel- or opposed-blade design as indicated, standard leakage rating, and suitable for horizontal or vertical applications.
 - 1. Steel Frames: Hat-shaped, galvanized, sheet steel channels, minimum of 16 gauge, with mitered and welded corners; frames with flanges where indicated for attaching to walls; and flangeless frames where indicated for installing in ducts.
 - 2. Roll-Formed Steel Blades: 16 gauge, galvanized, sheet steel.
 - 3. Blade Axles: Plated steel.
 - 4. Tie Bars and Brackets: Galvanized steel.
- D. Low-Leakage Volume Dampers: Multiple- or single-blade, parallel- or opposed-blade design as indicated, low-leakage rating, with linkage outside airstream, and suitable for horizontal or vertical applications.
- E. Low-Leakage Volume Dampers: Multiple- or single-blade, parallel- or opposed-blade design as indicated, low-leakage rating, and suitable for horizontal or vertical applications.
 - 1. Steel Frames: Hat-shaped, galvanized, sheet steel channels, minimum of 16 gauge, with mitered and welded corners; frames with flanges where indicated for attaching to walls; and flangeless frames where indicated for installing in ducts.
 - 2. Roll-Formed Steel Blades: 16 gauge, galvanized, sheet steel, air foil shaped.
 - 3. Blade Seals: Neoprene.
 - 4. Blade Axles: Plated steel.
 - 5. Tie Bars and Brackets: Galvanized steel.
- F. High-Performance Volume Dampers: Multiple- or single-blade, parallel- or opposed-blade design as indicated, low-leakage rating, with linkage outside airstream, and suitable for horizontal or vertical applications.
 - 1. Aluminum Frames: Hat-shaped, 0.125-inch thick, extruded-aluminum channels; frames with flanges where indicated for attaching to walls; and flangeless frames where indicated for installing in ducts.
 - 2. Extruded-Aluminum Blades: Minimum of 0.081-inch thick, 6063T extruded aluminum.
 - 3. Blade Seals: Dual-durometer vinyl on blade edges; metallic compression on jambs.
 - 4. Blade Axles: Plated steel.
 - 5. Tie Bars and Brackets: Aluminum.
- G. Jackshaft: 1-inch diameter, galvanized steel pipe rotating within a pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
 - 1. Length and Number of Mountings: Appropriate to connect linkage of each damper of a multiple-damper assembly.
- H. Damper Hardware: Zinc-plated, die-cast core with dial and handle made of 3/32-inch thick zinc-plated steel, and a 3/4-inch hexagon locking nut. Include center hole to suit damper operating-rod size. Include elevated platform for insulated duct mounting.

2.5 FIRE DAMPERS

- A. General: Labeled to UL 555.
- B. Fire Rating: One and one-half hours.
- C. Fire Rating: One and one-half and three hours.
- D. Frame: SMACNA Type A with blades in airstream; fabricated with roll-formed, 0.034-inch thick galvanized steel; with mitered and interlocking corners.
- E. Frame: SMACNA Type B with blades out of airstream; fabricated with roll-formed, 0.034-inch thick galvanized steel; with mitered and interlocking corners.
- F. Mounting Sleeve: Factory- or field-installed galvanized, sheet steel.
 - 1. Minimum Thickness: 0.052 inch or 0.138 inch thick as indicated, and length to suit application.
 - 2. Exceptions: Omit sleeve where damper frame width permits direct attachment of perimeter mounting angles on each side of wall or floor, and thickness of damper frame complies with sleeve requirements.
- G. Mounting Orientation: Vertical or horizontal as indicated.
- H. Blades: Roll-formed, interlocking, 0.034-inch thick, galvanized, sheet steel. In place of interlocking blades, use full-length, 0.034-inch thick, galvanized steel blade connectors.
- I. Horizontal Dampers: Include a blade lock and stainless-steel negator closure spring.
- J. Fusible Link: Replaceable, 165 or 212 deg F rated as indicated.

2.6 FLEXIBLE CONNECTORS

- A. General: Flame-retarded or noncombustible fabrics, coatings, and adhesives complying with UL 181, Class 1.
- B. Standard Metal-Edged Connectors: Factory fabricated with a strip of fabric 3-1/2 inches wide attached to two strips of 2-3/4-inch wide, 0.028-inch thick, galvanized, sheet steel or 0.032-inch aluminum sheets. Select metal compatible with connected ducts.
- C. Conventional, Indoor System Flexible Connector Fabric: Glass fabric double coated with polychloroprene.
 - 1. Minimum Weight: 26 oz./sq. yd.
 - 2. Tensile Strength: 480 lbf/inch in the warp, and 360 lbf/inch in the filling.
- D. Conventional, Outdoor System Flexible Connector Fabric: Glass fabric double coated with a synthetic-rubber, weatherproof coating resistant to the sun's ultraviolet rays and ozone environment.

1. Minimum Weight: 26 oz./sq. yd.
2. Tensile Strength: 530 lbf/inch in the warp, and 440 lbf/inch in the filling.

2.7 FLEXIBLE DUCTS

- A. General: Comply with UL 181, Class 1.
- B. Flexible Ducts, Insulated: Factory-fabricated, insulated, round duct, with an outer jacket enclosing 1-1/2-inch thick, glass-fiber insulation around a continuous inner liner.
 1. Reinforcement: Steel-wire helix encapsulated in inner liner.
 2. Outer Jacket: Glass-reinforced, silver Mylar with a continuous hanging tab, integral fibrous-glass tape, and nylon hanging cord.
 3. Inner Liner: Polyethylene film.
 4. Flexible Duct: Technaflex, Flexmaster.
- C. Flexible Duct Acoustical: Factory-fabricated insulated round duct with an outer jacket enclosing 1-1/2 inch thick, glass-fiber insulation around an acoustically transparent nylon inner liner.
 1. Reinforcement: Steel-wire helix encapsulated in inner liner.
 2. Outer Jacket: Glass-reinforced, silver Mylar with a continuous hanging tab, integral fibrous-glass tape, and nylon hanging cord.
 3. Inner Liner: Acoustically transparent nylon fabric.
 4. Acoustical flexible duct shall be Flexmaster Type 6 or equal.
- D. Pressure Rating: 6-inch wg positive, 1/2-inch wg negative.

2.8 ACCESSORY HARDWARE

- A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments, and length to suit duct insulation thickness.
- B. Splitter Damper Accessories: Zinc-plated damper blade bracket; 1/4-inch, zinc-plated operating rod; and a duct-mounted, ball-joint bracket with flat rubber gasket and square-head set screw.
- C. Flexible Duct Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action, in sizes 3 to 18 inches to suit duct size.
- D. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

2.9 FLANGE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Ductmate Industries, Inc.
2. Nexus PDQ; Division of Shilco Holdings Inc.
3. Ward Industries, Inc.; a division of Hart & Cooley, Inc.

B. Description: Add-on or roll-formed, factory-fabricated, slide-on transverse flange connectors, gaskets, and components.

C. Material: Galvanized steel.

D. Gage and Shape: Match connecting ductwork.

2.10 DUCT-MOUNTED ACCESS DOORS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. American Warming and Ventilating; a division of Mestek, Inc.
2. Cesco Products; a division of Mestek, Inc.
3. Ductmate Industries, Inc.
4. Elgen Manufacturing.
5. Flexmaster U.S.A., Inc.
6. Greenheck Fan Corporation.
7. McGill AirFlow LLC.
8. Nailor Industries Inc.
9. Pottorff.
10. Ventfabrics, Inc.
11. Ward Industries, Inc.; a division of Hart & Cooley, Inc.

B. Duct-Mounted Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 7-2 (7-2M), "Duct Access Doors and Panels," and 7-3, "Access Doors - Round Duct."

1. Door:
 - a. Double wall, rectangular.
 - b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
 - c. Vision panel.
 - d. Hinges and Latches: 1-by-1-inch (25-by-25-mm)butt or piano hinge and cam latches.
 - e. Fabricate doors airtight and suitable for duct pressure class.
2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.
3. Number of Hinges and Locks:
 - a. Access Doors Less Than 12 Inches (300 mm) Square: No hinges and two sash locks.
 - b. Access Doors up to 18 Inches (460 mm) Square: Continuous and two sash locks.

- c. Access Doors up to 24 by 48 Inches (600 by 1200 mm): Continuous and two compression latches with outside and inside handles.
 - d. Access Doors Larger Than 24 by 48 Inches (600 by 1200 mm): Continuous and two compression latches with outside and inside handles.
- 4.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install duct accessories according to applicable details shown in SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for metal ducts and NAIMA's "Fibrous Glass Duct Construction Standards" for fibrous-glass ducts.
- B. Install backdraft dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
- C. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
 - 1. Install steel volume dampers in steel ducts.
 - 2. Install aluminum volume dampers in aluminum ducts.
- D. Set dampers to fully open position before testing, adjusting, and balancing.
- E. Install volume dampers in lined duct; avoid damage to and erosion of duct liner.
- F. Provide test holes at fan inlet and outlet and elsewhere as indicated.
- G. Install fire dampers according to manufacturer's UL-approved written instructions.
 - 1. Install fusible links in fire dampers.
- H. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
 - 1. On both sides of duct electric heater.
 - 2. Upstream from duct filters.
 - 3. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
 - 4. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
 - 5. At each change in direction and at maximum 50-foot (15-m) spacing.
 - 6. Control devices requiring inspection.
 - 7. Elsewhere as indicated.

I. Access Door Sizes:

1. One-Hand or Inspection Access: 8 by 5 inches (200 by 125 mm).
2. Two-Hand Access: 12 by 6 inches (300 by 150 mm).
3. Head and Hand Access: 18 by 10 inches (460 by 250 mm).
4. Head and Shoulders Access: 21 by 14 inches (530 by 355 mm).
5. Body Access: 25 by 14 inches (635 by 355 mm).
6. Body plus Ladder Access: 25 by 17 inches (635 by 430 mm).

J. Install flexible connectors to connect ducts to equipment.

K. Label access doors according to Division 23 Section "Mechanical Identification."

L. Ductwork flexible connectors are not required for internally isolated equipment.

3.2 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Operate dampers to verify full range of movement.
2. Inspect locations of access doors and verify that purpose of access door can be performed.
3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
4. Operate remote damper operators to verify full range of movement of operator and damper.

END OF SECTION 233300

This Page Intentionally Left Blank

SECTION 233423 - POWER VENTILATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Centrifugal roof ventilators.
 - 2. Ceiling-mounting ventilators.
 - 3. In-line centrifugal fans.
 - 4. Propeller fans.

1.3 PERFORMANCE REQUIREMENTS

- A. Project Altitude: Base fan-performance ratings on actual Project site elevations.
- B. Operating Limits: Classify according to AMCA 99.

1.4 SUBMITTALS

- A. Product Data: Include rated capacities, furnished specialties, and accessories for each type of product indicated and include the following:
 - 1. Certified fan performance curves with system operating conditions indicated.
 - 2. Certified fan sound-power ratings.
 - 3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
 - 4. Material thickness and finishes, including color charts.
 - 5. Dampers, including housings, linkages, and operators.
 - 6. Roof curbs.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Wiring Diagrams: Power, signal, and control wiring.
 - 2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 - 3. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.

- C. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - 1. Roof framing and support members relative to duct penetrations.
 - 2. Size and location of initial access modules for acoustical tile.
- D. Field quality-control test reports.
- E. Operation and Maintenance Data: For power ventilators to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. AMCA Compliance: Products shall comply with performance requirements and shall be licensed to use the AMCA-Certified Ratings Seal.
- C. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.
- D. UL Standard: Power ventilators shall comply with UL 705.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver fans as factory-assembled unit, to the extent allowable by shipping limitations, with protective crating and covering.
- B. Disassemble and reassemble units, as required for moving to final location, according to manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.

1.7 COORDINATION

- A. Coordinate size and location of structural-steel support members.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 7 Section "Roof Accessories."

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Belts: One set(s) for each belt-driven unit.

PART 2 - PRODUCTS

2.1 CENTRIFUGAL ROOF VENTILATORS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
1. Acme Engineering & Mfg. Corp.
 2. Aerovent; a Twin City Fan Company
 3. American Coolair Corp.
 4. Ammerman; General Resource Corp.
 5. Breidert Air Products.
 6. Broan Mfg. Co., Inc.
 7. Carnes Company HVAC.
 8. Central Blower Co.
 9. Dayton Electric Manufacturing Co.; a division of W. W. Grainger, Inc.
 10. Delhi Industries Inc.
 11. Greenheck.
 12. Hartzell Fan, Inc.
 13. JencoFan; Div. of Breidert Air Products.
 14. Loren Cook Company.
 15. NuTone Inc.
 16. Penn Ventilation.
 17. Quietaire Corporation.
- B. Description: Direct- or belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, curb base, and accessories.
- C. Housing: Removable, spun-aluminum, dome top and outlet baffle; square, one-piece, aluminum base with venturi inlet cone.
1. Upblast Units: Provide spun-aluminum discharge baffle to direct discharge air upward, with rain and snow drains and grease collector.
 2. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.
- D. Fan Wheels: Aluminum hub and wheel with backward-inclined blades.
- E. Belt-Driven Drive Assembly: Resiliently mounted to housing, with the following features:
1. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
 2. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
 3. Pulleys: Cast-iron, adjustable-pitch motor pulley.
 4. Fan and motor isolated from exhaust airstream.
- F. Accessories:
1. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
 2. Bird Screens: Removable, 1/2-inch (13-mm) mesh, aluminum or brass wire.

3. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.
- G. Roof Curbs: Galvanized steel; mitered and welded corners; 1-1/2-inch- (40-mm-) thick, rigid, fiberglass insulation adhered to inside walls; and 1-1/2-inch (40-mm) wood nailer. Size as required to suit roof opening and fan base.
1. Configuration: Self-flashing without a cant strip, with mounting flange.
 2. Overall Height: 12 inches (300 mm).

2.2 CEILING-MOUNTING VENTILATORS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
1. American Coolair Corp.
 2. Ammerman; General Resource Corp.
 3. Breidert Air Products.
 4. Broan Mfg. Co., Inc.
 5. Carnes Company HVAC.
 6. Dayton Electric Manufacturing Co.; a division of W. W. Grainger, Inc.
 7. FloAire.
 8. Greenheck.
 9. JencoFan; Div. of Breidert Air Products.
 10. Loren Cook Company.
 11. NuTone Inc.
 12. Penn Ventilation.
- B. Description: Centrifugal fans designed for installing in ceiling or wall or for concealed in-line applications.
- C. Housing: Steel, lined with acoustical insulation.
- D. Fan Wheel: Centrifugal wheels directly mounted on motor shaft. Fan shrouds, motor, and fan wheel shall be removable for service.
- E. Grille: Plastic, louvered grille with flange on intake and thumbscrew attachment to fan housing.
- F. Electrical Requirements: Junction box for electrical connection on housing and receptacle for motor plug-in.
- G. Accessories:
1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
 2. Time-Delay Switch: Assembly with single-pole rocker switch, timer, and cover plate.
 3. Isolation: Rubber-in-shear vibration isolators.
 4. Manufacturer's standard roof jack or wall cap, and transition fittings.

2.3 IN-LINE CENTRIFUGAL FANS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
1. Acme Engineering & Mfg. Corp.
 2. American Coolair Corp.
 3. Ammerman; General Resource Corp.
 4. Bayley Fans; a division of Lau Industries, Inc.
 5. Breidert Air Products.
 6. Carnes Company HVAC.
 7. FloAire.
 8. Greenheck.
 9. Hartzell Fan, Inc.
 10. JencoFan; Div. of Breidert Air Products.
 11. Loren Cook Company.
 12. Madison Manufacturing.
 13. Penn Ventilation.
 14. Quietaire Corporation.
- B. Description: In-line, direct or belt-driven centrifugal fans consisting of housing, wheel, outlet guide vanes, fan shaft, bearings, motor and disconnect switch, drive assembly, mounting brackets, and accessories.
- C. Housing: Split, spun aluminum with aluminum straightening vanes, inlet and outlet flanges, and support bracket adaptable to floor, side wall, or ceiling mounting.
- D. Direct-Driven Units: Motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing.
- E. Belt-Driven Units: Motor mounted on adjustable base, with adjustable sheaves, enclosure around belts within fan housing, and lubricating tubes from fan bearings extended to outside of fan housing.
- F. Fan Wheels: Aluminum, airfoil blades welded to aluminum hub.
- G. Accessories:
1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
 2. Volume-Control Damper: Manually operated with quadrant lock, located in fan outlet.
 3. Motor and Drive Cover (Belt Guard): Epoxy-coated steel.

2.4 PROPELLER FANS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
1. Acme Engineering & Mfg. Corp.
 2. Aerovent; a Twin City Fan Company.

3. Airmaster Fan Co.
 4. American Coolair Corp.
 5. Ammerman; General Resource Corp.
 6. Bayley Fans; a division of Lau Industries, Inc.
 7. Breidert Air Products.
 8. Carnes Company HVAC.
 9. Chicago Blower Corporation.
 10. Cincinnati Fan.
 11. Dayton Electric Manufacturing Co.; a division of W. W. Grainger, Inc.
 12. Hartzell Fan, Inc.
 13. Howden Buffalo Inc.
 14. Industrial Air; a division of Lau Industries, Inc.
 15. JencoFan; Div. of Breidert Air Products.
 16. King Co. (The); King Air Systems.
 17. Loren Cook Company.
 18. Madison Manufacturing.
 19. Moffitt Corporation, Inc.
 20. New York Blower Company (The).
 21. NuTone Inc.
 22. Penn Ventilation.
 23. Quietaire Corporation.
 24. Stanley Fans.
- B. Description: Direct- or belt-driven propeller fans consisting of fan blades, hub, housing, orifice ring, motor, drive assembly, and accessories.
- C. Housing: Galvanized-steel sheet with flanged edges and integral orifice ring with baked-enamel finish coat applied after assembly.
- D. Steel Fan Wheels: Formed-steel blades riveted to heavy-gage steel spider bolted to cast-iron hub.
- E. Belt-Driven Drive Assembly: Resiliently mounted to housing, statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
1. Service Factor Based on Fan Motor Size: 1.4.
 2. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
 3. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
 - a. Ball-Bearing Rating Life: ABMA 9, L_{10} of 100,000 hours.
 4. Pulleys: Cast iron with split, tapered bushing; dynamically balanced at factory.
 5. Motor Pulleys: Adjustable pitch for use with motors through 5 hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 6. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 7. Belt Guards: Fabricate of steel for motors mounted on outside of fan cabinet.
- F. Accessories:

1. Gravity Shutters: Aluminum blades in aluminum frame; interlocked blades with nylon bearings.
2. Motor-Side Back Guard: Galvanized steel, complying with OSHA specifications, removable for maintenance.
3. Wall Sleeve: Galvanized steel to match fan and accessory size.
4. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.

2.5 MOTORS

- A. Comply with requirements in Division 23 Section "Motors."
- B. Enclosure Type: Totally enclosed, fan cooled.

2.6 SOURCE QUALITY CONTROL

- A. Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.
- B. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install power ventilators level and plumb.
- B. Secure roof-mounting fans to roof curbs with cadmium-plated hardware. Refer to Division 7 Section "Roof Accessories" for installation of roof curbs.
- C. Install units with clearances for service and maintenance.
- D. Label units according to requirements specified in Division 23 Section "Mechanical Identification."

3.2 CONNECTIONS

- A. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Division 23 Section "Duct Accessories."
- B. Install ducts adjacent to power ventilators to allow service and maintenance.

- C. Ground equipment according to Division 26 Section "Grounding and Bonding."
- D. Connect wiring according to Division 26 Section "Conductors and Cables."

3.3 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. Verify that shipping, blocking, and bracing are removed.
 - 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 - 3. Verify that cleaning and adjusting are complete.
 - 4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
 - 5. Adjust belt tension.
 - 6. Adjust damper linkages for proper damper operation.
 - 7. Verify lubrication for bearings and other moving parts.
 - 8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
 - 9. Disable automatic temperature-control operators, energize motor and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
 - 10. Shut unit down and reconnect automatic temperature-control operators.
 - 11. Remove and replace malfunctioning units and retest as specified above.
- B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.4 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Adjust belt tension.
- C. Refer to Division 23 Section "Testing, Adjusting, and Balancing" for testing, adjusting, and balancing procedures.
- D. Replace fan and motor pulleys as required to achieve design airflow.
- E. Lubricate bearings.

END OF SECTION 233423

SECTION 233600 - AIR TERMINAL UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Single-duct air terminal units.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated, include rated capacities, furnished specialties, sound-power ratings, and accessories.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Include a schedule showing unique model designation, room location, model number, size, and accessories furnished.
 - 2. Wiring Diagrams: Power, signal, and control wiring.
- C. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - 1. Ceiling suspension assembly members.
 - 2. Method of attaching hangers to building structure.
 - 3. Size and location of initial access modules for acoustical tile.
 - 4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
- D. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data" include the following:
 - 1. Instructions for resetting minimum and maximum air volumes.
 - 2. Instructions for adjusting software set points.

1.4 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of air terminal units and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. NFPA Compliance: Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."

1.5 COORDINATION

- A. Coordinate layout and installation of air terminal units and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 SINGLE-DUCT AIR TERMINAL UNITS

- A. Available Manufacturers:
 - 1. METALAIRE, Inc.; Metal Industries Inc.
 - 2. Price Industries.
 - 3. Titus.
 - 4. Trane Co. (The); Worldwide Applied Systems Group.
 - 5. Carrier.
- B. Configuration: Volume-damper assembly inside unit casing with control components located inside a protective metal shroud.
- C. Casing: 0.032-inch (0.8-mm) galvanized steel.
 - 1. Casing Lining: 1-inch- (25-mm-) thick, coated, fibrous-glass duct liner complying with ASTM C 1071; secured with adhesive.
 - 2. Casing Lining: Adhesive attached, 3/4-inch- (19-mm-) thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-

- spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
3. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
 4. Air Outlet: S-slip and drive connections.
- D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
1. Maximum Damper Leakage: ARI 130 rated, 2 percent of nominal airflow at 3-inch wg (750-Pa) inlet static pressure.
 2. Damper Position: Normally open.
- E. Hot-Water Heating Coil: Copper tube, mechanically expanded into aluminum-plate fins; leak tested underwater to 200 psig (1380 kPa); and factory installed.
- F. Electric Heating Coil: Slip-in-type, open-coil design with integral control box factory wired and installed. Include the following features:
1. Primary and secondary overtemperature protection.
 2. Nickel chrome 80/20 heating elements.
 3. Airflow switch.
 4. Noninterlocking disconnect switch.
 5. Fuses (for coils more than 48 A).
 6. Mercury contactors.
 7. Pneumatic-electric switches and relays.
 8. Magnetic contactor for each step of control (for three-phase coils).
- G. DDC Controls: Bidirectional damper operators and microprocessor-based controller and room sensor shall be compatible with temperature controls specified in Division 23 Section "Instrumentation and Control for HVAC" and shall have the following features:
1. Damper Actuator: 24 V, powered closed, spring return open.
 2. Terminal Unit Controller: Pressure-independent, variable-air-volume controller with electronic airflow transducer with multipoint velocity sensor at air inlet, factory calibrated to minimum and maximum air volumes, and having the following features:
 - a. Proportional, plus integral control of room temperature.
 - b. Time-proportional reheat-coil control.
 - c. Occupied and unoccupied operating mode.
 - d. Remote reset of airflow or temperature set points.
 - e. Adjusting and monitoring with portable terminal.
 - f. Communication with temperature-control system specified in Division 23 Section "Instrumentation and Control for HVAC."
 3. Room Sensor: Wall mounting, with temperature set-point adjustment and access for connection of portable operator terminal.

2.3 SOURCE QUALITY CONTROL

- A. Identification: Label each air terminal unit with plan number, nominal airflow, maximum and minimum factory-set airflows, coil type, and ARI certification seal.

- B. Verification of Performance: Rate air terminal units according to ARI 130.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to air terminal units to allow service and maintenance.
- C. Hot-Water Piping: In addition to requirements in Division 23 Section "Hydronic Piping," connect heating coils to supply with shutoff valve, strainer, control valve, and union or flange; and to return with balancing valve and union or flange.
- D. Connect ducts to air terminal units according to Division 23 Section "Metal Ducts."
- E. Ground units with electric heating coils according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- F. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- G. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
 - 2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Remove and replace malfunctioning units and retest as specified above.

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions and do the following:
 - a. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
 - b. Verify that controls and control enclosure are accessible.
 - c. Verify that control connections are complete.
 - d. Verify that nameplate and identification tag are visible.
 - e. Verify that controls respond to inputs as specified.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain air terminal units. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 233600

This Page Intentionally Left Blank

SECTION 233713 – DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.1 WORK INCLUDED

- A. Diffusers.
- B. Diffuser boots.
- C. Registers/grilles.
- D. Door grilles.
- E. Roof hoods.
- F. Goosenecks.

1.2 REFERENCES

- A. ADC 1062 - Certification, Rating and Test Manual.
- B. ANSI/NFPA 90A - Installation of Air Conditioning and Ventilating Systems.
- C. ARI 650 - Air Outlets and Inlets.
- D. ASHRAE 70 - Method of Testing for Rating the Air Flow Performance of Outlets and Inlets.
- E. SMACNA - Low Pressure Duct Construction Standard.

1.3 QUALITY ASSURANCE

- A. Test and rate performance of air outlets and inlets in accordance with ADC Equipment Test Code 1062 and ASHRAE 70.

1.4 REGULATORY REQUIREMENTS

- A. Conform to ANSI/NFPA 90A.

1.5 SUBMITTALS

- A. Provide product data for items required for this project.
- B. Submit schedule of outlets and inlets indicating type, size, location, application, and noise level.

- C. Review requirements of outlets and inlets as to size, finish, and type of mounting prior to submitting product data and schedules of outlets and inlets.
- D. Submit manufacturer's installation instructions.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS - CEILING DIFFUSERS

- A. Titus
- B. Tuttle and Bailey
- C. Price

2.2 RECTANGULAR CEILING DIFFUSERS

- A. Rectangular, adjustable pattern, fixed blade, stamped, multicore type diffuser to discharge air in 360 degree pattern with sectorizing baffles where indicated; Model TMSAA manufactured by Titus.
- B. Provide surface mount, snap-in, or inverted T-bar type frame. In plaster ceilings, provide plaster frame and ceiling frame.
- C. Fabricate of aluminum with baked enamel off-white finish.

2.3 ACCEPTABLE MANUFACTURERS - CEILING REGISTERS/GRILLES

- A. Price.
- B. Tuttle and Bailey.
- C. Titus.

2.4 CEILING EXHAUST AND RETURN REGISTERS/GRILLES

- A. Streamlined aluminum construction, 3/4 inch spacing, 35 degree fixed blades, 1-inch thick filter with ¼ turn fasteners, horizontal face; Model 355FF1 manufactured by Titus.
- B. Fabricate 1-1/4 inch margin frame with concealed mounting.
- C. Fabricate of aluminum with 20 gage minimum frame, or aluminum extrusions, with factory baked enamel off-white finish.
- D. Where not individually connected to exhaust fans, provide integral, gang-operated opposed blade dampers with removable key operator, operable from face.

- E. All ceiling exhaust and return air register/grilles installed in a room with T-bar drop ceiling shall be T-bar drop in type.

2.5 ROOF HOODS

- A. Fabricate air inlet or exhaust hoods in accordance with SMACNA Low Pressure Duct Construction Standards.
- B. Fabricate of galvanized steel, minimum 16 gage base and 20 gage hood, or aluminum, minimum 16 gage base and 18 gage hood; suitably reinforced; with removable hood; bird screen with 1/2 inch square mesh for exhaust and 3/4 inch for intake, and factory baked enamel finish.
- C. Mount unit on minimum 12 inch high curb base with insulation between duct and curb.
- D. Make hood outlet area minimum of twice throat area.

2.6 GOOSENECKS

- A. Fabricate in accordance with SMACNA Low Pressure Duct Construction Standards of minimum 18 gage galvanized steel.
- B. Mount on minimum 12 inch high curb base where size exceeds 9 x 9 inch.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install items in accordance with manufacturers' instructions.
- B. Check location of outlets and inlets and make necessary adjustments in position to conform with architectural features, symmetry, and lighting arrangement.
- C. Install diffusers to ductwork with air tight connection.
- D. Provide balancing dampers on duct take-off to diffusers, and grilles and registers, regardless of whether dampers are specified as part of the diffuser, or grille and register assembly.
- E. Paint ductwork visible behind air outlets and inlets matte black.
- F. All grilles and diffusers in gyms must be protected by screen guards.
- G. Insulate the top side of all T-bar lay-in grilles and diffusers.
- H. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.

- I. Form closely fitted joints with exposed connections accurately located and secured.
- J. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
- K. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.
- L. Protect galvanized and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.

END OF SECTION 233713

SECTION 233723 - HVAC GRAVITY VENTILATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Roof hoods.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design ventilators, including comprehensive engineering analysis by a qualified professional engineer, using structural performance requirements and design criteria indicated.
- B. Structural Performance: Ventilators shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of ventilator components, noise or metal fatigue caused by ventilator blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.
 - 1. Wind Loads: Determine loads based on pressures as indicated on Drawings.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes, without buckling, opening of joints, overstressing of components, failure of connections, or other detrimental effects.
 - 1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- D. Water Entrainment: Limit water penetration through unit to comply with ASHRAE 62.1-2007.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: For gravity ventilators. Include plans, elevations, sections, details, ventilator attachments to curbs, and curb attachments to roof structure.

1. Show weep paths, gaskets, flashing, sealant, and other means of preventing water intrusion.
- C. Delegated-Design Submittal: For shop-fabricated ventilators indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Detail fabrication and assembly of shop-fabricated ventilators.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Roof framing plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
1. Structural members to which roof curbs and ventilators will be attached.
 2. Sizes and locations of roof openings.

1.6 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 2. AWS D1.3, "Structural Welding Code - Sheet Steel."

1.7 COORDINATION

- A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Galvanized-Steel Sheet: ASTM A 653/A 653M, G90 (Z275) zinc coating, mill phosphatized.
- B. Fasteners: Same basic metal and alloy as fastened metal or 300 Series stainless steel unless otherwise indicated. Do not use metals that are incompatible with joined materials.
1. Use types and sizes to suit unit installation conditions.
 2. Use hex-head or Phillips pan-head screws for exposed fasteners unless otherwise indicated.
- C. Post-Installed Fasteners for Concrete and Masonry: Torque-controlled expansion anchors made from stainless-steel components, with capability to sustain without failure a load equal to 4 times the loads imposed for concrete, or 6 times the load imposed for masonry, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency.

- D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.2 FABRICATION, GENERAL

- A. Factory or shop fabricate gravity ventilators to minimize field splicing and assembly. Disassemble units to the minimum extent as necessary for shipping and handling. Clearly mark units for reassembly and coordinated installation.
- B. Fabricate frames, including integral bases, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
- C. Fabricate units with closely fitted joints and exposed connections accurately located and secured.
- D. Fabricate supports, anchorages, and accessories required for complete assembly.
- E. Perform shop welding by AWS-certified procedures and personnel.

2.3 ROOF HOODS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - 1. Greenheck Fan Corporation.
 - 2. Loren Cook Company.
- B. Factory fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figures 5-6 and 5-7.
- C. Materials: Galvanized-steel sheet, minimum 0.064-inch- (1.62-mm-) thick base and 0.040-inch- (1.0-mm-) thick hood; suitably reinforced.
- D. Roof Curbs: Galvanized-steel sheet; with mitered and welded corners; 1-1/2-inch- (40-mm-) thick, rigid fiberglass insulation adhered to inside walls; and 1-1/2-inch (40-mm) wood nailer. Size as required to fit roof opening and ventilator base.
 - 1. Configuration: Self-flashing without a cant strip, with mounting flange.
 - 2. Overall Height: 16 inches (400 mm).
- E. Bird Screening: Galvanized-steel, 1/2-inch- (12.7-mm-) square mesh, 0.041-inch (1.04-mm) wire. Provide for intake and relief application
- F. Insect Screening: Aluminum, 18-by-16 (1.4-by-1.6-mm) mesh, 0.012-inch (0.30-mm) wire. Provide only for relief applicaion.
- G. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.
- H. Damper: for relief hoods provide gravity damper with a system pressure of 0.03 inch wg with adjustable spring return.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install gravity ventilators level, plumb, and at indicated alignment with adjacent work.
- B. Install gravity ventilators with clearances for service and maintenance.
- C. Install perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
- D. Install concealed gaskets, flashings, joint fillers, and insulation as installation progresses. Comply with Section 079200 "Joint Sealants" for sealants applied during installation.
- E. Label gravity ventilators according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.2 CONNECTIONS

- A. Duct installation and connection requirements are specified in Section 233113 "Metal Ducts" and Section 233116 "Nonmetal Ducts." Drawings indicate general arrangement of ducts and duct accessories.

END OF SECTION 233723

SECTION 237413 - PACKAGED, OUTDOOR, CENTRAL-STATION AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes packaged, outdoor, central-station air-handling units (rooftop units) with the following components and accessories:
 - 1. Direct-expansion cooling.
 - 2. Hot-gas reheat.
 - 3. Gas furnace.
 - 4. Economizer outdoor- and return-air damper section.
 - 5. Integral, space temperature controls.
 - 6. Roof curbs.

1.3 DEFINITIONS

- A. DDC: Direct-digital controls.
- B. ECM: Electrically commutated motor.
- C. Outdoor-Air Refrigerant Coil: Refrigerant coil in the outdoor-air stream to reject heat during cooling operations and to absorb heat during heating operations. "Outdoor air" is defined as the air outside the building or taken from outdoors and not previously circulated through the system.
- D. Outdoor-Air Refrigerant-Coil Fan: The outdoor-air refrigerant-coil fan in RTUs. "Outdoor air" is defined as the air outside the building or taken from outdoors and not previously circulated through the system.
- E. RTU: Rooftop unit. As used in this Section, this abbreviation means packaged, outdoor, central-station air-handling units. This abbreviation is used regardless of whether the unit is mounted on the roof or on a concrete base on ground.
- F. Supply-Air Fan: The fan providing supply air to conditioned space. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.
- G. Supply-Air Refrigerant Coil: Refrigerant coil in the supply-air stream to absorb heat (provide cooling) during cooling operations and to reject heat (provide heating) during heating operations. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.

- H. VVT: Variable-air volume and temperature.

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design RTU supports to comply with [wind] [and] [seismic] performance requirements, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Wind-Restraint Performance:
 - 1. Basic Wind Speed: 153 MPH.
 - 2. Building Classification Category: III.
 - 3. Minimum 10 lb/sq. ft (48.8 kg/sq. m) multiplied by the maximum area of the mechanical component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.

1.5 SUBMITTALS

- A. Product Data: Include manufacturer's technical data for each RTU, including rated capacities, dimensions, required clearances, characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Wiring Diagrams: Power, signal, and control wiring.
- C. Delegated-Design Submittal: For RTU supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Design Calculations: Calculate requirements for selecting vibration isolators and for designing vibration isolation bases.
 - 2. Detail mounting, securing, and flashing of roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
 - 3. Wind-Restraint Details: Detail fabrication and attachment of wind and seismic restraints and snubbers. Show anchorage details and indicate quantity, diameter, and depth of penetration of anchors.
- D. Coordination Drawings: Plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Structural members to which RTUs will be attached.
 - 2. Roof openings
 - 3. Roof curbs and flashing.
- E. Field quality-control test reports.
- F. Operation and Maintenance Data: For RTUs to include in emergency, operation, and maintenance manuals.

- G. Warranty: Special warranty specified in this Section.

1.6 QUALITY ASSURANCE

A. ARI Compliance:

1. Comply with ARI 210/240 and ARI 340/360 for testing and rating energy efficiencies for RTUs.
2. Comply with ARI 270 for testing and rating sound performance for RTUs.

B. ASHRAE Compliance:

1. Comply with ASHRAE 15 for refrigeration system safety.
2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
3. Comply with ASHRAE/IESNA 90.1 for minimum efficiency of heating and cooling.

C. NFPA Compliance: Comply with NFPA 90A and NFPA 90B.

D. UL Compliance: Comply with UL 1995.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to replace components of RTUs that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: Manufacturer's standard, but not less than five years from date of Substantial Completion.
2. Warranty Period for Gas Furnace Heat Exchangers: Manufacturer's standard, but not less than five years from date of Substantial Completion.
3. Warranty Period for Solid-State Ignition Modules: Manufacturer's standard, but not less than three years from date of Substantial Completion.
4. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.
5. Warranty Period for Condenser and Evaporator Coils: Manufacturer's standard, but not less than five years from date of Substantial Completion.

1.8 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fan Belts: One set for each belt-driven fan.
2. Filters: One set of filters for each unit.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Carrier Corporation.
 2. Daikin.
 3. Trane; American Standard Companies, Inc.
 4. YORK International Corporation.

2.2 CASING

- A. General Fabrication Requirements for Casings: Formed and reinforced double-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed.
- B. Exterior Casing Material: Galvanized steel with factory-painted finish, with pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.
1. Exterior Casing Thickness: 0.052 inch (1.3 mm) thick.
- C. Inner Casing Fabrication Requirements:
1. Inside Casing: Galvanized steel, 0.034 inch (0.86 mm) thick.
- D. Casing Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
1. Materials: ASTM C 1071, Type I.
 2. Thickness: 1 inch (25 mm) with minimum R-8 insulation value.
 3. Liner materials shall have air-stream surface coated with an erosion- and temperature-resistant coating or faced with a plain or coated fibrous mat or fabric.
 4. Liner Adhesive: Comply with ASTM C 916, Type I.
- E. Condensate Drain Pans: Formed sections of stainless-steel sheet, a minimum of 2 inches (50 mm) deep, and complying with ASHRAE 62.
1. Double-Wall Construction: Fill space between walls with foam insulation and seal moisture tight.
 2. Drain Connections: Threaded nipple both sides of drain pan.

2.3 FANS

- A. Direct-Driven Supply-Air Fans: Double width, plenum-type, centrifugal; with permanently lubricated, motor resiliently mounted in the fan inlet. Aluminum wheels, and galvanized fan scrolls.
- B. Condenser-Coil Fan: Propeller, mounted on shaft of permanently lubricated motor.

- C. Relief-Air Fan: Forward curved, shaft mounted on permanently lubricated motor.
- D. Fan Motor: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."

2.4 COILS

- A. Supply-Air Refrigerant Coil:
 - 1. Aluminum-plate fin and seamless copper tube in steel casing with equalizing-type vertical distributor.
 - 2. Polymer strip shall prevent all copper coil from contacting steel coil frame or condensate pan.
 - 3. Coil Split: Interlaced.
 - 4. Baked phenolic coating.
 - 5. Condensate Drain Pan: Stainless steel formed with pitch and drain connections complying with ASHRAE 62.
- B. Outdoor-Air Refrigerant Coil:
 - 1. Aluminum-plate fin and seamless copper tube in steel casing with equalizing-type vertical distributor.
 - 2. Polymer strip shall prevent all copper coil from contacting steel coil frame or condensate pan.
 - 3. Baked phenolic coating.

2.5 REFRIGERANT CIRCUIT COMPONENTS

- A. Number of Refrigerant Circuits: Two.
- B. Compressor: Hermetic, reciprocating, mounted on vibration isolators; with internal overcurrent and high-temperature protection, internal pressure relief, and crankcase heater.
- C. Refrigeration Specialties:
 - 1. Refrigerant Charge: R-410A.
 - 2. Expansion valve with replaceable thermostatic element.
 - 3. Refrigerant filter/dryer.
 - 4. Manual-reset high-pressure safety switch.
 - 5. Automatic-reset low-pressure safety switch.
 - 6. Minimum off-time relay.
 - 7. Automatic-reset compressor motor thermal overload.
 - 8. Brass service valves installed in compressor suction and liquid lines.
 - 9. Low-ambient kit high-pressure sensor.

2.6 AIR FILTRATION

- A. Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.

1. Pleated: MERV 8.

2.7 GAS FURNACE

- A. Description: Factory assembled, piped, and wired; complying with ANSI Z21.47 and NFPA 54.
 1. CSA Approval: Designed and certified by and bearing label of CSA.
- B. Burners: Stainless steel with a minimum thermal efficiency of 80 percent.
 1. Fuel: Natural gas.
 2. Ignition: Electronically controlled electric spark or hot-surface igniter with flame sensor.
- C. Heat-Exchanger and Drain Pan: Stainless steel.
- D. Venting: Gravity vented.
- E. Safety Controls:
 1. Gas Control Valve: Modulating.
 2. Gas Train: Single-body, regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff.

2.8 DAMPERS

- A. Outdoor-Air Damper: Linked damper blades, for 0 to 25 percent outdoor air, with motorized damper filter.
- B. Outdoor- and Return-Air Mixing Dampers: Opposed-blade galvanized-steel dampers mechanically fastened to cadmium plated for galvanized-steel operating rod in reinforced cabinet. Connect operating rods with common linkage and interconnect linkages so dampers operate simultaneously.
 1. Damper Motor: Modulating with adjustable minimum position.
 2. Relief-Air Damper: Gravity actuated with bird screen and hood.

2.9 ELECTRICAL POWER CONNECTION

- A. Provide for single connection of power to unit with unit-mounted disconnect switch accessible from outside unit and control-circuit transformer with built-in overcurrent protection.

2.10 CONTROLS

- A. Control equipment and sequence of operation are specified in Division 23 Section "Instrumentation and Control for HVAC."
- B. DDC Controller:

1. Controller shall have volatile-memory backup.
 2. Safety Control Operation:
 - a. Smoke Detectors: Stop fan and close outdoor-air damper if smoke is detected. Provide additional contacts for alarm interface to fire alarm control panel.
 - b. Fire Alarm Control Panel Interface: Provide control interface to coordinate with operating sequence described in Division 28 Section "Fire Detection and Alarm."
 - c. Low-Discharge Temperature: Stop fan and close outdoor-air damper if supply air temperature is less than 40 deg F (4 deg C).
 - d. Defrost Control for Condenser Coil: Pressure differential switch to initiate defrost sequence.
 3. Scheduled Operation: Occupied and unoccupied periods on 365-day clock with a minimum of four programmable periods per day.
 4. Unoccupied Period:
 - a. Heating Setback: 10 deg F (5.6 deg C).
 - b. Cooling Setback: System off.
 - c. Override Operation: Two hours.
 5. Supply Fan Operation:
 - a. Occupied Periods: Run fan continuously.
 - b. Unoccupied Periods: Cycle fan to maintain setback temperature.
 6. Refrigerant Circuit Operation:
 - a. Occupied Periods: Cycle or stage compressors, and operate hot-gas bypass to match compressor output to cooling load to maintain discharge temperature and room humidity. Cycle condenser fans to maintain maximum hot-gas pressure. Operate low-ambient control kit to maintain minimum hot-gas pressure.
 - b. Unoccupied Periods: Compressors off.
 - c. Switch reversing valve for heating or cooling mode on air-to-air heat pump.
 7. Gas Furnace Operation:
 - a. Occupied Periods: Modulate burner to maintain discharge temperature.
 - b. Unoccupied Periods: Cycle burner to maintain setback temperature.
- C. Interface Requirements for HVAC Instrumentation and Control System:
1. Interface relay for scheduled operation.
 2. Interface relay to provide indication of fault at the central workstation and diagnostic code storage.
 3. Provide BACnet compatible interface for central HVAC control workstation for the following:
 - a. Adjusting set points.
 - b. Monitoring supply fan start, stop, and operation.
 - c. Inquiring data to include outdoor-air damper position, supply- and room-air humidity.

- d. Monitoring occupied and unoccupied operations.
- e. Monitoring constant and variable motor loads.
- f. Monitoring variable-frequency drive operation.
- g. Monitoring cooling load.
- h. Monitoring air-distribution static pressure and ventilation air volume.

2.11 ACCESSORIES

- A. Low-ambient kit using staged condenser fans for operation down to 35 deg F (1.7 deg C).
- B. Filter differential pressure switch with sensor tubing on either side of filter. Set for final filter pressure loss.
- C. Coil guards of painted, galvanized-steel wire.
- D. Hail guards of galvanized steel, painted to match casing.
- E. Concentric diffuser with white louvers and polished aluminum return grilles, insulated diffuser box with mounting flanges, and interior transition.
- F. Condenser and evaporator coils coating by Bygold. Coating type shall be aluminum pigmented polyurethane.
- G. Exterior casing anti-corrosive coating

2.12 ROOF CURBS

- A. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
 - 1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
 - a. Materials: ASTM C 1071, Type I or II.
 - b. Thickness: 1-1/2 inches (38 mm).
 - 2. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
 - a. Liner Adhesive: Comply with ASTM C 916, Type I.
 - b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
 - c. Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
 - d. Liner Adhesive: Comply with ASTM C 916, Type I.
- B. Curb Height: 24 inches (610 mm).

- C. Wind and Seismic Restraints: Metal brackets compatible with the curb and casing, painted to match RTU, used to anchor unit to the curb, and designed for loads at Project site. Comply with requirements in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" for wind-load requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of RTUs.
- B. Examine roughing-in for RTUs to verify actual locations of piping and duct connections before equipment installation.
- C. Examine roofs for suitable conditions where RTUs will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Roof Curb: Install on roof structure or concrete base, level and secure, according to NRCA's "Low-Slope Membrane Roofing Construction Details Manual," Illustration "Raised Curb Detail for Rooftop Air Handling Units and Ducts." Install RTUs on curbs and coordinate roof penetrations and flashing with roof construction specified in Division 07 Section "Roof Accessories." Secure RTUs to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.
- B. Install wind restraints according to manufacturer's written instructions.

3.3 CONNECTIONS

- A. Install condensate drain, minimum connection size, with trap and indirect connection to nearest roof drain or area drain.
- B. Install piping adjacent to RTUs to allow service and maintenance.
 - 1. Gas Piping: Comply with applicable requirements in Division 23 Section "Facility Natural-Gas Piping" Connect gas piping to burner, full size of gas train inlet, and connect with union and shutoff valve with sufficient clearance for burner removal and service.
- C. Duct installation requirements are specified in other Division 23 Sections. Drawings indicate the general arrangement of ducts. The following are specific connection requirements:
 - 1. Install ducts to termination at top of roof curb.
 - 2. Remove roof decking only as required for passage of ducts. Do not cut out decking under entire roof curb.

3. Connect supply ducts to RTUs with flexible duct connectors specified in Division 23 Section " Air Duct Accessories."
4. Install return-air duct continuously through roof structure.
5. Install 6" batt insulation inside roof curb above roof metal deck.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- B. Perform tests and inspections and prepare test reports.
 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing. Report results in writing.
- C. Tests and Inspections:
 1. After installing RTUs and after electrical circuitry has been energized, test units for compliance with requirements.
 2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Remove and replace malfunctioning units and retest as specified above.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
- B. Complete installation and startup checks according to manufacturer's written instructions and do the following:
 1. Inspect for visible damage to unit casing.
 2. Inspect for visible damage to furnace combustion chamber.
 3. Inspect for visible damage to compressor, coils, and fans.
 4. Inspect internal insulation.
 5. Verify that labels are clearly visible.
 6. Verify that clearances have been provided for servicing.
 7. Verify that controls are connected and operable.
 8. Verify that filters are installed.
 9. Clean condenser coil and inspect for construction debris.
 10. Clean furnace flue and inspect for construction debris.
 11. Connect and purge gas line.
 12. Remove packing from vibration isolators.
 13. Verify lubrication on fan and motor bearings.

14. Adjust fan belts to proper alignment and tension.
15. Start unit according to manufacturer's written instructions.
 - a. Start refrigeration system.
 - b. Do not operate below recommended low-ambient temperature.
 - c. Complete startup sheets and attach copy with Contractor's startup report.
16. Inspect and record performance of interlocks and protective devices; verify sequences.
17. Operate unit for an initial period as recommended or required by manufacturer.
18. Perform the following operations for both minimum and maximum firing. Adjust burner for peak efficiency.
 - a. Measure gas pressure on manifold.
 - b. Inspect operation of power vents.
 - c. Measure combustion-air temperature at inlet to combustion chamber.
 - d. Measure flue-gas temperature at furnace discharge.
 - e. Perform flue-gas analysis. Measure and record flue-gas carbon dioxide and oxygen concentration.
 - f. Measure supply-air temperature and volume when burner is at maximum firing rate and when burner is off. Calculate useful heat to supply air.
19. Calibrate temperature sensor.
20. Adjust and inspect high-temperature limits.
21. Inspect outdoor-air dampers for proper stroke and interlock with return-air dampers.
22. Start refrigeration system and measure and record the following when ambient is a minimum of 15 deg F (8 deg C) above return-air temperature:
 - a. Coil leaving-air, dry- and wet-bulb temperatures.
 - b. Coil entering-air, dry- and wet-bulb temperatures.
 - c. Outdoor-air, dry-bulb temperature.
 - d. Outdoor-air-coil, discharge-air, dry-bulb temperature.
23. Inspect controls for correct sequencing of heating, mixing dampers, refrigeration, and normal and emergency shutdown.
24. Measure and record the following minimum and maximum airflows. Plot fan volumes on fan curve.
 - a. Supply-air volume.
 - b. Return-air volume.
 - c. Relief-air volume.
 - d. Outdoor-air intake volume.
25. Simulate maximum cooling demand and inspect the following:
 - a. Compressor refrigerant suction and hot-gas pressures.
 - b. Short circuiting of air through condenser coil or from condenser fans to outdoor-air intake.
26. Verify operation of remote panel including pilot-light operation and failure modes. Inspect the following:

- a. High-temperature limit on gas-fired heat exchanger.
 - b. Low-temperature safety operation.
 - c. Filter high-pressure differential alarm.
 - d. Economizer to minimum outdoor-air changeover.
 - e. Relief-air fan operation.
 - f. Smoke alarms.
27. After startup and performance testing and prior to Substantial Completion, replace existing filters with new filters.

3.6 CLEANING AND ADJUSTING

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to site during other-than-normal occupancy hours for this purpose.
- B. After completing system installation and testing, adjusting, and balancing RTU and air-distribution systems, clean filter housings and install new filters.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain RTUs. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 237413

SECTION 238126 - SPLIT-SYSTEM AIR-CONDITIONERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes split-system air-conditioning consisting of separate evaporator-fan and compressor-condenser components.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For split-system air-conditioning units to include in emergency, operation, and maintenance manuals.

1.6 MATERIALS MAINTENANCE SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Filters: One set(s) for each air-handling unit.

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE Compliance:
 1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
 2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."
- C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

1.8 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete."
- B. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.
 1. Warranty Period:
 - a. For Compressor: Five year(s) from date of Substantial Completion.
 - b. For Parts: Five year(s) from date of Substantial Completion.
 - c. For Labor: Five year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Carrier Corporation; Home Comfort and HVAC Building & Industrial Systems.
 2. Mitsubishi Electric & Electronics USA, Inc.; HVAC Advanced Products Division.

3. Trane; a business of American Standard companies.

2.2 INDOOR UNITS 5 TONS OR LESS

A. Floor-Mounted, Evaporator-Fan Components:

1. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect.
 - a. Insulation: Faced, glass-fiber duct liner.
 - b. Drain Pans: Galvanized steel, with connection for drain; insulated.
2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 210/240.
3. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
4. Fan: Direct drive, centrifugal.
5. Fan Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
 - b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
6. Air Filtration Section:
 - a. General Requirements for Air Filtration Section:
 - 1) Comply with NFPA 90A.
 - 2) Minimum Arrestance: According to ASHRAE 52.1 and MERV according to ASHRAE 52.2.
 - 3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
 - b. Disposable Panel Filters:
 - 1) Factory-fabricated, viscous-coated, flat-panel type.
 - 2) Thickness: 1 inch .
 - 3) Arrestance according to ASHRAE 52.1: 80.
 - 4) Merv according to ASHRAE 52.2: 5.

B. Wall-Mounted, Evaporator-Fan Components:

1. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect, and discharge drain pans with drain connection.

2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 210/240.
3. Fan: Direct drive, centrifugal.
4. Fan Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
 - b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
 - c. Enclosure Type: Totally enclosed, fan cooled.
 - d. NEMA Premium (TM) efficient motors as defined in NEMA MG 1.
 - e. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.
 - f. Mount unit-mounted disconnect switches on exterior of unit.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
6. Condensate Drain Pans:
 - a. Fabricated with two percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.
 - 1) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
 - 2) Depth: A minimum of 1 inch deep.
 - b. Single-wall, stainless-steel sheet.
 - c. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
7. Air Filtration Section:
 - a. General Requirements for Air Filtration Section:
 - 1) Comply with NFPA 90A.
 - 2) Minimum Arrestance: According to ASHRAE 52.1 and MERV according to ASHRAE 52.2.
 - 3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
 - b. Disposable Panel Filters:
 - 1) Factory-fabricated, viscous-coated, flat-panel type.
 - 2) Thickness: 1 inch .

2.3 OUTDOOR UNITS (5 TONS OR LESS)

A. Air-Cooled, Compressor-Condenser Components:

1. Casing: Steel, finished with baked enamel in color selected by Architect, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 - a. Compressor Type: Scroll.
 - b. Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.
 - c. Refrigerant Charge: R-410A.
 - d. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 210/240.
3. Fan: Aluminum-propeller type, directly connected to motor.
4. Motor: Permanently lubricated, with integral thermal-overload protection.
5. Low Ambient Kit: Permits operation down to 45 deg F .
6. Mounting Base: Polyethylene.

2.4 ACCESSORIES

- A. Thermostat: Low voltage with subbase to control compressor and evaporator fan.
- B. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install units level and plumb.
- B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.
- C. Install ground-mounted, compressor-condenser components on 4-inch- thick, reinforced concrete base that is 4 inches larger, on each side, than unit. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete." Coordinate anchor installation with concrete base.
- D. Install ground-mounted, compressor-condenser components on polyethylene mounting base.
- E. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
 - 1. Remote, Water-Cooled Condenser Connections: Comply with requirements specified in Division 23 Section "Hydronic Piping" Connect hydronic piping to supply and return connections with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.
- B. Where piping is installed adjacent to unit, allow space for service and maintenance of unit.
- C. Duct Connections: Duct installation requirements are specified in Division 23 Section "Metal Ducts" Drawings indicate the general arrangement of ducts. Connect supply and return ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in Division 23 Section "Air Duct Accessories."

3.3 FIELD QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Remove and replace malfunctioning units and retest as specified above.
- C. Prepare test and inspection reports.

3.4 STARTUP SERVICE

- A. Perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.

3.5 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain units.

END OF SECTION 238126

SECTION 260000 - BASIC ELECTRICAL REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. General Electrical Requirements.
 2. Work Included in Contract.
 3. Definitions.
 4. Dimensions and Equipment Location.
 5. Owner Supplied Products.
 6. Work by Owner.
 7. Pre-Installation Meetings.
 8. Demonstration and Training Meetings.
 9. Product Data.
 10. Shop Drawings.
 11. Test Reports.
 12. Manufacturer's Certificates.
 13. Manufacturer's Instructions.
 14. Manufacturer's Field Reports.
 15. Quality Assurance and Control of Installation.
 16. Temporary Facilities and Controls.
 17. Delivery, Storage, and Handling Requirements.
 18. Product Options.
 19. Product Substitution Procedures.
 20. Final Cleaning and Painting.
 21. Starting of Systems.
 22. Demonstration and Instructions.
 23. Project Record Documents.
 24. Extra Material and Spare Parts.
 25. Operation and Maintenance Manuals.
 26. Warranties.
 27. Pre-bid Survey.

1.2 GENERAL ELECTRICAL REQUIREMENTS

- A. Mention of any article, operation or method requires that Contractor shall provide same and perform each operation in complete accordance with conditions stated.
- B. Contractor shall provide all material, labor, equipment and transportation as necessary to complete project in compliance with Contract Documents.
- C. In general, this work includes everything essential for a complete electrical system in operating order as shown on drawings and indicated in specifications.
- D. Work shall be installed in accordance with National, State, and Local codes, ordinances, laws, and regulations. Comply with all applicable OSHA regulations.

- E. Materials shall have a UL or ETL label where a UL or ETL standard or testing requirement exists.
- F. All work shall be installed in accordance with recommendations of manufacturer whose equipment is to be supplied and installed under this Contract.
- G. Before submitting a bid, each bidder shall examine all specifications and drawings relating to their work and shall become fully informed as to extent and character of work required and its relation to other work within project area.
- H. Contractor, in conjunction with Engineer's representative, shall establish exact locations of all materials and equipment to be installed. Consideration shall be given to construction features, equipment of other trades and requirements of equipment proper.
- I. All materials shall be suitably stored and protected prior to installation and all work shall be protected after installation, during construction and prior to acceptance.
- J. Contractor shall furnish all scaffolding, rigging, hoisting and services necessary for delivery, erection and installation of all equipment and apparatus required to be installed by Contractor. All such equipment shall be removed by Contractor upon completion of project.
- K. Refer to Division 01 – General Requirements for temporary electrical service.

1.3 WORK INCLUDED IN CONTRACT

- A. Contractor shall provide auxiliary contacts, buttons, and switches on starters as required.
- B. Contractor shall provide power wiring (120 V or greater) to control panels, motor starters, variable frequency drives, motors, electric actuators, electric devices and smoke detectors.

1.4 DEFINITIONS

- A. Exposed: Exposed to view in any room, corridor, stairway, or from the building's exterior.
- B. Code: National, State and Local Electrical codes including OSHA requirements.
- C. Provide, furnish, install, and wire ready for service.
- D. Signal Voltage: NEC class 1, 2, or 3 remote control, signaling, or power limited circuits.
- E. Low Voltage: 50 to 600 volts.
- F. Medium Voltage: 601 to 35,000 volts.
- G. High Voltage: 35,001 volts and greater.
- H. Substitution: Manufacturer or method other than those listed by name in these specifications, on the Drawings, or in an Addendum.

1.5 DIMENSIONS AND EQUIPMENT LOCATION

- A. Drawings depicting electric work are diagrammatic and show, in their approximate location, symbols representing electrical equipment and devices.
- B. Exact locations of such equipment and devices shall be established in field in accordance with instructions from Engineer/Architect as established by manufacturer's installation drawings and details.
 - 1. Contractor shall refer to shop drawings and submittal drawings for all equipment requiring electrical connections to verify rough-in and connection locations.
 - 2. Unless specifically stated, no measurement of an electric drawing derived by scaling shall be used as a dimension to work by.
 - 3. Dimensions noted on electric drawings are subject to measurements of adjacent and previously completed work.
 - 4. All measurements shall be performed prior to actual installation of equipment.

1.6 OWNER SUPPLIED PRODUCTS

- A. Reference Division 01 – General Requirements for Owner supplied products.

1.7 WORK BY OWNER

- A. Reference Division 01 – General Requirements for work by Owner.

1.8 PRE-INSTALLATION MEETINGS

- A. When required in individual specification sections, convene pre-installation meeting at Project site prior to commencing work of specific section.
- B. Require attendance of parties directly affecting, or affected by, Work of specific section.
- C. Notify Engineer/Architect four days in advance of meeting date.
- D. Prepare agenda and preside at meeting:
 - 1. Review conditions of installation, preparation and installation procedures.
 - 2. Review coordination with related work.
- E. Record minutes and distribute copies within two days after meeting to participants, with two (2) copies to Engineer/Architect, and those affected by decisions made.

1.9 DEMONSTRATION AND TRAINING MEETING

- A. Contractor shall schedule and administer demonstration and training sessions for Owner for each portion of equipment and products that are required to have training in proper operation and maintenance.
- B. Contractor shall schedule representatives of the equipment manufacturer to attend demonstration and training sessions to provide additional information as necessary.

1.10 PRODUCT DATA

- A. Product Data: Submit to Engineer/Architect for review for limited purpose of checking for conformance with information given and design concept expressed in Contract Documents.
- B. Provide copies and distribute in accordance with Submittal Procedures article in Division 01 – General Requirements and for record documents purposes described in Division 01 – General Requirements.
- C. Submit number of copies Contractor requires, plus three copies Engineer/Architect will retain.
- D. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers' standard data to provide information specific to this Project.
- E. Indicate product utility and electrical characteristics, utility connection requirements, and location of utility outlets for service for functional equipment and appliances.
- F. After review distribute in accordance with Submittal Procedures article in Division 01 – General Requirements and provide copies for record documents described in Division 01 – General Requirements.

1.11 SHOP DRAWINGS

- A. Shop Drawings: Submit to Engineer/Architect for review for limited purpose of checking for conformance with information given and design concept expressed in Contract Documents.
- B. The following shop drawing submittals are required:
 - 1. 26 05 03 Wiring Connections
 - 2. 26 05 19 Building Wire and Cable
 - 3. 26 05 26 Grounding and Bonding
 - 4. 26 05 29 Electrical Hangers and Supports
 - 5. 26 05 33 Raceways and Boxes
 - 6. 26 05 34 Floor Boxes
 - 7. 26 05 53 Electrical Identification
 - 8. 26 05 73 Short Circuit/Coordination/Arc Flash Hazard Analysis Studies
 - 9. 26 05 80 Penetration Firestopping for Electrical
 - 10. 26 09 43 Networked Lighting Controls
 - 11. 26 12 00 Pad-Mounted Transformers
 - 12. 26 22 00 Dry Type Transformers
 - 13. 26 24 16 Panelboards
 - 14. 26 27 16 Cabinets and Enclosures
 - 15. 26 27 26 Wiring Devices
 - 16. 26 28 13 Fuses
 - 17. 26 28 19 Enclosed Switches
 - 18. 26 28 23 Enclosed Circuit Breakers
 - 19. 26 29 13 Enclosed Controllers
 - 20. 26 29 16 Enclosed Contactors
 - 21. 26 29 33 Motor Wiring
 - 22. 26 33 53 Static Uninterruptible Power Supplies
 - 23. 26 35 53 Transient Voltage Surge Suppressor
 - 24. 26 41 00 Facility Lightning Protection

- 25. 26 51 00 Interior Lighting
- 26. 26 56 00 Exterior Lighting
- 27. 26 60 00 Multiplexed Addressable Fire Alarm Detection System

- C. Produce copies and distribute in accordance with Submittal Procedures article in Division 01 – General Requirements and for record documents purposes described in Division 01 – General Requirements.
- D. Indicate special utility and electrical characteristics, utility connection requirements, and location of utility outlets for service for functional equipment and appliances.
- E. Shop drawings shall be submitted in advance of construction and installation so as to not cause delay in other Contractor's work.
- F. Data submitted for Engineer's review shall be numbered consecutively, shall be noted to correlate with electrical drawings and shall bear:
 - 1. Name and location of project.
 - 2. Name of Contractor.
 - 3. Date of submittal.
 - 4. Date of drawings and date of each correction and revision.
 - 5. If more than one type of lighting fixture (or other material) is on submitted sheet, proposed equipment shall be conspicuously checked with red pen by Electrical Contractor.
- G. Shop drawings for different systems and equipment shall, be bound separately by specification section and not bound by manufacturer. Each separate submittal shall be sent under a separate transmittal.
- H. Submittals which contain different specification section systems bound together shall be returned not reviewed and returned to Contractor for re-submittal.
- I. Lighting Fixture shop drawings shall consist of single submittal with all project light fixtures included. Submittals grouped by manufacturer shall not be accepted. Contractor shall be responsible for coordinating drawings from his various suppliers in order to comply with this requirement.
- J. Contractor shall examine shop drawings and equipment brochures prior to submission.
- K. Contractor shall verify that materials and equipment depicted will properly fit into construction.
- L. Contractor shall also review all previously completed work related to installation of equipment depicted to insure that it has been properly installed.
- M. No materials or equipment subject to prior review by Engineer shall be fabricated or installed by Contractor, without approval.
- N. Engineer's review of shop drawings shall not relieve Contractor of responsibility for deviations from requirements of drawings and specifications, unless prior approval for such deviations has been granted.
- O. Submit in electronic PDF format.

- P. After review, Contractor shall maintain copies required for Record Documents described in Division 01 – General Requirements.

1.12 TEST REPORTS

- A. Operation of equipment and electrical systems does not constitute an acceptance of work by Owner.
- B. Final acceptance is to be made after Contractor has adjusted their equipment and demonstrated that it meets or exceeds requirements of drawings and specifications.
- C. After work is completed and prior to acceptance, Contractor shall conduct following tests, tabulate data, date, sign and submit to Engineer:
 - 1. Standard megger insulation test on each feeder.
 - 2. Ground resistance test.
 - 3. Clamp ammeter test on each feeder conductor with all utilization equipment energized.
 - a. Load current in each phase conductor of feeder or portion thereof supplying panel shall not differ from average connected load currents in feeder conductors by more than 7-1/2 percent.
 - b. If load current does differ by more than 7-1/2 percent, Contractor shall change phase loading to same or receive written approval from Engineer that this is not required due to nature of load.
- D. Upon completion of installation, Contractor shall furnish certificates of approval from authorities having jurisdiction.
- E. Contractor shall demonstrate that all work is complete and is in specified operating condition, with raceway and conduit system properly grounded, wiring free from grounds, shorts, and entire installation is free from any physical defects.
- F. In presence of Engineer and Owner, Contractor shall demonstrate proper operation of all systems.
- G. Perform other testing as specifically directed in other sections of specifications for specific equipment.

1.13 MANUFACTURER'S CERTIFICATES

- A. When specified in individual specification sections, submit certification by manufacturer, installation/ application subcontractor, or Contractor to Engineer/Architect, in quantities specified for Product Data.
- B. Indicate material or product conforms to or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.
- C. Certificates may be recent or previous test results on material or Product, but must be acceptable to Engineer/Architect.

1.14 MANUFACTURER'S INSTRUCTIONS

- A. When specified in individual specification sections, submit printed instructions for delivery, storage, assembly, installation, start-up, adjusting, and finishing, to Engineer for delivery to Owner in quantities specified for Product Data.
- B. Indicate special procedures, perimeter conditions requiring special attention, and special environmental criteria required for application or installation.

1.15 MANUFACTURER'S FIELD REPORTS

- A. Submit reports for Engineer's benefit as contract administrator or for Owner.
- B. Submit report within 30 days of observation to Engineer/Architect for information.
- C. Submit for information for limited purpose of assessing conformance with information given and design concept expressed in Contract Documents.

1.16 QUALITY ASSURANCE/CONTROL OF INSTALLATION

- A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship to produce Work of specified quality.
- B. Comply fully with manufacturer's instructions, including each step in sequence.
- C. Should manufacturer's instructions conflict with Contract Documents, request clarification from Engineer/Architect before proceeding.
- D. Comply with specified standards as a minimum quality for the Work except when more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.
- E. Perform Work by persons qualified to produce workmanship of specified quality.
- F. Verify field measurements are as indicated on Shop Drawings or as instructed by manufacturer.
- G. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion or disfigurement.

1.17 TEMPORARY FACILITIES AND CONTROLS

- A. Reference Division 01 – General Requirements for temporary facilities and control requirements.

1.18 PRODUCT DELIVERY, STORAGE AND HANDLING REQUIREMENTS

- A. Transport and handle products in accordance with manufacturer's instructions.
- B. Promptly inspect shipments to ensure products comply with requirements, quantities are correct, and products are undamaged.
- C. Provide equipment and personnel to handle products by methods to prevent soiling, disfigurement, or damage.

- D. Store and protect products in accordance with manufacturer's instructions.
- E. Store with seals and labels intact and legible.
- F. Store sensitive products in weather tight, climate controlled, enclosures in an environment favorable to product.
- G. For exterior storage of fabricated products, place on sloped supports above ground.
- H. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to prevent condensation and degradation of products.
- I. Provide equipment and personnel to store products by methods to prevent soiling, disfigurement, or damage.
- J. Arrange storage of products to permit access for inspection. Periodically inspect to verify products are undamaged and are maintained in acceptable condition.

1.19 PRODUCT OPTIONS

- A. Products Specified by Reference Standards or by Description Only: Any product meeting those standards or description.
- B. Products Specified by Naming One or More Manufacturers: Products of one of manufacturers named and meeting specifications; no options or substitutions allowed.
- C. Products Specified by Naming One or More Manufacturers with Provision for Substitutions: Submit request for substitution for any manufacturer not named in accordance with following article.
- D. Materials and equipment required shall be of new manufacture.
- E. Items specified shall be of latest type or model produced by manufacturer specified. If model number is obsolete, substitute current manufacturer's product.

1.20 PRODUCT SUBSTITUTION PROCEDURES

- A. Substitutions will not be allowed. Where the Contractor wishes to use equipment or methods other than those listed by name, that equipment must be approved by the Engineer. To gain approval for equipment not listed, the Contractor shall follow the substitution request procedures outlined in the following paragraphs.
- B. Substitutions may be considered when a product becomes unavailable through no fault of Contractor.
- C. Document each request with complete data substantiating compliance of proposed Substitution with Contract Documents, and specifically indicating where equipment differs from equipment specified.
- D. A request constitutes a representation that Contractor:
 - 1. Has investigated proposed product and determined that it meets or exceeds quality level of specified product.

2. Will provide same warranty for Substitution as for specified product.
 3. Will coordinate installation and make changes to other Work that may be required for the Work to be complete with no additional cost to Owner.
 4. Waives claims for additional costs or time extension that may subsequently become apparent.
 5. Will reimburse Owner and Engineer/Architect for review or redesign services associated with re-approval by authorities having jurisdiction.
- E. Substitutions will not be considered when they are indicated or implied on shop drawings or product data submittals, without separate written request, or when acceptance will require revision to Contract Documents.
- F. Substitution Submittal Procedure:
1. Submit three copies of request for Substitution for consideration. Limit each request to one proposed Substitution.
 2. Submit Shop Drawings, Product Data, and certified test results attesting to proposed product equivalence. Burden of proof is on proposer.
 3. Lighting Fixtures: Request for substitutions shall include photometric test reports performed by an independent testing laboratory.
 4. Contractor shall provide samples of proposed equipment for Engineer's review, if requested by Engineer.
 5. Contractor shall furnish any other information or materials as requested by Engineer to establish equality.
 6. Engineer will notify Contractor in writing of decision to accept or reject request.
- G. Equipment and materials submitted without proper documentation shall be rejected without review.
- H. Contractor's submitting equipment for approval as an equal, shall include in their bid all incidental costs that may result from use of approved equipment.
- I. Such costs shall include, but not be limited to, additional costs that may be incurred by other contractors whose scope of work is affected by use of "equal" products.
- J. Electrical Contractor shall be responsible for those costs even if they do not become evident until after bidding.
- K. Only one request for substitution will be considered for each product.
- L. When substitution is not accepted, provide specified product.
- M. Submittals shall be received to allow for sufficient time to incorporate the acceptance into the bid documents through an addendum. Substitution submittals received after the issuance of the final addendum will not be considered.

1.21 FINAL CLEANING AND PAINTING

- A. Rubbish resulting from work shall be removed and disposed of on a daily basis in such manner as to be acceptable to Architect.

- B. Contractor shall clean all exposed iron work, interior and exterior of cabinets and pull boxes, etc., and remove rubbish and debris resulting from work.
- C. Where painted surfaces of equipment have been damaged or rusted during construction, Contractor shall paint same to match final.
- D. Clean other equipment as indicated in other sections of specification for specific equipment.

1.22 STARTING OF SYSTEMS

- A. Coordinate schedule for start-up of various equipment and systems.
- B. Notify Engineer/Architect and Owner seven days prior to start-up of each item.
- C. Verify each piece of equipment or system has been checked for proper lubrication, drive rotation, belt tension, control sequence, and for conditions that may cause damage.
- D. Verify tests, meter readings, and specified electrical characteristics agree with those required by equipment or system manufacturer.
- E. Verify wiring and support components for equipment are complete and tested.
- F. Execute start-up under supervision of applicable manufacturer's representative in accordance with manufacturer's instructions.
- G. When specified in individual specification Sections, require manufacturer to provide authorized representative to be present at site to inspect, check, and approve equipment or system installation prior to start-up, and to supervise placing equipment or system in operation.

1.23 DEMONSTRATION AND INSTRUCTIONS

- A. Demonstrate operation and maintenance of products to Owner's personnel two weeks prior to date of Substantial Completion.
- B. Demonstrate Project equipment and instruct in classroom environment located at project site and instructed by manufacturer's representative who is knowledgeable about the Project.
 - 1. For equipment or systems requiring seasonal operation, perform demonstration for other season within six months.
 - 2. Utilize operation and maintenance manuals as basis for instruction. Review contents of manual with Owner's personnel in detail to explain all aspects of operation and maintenance.
 - 3. Demonstrate start-up, operation, control, adjustment, trouble-shooting, servicing, maintenance, and shutdown of each item of equipment at scheduled time, at designated location.
 - 4. Prepare and insert additional data in operations and maintenance manuals when need for additional data becomes apparent during instruction.
 - 5. Required instruction time for each item of equipment and system is specified in individual sections.

1.24 PROJECT RECORD DOCUMENTS

- A. Maintain on site one set of following electrical record documents; record actual revisions to the Work:
 - 1. Locations of all buried conduit or similar items. Include buried depth.
 - 2. Field changes of dimension or detail.
 - 3. Changes made by field order or change order.
 - 4. Details not on original contract drawings.
 - 5. Changes to circuit numbers.
 - 6. Junction box locations and conduit runs, with trade sizes indicated, for all lighting, power, and electrical systems installed.
 - 7. Master-share light fixture ballasting arrangements.
 - 8. Locations of all feeders and pullboxes.
 - 9. Record documents include:
 - a. Drawings.
 - b. Specifications.
 - c. Addenda.
 - d. Change Orders and other modifications to the Contract.
 - e. Reviewed Shop Drawings, Product Data, and Samples.
 - f. Manufacturer's instruction for assembly, installation, and adjusting.
- B. Ensure entries are complete and accurate, enabling future reference by Owner.
- C. Store record documents separate from documents used for construction.
- D. Record information concurrent with construction progress, not less than weekly.
- E. Specifications: Legibly mark and record at each product section description of actual products installed, including following:
 - 1. Manufacturer's name and product model and serial number.
 - 2. Product substitutions or alternates utilized.
 - 3. Changes made by Addenda and modifications.
- F. Record Drawings and Shop Drawings: Legibly mark each item to record actual construction including:
 - 1. Measured depths of foundations in relation to finish first main floor datum.
 - 2. Measured horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent surface improvements.
 - 3. Measured locations of internal utilities and appurtenances concealed in construction, referenced to visible and accessible features of the Work.
 - 4. Field changes of dimension and detail.
 - 5. Details not on original Contract drawings.
- G. Submit documents to Engineer/Architect for review. Documents shall be submitted in both electronic and hard copy formats.

1.25 EXTRA MATERIAL AND SPARE PARTS

- A. Furnish spare parts, maintenance, and extra products in quantities specified in individual specification sections.

- B. Deliver to Project site and place in location as directed by Owner; obtain receipt prior to final payment.

1.26 OPERATION AND MAINTENANCE MANUALS

- A. Electrical Contractor shall assemble and submit to Architect for subsequent submission to Owner, three complete sets of a Manual of Operation and Maintenance for each of electrical and communications systems.
- B. Each manual shall consist of a 3-ring binder volume instructing Owner's personnel in operation and maintenance of system in question.
- C. All information shall be bound and secured in manual.
- D. Manual shall cover all phases of operation of equipment and shall be illustrated with photographs, drawings, and wiring diagrams.
- E. Manuals shall accurately describe operation, construction and adjustable features of complete system and its component parts.
- F. Manual shall be complete with an equipment parts listing to facilitate ordering of spare and replacement parts.
- G. Each manual shall contain two sets of final shop drawings depicting equipment as installed.

1.27 WARRANTIES

- A. Obtain warranties and bonds executed in duplicate by responsible subcontractors, suppliers, and manufacturers, within ten days after completion of applicable item of work.
- B. Execute and assemble transferable warranty documents and bonds from subcontractors, suppliers, and manufacturers.
- C. Verify documents are in proper form, contain full information, and are notarized.
- D. Co-execute submittals when required.
- E. Include Table of Contents and assemble in three D side ring heavy duty binder with durable plastic cover.
- F. Time of Submittals:
 - 1. For equipment or component parts of equipment put into service during construction with Owner's permission, submit documents within ten days after acceptance.
 - 2. Make other submittals within ten days after Date of Substantial Completion, prior to final Application for Payment.
 - 3. For items of Work for which acceptance is delayed beyond Date of Substantial Completion, submit within ten days after acceptance, listing date of acceptance as beginning of warranty or bond period.

1.28 PREBID SURVEY

- A. Before submitting their bid, Contractor shall tour project site and review following items:

1. Exact configuration of areas requiring demolition, temporary power, relocating, etc.
 2. Site conditions such as material storage, staging areas, parking, etc.
 3. Problems with work sequence.
- B. Any conditions found that are not shown on drawings or stated within project manual that may affect scope of work shall be reported to Engineer.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Sleeves: ASTM A53, Schedule 40 galvanized steel pipe.

2.2 ACCESS PANELS

- A. Access panels required by code or otherwise to electrical service equipment shall be supplied and installed by Electrical Contractor.

PART 3 - EXECUTION

3.1 FIRESTOPPING

- A. Openings in fire rated construction and annular spaces around conduits, cable trays, and other penetrating items shall be protected in accordance with NEC Article 300.21 and in accordance with Wisconsin Administrative Code, Department of Commerce Chapter 51.049. Fire rating of protective seal shall be at least that of floor or wall into which it is installed, so that original fire rating of construction is maintained.
- B. Wall or floor penetration openings shall be as small as possible.
- C. Openings and annular spaces required by code to be protected, shall be protected.
- D. Installation of materials and assemblies shall be in strict accordance with manufacturer's instructions.

3.2 SLEEVES

- A. Where conduits, cables trays, or other electrical raceways must pass through floors or walls that are to be constructed of poured in place concrete, contractor shall provide sleeves in formwork prior to concrete pour. It shall be Electrical Contractor's responsibility to provide all sleeves for his work unless specifically indicated otherwise on drawings. Prior to installing sleeves, contractor shall prepare drawings indicating locations, quantities, sizes, and spacings of all sleeves anticipated. Drawings shall be forwarded to structural engineer for approval.
- B. Floor sleeves shall extend minimum of 2 inches above finished floor.

END OF SECTION 260000

This Page Intentionally Left Blank

SECTION 260501 - ELECTRICAL DEMOLITION AND ALTERATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Removal of existing electrical equipment, wiring, and conduit in areas to be remodeled.
2. Removal of designated construction; dismantling, cutting and alterations for completion of Work.
3. Disposal of materials.
4. Storage of removed materials.
5. Identification of utilities.
6. Salvaged items.
7. Protection of items to remain as scheduled at end of section and as indicated on Drawings.
8. Relocate existing equipment to accommodate construction.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
2. Section 26 00 00 – Basic Electrical Requirements.
3. Division 02 – Existing Conditions.
4. Division 08 – Openings: Execution requirements for access doors and panels specified by this section.

1.2 CLOSEOUT SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for closeout submittals.
- B. Section 26 00 00 – Basic Electrical Requirements: Record actual locations of capped utilities and conduits and equipment abandoned in place.

1.3 QUALITY ASSURANCE

- A. Contractor shall notify the Engineer of any existing code violations observed during the course of performing his work. The Engineer will decide if corrective action needs to be taken. Corrective actions that change the scope of the work will be considered a change order and will be processed accordingly.

1.4 SEQUENCING

- A. Division 01 – General Requirements: Requirements for sequencing.

1.5 SCHEDULING

- A. Division 01 – General Requirements: Requirements for scheduling.
- B. Existing buildings shall remain in service during construction.
- C. Prior to demolition or alteration of structures, the following shall be accomplished:
 1. Owner release of such structure.

2. Disconnection of electrical power to equipment and circuits removed or affected by demolition work.
 3. Electrical services rerouted or shut off outside area of demolition.
 4. Coordinate sequencing with Owner and other Contractors.
 5. Survey and record condition of existing facilities to remain in place that may be affected by demolition operations.
- D. Power outages and interruptions in building systems shall be held to a minimum and shall be done at a time convenient to Owner. Time of all outages shall be scheduled with Owner and all other trades affected by outage at least ten working days in advance.
- E. Perform noisy, malodorous, or dusty work:
1. Between hours of 5:00 p.m. and 10:00 p.m.
- F. Cease operations immediately when structure appears to be in danger and notify Architect/Engineer. Do not resume operations until directed.

1.6 COORDINATION

- A. Conduct demolition to minimize interference with adjacent and occupied building areas.
- B. Coordinate demolition work with the general contractor and other trades.
- C. Coordinate and sequence demolition so as not to cause shutdown of operation of surrounding areas.
- D. Shut-down Periods:
1. Arrange timing of shut-down periods of in-service panels with Owner. Do not shut down any utility without prior written approval.
 2. Keep shut-down period to minimum or use intermittent period as directed by the Owner.
 3. Maintain life-safety systems in full operation in occupied facilities.
- E. Identify salvage items in cooperation with Owner. Owner may keep any equipment in demolition areas. Contractor shall deliver equipment owner wants salvaged to area in building designated by owner. Contractor shall remove all materials in demolished area not salvaged from site. Contractor shall obtain release of all materials before disposition.
- F. After demolition operations are completed, survey conditions and restore existing facilities to their pre-demolition condition.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify of existing conditions before starting work.
- B. Verify wiring and equipment indicated to be demolished serve only abandoned facilities.

- C. Verify termination points for demolished services.

3.2 PREPARATION

- A. Erect, and maintain temporary safeguards, including warning signs and lights, barricades, and similar measures, for protection of public, Owner, Contractor's employees, and existing improvements to remain.
- B. Temporary egress signage and emergency lighting.

3.3 DEMOLITION

- A. Demolition Drawings are based on casual field observation and existing record documents. Report discrepancies to Architect/Engineer before disturbing existing installation.
- B. Remove exposed abandoned conduit, including abandoned conduit above accessible ceiling finishes. Cut conduit flush with walls and floors, and patch surfaces.
- C. Remove conduit, wire, boxes, and fastening devices to avoid any interference with new installation.
- D. Disconnect electrical systems in walls, floors, and ceilings scheduled for removal.
- E. Reconnect equipment being disturbed by renovation work and required for continued service to nearest available panel.
- F. Disconnect or shut off service to areas where electrical work is to be removed. Remove electrical fixtures, equipment, and related switches, outlets, conduit and wiring which are not part of final project.
- G. Install temporary wiring and connections to maintain existing systems in service during construction.
- H. Perform work on energized equipment or circuits with experienced and trained personnel.
- I. Remove, relocate, and extend existing installations to accommodate new construction.
- J. Repair adjacent construction and finishes damaged during demolition and extension work.
- K. Remove exposed abandoned grounding and bonding components, fasteners and supports, and electrical identification components, including abandoned components above accessible ceiling finishes. Cut embedded support elements flush with walls and floors.
- L. Clean and repair existing equipment to remain or to be reinstalled.
- M. Protect and retain power to existing active equipment remaining.
- N. Electrical equipment in conflict with construction shall be removed or relocated as indicated on drawings, as directed, or required.

3.4 MODIFICATIONS

- A. Feeders, branch circuits, and other system wiring which are to remain in-service, but which are presently routed through areas being demolished shall be rerouted around demolition area.
- B. Where existing branch circuits are to be extended or modified, existing conduit may be reused at Contractor's discretion. Existing conduits that are removed from their existing location shall be reused.
- C. Existing wiring may be spliced and used to extent that it was not removed. Any existing conductors removed shall not be re-pulled and then reused.

3.5 EXISTING PANELBOARDS

- A. Ring out circuits in existing panel affected by the Work. Where additional circuits are needed, reuse circuits available for reuse. Install new breakers.
- B. Tag unused circuits as spare.
- C. Where existing circuits are indicated to be reused, use sensing measuring devices to verify circuits feeding Project area or are not in use.
- D. Remove existing wire no longer in use from panel to equipment.
- E. Provide new updated directories where more than three circuits have been modified or rewired.

3.6 SALVAGE ITEMS

- A. Remove and protect items requested by Owner to be salvaged and transport to location on site designated by Owner.

3.7 REUSABLE ELECTRICAL EQUIPMENT

- A. Carefully remove equipment, materials, or fixtures which are to be reused. Only items specifically identified as be reused shall be reused.
- B. Disconnect, remove, or relocate existing electrical material and equipment interfering with new installation.
- C. Relocate existing lighting fixtures as indicated on Drawings. Clean fixtures and re-lamp. Test fixture to see if it is in good working condition before installation at new location.

3.8 CLEANING

- A. Provide under provisions of Division 01 - General Requirements.
- B. Remove demolished materials as work progresses. Legally dispose materials.
- C. Keep workplace neat.

3.9 DISPOSAL

- A. Contractor shall tour demolition areas with Owner to determine status of all equipment to be removed during demolition.
- B. All equipment that is to be salvaged for reuse by the Owner shall be removed by Contractor and transported to an Owner designated storage area on site.
- C. Raceway, boxes and supporting devices shall become property of Contractor and shall be removed from site and disposed of by the Contractor.
- D. Removed equipment shall be disposed of by Contractor unless specifically otherwise indicated on drawings or requested by Owner. Contractor shall provide transport for disposal.

3.10 LIGHTING FIXTURE BALLAST DISPOSAL

- A. Contractor shall inspect all ballasts in all light fixtures removed as part of this project and take actions described below.
- B. All ballasts labeled as "NON PCB'S" or "NO PCB'S" shall be handled as described in other sections of these specifications which describe demolition or salvage materials handling. If PCB content is not stated on ballast label, ballast shall be handled as a PCB ballast.
- C. All PCB ballasts shall have wires clipped off and ballasts placed in US DOT approved type 17C or type 17H barrels and placed in storage in a location within building as designated by Owner. Contractor shall provide to Owner, in typewritten form, a total count of these ballasts and where they are stored.
- D. These ballasts are not to be removed from work site by Contractor.
- E. Contractor shall label and mark PCB storage barrels with EPA approved PCB labels and shall mark storage area with signs, marks, and lines to meet regulations of Wisconsin Code NR 157.
- F. Contractor shall provide approved PCB absorbent materials to be stored immediately adjacent to barrel storage area. Do not place loose absorbent material in barrels.
- G. When ballast demolition is completed, and all PCB ballasts are placed in barrels ready to be picked up for disposal, Contractor shall notify Owner in writing so Owner can make arrangements for pick up and disposal of PCB ballasts.

3.11 LIGHTING FIXTURE LAMP DISPOSAL

- A. Contractor shall be responsible for proper removal and recycling of all existing fixture lamps being removed from service in accordance with EPA and State of Wisconsin DNR requirements. Lamps shall not be disposed of in any way except as described herein.
- B. Contractor shall be responsible for arranging for recycling of lamps by a licensed waste lamp and bulb recycler. Cost for recycling of removed lamps shall be included in Contractor's bid.
- C. Contractor shall carefully package removed lamps to prevent breakage. Contractor shall store waste lamps in a secure area, either in container that lamps are shipped in or in other ways so as to eliminate breakage. Both lamp storage area and individual containers should be labeled as

hazardous waste. Store lamps in covered containers to prevent lamps from being broken as a result of other debris being placed on top of them.

3.12 ALTERATIONS

- A. Contractor shall be responsible for coordination of other trades to facilitate installation in existing building.
- B. Work shall include, but is not limited to, cutting, patching, refinishing and all work necessary and required to leave existing building in a condition acceptable to engineer.

3.13 PROTECTION OF FINISHED WORK

- A. Furnish under provisions of Division 01 - General Requirements.
- B. Do not permit traffic over unprotected floor surface.

END OF SECTION 260501

SECTION 260503 - WIRING CONNECTIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Electrical Connections to Equipment.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 05 19 - Building Wire and Cable.
 - 3. Section 26 05 33 - Raceway and Boxes.

1.2 REFERENCES

- A. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA WD 1 - General Requirements for Wiring Devices.
 - 2. NEMA WD 6 - Wiring Devices-Dimensional Requirements.

1.3 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.
- B. Product Data: Submit wiring device manufacturer's catalog information showing dimensions, configurations, and construction.
- C. Manufacturer's installation instructions.

1.4 CLOSEOUT SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for closeout submittals.
- B. Project Record Documents: Record actual locations, sizes, and configurations of equipment connections.

1.5 COORDINATION

- A. Obtain and review shop drawings, product data, manufacturer's wiring diagrams, and manufacturer's instructions for equipment furnished under other sections.
- B. Determine connection locations and requirements.
- C. Sequence rough-in of electrical connections to coordinate with installation of equipment.
- D. Sequence electrical connections to coordinate with start-up of equipment.

PART 2 - PRODUCTS

2.1 CORD AND PLUGS

- A. Attachment Plug Construction: Conform to NEMA WD 1.
- B. Configuration: NEMA WD 6; match receptacle configuration at outlet furnished for equipment.
- C. Cord Construction: Type SO multiconductor flexible cord with identified equipment grounding conductor, suitable for use in damp locations.
- D. Size: Suitable for connected load of equipment, length of cord, and rating of branch circuit over-current protection.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify equipment is ready for electrical connection, for wiring, and to be energized.

3.2 INSTALLATION

- A. Make electrical connections.
- B. Make conduit connections to equipment that is subject to vibration using flexible conduit. Use liquid-tight flexible conduit with watertight connectors in damp or wet locations. Equipment subject to vibration shall include:
 - 1. Transformers.
 - 2. Motors.
 - 3. Packaged HVAC equipment.
- C. Connect heat producing equipment using wire and cable with insulation suitable for temperatures encountered.
- D. Provide receptacle outlet to accommodate connection with attachment plug.
- E. Provide suitable strain-relief clamps and fittings for cord connections at outlet boxes and equipment connection boxes.
- F. Provide disconnect switches, controllers, control stations, and control devices to complete equipment wiring requirements.
- G. Provide terminal block jumpers to complete equipment wiring requirements.
- H. Provide interconnecting conduit and wiring between devices and equipment to complete equipment wiring requirements.
- I. Coolers and Freezers: Cut and seal conduit openings in freezer and cooler walls, floor, and ceilings.

3.3 ADJUSTING

- A. Division 01 - General Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Cooperate with utilization equipment installers and field service personnel during checkout and starting of equipment to allow testing and balancing and other startup operations. Provide personnel to operate electrical system and checkout wiring connection components and configurations.

3.4 SPECIAL OUTLET AND MOTOR WIRING SCHEDULES

- A. See Drawings.

END OF SECTION 260503

This page intentionally left blank

SECTION 260519 - BUILDING WIRE AND CABLE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Building Wire.
 - 2. Building Cable.
 - 3. Wiring Connectors.
 - 4. Connections.

- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.
 - 3. Section 26 05 53 – Electrical Identification.

1.2 REFERENCES

- A. International Electrical Testing Association (NETA):
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

- B. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electrical Code (NEC).

1.3 CLOSEOUT SUBMITTALS

- A. Division 01 – General Requirements: Procedures for closeout submittals.

- B. Project Record Documents: Record actual locations of components and circuits.

1.4 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years.

1.5 FIELD MEASUREMENTS

- A. Verify field measurements are as indicated on Drawings.

1.6 COORDINATION

- A. Division 01 – General Requirements: Requirements for coordination.

- B. When wire and cable destination is indicated, and routing is not shown, determine routing and lengths required.

- C. Wire and cable routing indicated is approximate unless dimensioned.

PART 2 - PRODUCTS

2.1 BUILDING WIRE

- A. Product Description: Single conductor insulated wire.
- B. Conductor: Copper only. At the Contractor's option, aluminum conductors size #1/0 and larger may be substituted for copper and used for phase and neutral conductors for transformer feeders, switchboard feeders, and panelboard feeders. All ground conductors shall be copper.
 - 1. Aluminum conductors shall not be used for serving individual motors, chillers, VFD's and motor controllers.
 - 2. The following requirements shall be met when aluminum conductors are used:
 - a. Aluminum alloy conductors shall be compact stranded conductors of a recognized Aluminum Association 8000 Series aluminum alloy conductor material (AA-8000 series alloy).
 - b. It is the responsibility of the contractor to increase the size of the conduit, wire gutter, or enclosure, if necessary, to accommodate the aluminum conductors and meet allowable code requirements.
 - c. It is the responsibility of the contractor to increase the size of the aluminum conductor and associated termination lugs to match the ampacity of the copper conductor circuit shown on the Drawings.
 - d. Contractor shall submit a feeder schedule to the Engineer for all conductor substitutions indicating the aluminum conductor wire size and the conduit size. The contractor shall not begin the installation until written approval is granted by the Engineer.
 - e. All aluminum conductors shall terminate on a mechanical screw-type connector or mechanical compression-type connector. Connector shall be dual rated (AL7CU or AL9CU) and Listed by UL for use with aluminum and copper conductors and sized to accept aluminum conductors of the required ampacity. When using compression-type connectors, the lugs shall be marked with wire size, die index, number and location of crimps and shall be suitably color-coded. Using a suitable stripping tool, remove insulation from the required length of the conductor. Wire brush the conductor and apply a Listed joint compound. Tighten or crimp the connection per the connector manufacturer's recommendation. Wipe off any excess joint compound.
 - f. When terminating aluminum conductors to aluminum bus, prepare a mechanical screw-type or compression-type connection. Bolts shall be anodized alloy and conform to current ANSI and ASTM chemical and mechanical property limits. Nuts shall be aluminum alloy and conform to current ANSI standards. Washers shall be flat aluminum alloy, Type A plain, standard wide series conforming to current ANSI standards. Lubricate and tighten the hardware per manufacturer's recommendations
 - g. When terminating aluminum conductors to copper bus, prepare a mechanical screw-type or compression-type connection. Bolts shall be plated or galvanized medium carbon steel; heat treated, quenched and tempered equal to current ASTM standard or SAE grade 5. Nuts shall conform to current ANSI standards. Washers shall be steel, Type A plain, standard wide series conforming to current ANSI standards. Belleville conical spring washers shall be of hardened steel, cadmium plated or silicone bronze. Lubricate and tighten the hardware per manufacturer's recommendations.
 - h. The final tightening torque shall be recorded for all aluminum conductor mechanical screw-type connections and provided in report form, in the completed O&M manuals.
 - i. Contractor shall perform an infrared survey of all aluminum conductor connections after the installation is complete and in normal service. Infrared surveys shall be performed during periods of maximum possible loading with at least 30% of rated load

of the equipment being inspected. All connections with elevated temperatures shall be corrected by the contractor. The infrared survey results shall be provided in report form, in the completed O&M manuals.

- C. Insulation Voltage Rating: 600 volts, rated 75 degrees C unless otherwise noted.
- D. In mechanical rooms, light fixtures, and others high temperature applications, insulation shall be rated 90 degrees C. or greater.
- E. Provide following wiring types:
 - 1. Concealed or exposed dry interior locations: Use only building wire Type THHN/THWN or XHHW insulation in raceway.
 - 2. Above Accessible Ceilings: Use only building wire Type THHN/THWN or XHHW insulation in raceway.
 - 3. Wet or Damp Interior Locations: Use only building wire Type XHHW-2 insulation in raceway.
 - 4. Exterior Locations: Use only building wire Type XHHW-2 insulation in raceway.
 - 5. Underground Locations: Use only building wire Type XHHW-2 or USE insulation, in raceway.
- F. Solid or Stranded conductor for 10 AWG and smaller. Conductor 8 AWG and larger shall be stranded.
- G. Conductor not smaller than 12 AWG for power and lighting circuits.
- H. Conductor not smaller than 14 AWG for control circuits.
- I. All wires shall be new, delivered to the site in unbroken cartons and shall be less than one year old out of manufacturer's stock.

2.2 WIRING CONNECTORS

- A. Conductors No. 10 AWG and Smaller: Scotch 3M - Scotch-lok compression type solderless connectors with plastic cover.
- B. Joints, Taps, and Splices in Conductors No. 8 AWG and Larger: Solderless compression type connectors, tool and die applied, of a type that will not loosen under vibration or normal strains. Burndy "Hy-Dent" type or equivalent as acceptable to Engineer.
- C. Rubber insulating electrical tape: Scotch 3M model 23, 30-mil tape.
- D. Split bolt connectors are not acceptable.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Install in accordance with manufacturer's written instructions and in accordance with recognized industry practices.
- B. Run wire and cable in conduit, unless otherwise indicated on drawings.

- C. Do not draw conductors into conduits until building is enclosed and watertight and until work that may cause conductor damage has been completed.
- D. Voltage drop for branch circuits and feeder circuit combined shall not exceed requirements of NEC Article 215.
- E. Examine areas and conditions under which conductors are to be installed and notify Engineer in writing of conditions detrimental to proper and timely completion of work.
- F. Do not proceed with work until unsatisfactory conditions have been corrected.

3.2 JOINTS, TAPS AND SPLICES

- A. Each tap, joint, or splice in conductors No. 8 AWG and larger shall be taped with two half-lap layers of vinyl plastic electrical tape and a finish wrap of color coding tape, where required by code.
- B. Cable splices shall be made only in distribution and junction boxes.

3.3 PREPARATION

- A. Completely and thoroughly swab raceway before installing wire.

3.4 EXISTING WORK

- A. Remove exposed abandoned wire and cable including abandoned wire and cable above accessible ceiling finishes.
- B. Patch surfaces where removed cables pass through building finishes.
- C. Disconnect abandoned circuits and remove circuit wire and cable.
- D. Remove abandoned boxes when wire and cable servicing boxes is abandoned and removed.
- E. Install blank cover for abandoned boxes not removed.
- F. Provide access to existing wiring connections remaining active and requiring access. Modify installation or install access panel.
- G. Extend existing circuits using materials and methods as specified.
- H. For additions to existing buildings, existing conductor color coding schemes shall be followed unless in conflict with codes. If no logical color coding scheme exists, color coding indicated above shall be followed.

3.5 INSTALLATION

- A. Route wire and cable to meet project conditions.
- B. Conductors shall not be installed at temperatures below manufacturer's minimum installation temperature.

- C. Neatly train and lace wiring inside boxes, equipment, and panelboards.
- D. Identify and color code wire and cable under provisions of Section 26 05 53 – Electrical Identification.
- E. Identify each conductor with its panel and circuit number or other designation indicated.
- F. Special Techniques - Building Wire in Raceway:
 - 1. Pull conductors into raceway at same time.
 - 2. Install building wire 4 AWG and larger with pulling equipment.
- G. Special Techniques - Wiring Connections:
 - 1. Clean conductor surfaces before installing lugs and connectors.
 - 2. Make splices, taps, and terminations to carry full ampacity of conductors with no perceptible temperature rise.
 - 3. Tape uninsulated conductors and connectors with electrical tape to 150 percent of insulation rating of conductor.
 - 4. Install solderless pressure connectors with insulating covers for copper conductor splices and taps, 8 AWG and smaller.
 - 5. Install insulated spring wire connectors with plastic caps for copper conductor splices and taps, 10 AWG and smaller.
 - 6. When 10 AWG and smaller stranded conductors are used install crimp on fork terminals for device terminations. Do not place bare stranded conductors directly under screws.

3.6 BRANCH CIRCUIT CONDUCTORS

- A. Install branch circuits and switched circuits as required to comply with circuiting, switching, and control functions shown on drawings.
- B. Conductors shall be size 12 AWG minimum, unless otherwise noted, for branch circuit wiring, including motor circuits.
- C. Size 120V branch circuits for length of run on following basis:
 - 1. 0 to 75 ft. run from panelboard to first outlet: No. 12 AWG minimum.
 - 2. 75 to 125 ft. run: increase one wire size, No. 12 AWG becomes No. 10 AWG.
 - 3. 126 to 200 ft run: increase two wire sizes, No. 12 AWG becomes No. 8 AWG.
 - 4. 201 and above: wiring to be sized for 3 percent maximum voltage drop.
- D. Provide individual neutral conductors for all branch circuit phase conductors. Multi-wire branch circuits sharing a common neutral will not be allowed.
- E. Route branch circuits and switch legs as dictated by construction, these specifications, or instruction from Engineer.
- F. Size conduit, outlet boxes, and other raceway system components in accordance with NEC requirements as minimum.
- G. Circuit numbers as shown on drawings are for Contractor to plan their wiring and for estimating purposes and are not necessarily exact circuit numbers to be used in specific panel for particular load.

- H. Exact circuit numbers for each load are to be selected by Contractor at their option.
- I. Balanced load on panelboard bus will be determining factor in arrangement of circuits. Panelboards average load shall not differ from phase to phase by plus or minus 7.5 percent.
- J. Motor and equipment branch wiring.
 - 1. Furnish and install motor circuits in accordance with schedules on drawings and code requirements, from source of supply to associated motor starter, and from starter to motor terminal box, including necessary and required intermediate connections.
 - 2. Conductor and conduit size for motor branch circuits, if shown on drawings, are sized for motor requirement only.
 - 3. Control wiring is not included in conduit sizes shown on drawings.
 - 4. Motors shall have proper conductor sizes as per NEC requirements and nameplate ratings.
 - 5. Contractor shall be responsible for verification of ratings of motors and installing proper branch circuits.
 - 6. Obtain manufacturer's wiring diagrams and shop drawings for equipment requiring electrical connections.
 - 7. Check drawings and specifications of other divisions of work for equipment and work, which shall be included in order to provide a complete electrical installation.
 - 8. Motor connections shall be made by compression type connectors using proper tools and fittings to assure good electrical continuity and low resistance joint.

3.7 FEEDER INSTALLATION

- A. Install in accordance with manufacturer's written instructions, and in accordance with recognized industry practices.
- B. Extend feeders at full capacity from origin to termination.
- C. Feeder conduits shall contain only those conductors constituting a single feeder circuit.
- D. Where feeder conductors are run in parallel, conductors shall be of same length, same material, circular-mil area, insulation type, and terminated in same manner.
- E. Where parallel feeder conductors run in separate raceways, each raceway shall have same physical characteristics.
- F. Feeders shall follow most accessible routes, concealed in construction in finished areas, exposed to minimum temperature gradient and to minimum temperature fluctuation.
- G. Confine feeders to insulated portions of building, unless otherwise specified.
- H. Trapped feeder runs without facilities for continuous drainage are not acceptable.
- I. Feeder conduits shall not be routed in conduit floor slabs or below basement or grade level floor slabs.
- J. Feeder conductors in switchboards, panelboards, pullboxes, gutters, and other open wiring spaces shall be bundled by feeder using plastic tie wraps at intervals not greater than 3 feet on center.

3.8 FIXTURE WIRES

- A. Use conductor with insulation suitable for current, voltage, and temperature to which conductor will be subjected.
- B. Provide minimum No. 12 wire size for conductors supplying power to a single fixture. 600V insulation minimum.
- C. Insulation suitable for operation at 90 degrees C. minimum for lighting fixtures with integral ballast, mogul base sockets, quartz lamps, or otherwise where subject to excessive temperatures.
- D. Fixture wiring shall be continuous wiring system to lampholder or to ballast and from ballast to lampholder.

3.9 IDENTIFICATION AND LABELLING

- A. For materials specified in this section, see specification Section 26 05 53 for identification and labeling requirements.

3.10 FIELD QUALITY CONTROL

- A. Division 01 – General Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.
- C. Perform inspections and tests listed in NETA ATS, Section 7.3.1.

END OF SECTION 260519

This Page Intentionally Left Blank

SECTION 260526 - GROUNDING AND BONDING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Rod electrodes.
 - 2. Wire.
 - 3. Grounding well components.
 - 4. Mechanical connectors.
 - 5. Exothermic connections.

- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.
 - 3. Section 26 05 19 - Building Wire and Cable.

1.2 REFERENCES

- A. Institute of Electrical and Electronics Engineers (IEEE):
 - 1. IEEE 142 - Recommended Practice for Grounding of Industrial and Commercial Power Systems.
 - 2. IEEE 1100 - Recommended Practice for Powering and Grounding Electronic Equipment.

- B. International Electrical Testing Association (NETA): NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

- C. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electrical Code.
 - 2. NFPA 99 - Standard for Health Care Facilities.

1.3 SYSTEM DESCRIPTION

- A. Grounding systems use the following elements as grounding electrodes:
 - 1. Metal underground water pipe.
 - 2. Metal building frame.
 - 3. Concrete-encased electrode.
 - 4. Ground ring.
 - 5. Rod electrode.

1.4 DESIGN REQUIREMENTS

- A. Provide all material, labor and incidentals necessary for the completion of this section of the work.

1.5 PERFORMANCE REQUIREMENTS

- A. Grounding System Resistance: 5 ohms maximum.

1.6 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.
- B. Product Data: Submit data on grounding electrodes and connections.
- C. Test Reports: Indicate overall resistance to ground. Indicate soil conditions when tests were done including when last rain occurred.

1.7 CLOSEOUT SUBMITTALS

- A. Division 01 – General Requirements: Procedures for closeout submittals.
- B. Project Record Documents: Record actual locations of components and grounding electrodes.

1.8 QUALITY ASSURANCE

- A. Provide grounding materials conforming to requirements of NEC, IEEE 142, and UL labeled.
- B. Perform Work in accordance with National Electric Code and state and local code requirements.

1.9 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years' experience.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and protect products under provisions of Division 01 – General Requirements.
- B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- C. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.
- D. Do not deliver items to project before time of installation. Limit shipment of bulk and multiple-use materials to quantities needed for immediate installation.

1.11 COORDINATION

- A. Coordinate complete grounding and bonding of building reinforcing steel prior to concrete placement.

PART 2 - PRODUCTS

2.1 ROD ELECTRODES

- A. Manufacturers:
 - 1. Galvan Industries/Erico Inc.
 - 2. LTV/Copperweld, Inc.
 - 3. Eritech/Erico, Inc.

4. Lyncole XIT Grounding.
5. Harger Lightning and Grounding.

B. Product Description:

1. Material: Copper-clad steel.
2. Diameter: 3/4 inch.
3. Length: 10 feet.

- C. Connector: Connector shall be exothermic welded connection unless otherwise noted. Provide U-bolt clamp in ground test wells and where indicated on drawings.

2.2 WIRE

- A. Material: Stranded copper. Provide tin plated copper where exposed to corrosive environment.
- B. Connection to Electrodes: 2/0 AWG, minimum size.
- C. Grounding Electrode Conductor: Copper conductor, bare.
- D. Bonding Conductor: Copper conductor, bare.

2.3 GROUNDING WELL COMPONENTS

- A. Well Pipe: 8 inches NPS (DN200) by 24 inches long fiberglass pipe with belled end.
- B. Well Cover: Fiberglass with legend "GROUND" embossed on cover.

2.4 MECHANICAL CONNECTORS

A. Manufacturers:

1. Erico, Inc.
2. ILSCO Corporation.
3. O-Z Gedney Co.
4. Thomas & Betts, Electrical.
5. Burndy Electric.

- B. Description: Bronze connectors, suitable for grounding and bonding applications, in configurations required for particular installation.

- C. Ground clamp fittings shall be interlocking clamp type, fabricated from high strength corrosion resistant metal with high strength silicon bronze u-bolts, nuts, locks, and lock washers.

2.5 EXOTHERMIC CONNECTIONS

A. Manufacturers:

1. Thermoweld.
2. Cadweld, Erico, Inc.
3. Harger Lightning Protection.
4. Exothermic Welding Co.
5. Thomas & Betts, Electrical.

- B. Product Description: Exothermic materials, accessories, and tools for preparing and making permanent field connections between grounding system components.

2.6 GROUND BUSSES

- A. Copper only.
- B. Cross section shall be 1/4-inch x 2 inches, lengths as shown on drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify of existing conditions before starting work.
- B. Verify final backfill and compaction has been completed before driving rod electrodes.

3.2 PREPARATION

- A. Remove paint, rust, mill oils, and other surface contaminants at connection points.

3.3 EXISTING WORK

- A. Modify existing grounding system to maintain continuity to accommodate renovations.
- B. Extend existing grounding system using materials and methods as specified.

3.4 INSTALLATION

- A. Install in accordance with IEEE 142.
- B. Install rod electrodes near location of electric service entrance unless otherwise shown on drawings. Install additional rod electrodes, if required, to achieve specified resistance to ground.
- C. Install interconnecting wire 2 feet below finish grade.
- D. Install grounding and bonding conductors concealed from view.
- E. Install grounding well pipe with cover at rod locations as indicated on Drawings. Install well pipe top flush with finished grade.
- F. Bond together metal siding not attached to grounded structure; bond to ground.
- G. Bond together reinforcing steel and metal accessories in pool and fountain structures.
- H. Install ground grid under access floors as indicated on Drawings. Construct grid of 4 AWG bare copper wire installed on 24-inch centers both ways. Bond each access floor pedestal to grid.
- I. Bond together each metallic raceway, pipe, duct and other metal object entering space under access floors. Bond to underfloor ground grid. Install 2 AWG bare copper bonding conductor.

- J. Bond to lightning protection system. Refer to Division 26.
- K. Install continuous grounding using underground cold-water system, driven ground rods, and building steel as grounding electrode.
- L. Ground electrical systems and equipment as required by code, utility, local ordinances, and to requirements herein.
- M. Install separate code rated grounding conductors to special equipment and activity areas as required by code.
- N. Bond all metallic piping systems and service equipment as required by NEC.
- O. Permanently attach grounding conductors prior to energizing equipment.
- P. Drive ground rods to a depth 4-inches below finished grade.
- Q. Grounding electrode conductor shall be continuous without splice from nearest building grounding electrode. Ground to service equipment. Install bonding jumper around water meter. Attach non-ferrous metal tag to warn against removal. Make connections to ground electrodes with approved molded exothermic weld process.

3.5 EQUIPMENT GROUND

- A. Bond metallic conduits, supports, cabinets, and other equipment so ground will be electrically continuous from service to outlet boxes.
- B. Permanently ground entire light and power system in accordance with NEC, including service equipment, distribution panels, lighting panelboards, switch and starter enclosures, motor frames, grounding type receptacles, and other exposed non-current carrying metal parts of electrical equipment.
- C. Accomplish grounding of electrical system by using insulated grounding conductor installed with feeders and branch circuit conductors in conduits.
- D. Size grounding conductors in accordance with NEC.
- E. Install from grounding bus of serving panel to ground bus of served panel, grounding screw of receptacles, lighting fixture housing, light switch outlet boxes or metal enclosures of service equipment.
- F. Install grounding conductor in nonmetallic and flexible conduit to complete equipment ground continuity.
- G. Ground wire shall be bonded at equipment and at first junction box of conduit system on line side of flexible conduit to the system.
- H. Install grounding conductors to permit shortest and most direct path from equipment to ground.
- I. When grounding conductor runs through metallic conduit, bond to conduit at entrance and exit with a bolted clamp.

- J. Ground neutral at service only.
- K. Install a separate equipment grounding conductor in each conduit containing feeder conductors.
- L. Install a green equipment grounding conductor in all conduits serving branch circuits.
- M. Green ground bar in panels, where required to be similar to neutral bar, except tinted green and bonded to panel tub.
- N. Connections shall be accessible for inspection and checking.
- O. No insulation shall be installed over ground connections.
- P. Ground connection surfaces shall be cleaned, and all connections shall be made so that it is impossible to move them.
- Q. Attach grounds permanently before permanent building service is energized.
- R. Ground metal lighting poles. Install a ground lug on inside wall of pole directly across from handhole.
- S. Install grounding and bonding in patient care areas to meet requirements of NFPA 99.
- T. Ground Busses:
 - 1. Mount to walls with insulated standoffs.
 - 2. At splice points, splice bus shall overlap busses being spliced with a dimension twice the width of the buss being spliced. Splice bus shall be connected to each bus with a minimum of two splice bolts.
 - 3. Bus splice bolts shall utilize Bellevue washers.

3.6 FIELD QUALITY CONTROL

- A. Division 01 – General Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.
- C. Grounding and Bonding: Perform inspections and tests listed in NETA ATS, Section 7.13. Make final grounding system measurements two days after latest rainfall.
- D. Perform ground resistance testing in accordance with IEEE 142. Contractor shall make ground resistance measurements. Measure in normally dry conditions, not less than 48 hours after rainfall.
- E. Perform leakage current tests in accordance with NFPA 99.
- F. Perform continuity testing in accordance with IEEE 142.
- G. When improper grounding is found on receptacles, check receptacles in entire project and correct. Perform retest.

END OF SECTION 260526

SECTION 260529 - ELECTRICAL HANGERS AND SUPPORTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Conduit supports.
2. Formed steel channel.
3. Spring steel clips.
4. Sleeves.
5. Mechanical sleeve seals.
6. Equipment bases and supports.

B. Related Sections

1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
2. Section 03 31 00 – Structural Concrete: Product requirements for concrete for placement by this section.
3. Section 26 00 00 – Basic Electrical Requirements.

1.2 REFERENCES

A. ASTM International (American Society for Testing and Materials):

2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.
3. UL 1479 - Fire Tests of Through-Penetration Firestops.
4. UL - Fire Resistance Directory.

G. Intertek Testing Services (Warnock Hersey Listed) (WH):

1. WH - Certification Listings.

1.3 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.
- B. Shop Drawings: Indicate system layout with location and detail of trapeze hangers.
- C. Product Data:
 - 1. Hangers and Supports: Submit manufacturers catalog data including load capacity.
- D. Design Data: Indicate load-carrying capacity of trapeze hangers and hangers and supports.
- E. Manufacturer's Installation Instructions:
 - 1. Hangers and Supports: Submit special procedures and assembly of components.
- F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with State and Municipality standards.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five years documented experience.
- B. Installer: Company specializing in performing work of this section with minimum five years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and protect products under provisions of Section 26 00 00 – Basic Electrical Requirements.
- B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- C. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Section 26 00 00 – Basic Electrical Requirements: Environmental conditions affecting products on site.

PART 2 - PRODUCTS

2.1 CONDUIT SUPPORTS

- A. Hanger Rods: Threaded high tensile strength galvanized carbon steel with free running threads.
- B. Beam Clamps: Malleable Iron, with tapered hole in base and back to accept either bolt or hanger rod. Set screw: hardened steel.

- C. Conduit clamps for trapeze hangers: Galvanized steel, notched to fit trapeze with single bolt to tighten.
- D. Conduit clamps - General Purpose: One-hole malleable iron for surface mounted conduits.
- E. Cable Ties: High strength nylon temperature rated to 185 degrees F. Self-locking.

2.2 FORMED STEEL CHANNEL

- A. Product Description: Galvanized 12 gage thick steel. With holes 1-1/2 inches on center.

2.3 SPRING STEEL CLIPS

- A. Product Description: Mounting hole and screw closure.

2.4 SLEEVES

- A. Sleeves for Through Non-fire Rated Floors: 18 gage thick galvanized steel.
- B. Sleeves for Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 gage thick galvanized steel.
- C. Sleeves for Through Fire Rated and Fire Resistive Floors and Walls, and Fire Proofing: Prefabricated fire rated sleeves including seals, UL listed.
- D. Fire-stopping Insulation: Glass fiber type, non-combustible.

2.5 MECHANICAL SLEEVE SEALS

- A. Manufacturers:
 - 1. Link-Seal, Inc.
 - 2. NMP Corporation.
 - 3. Equivalent as acceptable to Engineer.
- B. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.6 PENETRATIONS OF NON-RATED CONSTRUCTION

- A. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where conduit is exposed.
- B. For exterior wall openings below grade, furnish modular mechanical type seal consisting of interlocking synthetic rubber links shaped to continuously fill annular space between conduit and cored opening or water-stop type wall sleeve.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify existing conditions before starting work.
- B. Verify openings are ready to receive sleeves.

3.2 PREPARATION

- A. Obtain permission from Architect/Engineer before using powder-actuated anchors.
- B. Do not drill or cut structural members.
- C. Obtain permission from Architect/Engineer before drilling or cutting structural members.
- D. Install hangers, supports, and anchors only after structural work, where work is to be installed, has been completed. Correct inadequacies such as proper placement of inserts, anchors, and other building structural attachments.
- E. Examine areas and conditions under which equipment and associated components are to be installed and notify Architect, in writing, of conditions detrimental to proper and timely completion of work. Do not proceed with work until unsatisfactory conditions have been corrected.

3.3 INSTALLATION - HANGERS AND SUPPORTS

- A. Anchors and Fasteners:
 - 1. Concrete Structural Elements: Provide precast inserts, expansion anchors, powder actuated anchors and preset inserts.
 - 2. Steel Structural Elements: Provide beam clamps, spring steel clips, steel ramset fasteners, and welded fasteners.
 - 3. Concrete Surfaces: Provide self-drilling anchors and expansion anchors.
 - 4. Hollow Masonry, Plaster, and Gypsum Board Partitions: Provide toggle bolts and hollow wall fasteners.
 - 5. Solid Masonry Walls: Provide expansion anchors and preset inserts.
 - 6. Sheet Metal: Provide sheet metal screws.
 - 7. Wood Elements: Provide wood screws.
 - 8. Install anchors at proper locations to prevent stresses from exceeding those permitted by ANSI B31 and to prevent the transfer of loading and stresses to connected equipment.
 - 9. Installation methods shall be in conformity with the manufacturer's recommendations for maximum holding power, but in no case shall the depth of hole be less than four bolt diameters. Minimum distance between the center of any expansion anchor and an edge of exterior corner of concrete shall be not less than 4-1/2 times the diameter of the hole in which it is installed.
- B. Inserts:
 - 1. Install inserts for placement in concrete forms.
 - 2. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
 - 3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over 4 inches.

4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
 5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut [above] [flush with top of] [recessed into and grouted flush with] slab.
- C. Install conduit and raceway support and spacing in accordance with NEC.
- D. Do not fasten supports to pipes, ducts, mechanical equipment, or conduit.
- E. Install multiple conduit runs on common hangers.
- F. Supports:
1. Fabricate supports from structural steel or formed steel channel. Install hexagon head bolts to present neat appearance with adequate strength and rigidity. Install spring lock washers under nuts.
 2. Install surface mounted cabinets and panelboards with minimum of four anchors.
 3. In wet and damp locations install steel channel supports to stand cabinets and panelboards 1 inch (25 mm) off wall.
 4. Support vertical conduit at every floor.

3.4 LIGHTING FIXTURE SUPPORT

- A. Items including (but not limited to) stems, hickies, bar hangers, and clips required to securely attach fixtures to ceilings or walls.
- B. Studs and uni-strut support for fixture outlet and ceiling support.
- C. Fixture grid hangers for mounting surface fluorescent units to exposed grid ceiling.
- D. Drilled expansion insert type anchors rated for load and application requirements including (but not limited to) sleeve anchors, lag shields, and plastic anchors.
- E. Provide auxiliary supports so that fixtures can be drawn up tightly, cannot be tilted or rotated, and will not be affected by vibrations.

3.5 SUPPORT OF CONDUIT

- A. Fasten conduit to structural parts of building in a manner acceptable to Engineer.
- B. Do not use perforated hanger iron.
- C. Install concrete insert channel as required, with spacings as recommended by manufacturer. Install with anchor and caps, insert joiner clips and closer seals as required.
- D. Support conduit as follows:
 1. Single conduit runs vertical surfaces: Galvanized, heavy duty, sheet steel straps; back straps to be provided for all exposed conduit and conduit on exterior walls.
 2. Single conduit runs horizontal surfaces: Galvanized, heavy duty, one-hole malleable iron or 2-hole steel pipe straps.
 3. Multiple conduit runs vertical surfaces: Horizontal or vertical rack channel with conduit straps as required.

4. Multiple conduit runs horizontal surfaces: Single or double rack channel trapeze, complete with conduit straps as required; all supported with threaded hanger rods.
5. Conduit runs through roof: Conduit extending through roof shall pass through a ceiling box at roof lines. Provide 14-gauge minimum copper box complete with watertight soldered seams and flanged to serve as pitch pocket for each conduit. Conduit and pitch pocket shall be installed in advance of roofing work.
6. Vertical Cable Support. Conductors in vertical raceways shall be supported using cable supports. Locate supports so that each 25 feet length of conductor in a vertical raceway is supported.

3.6 INSTALLATION – NON-RATED CONSTRUCTION

- A. Seal opening through non-fire rated wall, partition, floor, ceiling, and roof opening with material matching surface penetrated.
- B. Interior partitions: Seal penetrations at telecommunication rooms and data rooms. Apply sealant to both sides of penetration to completely fill space between surface and conduit.

3.7 INSTALLATION - EQUIPMENT BASES AND SUPPORTS

- A. Provide housekeeping pads of concrete, minimum 3-1/2 inches thick and extending 6 inches beyond supported equipment. Refer to Section 03 31 00 – Structural Concrete.
- B. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.
- C. Construct supports of steel members formed steel channel. Brace and fasten with flanges bolted to structure.

3.8 INSTALLATION - SLEEVES

- A. Exterior watertight entries: Seal with adjustable interlocking rubber links.
- B. Conduit penetrations not required to be watertight: Sleeve and fill with silicon foam.
- C. Set sleeves in position in forms. Provide reinforcing around sleeves.
- D. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.
- E. Extend sleeves through floors one (1) inch above finished floor level. Caulk sleeves.
- F. Where conduit or raceway penetrates floor, ceiling, or wall, close off space between conduit or raceway and adjacent work with [stuffing] [fire stopping] insulation and caulk [airtight]. Provide close fitting metal collar or escutcheon covers at both sides of penetration.
- G. Install chrome plated steel plastic stainless steel escutcheons at finished surfaces.

3.9 FIELD QUALITY CONTROL

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.

3.10 CLEANING

- A. Provide under provisions of Section 26 00 00 – Basic Electrical Requirements.

3.11 PROTECTION OF FINISHED WORK

- A. Provide under provisions of Section 26 00 00 – Basic Electrical Requirements.
- B. Protect adjacent surfaces from damage by material installation.

END OF SECTION 260529

This page intentionally left blank

SECTION 260533 - RACEWAY AND BOXES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Conduit.
2. Tubing.
3. Raceways.
4. Wireways.
5. Outlet Boxes.
6. Pull Boxes.
7. Junction Boxes.
8. Handholes.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
2. Section 26 00 00 - Basic Electrical Requirements.
3. Section 26 05 34 - Floor Boxes.
4. Section 26 05 36 - Cable Trays.
5. Section 26 05 53 - Electrical Identification.
6. Section 26 27 23 - Indoor Service Poles.
7. Section 33 71 19 - Underground Ducts and Manholes.

1.2 REFERENCES

A. American National Standards Institute (ANSI):

1. ANSI C80.1 - Rigid Steel Conduit, Zinc Coated.
2. ANSI C80.3 - Specification for Electrical Metallic Tubing, Zinc Coated.
3. ANSI C80.5 - Aluminum Rigid Conduit - (ARC).

B. National Electrical Manufacturers Association (NEMA):

1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
2. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.
3. NEMA OS 1 - Sheet Steel Outlet Boxes, Device Boxes, Covers, and Box Supports.
4. NEMA OS 2 - Nonmetallic Outlet Boxes, Device Boxes, Covers, and Box Supports.
5. NEMA RN 1 - Polyvinyl Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit.
6. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Tubing and Conduit.
7. NEMA TC 3 - PVC Fittings for Use with Rigid PVC Conduit and Tubing.

1.3 SUBMITTALS

A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.

B. Product Data: Submit for product data following:

1. Flexible metal conduit.

2. Liquid-tight flexible metal conduit.
3. Nonmetallic conduit.
4. Flexible nonmetallic conduit.
5. Nonmetallic tubing.
6. Raceway fittings.
7. Conduit bodies.
8. Surface raceway.
9. Wireway.
10. Pull and junction boxes.
11. Handholes.

C. Manufacturer's Installation Instructions: Submit application conditions and limitations of use stipulated by Product testing agency specified under Regulatory Requirements.

D. Include manufacturers' instructions for storage, handling, protection, examination, preparation, and installation of Product.

1.4 CLOSEOUT SUBMITTALS

A. Section 26 00 00 – Basic Electrical Requirements: Procedures for closeout submittals.

B. Project Record Documents:

1. Record actual routing of conduits larger than 2-inch trade size (DN50).
2. Record actual locations and mounting heights of outlet, pull, and junction boxes.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store and protect products under provisions of Section 26 00 00 – Basic Electrical Requirements.

B. Protect conduit from corrosion and entrance of debris by storing above grade. Provide appropriate covering.

C. Protect PVC conduit from sunlight.

1.6 COORDINATION

A. Coordinate mounting heights, orientation and locations of outlets mounted above counters, benches, and backsplashes.

PART 2 - PRODUCTS

2.1 DESIGN REQUIREMENTS

A. Minimum Raceway Size: 1/2 3/4 inch unless otherwise specified.

2.2 METAL CONDUIT

A. Rigid Steel Conduit: ANSI C80.1.

B. Intermediate Metal Conduit (IMC) or Rigid Metal Conduit (RMC).

- C. Fittings and Conduit Bodies: NEMA FB 1; Fittings for metal raceways shall be steel or malleable iron and shall be zinc galvanized, or cadmium plated. Do not use aluminum or die cast fittings. Threaded and liquid tight.
- D. Box connector bushings shall have insulated throats. Integral grounding lugs shall be provided where required by code, where detailed on the Drawings, or required elsewhere in these specifications.

2.3 PVC COATED METAL CONDUIT

- A. Product Description: NEMA RN 1; rigid steel conduit with external PVC coating, 40 mil thick.
- B. Fittings and Conduit Bodies: NEMA FB 1; steel fittings with external PVC coating to match conduit, PVC gasketed for mating surfaces

2.4 FLEXIBLE METAL CONDUIT (FMC)

- A. Product Description: Interlocked steel construction.
- B. Fittings: NEMA FB 1. Threaded, grounding type, insulated throat, two screw clamp type with locknuts, externally secured.
- C. Minimum size 1/2-inch with the exception that 3/8-inch diameter may be used in lengths not to exceed 6 foot, to serve individual lighting fixtures installed in a suspended accessible ceiling system.

2.5 LIQUIDTIGHT FLEXIBLE METAL CONDUIT (LFMC)

- A. Product Description: Interlocked steel construction with PVC sunlight resistant jacket.
- B. Fittings: NEMA FB 1. Liquid tight, suitable for grounding, suitable for wet locations, tapered threaded hub, non-metallic materials.

2.6 ELECTRICAL METALLIC TUBING (EMT)

- A. Product Description: ANSI C80.3; galvanized tubing.
- B. Fittings and Conduit Bodies: NEMA FB 1; steel or malleable iron, compression, threaded, insulated throat, gland compression type, rain and concrete tight type.
- C. Box connector bushings shall have insulated throats. Integral grounding lugs shall be provided where required by code, where detailed on the Drawings, or required elsewhere in these specifications.

2.7 NONMETALLIC CONDUIT

- A. Product Description: NEMA TC 2; Schedule 40 or 80 PVC, UL listed, and as required by NEC. Sunlight resistant.
- B. Rated for 90 degrees C. cable.
- C. Fittings and Conduit Bodies: NEMA TC 3, schedule 40 or 80, to match conduit.

- D. Expansion fittings. PVC material, Carlon series E945 or equivalent.
- E. Expansion straps. PVC material, Carlon series E978 or equivalent.

2.8 MULTI-CELL RIGID CONDUIT AND FITTINGS

- A. Outer duct shall be HW PVC or Rigid Metal Conduit as specified in Section 26 05 33 – Raceway and Boxes.
- B. Three cell schedule 40 factory installed inner ducts within 4 inches outer duct. Each cell shall have a diameter of approximately 1.50 inches.
- C. Inner ducts shall be PVC or nylon as required by Section 26 05 33 – Raceway and Boxes.
- D. Inner ducts shall be pre-lubricated.
- E. Outer markings to assist contractor in proper installation and alignment.
- F. Internal spacers to keep cells straight throughout the run.
- G. Use manufacturer's transition adapters when connecting HW PVC outer duct sections to GRC outer duct sections.

2.9 EXPANSION FITTINGS

- A. Expansion fittings: Copper bonding jumper, Crouse-Hinds Type XJ.
- B. Expansion/deflection fittings: Copper bonding jumper, Crouse-Hinds Type XD.

2.10 SURFACE METAL RACEWAY

- A. Manufacturers:
 - 1. Carlon Electrical Products.
 - 2. Hubbell Wiring Devices.
 - 3. Thomas & Betts Corp.
 - 4. Walker Systems Inc.
 - 5. The Wiremold Co.
- B. Product Description: Sheet metal channel with fitted cover, suitable for use as surface metal raceway.
- C. Finish: Gray Buff enamel. Stainless steel.
- D. Fittings, Boxes, and Extension Rings: Furnish manufacturer's standard accessories; match finish on raceway.

2.11 SURFACE NONMETAL RACEWAY

- A. Manufacturers:
 - 1. Carlon Electrical Products.
 - 2. Hubbell Wiring Devices.
 - 3. Thomas & Betts Corp.

4. Walker Systems Inc.
5. The Wiremold Co.
6. Panduit.

B. Product Description: Plastic Fiberglass channel with fitted cover, suitable for use as surface raceway.

C. Finish: Gray.

D. Fittings, Boxes, and Extension Rings: Furnish manufacturers' standard accessories, finish to match raceway.

2.12 WIREWAY

A. Product Description: General purpose Oiltight and dust-tight Raintight type wireway.

B. Knockouts: Manufacturer's standard None Bottom only.

C. Size: 4 x 4 inch 6 x 6 inch 8 x 8 inch 12 x 12 inch; length as indicated on Drawings.

D. Cover: Hinged Screw cover with full gaskets.

E. Connector: Slip-in Flanged.

F. Fittings: Lay-in type with removable top, bottom, and side; captive screws drip shield.

G. Finish: Rust inhibiting primer coating with gray enamel finish.

2.13 CONVENTIONAL DEVICE OUTLET BOXES FOR FLUSH DEVICES

A. Sheet Metal Outlet Boxes: NEMA OS 1, galvanized steel.

1. Luminaire and Equipment Supporting Boxes: Rated for weight of equipment supported; furnish 1/2 inch (13 mm) male fixture studs where required.
2. Concrete Ceiling Boxes: Concrete type.

B. Cast Boxes: NEMA FB 1, Type FD, aluminum cast ferrous alloy. Furnish gasketed cover by box manufacturer. Furnish threaded hubs.

C. Wall Plates for Finished Areas: As specified in Section 26 27 26 – Wiring Devices.

D. Wall Plates for Unfinished Areas: Furnish gasketed cover.

2.14 PULL AND JUNCTION BOXES

A. Outlet Boxes:

1. Interior Wall Outlet Boxes – Flush Mounted: Stamped steel, four-inch square, 2-1/8 inch deep minimum, with square corners. Provide with raised device rings, height to match wall finish thickness. Mounting accessories. Larger width boxes shall be provided for ganging requirements indicated on drawings.
2. Interior Wall Outlet Boxes – Surface Mounted – Dry Location: Stamped steel, four-inch square, 2-1/8 inch deep, with round corners. Provide rounded corner raised box covers with

openings for devices being installed. Refer to Section 260000 for restrictions on exposed conduit systems.

3. Interior Wall Outlet Boxes – Surface Mounted – Damp or Wet Location: Cast malleable iron with threaded conduit hubs. Two inches deep minimum. Internal mounting ears. Boxes shall be coated with electroplated zinc, a dichromate coating, and an aluminum polymer enamel finish. Refer to Section 260000 for restrictions on exposed conduit systems.
4. Exterior Wall Outlet Boxes – Surface Mounted: Cast malleable iron with threaded conduit hubs. Two inches deep minimum. Internal mounting ears. Boxes shall be coated with electroplated zinc, a dichromate coating, and an aluminum polymer enamel finish. Refer to Section 260000 for restrictions on exposed conduit systems.
5. Ceiling Boxes – Flush Mounted – for Surface and Pendant Light Fixtures: Dropped ceiling construction. Stamped steel four-inch octagon box set flush with finished surface, with 3/8-inch fixture stud.
6. Cast in place concrete construction. Stamped steel four inch octagonal, galvanized concrete boxes having a minimum depth of 3 inches, with 3/8-inch fixture stud.
7. Electrical Boxes in Corrosive Locations: PVC coated cast steel boxes compatible with conduit system installed. Coating shall cover both interior and exterior surfaces. See floor plans for identification of corrosive areas.

B. Sheet Metal Boxes: NEMA OS 1, galvanized steel.

C. Hinged Enclosures: As specified in Section 26 27 16 – Cabinets and Enclosures.

D. Surface Mounted Cast Metal Box: NEMA 250, Type 4 4X6; flat-flanged, surface mounted junction box;

1. Material: Galvanized cast iron Cast aluminum.
2. Cover: Furnish with ground flange, neoprene gasket, and stainless-steel cover screws.

E. In-Ground Cast Metal Box: NEMA 250, Type 6, outside inside flanged, recessed cover box for flush mounting;

1. Material: Galvanized cast iron Cast aluminum.
2. Cover: Smooth Nonskid cover with neoprene gasket and stainless-steel cover screws.
3. Cover Legend: "ELECTRIC".

F. Polymer concrete composite Handholes: Die-molded, polymer concrete composite hand holes:

1. Cable Entrance: Pre-cut 6-inch x 6-inch cable entrance at center bottom of each side.
2. Cover: polymer concrete composite, weatherproof cover with nonskid finish. Secure cover with stainless steel hex bolts.

2.15 RECESSED COMBINATION FLAT PANEL TV / POWER OUTLET BOXES

A. Steel boxes, flush mounted with recessed faceplates.

B. TV jack and power outlet recessed so that plugs do not protrude from wall finish.

C. Acceptable Manufacturer: Hubbell.

2.16 SEALS

A. Link seal type as manufactured by Thunderline Corporation or equivalent as acceptable to Engineer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify outlet locations and routing and termination locations of raceway prior to rough-in.

3.2 EXISTING WORK

- A. Remove exposed abandoned raceway, including abandoned raceway above accessible ceiling finishes. Cut raceway flush with walls and floors, and patch surfaces.
- B. Remove concealed abandoned raceway to its source.
- C. Disconnect abandoned outlets and remove devices. Remove abandoned outlets when raceway is abandoned and removed. Install blank cover for abandoned outlets not removed.
- D. Maintain access to existing boxes and other installations remaining active and requiring access. Modify installation or provide access panel.
- E. Extend existing raceway and box installations using materials and methods compatible with existing electrical installations, or as specified.
- F. Clean and repair existing raceway and boxes to remain or to be reinstalled.
- G. Cutting and Patching:
 - 1. Provisions for openings, holes, and clearances through walls, floors, ceilings, and partitions shall be made in advance of construction.
 - 2. Provide cutting and patching as necessary for installation of electrical systems, subject to approval of Owner.
 - 3. Contractor shall secure the approval of Owner for all anticipated floor sleeves for installation of electrical conduits in existing buildings, prior to starting any such work.
 - 4. Contractor shall locate embedded conduits before core drilling in existing floors. Ground detector systems will be acceptable.
 - 5. Patching of holes and openings resulting from work of this branch shall be responsibility of this Contractor. All painting of patched surfaces shall match existing paint color.
- H. Concealment:
 - 1. Unless specifically noted otherwise, conduits shall be routed concealed in finished spaces and shall not be visible at any point within the finished space or from the building's exterior. This requirement also applies to new conduits installed in existing construction.
 - 2. Exposed raceway may be used on remodeling projects only where physically impossible to route concealed in existing construction. In such cases where exposed conduit is allowed, it shall be equivalent to Wiremold 500 or 700 series as dictated by wiring quantities. In each case, specific raceway type and routing shall be submitted to Architect for approval. Where allowed, general installation requirements are as follows:
 - a. Raceways shall be routed horizontally along corners of walls and ceilings, above edges of base molding at floors, or along tops of window and door frames.
 - b. Raceways shall be routed vertically along corners of adjacent walls and along edges of window and door frames.
 - c. Raceways shall not be routed down or across open wall surfaces except in portions of runs not exceeding 12 inches in length.

- d. Raceways shall be painted to match wall finishes. EC is responsible for painting of raceways.
- e. Fittings and boxes used with raceways shall be specifically designed and approved for use with raceways.
3. At Contractor's option, conduits may be installed concealed below basement floor slabs or below slabs on grade.
4. Conduits may be routed exposed in mechanical equipment rooms and utility rooms.

3.3 RESTRICTIONS

- A. Split, crushed, or scarred conduit is not acceptable.
- B. Welded conduit is not acceptable.
- C. Do not route conduit over boiler, under boiler or in slabs below boiler, incinerator, or other high temperature equipment.
- D. PVC conduit may not be used in the interior of building except at following locations.
 1. PVC conduit may be used for grounding conductors.
 2. Greenhouses.
 3. Pool Equipment Rooms.

3.4 SYSTEM DESCRIPTION

- A. Raceway and boxes located as indicated on Drawings, and at other locations required for splices, taps, wire pulling, equipment connections, and compliance with regulatory requirements.
- B. Raceway and boxes are shown in approximate locations unless dimensioned. Provide raceway to complete wiring system.
- C. Underground More than 5 feet outside Foundation Wall: Provide schedule 40 nonmetallic conduit, unless otherwise noted on drawings.
- D. Provide cast metal boxes in pavement or sidewalks and nonmetallic handhole in grass areas, unless otherwise noted.
- E. Underground Within 5 feet from Foundation Wall: Provide rigid steel conduit.
- F. In or Under Slab on Grade: Provide schedule 40 nonmetallic conduit. Provide RMC elbows where conduits exit slab and are exposed to view.
- G. Outdoor Locations, Above Grade: Provide rigid steel conduit, unless otherwise noted. Provide cast metal outlet, pull, and junction boxes.
- H. In Slab Above Grade: Feeder conduit shall not be installed in slab. Provide schedule 40 nonmetallic conduit with EMT elbow so any conduit above slab shall be metallic.
- I. Wet and Damp Locations: Provide rigid steel conduit. Provide cast metal junction and pull boxes. Provide flush mounting outlet box in finished areas.

- J. Concealed Dry Locations: Provide rigid steel, intermediate metal conduit or electrical metallic tubing. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.
- K. Exposed Dry Locations: Provide rigid steel, intermediate metal conduit or electrical metallic tubing, unless otherwise noted. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.
- L. Hazardous Locations: Provide Rigid Metal Conduit.
- M. Conduits embedded in concrete lighting fixture pole bases shall be Rigid Metal Conduit.
- N. Provide separate conduit system for each of the following systems:
 - 1. 208-volt normal power wiring systems.
 - 2. 208-volt code required emergency power wiring systems (load side of transfer switch ____).
 - 3. 208-volt legally required and optional emergency power wiring systems (load side of transfer switch ____).
 - 4. 480-volt normal power wiring systems.
 - 5. 480-volt code required emergency power wiring systems (load side of transfer switch ____).
 - 6. 480 volt legally required and optional emergency power wiring systems (load side of transfer switch).
 - 7. Medium voltage wiring systems.
 - 8. Low voltage lighting control systems.
 - 9. Lightning Protection Systems.
 - 10. Fire alarm systems.
 - 11. Halon 1301 fire suppression systems.
 - 12. Area of rescue assistance call systems.
 - 13. Closed circuit television (CCTV) systems.
 - 14. Electronic Card Key Access System.
 - 15. Clock Systems.
 - 16. Voice/data communications raceway systems.
 - 17. Master antenna television (MATV) systems.
 - 18. Intercom, paging or sound system.
 - 19. Nurse call systems.

3.5 INSTALLATION

- A. Install Work in accordance with State and Municipality standards.
- B. All conduits containing service entrance conductors shall be rigid metal conduits.
- C. Ground and bond raceway and boxes in accordance with Section 26 05 26 – Grounding and Bonding.
- D. Fasten raceway and box supports to structure and finishes in accordance with Section 26 05 29 – Electrical Hangers and Supports.
- E. Identify raceway and boxes in accordance with Section 26 05 53 – Electrical Identification.
- F. Arrange raceway and boxes to maintain headroom and present neat appearance.

3.6 INSTALLATION - RACEWAY

- A. Raceway routing is shown in approximate locations unless dimensioned. Route to complete wiring system.
- B. Arrange raceway supports to prevent misalignment during wiring installation.
- C. Support raceway using coated steel or malleable iron straps, lay-in adjustable hangers, clevis hangers, and split hangers.
- D. Group related raceway; support using conduit rack. Construct rack using steel channel specified in Section 26 05 29 – Electrical Hangers and Supports; provide space on each for 25 percent additional raceways.
- E. Secure conduits in place with malleable corrosion-proof alloy straps or hangers. Conduit straps used in corrosive areas shall be PVC coated.
- F. Do not support raceway with wire or perforated pipe straps. Remove wire used for temporary supports.
- G. Do not attach raceway to ceiling support wires or other piping systems.
- H. Construct wireway supports from steel channel specified in Section 26 05 29 – Electrical Hangers and Supports.
- I. Route exposed raceway parallel and perpendicular to walls and structural members.
- J. Route raceway installed above accessible ceilings parallel and perpendicular to walls and structural members.
- K. Conduits under slab may be routed from point-to-point.
- L. Conduits routed within concrete construction such as poured walls, floor slabs, topping slabs, shall comply with following requirements.
 - 1. Conduits shall be parallel to each other, spaced on center to center distance of at least three times conduit trade diameter, and provided with a minimum of 2 inches of concrete.
 - 2. Contractor shall note that precast planks below topping slabs may camber. Topping slab thickness will be less at high point of camber.
 - 3. Conduits larger than 1-1/4 inch inside diameter shall not be installed in floor slabs. Conduits over 3/4-inch ID shall not be installed in topping slabs.
 - 4. Conduits embedded in a structural frame slab shall comply with applicable provisions of American Concrete Institute (ACI), Standard 318. Refer to structural drawings for locations of structural frames.
 - 5. Conduits used for feeders shall not be embedded in concrete floor slabs or concrete topping slabs.
 - 6. Conduits in poured concrete construction shall not cross other conduits or other piping.
 - 7. Unless specifically indicated on electrical drawings, conduits installed in poured concrete construction shall be approved by Structural Engineer prior to conduit installation.
 - 8. Contractor will be required to submit drawings showing conduit sizes and routings to Structural Engineer for their review. Approval may not be given prior to bidding. Contractors who base their bid on assumption that conduits will be allowed in concrete

- construction do so at their own risk. No changes will be made to contract if, during construction, Structural Engineer prohibits installation of conduit in concrete construction.
9. In areas constructed of precast concrete conduits may be run in cores of planks.
- M. Maintain clearance between raceway and piping for maintenance purposes.
- N. Maintain 12-inch clearance between raceway and surfaces with temperatures exceeding 104 degrees F. Do not route conduit over boiler, incinerator, or other high temperature equipment.
- O. Where conduits must cross or follow the same path as water, steam or other fluid piping, run electrical conduits above such piping wherever possible.
- P. Cut conduit square using saw or pipe cutter; de-burr cut ends.
- Q. Bring conduit to shoulder of fittings; fasten securely.
- R. Join nonmetallic conduit using cement as recommended by manufacturer. Wipe nonmetallic conduit dry and clean before joining. Apply full even coat of cement to entire area inserted in fitting. Allow joint to cure for minimum 20 minutes.
- S. Install conduit hubs to fasten conduit to cast boxes in damp and wet locations.
- T. Install no more than equivalent of three 90-degree bends between boxes. Install conduit bodies to make sharp changes in direction, as around beams. Install hydraulic one-shot bender to fabricate or factory elbows for bends in metal conduit larger than 2-inch size.
- U. Avoid moisture traps; install junction box with drain fitting at low points in conduit system.
- V. Provide a watertight conduit system where installed in wet locations such as underground, or where embedded in concrete.
- W. Install fittings to accommodate expansion and deflection where raceway crosses seismic, control and expansion joints. Provide fittings with bonding jumper.
- X. Install suitable pull string or cord in each empty raceway except sleeves and nipples.
- Y. Install suitable caps to protect installed conduit against entrance of dirt and moisture.
- Z. Close ends and unused openings in wireway.
- AA. Conduit runs that extend through areas of different temperature or atmospheric conditions or that are partly indoors and partly outdoors shall be sealed, drained, and installed in a manner that will prevent drainage of condensed or entrapped moisture into cabinets, motors, or equipment enclosures. Install bushings with ground lugs and integral plastic linings at equipment with open-bottom conduit entrances.
- BB. Conduit connections at motors, transformers, and other equipment that vibrates.
1. Flexible metal conduit between 18 inches and 36 inches long for conduit connections at equipment that vibrates.
 2. Liquid-tight flexible metal conduit where flexible connections are required and where conduit will be exposed to moisture, dirt, fumes, oil, corrosive atmosphere, etc. Provide

with connectors to assure a liquid-tight, permanently grounded connection. Locate so it is least subject to physical abuse. Corrosive areas are identified on floor plan.

3. Use double locknuts and insulated bushings with threads fully engaged.

CC. Direct buried underground conduit.

1. Exterior underground direct buried conduits shall be buried at a depth of not less than 30 inches below grade.
2. Provide conduits or ducts terminating below grade with means to prevent entry of dirt or moisture.
3. Underground conduits shall slope 1/8 inch per foot for proper drainage. Conduits shall drain toward manholes and junction boxes, not the electrical equipment.

DD. COVERED PARKING STRUCTURE CONDUITS

1. Provide PVC fittings and PVC cement, which are compatible with the conduit being used and the installation temperature.
2. Provide PVC expansion fittings in all exposed PVC conduit runs longer than 36 inches. Provide every 30 feet for runs longer than 30 feet. Expansion fittings shall have 6 inches of travel. Set expansion fittings for installed ambient temperature, half way at 50 degrees F.
3. Provide special PVC expansion straps. Provide two fasteners at each strap. Conduit supports 3 feet on center maximum.
4. Provide cast iron junction boxes to support light fixtures.

3.7 INSTALLATION - SURFACE RACEWAY

- A. Surface Raceway: Install flat-head screws, clips, and straps to fasten raceway channel to surfaces; mount plumb and level. Install insulating bushings and inserts at connections to outlets and corner fittings.
- B. Where exposed raceways and electrical devices are required in existing construction, exposed raceway, fittings and boxes shall be used provided that installation meets following:
 1. Raceways shall be routed horizontally along corner surfaces formed by walls and ceilings, directly above edges of bases at floor, along tops of window mullions and door frames.
 2. Raceways shall be routed vertically along corners formed by adjacent walls and along edges of door frames.
 3. Surface raceways shall not be routed down or across open wall surfaces except in portions of runs not exceeding 12 inches in length.
 4. Surface raceways shall be painted to match wall finishes on which the raceways are routed. If wood backing is required, it shall be continuous and painted to match surrounding surfaces.
 5. If raceways are installed prior to painting, raceways will then be painted as part of painting contract.
 6. Fittings and boxes used with surface metal raceways shall be specifically designed and approved for use with such raceways.

3.8 INSTALLATION - BOXES

- A. Install wall mounted boxes at elevations to accommodate mounting heights as indicated on Drawings.
- B. Adjust box location up to 10 feet prior to rough-in to accommodate intended purpose.

- C. Orient boxes to accommodate wiring devices oriented as specified in Section 26 27 26 – Wiring Devices.
- D. Install pull boxes and junction boxes above accessible ceilings and in unfinished areas only.
- E. In Accessible Ceiling Areas: Install outlet and junction boxes no more than 6 inches from ceiling access panel or from removable recessed luminaire.
- F. Locate flush mounting box in masonry wall to require cutting of masonry unit corner only. Coordinate masonry cutting to achieve neat opening.
- G. Do not install flush mounting box back-to-back in walls; install with minimum 6 inches separation. Install with minimum 24 inches separation in acoustic rated walls.
- H. Secure flush mounting box to interior wall and partition studs. Accurately position to allow for surface finish thickness.
- I. Install stamped steel bridges to fasten flush mounting outlet box between studs.
- J. Install flush mounting box without damaging wall insulation or reducing its effectiveness.
- K. Install adjustable steel channel fasteners for hung ceiling outlet box.
- L. Do not fasten boxes to ceiling support wires or other piping systems.
- M. Support boxes independently of conduit.
- N. Install gang box where more than one device is mounted together. Do not use sectional box.
- O. Install gang box with plaster ring for single device outlets.

3.9 INTERFACE WITH OTHER PRODUCTS

- A. Install conduit to preserve fire resistance rating of partitions and other elements, using materials and methods in accordance with Section 07 84 00 - Firestopping.
- B. Route conduit through roof openings for piping and ductwork or through suitable roof jack with pitch pocket. Coordinate location with roofing installation specified in Division 07 – Thermal and Moisture Protection.
- C. Locate outlet boxes to allow luminaires positioned as indicated on Drawings.
- D. Align adjacent wall mounted outlet boxes for switches, thermostats, and similar devices.

3.10 ADJUSTING

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Adjust flush-mounting outlets to make front flush with finished wall material.
- C. Install knockout closures in unused openings in boxes.

3.11 CLEANING

- A. Clean interior of boxes to remove dust, debris, and other material.
- B. Clean exposed surfaces and restore finish.

END OF SECTION 260533

SECTION 260534 - FLOOR BOXES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Flush Floor Boxes.
 - 2. Floor Box Service Fittings.
 - 3. Poke-through Floor Outlets.

- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.
 - 3. Section 26 05 33 - Raceway and Boxes.
 - 4. Section 26 27 26 - Wiring Devices: Receptacles for installation in floor boxes.
 - 5. Section 07 84 00 – Firestopping: Firestopping.

1.2 REFERENCES

- A. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA OS 1 - Sheet Steel Outlet Boxes, Device Boxes, Covers, and Box Supports.

1.3 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.
- B. Product Data: Submit catalog data for floor boxes service fittings.
- C. Samples: Submit two of each service fitting illustrating size, material, configuration, and finish.

1.4 CLOSEOUT SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for closeout submittals.
- B. Project Record Documents: Record actual locations of each floor box and poke-through fitting.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

1.6 EXTRA MATERIALS

- A. Furnish under provisions of Section 26 00 00 – Basic Electrical Requirements.
- B. Furnish two carpet rings.

PART 2 - PRODUCTS

2.1 FLUSH FLOOR BOXES

- A. Manufacturers:
 - 1. Legrand/Wiremold, RFB4 Series.
 - 2. Equivalent as acceptable to Engineer.
- B. Floor Boxes: NEMA OS 1, 3-7/16 inches deep.
- C. Adjustability: Fully adjustable.
- D. Material:
 - 1. Cast iron for on grade slab installations.
 - 2. Steel for floor slabs above grade.
- E. Shape: Rectangular.
- F. Accessories:
 - 1. Internal brackets and faceplates to accommodate outlet configurations shown on the floor plans.
 - 2. Flanged covers with tile or carpet inserts. Metal cover with finish as selected by the Architect.

2.2 POKE-THROUGH FLOOR OUTLETS

- A. Manufacturers:
 - 1. Wiremold, RC7 Series.
 - 2. Equivalent as acceptable to Engineer.
- B. Product Description: Assembly comprising service fitting, poke-through component, fire stops and smoke barriers, and junction box for conduit termination.
- C. Service Fitting Type: Flush.
- D. Device Plate: Metal or plastic finish to be selected by the Architect.
- E. Configuration: As required to accommodate outlet configurations shown on the floor plans.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify exact locations of floor boxes prior to rough-in.
- B. Verify openings in access floor are in proper locations.

3.2 EXISTING WORK

- A. Disconnect abandoned service fitting devices and remove service fittings. Install blank cover for abandoned floor boxes not removed.

- B. Maintain access to existing floor boxes remaining active and requiring access. Modify installation or provide access panel.
- C. Extend existing service fitting installations using materials and methods compatible with existing electrical installations, or as specified.
- D. Clean and repair existing service fittings to remain or to be reinstalled.

3.3 INSTALLATION

- A. Boxes and fittings are indicated on Drawings in approximate locations unless dimensioned. Adjust box location to accommodate intended purpose.
- B. Floor Box Requirements: Use cast floor boxes for installations in slab on grade; formed steel boxes are acceptable for other installations.
- C. Set floor boxes level.
- D. Install boxes and fittings to preserve fire resistance rating of slabs and other elements, using materials and methods specified in Section 26 00 00 – Basic Electrical Requirements.

3.4 ADJUSTING

- A. Adjust floor box flush with finish flooring material.

3.5 CLEANING

- A. Clean interior of boxes to remove dust, debris, and other material.

END OF SECTION 260534

SECTION 260553 - ELECTRICAL IDENTIFICATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Nameplates.
 - 2. Labels.
 - 3. Wire markers.
 - 4. Stencils.
 - 5. Underground Warning Tape.

- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.
 - 3. Division 09 – Finishes: Execution requirements for painting specified by this section.

1.2 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.

- B. Product Data:
 - 1. Submit manufacturer's catalog literature for each product required.
 - 2. Submit electrical identification schedule including list of wording, symbols, letter size, color coding, tag number, location, and function.

- C. Samples:
 - 1. Submit two tags, actual size.
 - 2. Submit two labels, actual size.

- D. Manufacturer's Installation Instructions: Indicate installation instructions, special procedures, and installation.

1.3 CLOSEOUT SUBMITTALS

- A. Division 01 – General Requirements: Procedures for closeout submittals.

- B. Project Record Documents: Record actual locations of tagged devices; include tag numbers.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with State and Municipality standards.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five years documented experience.

- B. Installer: Company specializing in performing Work of this section with minimum five years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and protect products under provisions of Division 01 – General Requirements.
- B. Accept identification products on site in original containers. Inspect for damage.
- C. Accept materials on site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.
- D. Protect insulation from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original wrapping.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Division 01 – General Requirements: Environmental conditions affecting products on site.
- B. Install labels and nameplates only when ambient temperature and humidity conditions for adhesive are within range recommended by manufacturer.

1.8 EXTRA MATERIALS

- A. Furnish under provisions of Division 01 – General Requirements.

PART 2 - PRODUCTS

2.1 NAMEPLATES

- A. Product Description: Laminated three-layer plastic with engraved black letters on white contrasting background color.
- B. Nameplates shall match identification shown on drawings.
- C. Letter Size:
 - 1. 3/8-inch high letters for identifying voltages, phase and number of wires.
 - 2. 3/4-inch high letters for identifying equipment and loads.
 - 3. Panelboards: Nameplates shall state: panel identification, voltage, phase and number of wires (example: LP1/BH1, 277/480V, 3PH, 4W).
 - 4. Medium voltage cables: nameplates shall be self-extinguishing, resistant to oil, water and solvents. Nameplate shall be minimum size 1-inch X 4-inches. Nameplate shall note: switch feeder from, phase, where feeder starts and where feeder ends.
- D. Minimum nameplate thickness: 1/8 inch.

2.2 LABELS

- A. Labels: Printed adhesive label tags, with 1/8-inch minimum height black letters on white background.

- B. Wiring device labels: Printed adhesive label tags, with 1/8-inch minimum height black letters on clear background.

2.3 WIRE AND CABLE IDENTIFICATION

- A. Different conductor insulation colors and electrical tape colors shall be used to identify the different phases of conductors in a given circuit.
- B. Branch wiring shall be color coded per industry standards. If Owner does not have a pre-established color code, use the following colors unless otherwise required by code.
- C. Code color requirements shall always be followed where applicable.
- D. Following colors shall be as follows unless otherwise required by code:
 - 1. 120/208-volt systems
 - a. A-phase: solid black.
 - b. B-phase: solid red.
 - c. C-phase: solid blue.
 - d. Different colors shall be used to identify switched legs.
 - e. Neutral conductor: solid white. Provide additional markings for neutral conductors in the same raceway as required by code.
 - 2. 480/277-volt systems
 - a. A-phase: Solid brown.
 - b. B-phase: solid orange.
 - c. C-phase: solid yellow.
 - d. Different colors shall be used to identify switched legs.
 - e. Neutral conductor: solid gray. Provide additional markings for neutral conductors in the same raceway as required by code.
 - 3. Ground Conductors: solid green. Provide additional markings for ground conductors in the same raceway as required by code.
 - 4. For additions to existing buildings use existing color code system unless it violates code. If no wire color coding system is used; use color coding system listed above.
- E. Where wires of different systems junction in a common box, each cable shall be grouped with its own system and identified using tags or identification strips.
- F. For 3 phase systems, each phase shall be identified at all terminals using cable markers.
- G. Wire and cable labels:
 - 1. Feeder and branch circuits: label shall indicate panel and circuit number as actually installed.
 - 2. Control Circuits: Control wire number as indicated on shop drawings.

2.4 CONDUIT AND RACEWAY MARKERS

- A. Conduit color/stencil markings:
 - 1. Medium Voltage System: Orange lettering on white background noting: HIGH VOLTAGE - "actual line-to-line voltage".
 - 2. 480 Volt System: Yellow color band.
 - 3. 208 Volt System: Blue color band.
 - 4. Fire Alarm System: Red colored band.
 - 5. Telephone/Data System: Gray colored band.

2.5 STENCILS

- A. Stencils: With clean cut symbols and letters of following size:
 - 1. Up to 2 inches Outside Diameter of Raceway: 1/2-inch high letters.
 - 2. 2-1/2 to 6 inches Outside Diameter of Raceway: 1-inch high letters.
 - 3. 1/2-inch high letters minimum for identifying boxes and other equipment.

2.6 UNDERGROUND WARNING TAPE

- A. Description: 4-inch wide plastic tape, colored yellow with suitable warning legend describing type of buried electrical lines.

2.7 PANELBOARD DIRECTORIES

- A. Suitable for complete description of load served.
- B. Directory shall be removable.
- C. Typewritten card, describing loads served.
- D. Provide steel frame holder on inside cover of door to hold directory.
- E. Directory shall be covered with a clear plastic sheet.

PART 3 - EXECUTION

3.1 GENERAL

- A. Where mixed voltages are used in one building (e.g. 4160-volt, 480-volt, 208-volt) each switch, switchboard, junction box, equipment, etc., on each system must be labeled for voltage in addition to the other requirements listed herein.
- B. All branch circuit and power panels must be identified with the same symbol used in circuit directory in main distribution center.
- C. Stenciling may only be used on equipment fronts in unfinished areas.
- D. Receptacle labels shall identify panel and circuit number feeding receptacle.
- E. Switch label shall indicate equipment controlled by switch. Do not label light switches unless otherwise noted on drawings.

3.2 PREPARATION

- A. Degrease and clean surfaces to receive adhesive for identification materials.
- B. Prepare surfaces in accordance with Division 09 – Finishes for stencil painting.

3.3 EXISTING WORK

- A. Install identification on existing equipment to remain in accordance with this section.

- B. Re-stencil existing equipment.

3.4 INSTALLATION

- A. Install identifying devices after completion of painting.
- B. Adhesive type labels not permitted except for phase and wire identification.
- C. Hand written labels or embossed tape are not permitted.
- D. Entrance door to primary electrical room shall have porcelain enameled sign lettered "DANGER HIGH VOLTAGE". This same sign shall also be placed on primary switch.
- E. Each distribution and lighting panel shall be equipped with typewritten directory describing loads served. Directory shall be contained in steel frame mounted on inside face of panel's door and shall be covered with sheet of clear plastic.
- F. Switchboards, transformers, switchgear, telephone backboards, transfer switches, panels and cabinets shall be provided with 1/8-inch minimum thickness 5 ply lamecoid plastic nameplates indicating usage, plan designation and voltage where applicable. In Equipment and Mechanical Rooms, this identification may be on exterior of unit, in other areas identification shall be inside door or cover. Nameplates shall be black with white engraved lettering. Lettering shall be 1/2-inch high minimum. Fasten nameplates with escutcheon pins.
- G. Junction and pullboxes smaller than 12-inch x 12-inch shall be identified by using permanent marker on coverplate indicating originating panelboard and circuit(s) or system served.
- H. Junction and pull boxes with dimensions 12-inch x 12-inch and larger shall be stenciled or provided with permanent labels as follows:
 - 1. Lighting and power feeders and branch circuits - 120, 208, 277, 480. Add "EM" for emergency circuits, ex. 120EM, etc.
 - 2. Medium voltage feeders - 5KV, 15KV, etc. as applicable for system voltage.
 - 3. Clock - CLK.
 - 4. Voice/Data communications - V/D COM.
 - 5. Fire Alarm - FA.
 - 6. Signal voltage lighting controls - LVLC.
 - 7. Area of rescue assistance system - RA.
 - 8. Master Antenna Television System - MATV.
 - 9. Nurse call system - NC.
 - 10. Building paging system - PA.
 - 11. Electronic Card Key Access System - CA.
- I. Cover plates for control stations controlling remote equipment shall be engraved to identify device being controlled.
- J. Motor starters, remote control stations, etc., shall be identified with engraved lamecoid nameplates fastened to equipment with escutcheon pins. Nameplates shall be 1/8 -inch 5 ply lamecoid with 1/4-inch white letters on a black background. Adhesive cloth labels, similar to those manufactured by Brady Label Co., may be used on motor switches and controls only, indicating number, designation, size and usage of motor.

- K. On inside of coverplates for light switches, occupancy sensors, receptacles, and special purpose outlets, provide a permanent label identifying panel and circuit number feeding device. Adhesive plastic tape will be permitted for this use.
- L. On light fixtures at wiring entrance point, provide permanent label identifying panel and circuit number feeding fixture. Adhesive plastic tape will be permitted for this use.
- M. Refer to individual specification sections for more specific or additional identification requirements.
- N. Nameplate Installation:
 - 1. Install nameplate parallel to equipment lines.
 - 2. Install nameplate for each electrical distribution and control equipment enclosure with corrosive-resistant mechanical fasteners.
 - 3. Install nameplates for each control panel and major control components located outside panel with corrosive-resistant mechanical fasteners.
 - 4. Secure nameplate to equipment front using screws or rivets.
 - 5. Secure nameplate to inside surface of door on recessed panelboard in finished locations.
 - 6. Provide identification for the following:
 - a. Conduit (provide stencil or color band).
 - b. Wires and cables (provide Color code and label).
 - c. Medium voltage cables.
 - d. Junction and pullboxes (provide color code and/or stencil).
 - e. Wiring devices (provide label).
 - f. Equipment (provide nameplates).
 - g. Switchboards (provide nameplate to identify board and each load fed from switchboard)
 - h. Panelboards (provide nameplates and directory).
 - i. Transformers (provide nameplates).
 - j. Motor starters (provide nameplates).
 - k. Motor control centers (provide nameplates).
 - l. Transfer switches (provide nameplates).
 - m. Fire alarm panel (provide nameplates).
 - n. Control panels (provide nameplates).
 - o. Time contactor (provide nameplates).
 - p. Contactor (provide nameplates).
 - q. Disconnect switch (provide nameplates).
- O. Label Installation:
 - 1. Install label parallel to equipment lines.
 - 2. Install label for identification of individual control device stations.
 - 3. Install labels for permanent adhesion.
- P. Wire label Installation:
 - 1. Install wire marker for each conductor at panelboard gutters and outlet or equipment connection. Label shall be within one (1) foot of end of conductor.
- Q. Conduit Marker Installation:
 - 1. Install conduit marker for each conduit longer than 6 feet.
 - 2. Conduit Markers Spacing: 50 feet on center, minimum of one visible in every room.
 - 3. Raceway Painting: Identify conduit using field painting in accordance with Division 09 – Finishes.

- a. Paint colored band on each conduit longer than 6 feet.
 - b. Paint bands 50 feet on center, minimum of one in each room.
- R. Stencil Installation:
- 1. Apply stencil painting in accordance with Division 09 – Finishes.
 - 2. Junction boxes: identify system source and load served.
 - 3. Junction boxes for electrical communications, signal and control systems: Identify system source and equipment serviced, stenciled in black on cover.
 - 4. Junction boxes for Fire Alarm system: Junction box covers shall be painted red with “Fire Alarm” stenciled in black on cover.
- S. Underground Warning Tape Installation:
- 1. Install underground warning tape along length of each underground conduit, raceway, or cable 6 to 8 inches below finished grade, directly above buried conduit, raceway, or cable.
- T. Medium Voltage Cable identification:
- 1. Fasten label to cable with nylon tie-wraps.
 - 2. Install cable labels on each conductor at each cable termination, each pullbox, each manhole, and at all other accessible locations.
 - 3. During entire cable installation, phasing of conductors shall be maintained and identified.

This page intentionally left blank

SECTION 260573 - SHORT CIRCUIT/COORDINATION/ARC FLASH HAZARD ANALYSIS STUDIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Electrical contractor shall retain the services of an independent third party firm to perform a short circuit/coordination study/arc flash hazard analysis study as described herein.
- B. Submit studies to Design Engineer along with submittal for distribution equipment Shop Drawings prior to release of equipment for manufacture.
- C. Studies shall include all portions of electrical distribution system from normal power source or sources, and emergency/standby sources, down to and including smallest circuit breaker in distribution system. Adequately cover normal system connections and those which result in maximum fault conditions in study.
- D. Firm performing study should demonstrate capability and experience to provide assistance during start up as required.
- E. Perform study and assessment based on SKM's Dapper, Captor and PowerTool software.
- F. Related Sections:
 - 1. Applicable provisions of Division 01 shall govern Work under this Section.
- G. Complete system selective coordination shall be provided including time below 0.01 seconds for following specific systems:
 - 1. Emergency Systems: Per NEC 700.27.
 - 2. Legally Required Standby Systems: Per NEC 701.18.
 - 3. Critical Operations Power Systems: Per NEC 708.54.
 - 4. Essential Electrical Systems: Per NEC 517.26.
 - 5. Elevator Circuits: Per NEC 620.62.
- H. Study shall be stamped and signed by a Professional Engineer (PE). PE shall put statement in summary of report that all systems that are required to be selectively coordinated per NEC are completely coordinated.

1.2 DATA COLLECTION FOR STUDY

- A. Contractor shall provide required data for preparation of the studies. Engineer performing system studies shall furnish Contractor with a listing of required data to be collected immediately after award of the Contract.
- B. Electrical Contractor shall furnish Engineer performing electrical system study wire sizes, insulation types, conduit types, and circuit length for use and verification in study.

1.3 REFERENCES

- A. Perform studies in strict accordance with latest revision of the following standards.
- B. American National Standards Institute (ANSI)

1. ANSI C57.12.59 Guide for Dry-Type Transformer Through-Fault Current Duration.
 2. ANSI/IEEE Std. 141 IEEE Recommended Practice for Electric Power Distribution for Industrial Plants.
 3. ANSI/IEEE Std. 242 “Buff Book” IEEE Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems.
 4. ANSI/IEEE Std. 602 IEEE Recommended Practice for Electric System in Health Care Facilities.
- C. Insulated Cable Engineers Association (ICEA) Standards.
- D. Occupational Safety and Health Administration (OSHA) Standards.
- E. The National Fire Protection Association (NFPA)
1. NFPA 70 – National Electrical Code.
 2. NFPA 70E Standard for Electrical Safety in the Workplace.
- F. Institute of Electrical and Electronics Engineers, Inc. (IEEE)
1. IEEE 1584 Guide for Arc Flash Calculations.

1.4 QUALIFICATIONS

- A. Contractor shall have studies performed by qualified Engineers of electrical distribution equipment manufacturer or by an Owner-approved consultant. Contractor is responsible for providing pertinent information required by preparers of studies.
- B. Firm should be currently involved in high- and low-voltage power system evaluation. Studies shall be performed, stamped and signed by a licensed Professional Engineer in State of Florida. Submit credentials of individual(s) performing studies and background of firm to Engineer for approval prior to start of the Work. A minimum of five (5) years’ experience in power system analysis is required for individual in charge of the project.

1.5 SUBMITTALS

- A. Third party qualifications. Submit qualifications of individual(s) who will perform the Work for approval prior to commencing studies. Use Power Tools software by SKM to perform calculations.
- B. Study Report:
1. Provide studies in conjunction with equipment submittals to verify equipment ratings required.
 2. Summarize results of power system study in a final report. Submit six (6) bound copies of the final report. Provide two (2) PDF copies of study, so that it can be more easily stored and shared. Also, provide two (2) copies (on CD) of report in MS word, and two (2) copies (on CD) of one-line diagram in PDF format.
 3. Report shall include the following sections:
 - a. Overview.
 - b. Short Circuit Study.
 - 1) Purpose.
 - 2) Explanation of Data.
 - 3) Assumptions.
 - 4) Analysis of Results.

- 5) Recommendations.
 - c. Protective Device Coordination Study.
 - 1) Purpose.
 - 2) Explanation of Data.
 - 3) Assumptions.
 - 4) Analysis of Results.
 - 5) Recommendations (Including NEC 700-27 Requirement).
 - 6) CAPTOR Results.
 - 7) Example Drawings.
 - d. Arc Flash Study.
 - 1) Purpose.
 - 2) Explanation of Data.
 - 3) Assumptions.
 - 4) Analysis of Results.
 - 5) Recommendations.
 - 6) SKM Arc Flash Evaluation Report.
 - e. Prioritized Recommendations and Conclusions.
 - f. Appendices
 - 1) DAPPER One-line Diagrams.
 - 2) AutoCAD One-line Diagrams.
 - 3) SKM Protective Device Summaries.
 - 4) Reference Data.
 - 5) Sample Work Permit Form.
 - 6) Copy of Warning Labels, including study date
 4. Above sections shall include the following items in detail:
 - a. Obtain available fault current from local utility company.
 - b. Short circuit studies shall evaluate available fault current at each bus (each change of impedance), including all three-phase motors.
 - c. Coordination study recommendations for relay settings, breaker settings, and motor protection settings.
 - d. Recommendations for improving coordination and/or load distribution, as well as ground fault requirements.
 - e. Arc flash values for two normal cases to define highest values (low short circuit and high short circuit).
 - f. Arc flash values for two maintenance cases, which define arc flash values available at equipment that would be available if instantaneous trip of upstream circuit breaker is set at a minimum value. This is recommended if someone has to work on live equipment.
 - g. IEEE standard one-line diagram with equipment evaluation and circuit breaker setting forms that clearly define system data and are easy to interpret.
 - h. Recommendations to reduce arc flash incident energy in areas that require class 2 and higher PPE.
 - i. Prioritized report summarizing recommendations from this study. This shall include observed NEC code violations and their corrective action.
 - j. Contractor shall provide a one-line diagram that meets IEEE/ANSI standard 141, mounted on 24-inch x 36-inch (minimum) extruded polystyrene backboard. Mount copies of this one-line diagram in each electrical room.

1.6 QUALITY ASSURANCE

- A. Reference standards listed in IEEE "Buff Book", latest edition.

- B. Perform short circuit study in accordance with latest applicable IEEE and ANSI standards.

PART 2 - PRODUCTS – (Not Used)

PART 3 - EXECUTION

3.1 SHORT CIRCUIT AND COORDINATION STUDY

- A. Perform short circuit, coordination, and arc flash hazard studies using SKM Dapper, Captor and PowerTool for Windows software packages.
- B. In short circuit study, provide calculation methods and assumptions, base per unit quantities selected, one-line diagrams, source impedance data including power company system characteristics, typical calculations, and recommendations. Calculate short circuit interrupting and momentary (when applicable) duties for an assumed 3-phase bolted fault at each supply switchgear lineup, unit substation primary and secondary terminals, low voltage switchgear lineup, switchboard, motor control center, distribution panelboard, pertinent branch circuit panelboard, and other significant locations throughout system. Provide a ground fault current study for same system areas, including associated zero sequence impedance data. Include in tabulations fault impedance, X to R ratios, asymmetry factors, motor contribution, short circuit KVA, and symmetrical and asymmetrical fault currents.
- C. In protective device coordination study, provide time-current curves graphically indicating coordination proposed for system, centered on conventional, full-size, log-log forms. Include with each curve sheet a complete title and one-line diagram with legend identifying specific portion of system covered by that particular curve sheet. Include a detailed description of each protective device identifying its type, function, manufacturer, and time-current characteristics. Tabulate recommended device tap, time dial, pickup, instantaneous, and time delay settings. Study should clearly demonstrate compliance with NEC selective coordination requirements.
- D. Curve sheets shall include power company relay and fuse characteristics, system medium-voltage equipment relay and fuse characteristics, low-voltage equipment circuit breaker trip device characteristics, pertinent transformer characteristics, pertinent motor and generator characteristics, and characteristics of other system load protective devices. Include at least all devices down to largest branch circuit and largest feeder circuit breaker in each motor control center, and main breaker in branch panelboards.
- E. Include adjustable settings for ground fault protective devices. Include manufacturing tolerance and damage bands in plotted fuse characteristics. Show transformer full load and 150, 400, or 600 percent currents, transformer magnetizing inrush, ANSI transformer withstand parameters, and significant symmetrical and asymmetrical fault currents. Terminate device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which device is exposed.
- F. Select each primary protective device required for a delta-wye connected transformer so that its characteristic or operating band is within transformer characteristics, including a point equal to 58 percent of ANSI withstand point to provide secondary line-to-ground fault protection. Where primary device characteristic is not within transformer characteristics, provide a transformer damage curve. Separate transformer primary protective device characteristic curves from

associated secondary device characteristics by a 16 percent current margin to provide proper coordination and protection in the event of secondary line-to-line faults. Separate medium-voltage relay characteristic curves from curves for other devices by at least a 0.4-second time margin.

- G. Include complete fault calculations as specified herein for each proposed and ultimate source combination. Note that source combinations may include present and future supply circuits, large motors, or generators as noted on drawing one-lines.
- H. Utilize equipment load data for study obtained by Contractor from contract documents, including Contract Addendums issued prior to bid opening.
- I. Include fault contribution of motors in the study. Notify Engineer in writing of circuit protective devices not properly rated for fault conditions.
- J. Provide settings for motor starters for motors over 50 horsepower. Include in the study package and comment.
- K. When an emergency generator is provided or existing, include phase and ground coordination of generator protective devices, to meet NEC Articles 700 and 701 requirements. Show generator decrement curve and damage curve along with operating characteristic of protective devices. Obtain information from generator manufacturer and include generator actual impedance value, time constants, and current boost data in study. Do not use typical values for generator.
- L. Evaluate proper operation of ground relays in 4-wire distributions with more than one main service circuit breaker, or when generators are provided, and discuss neutral grounds and ground fault current flows during a neutral to ground fault.
- M. For motor control circuits, show MCC full-load current plus symmetrical and asymmetrical of largest motor starting current to ensure protective devices will not trip major or group operation.

3.2 FIELD SETTINGS

- A. Contractor shall perform field adjustments of protective devices as required to place equipment in final operating condition. Settings shall be in accordance with approved short circuit study, protective device coordination study, and arc flash hazard study.
- B. Contractor shall carry out necessary field settings of devices and adjustments and minor modifications to equipment to accomplish conformance with approved short circuit and protective device coordination study at no additional cost to Owner.

3.3 ARC FLASH HAZARD STUDY

- A. Include arc flash hazard study as part of the short circuit and coordination study. Study shall include the following:
 - 1. Determine and document possible utility and generator/emergency sources that are capable of being connected to each piece of electrical gear. Calculations shall be based on highest possible source connection.
 - 2. Calculations to conform to NFPA 70E calculation standards. Calculate incident energy units in calories per square centimeter.

3. Provide recommended boundary zones and personal protective equipment (PPE) based on calculated incident energy and requirements of NFPA 70E for each piece of electrical gear.
- B. Electrical Contractor shall provide labeling as required by OSHA based upon results of arc flash hazard study. At a minimum, labeling shall contain the following information:
1. PPE level.
 2. Flash Hazard Boundaries.
 3. Flash Protection Boundary
 4. Shock Hazard Boundaries such as Limited Approach Boundary, Restricted Approach Boundary, Prohibited Approach Boundary.
 5. Study date.

END OF SECTION 260573

SECTION 260580 - PENETRATION FIRESTOPPING FOR ELECTRICAL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Penetrations for the passage of cables, conduit, and other electrical equipment through fire-rated vertical barriers (walls and partitions), horizontal barriers (floor/ceiling assemblies), and vertical service shaft walls and partitions.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
2. Section 03 31 00 – Structural Concrete.
3. Section 04 20 00 - Unit Masonry.
4. Section 07 84 00 - Firestopping.
5. Section 07 90 00 - Joint Protection.
6. Section 09 21 16 - Gypsum Board Assemblies: Gypsum board fireproofing.
7. Section 09 23 00 - Gypsum Plastering: Gypsum plaster fireproofing.
8. Section 13 48 00 - Sound, Vibration and Seismic Control.
9. Division 21 - Fire Suppression.
10. Division 22 - Plumbing.
11. Division 23 - Heating, Ventilating, and Air Conditioning (HVAC).
12. Division 27 - Communications.

1.2 DEFINITIONS

- A. Firestopping: Material or combination of materials used to retain integrity of fire-rated construction by maintaining an effective barrier against the spread of flame, smoke, and hot gases through penetrations in fire rated wall and floor assemblies.

1.3 REFERENCES

A. ASTM International (ASTM):

1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
2. ASTM E814 - Standard Method of Fire Tests of Through Penetration Fire Stops.
3. ASTM E2174 - Standard Practice for On-site Inspection of Installed Fire Stops.
4. ASTM G21 – Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

B. International Building Code (IBC 2009).

C. International Firestop Council Guidelines for Evaluating Firestop Systems Engineering Judgments.

D. National Fire Protection Association (NFPA):

1. NFPA 70 - National Electric Code
2. NFPA 101 - Life Safety Code.

- E. Underwriters Laboratories (UL) of Northbrook, IL publishes tested systems in their "FIRE RESISTANCE DIRECTORY" that is updated annually.
 - 1. UL Fire Resistance Directory:
 - a. Firestop Devices (XHJI).
 - b. Fire Resistance Ratings (BXRH).
 - c. Through-Penetration Firestop Systems (XHEZ).
 - d. Fill, Voids, or Cavity Material (XHHW).
 - e. Forming Materials (XHKU).
- F. Underwriters Laboratories Inc. (UL):
 - 1. UL 1479 - Fire Tests of Through-Penetration Firestops.

1.4 SUBMITTALS

- A. Submit Product Data: Manufacturer's specifications and technical data for each material including the composition and limitations, documentation of UL firestop systems to be used and manufacturer's installation instructions to comply with Section 26 00 00 – Basic Electrical Requirements.
- B. Manufacturer's engineering judgment identification number and drawing details when no UL system is available for an application. Engineering judgment must include both project name and contractor's name who will install firestop system as described in drawing.
- C. Submit material safety data sheets provided with product delivered to job-site.

1.5 QUALITY ASSURANCE

- A. A manufacturer's direct representative (not distributor or agent) to be on-site during initial installation of firestop systems to train appropriate contractor personnel in proper selection and installation procedures. This will be done per manufacturer's written recommendations published in their literature and drawing details.
- B. Firestop System installation must meet requirements of ASTM E814 or UL 1479 tested assemblies that provide a fire rating equal to that of construction being penetrated.
- C. Proposed firestop materials and methods shall conform to applicable governing codes having local jurisdiction.
- D. Firestop Systems do not reestablish the structural integrity of load bearing partitions/assemblies or support live loads and traffic. Installer shall consult the structural engineer prior to penetrating any load bearing assembly.
- E. For those firestop applications that exist for which no UL tested system is available through a manufacturer, a manufacturer's engineering judgment derived from similar UL system designs or other tests will be submitted to local authorities having jurisdiction for their review and approval prior to installation. Engineering judgment drawings must follow requirements set forth by the International Firestop Council.

1.6 INSTALLER QUALIFICATIONS

- A. Engage an experienced Installer who is certified, licensed, or otherwise qualified by the firestopping manufacturer as having been provided the necessary training to install manufacturer's products per specified requirements. A manufacturer's willingness to sell its firestopping products to the Contractor or to an Installer engaged by the Contractor does not in itself confer qualification on the buyer.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials undamaged in manufacturer's clearly labeled, unopened containers, identified with brand, type, and UL label where applicable.
- B. Coordinate delivery of materials with scheduled installation date to allow minimum storage time at job-site.
- C. Store materials under cover and protect from weather and damage in compliance with manufacturer's requirements, including temperature limitations.
- D. Comply with recommended procedures, precautions or remedies described in material safety data sheets as applicable.
- E. Do not use damaged or expired materials.

1.8 PROJECT CONDITIONS

- A. Do not use materials that contain flammable solvents.
- B. Scheduling:
 - 1. Schedule installation of CAST IN PLACE firestop devices after completion of floor formwork, metal form deck, or composite deck but before placement of concrete.
 - 2. Schedule installation of other firestopping materials after completion of penetrating item installation but prior to covering or concealing of openings.
- C. Verify existing conditions and substrates before starting work. Correct unsatisfactory conditions before proceeding.
- D. Weather conditions: Do not proceed with installation of firestop materials when temperatures exceed the manufacturer's recommended limitations for installation printed on product label and product data sheet.
- E. During installation, provide masking and drop cloths to prevent firestopping materials from contaminating any adjacent surfaces.

PART 2 - PRODUCTS

2.1 FIRESTOPPING, GENERAL

- A. Provide firestopping composed of components that are compatible with each other, the substrates forming openings, and the items, if any, penetrating the firestopping under conditions of service

and application, as demonstrated by the firestopping manufacturer based on testing and field experience.

- B. Provide components for each firestopping system that are needed to install fill material. Use only components specified by the firestopping manufacturer and approved by the qualified testing agency for the designated fire-resistance-rated systems.
- C. Penetrations in Fire Resistance Rated Walls: Provide firestopping with ratings determined in accordance with UL 1479 or ASTM E 814.
 - 1. F-Rating: Not less than the fire-resistance rating of the wall construction being penetrated.
- D. Penetrations in Horizontal Assemblies: Provide firestopping with ratings determined in accordance with UL 1479 or ASTM E814.
 - 1. F-Rating: Minimum of 1-hour rating, but not less than the fire-resistance rating of the floor construction being penetrated.
 - 2. T-Rating: when penetrant is located outside of a wall cavity, minimum of 1-hour rating, but not less than the fire-resistance rating of the floor construction being penetrated.
 - 3. W-Rating: Class 1 rating in accordance with water leakage test per UL 1479.
- E. Penetrations in Smoke Barriers: Provide firestopping with ratings determined in accordance with UL 1479 or ASTM E814.
 - 1. L-Rating: Not exceeding 5.0 cfm/sq. ft. of penetration opening at both ambient and elevated temperatures.
- F. Mold Resistance: Provide penetration firestopping with mold and mildew resistance rating of 0 as determined by ASTM G21.

2.2 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with through penetration firestop systems (XHEZ) listed in Volume II of the UL Fire Resistance Directory, provide products of the following manufacturers as identified below:
 - 1. Hilti, Inc.
 - 2. Dow Corning Co.
 - 3. Fire Trak Corp.
 - 4. International Protective Coatings Corp.
 - 5. 3M Fire Protection Products.
 - 6. Specified Technology, Inc.

2.3 MATERIALS

- A. Use only firestop products that have been UL 1479 or ASTM E 814 tested for specific fire-rated construction conditions conforming to construction assembly type, penetrating item type, annular space requirements, and fire-rating involved for each separate instance.
- B. Pre-installed firestop devices for use with noncombustible and combustible pipes (closed and open systems), conduit, and/or cable bundles penetrating concrete floors and/or gypsum walls, the following products are acceptable. Equivalent products by other acceptable manufacturers are acceptable.
 - 1. Hilti Cast-In Place Firestop Device (CP 680-P) for use with combustible penetrants.
 - 2. Hilti Cast-In Place Firestop Device (CP 680-M) for use with noncombustible penetrants.

3. Hilti Speed Sleeve (CP 653) for use with cable penetrations.
 4. Hilti Firestop Drop-In Device (CFS-DID) for use with noncombustible and combustible penetrants.
- C. Sealants, foams or caulking materials for use with non-combustible items including rigid steel conduit and electrical metallic tubing (EMT), the following products are acceptable. Equivalent products by other acceptable manufacturers are acceptable.
1. Hilti Intumescent Firestop Sealant (FS-ONE).
 2. Hilti Fire Foam (CP 620).
 3. Hilti Flexible Firestop Sealant (CP 606).
 4. Hilti Elastomeric Firestop Sealant (CP 601S).
- D. Intumescent sealants, caulking materials for use with combustible items (penetrants consumed by high heat and flame) including PVC jacketed, flexible cable or cable bundles, and plastic pipe, the following products are acceptable. Equivalent products by other acceptable manufacturers are acceptable.
1. Hilti Intumescent Firestop Sealant (FS-ONE).
- E. Foams, intumescent sealants, or caulking materials for use with flexible cable or cable bundles, the following products are acceptable. Equivalent products by other acceptable manufacturers are acceptable.
1. Hilti Intumescent Firestop Sealant (FS-ONE).
 2. Hilti Fire Foam (CP 620).
 3. Hilti Flexible Firestop Sealant (CP 606).
 4. Hilti Elastomeric Firestop Sealant (CP 601S).
- F. Non-curing, re-penetrable intumescent putty or foam materials for use with flexible cable or cable bundles, the following products are acceptable. Equivalent products by other acceptable manufacturers are acceptable.
1. Hilti Firestop Putty Stick (CP 618).
 2. Hilti Firestop Plug (CFS-PL).
- G. Wall opening protective materials for use with U.L. listed metallic and specified nonmetallic outlet boxes, the following products are acceptable. Equivalent products by other acceptable manufacturers are acceptable.
1. Hilti Firestop Putty Pad (CP 617).
 2. Hilti Firestop Box Insert.
- H. Materials used for large openings and complex penetrations made to accommodate cable trays and bundles, multiple steel and copper pipes, electrical busways in raceways, the following products are acceptable. Equivalent products by other acceptable manufacturers are acceptable.
1. Hilti Firestop Mortar (CP 637).
 2. Hilti Firestop Block (CFS-BL).
 3. Hilti Fire Foam (CP 620).
 4. Hilti Firestop Board (CP 675T).
- I. Non-curing, re-penetrable materials used for large openings and complex penetrations made to accommodate cable trays and bundles, multiple steel and copper pipes, electrical busways in raceways, the following products are acceptable. Equivalent products by other acceptable manufacturers are acceptable.
1. Hilti Firestop Block (CFS-BL).

2. Hilti Firestop Board (CP 675T).
- J. For blank openings made in fire-rated wall or floor assemblies, where future penetration of pipes, conduits, or cables is expected, the following products are acceptable. Equivalent products by other acceptable manufacturers are acceptable.
 1. Hilti Firestop Block (CFS-BL).
 2. Hilti Firestop Plug (CFS-PL).
 - K. Provide a firestop system with a "F" Rating as determined by UL 1479 or ASTM E 814 which is equal to the time rating of construction being penetrated.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Verification of Conditions: Examine areas and conditions under which work is to be performed and identify conditions detrimental to proper or timely completion.
 1. Verify penetrations are properly sized and in suitable condition for application of materials.
 2. Surfaces to which firestop materials will be applied shall be free of dirt, grease, oil, rust, laitance, release agents, water repellents, and any other substances that may affect proper adhesion.
 3. Provide masking and temporary covering to prevent soiling of adjacent surfaces by firestopping materials.
 4. Comply with manufacturer's recommendations for temperature and humidity conditions before, during and after installation of firestopping.
 5. Do not proceed until unsatisfactory conditions have been corrected.

3.2 COORDINATION

- A. Coordinate location and proper selection of cast-in-place Firestop Devices with trade responsible for the work. Ensure device is installed before placement of concrete.

3.3 INSTALLATION

- A. Regulatory Requirements: Install firestop materials in accordance with UL Fire Resistance Directory.
- B. Manufacturer's Instructions: Comply with manufacturer's instructions for installation of through-penetration materials.
 1. Seal all holes or voids made by penetrations to ensure an air and water-resistant seal.
 2. Protect materials from damage on surfaces subjected to traffic.

3.4 FIELD QUALITY CONTROL

- A. Examine sealed penetration areas to ensure proper installation before concealing or enclosing areas.
- B. Keep areas of work accessible until inspection by applicable code authorities.

- C. Inspection of through-penetration firestopping shall be performed in accordance with ASTM E2174, "Standard Practice for On-Site Inspection of Installed Fire Stops" or other recognized standard.
- D. Perform under this section patching and repairing of firestopping caused by cutting or penetrating of existing firestop systems already installed by other trades.

3.5 ADJUSTING AND CLEANING

- A. Remove equipment, materials and debris, leaving area in undamaged, clean condition.
- B. Clean all surfaces adjacent to sealed holes and joints to be free of excess firestop materials and soiling as work progresses.

SECTION 260800 - COMMISSIONING OF ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Electrical commissioning description.
 - 2. Electrical commissioning responsibilities.

- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern Work under this Section.
 - 2. Section 01 91 13] – General Commissioning Requirements.
 - 3. Division 21 – Fire Suppression Systems: Fire suppression systems commissioning requirements.
 - 4. Division 22 – Plumbing: Plumbing systems commissioning requirements.
 - 5. Division 23 – Heating, Ventilating and Air Conditioning: HVAC systems commissioning requirements.

1.2 REFERENCES

- A. Associated Air Balance Council:
 - 1. AABC - ACG Commissioning Guideline.

- B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
 - 1. ASHRAE Guideline 0 - The HVAC Commissioning Process.

- C. BCA (Building Commissioning Association) Commissioning Handbook.

1.3 COMMISSIONING DESCRIPTION

- A. Commissioning:
 - 1. Commissioning is a quality-oriented process for achieving, verifying, and documenting that performance of facilities, systems, and assemblies meet defined objectives and criteria.
 - 2. Commissioning process begins at project inception (during pre-design phase) and continues through the life of facility.
 - 3. Commissioning process includes specific tasks to be conducted during each phase in order to verify that design, construction, and training meets Owner's Project Requirements.

- B. Commissioning Team:
 - 1. Members of commissioning team consist of:
 - a. Commissioning Authority (CxA).
 - b. Owner's Representative/Construction Manager (CM).
 - c. General Contractor (GC).
 - d. Architect and Design Engineers.
 - e. Plumbing Contractor (PC).
 - f. Mechanical Contractor (MC).
 - g. Electrical Contractor (EC).
 - h. Testing and Balancing (TAB) Contractor.

- i. Control Contractor (CC).
 - j. Facility Operating Staff
 - k. Other installing subcontractors or suppliers of equipment.
 2. CxA directs and coordinates project commissioning activities and reports to Owner.
 3. All team members work together to fulfill their contracted responsibilities and meet objectives of the Contract Documents.
- C. Electrical commissioning process includes the following tasks:
 1. Testing and startup of Electrical equipment and systems.
 2. Equipment and system verification checks.
 3. Assistance in functional performance testing to verify equipment and system performance.
 4. Provide qualified personnel to assist in commissioning tests.
 5. Complete and endorse functional performance test checklists provided by Commissioning Authority to assure equipment and systems are fully operational and ready for functional performance testing.
 6. Provide equipment, materials, and labor necessary to correct deficiencies found during commissioning process to fulfill contract and warranty requirements.
 7. Provide operation and maintenance information and record drawings to Commissioning Authority for review verification and organization, prior to distribution.
 8. Assist Commissioning Authority to develop, edit, and document system operation descriptions.
 9. Provide training for systems specified in this Section with coordination by Commissioning Authority.
- D. Equipment and Systems to Be Commissioned:
 1. Interior Lighting and Lighting Controls.
 2. Exterior Lighting and Lighting Controls.
 3. Emergency Lighting.
 4. Special Purpose Lighting and Controls.
 5. Lightning Protection System.
 6. Engine Generators.
 7. Transfer Switches.
 8. Variable Frequency Drives.
 9. Power Filter and Conditioners.
 10. Low-Voltage Distribution Equipment.
 11. Low Voltage Transformers.
 12. Medium Voltage Transformers.
 13. Electrical Power Monitoring and Control.
 14. Photovoltaic Collectors.
 15. Battery Equipment.
 16. Electric Terminal Heating Equipment.

1.4 COMMISSIONING SUBMITTALS

- A. Division 01 – General Requirements: Requirements for commissioning submittals.

1.5 CLOSEOUT SUBMITTALS

- A. Division 01 - General Requirements: Execution and Closeout Submittal Procedures: Shop drawings, product data and samples.

- B. Division 01 – General Requirements: Requirements for submittals.
- C. Project Record Documents: Record revisions to equipment and system documentation necessitated by commissioning.
- D. Operation and Maintenance Data: Submit revisions to operation and maintenance manuals for necessary revisions discovered during commissioning.

1.6 COMMISSIONING RESPONSIBILITIES

- A. Equipment or System Installer Commissioning Responsibilities:
 - 1. Attend commissioning meetings.
 - 2. Ensure temperature controls installer performs assigned commissioning responsibilities as specified below.
 - 3. Ensure testing, adjusting, and balancing agency performs assigned commissioning responsibilities as specified.
 - 4. Provide instructions and demonstrations for Owner's personnel.
 - 5. Ensure subcontractors perform assigned commissioning responsibilities.
 - 6. Ensure participation of equipment manufacturers in appropriate startup, testing, and training activities when required by individual equipment specifications.
 - 7. Develop startup and initial checkout plan using manufacturer's startup procedures and functional performance checklists for commissioned equipment and systems.
 - 8. During verification check and startup process, execute electrical related portions of checklists for commissioned equipment and systems.
 - 9. Perform and document completed startup and system operational checkout procedures, providing copy to Commissioning Authority.
 - 10. Provide manufacturer's representatives to execute starting of equipment. Ensure representatives are available and present during agreed upon schedules and attend for duration to complete tests, adjustments, and problem solving.
 - 11. Coordinate with equipment manufacturers to determine specific requirements to maintain validity of warranties.
 - 12. Provide personnel to assist Commissioning Authority during equipment or system verification checks and functional performance tests.
 - 13. Prior to functional performance tests, review test procedures to ensure feasibility, safety and equipment protection and provide necessary written alarm limits used during tests.
 - 14. Prior to startup, inspect, check, and verify correct and complete installation of equipment and system components for verification checks included in commissioning plan.
 - 15. When deficient or incomplete work is discovered, ensure to take corrective action and re-check until equipment or system is ready for startup.
 - 16. Provide factory-supervised startup services for equipment and systems specified in Section 26 32 13 – Engine Generators.
 - 17. Coordinate work with manufacturer and Commissioning Authority.
 - 18. Perform verification checks and startup on equipment and systems as specified.
 - 19. Assist Commissioning Authority in performing functional performance tests on equipment and systems as specified.
 - 20. Perform operation and maintenance training sessions scheduled by Commissioning Authority.
 - 21. Conduct electrical system orientation and inspection.
- B. Temperature Controls Installer Commissioning Responsibilities:
 - 1. Attend commissioning meetings.

2. Review design for ability of systems to be controlled including the following:
 - a. Confirm proper hardware requirements exist to perform functional performance testing.
 - b. Confirm proper safeties and interlocks are included in design.
 - c. Confirm sensors selected are within device ranges.
 - d. Review sequences of operation and obtain clarification from Engineer/ Architect.
 - e. Indicate delineation of control between packaged controls and building automation system, listing BAS monitor points and BAS adjustable control points.
 - f. Provide written sequences of operation for packaged controlled equipment. Equipment manufacturers' stock sequences may be included, when accompanied by additional narrative to reflect Project conditions.
3. Inspect, check, and confirm proper operation and performance of control hardware and software provided in other electrical sections.
4. Inspect check and confirm correct installation and operation of automatic temperature control system input and output device operation through point-to-point checks.
5. Perform training sessions to instruct Owner's personnel in hardware operation, software operation, programming, and application in accordance with commissioning plan and requirements.
6. Demonstrate system performance and operation to Commissioning Authority during functional performance tests including each mode of operation.
7. Provide control system technician to assist during Commissioning Authority verification check and functional performance testing.
8. Provide control system technician to assist testing, adjusting, and balancing agency during performance of testing, adjusting, and balancing work.
9. Assist in performing operation and maintenance training sessions scheduled by Commissioning Authority.

1.7 COMMISSIONING MEETINGS

- A. Division 01 – General Requirements – General Commissioning Requirements: Requirements for commissioning meetings.
- B. Attend initial commissioning meeting and progress commissioning meetings as required by Commissioning Authority.

1.8 SCHEDULING

- A. Division 01 – General Requirements: Requirements for scheduling.
- B. Prepare schedule indicating anticipated start dates for the following:
 1. Interior lighting control testing.
 2. Exterior lighting control testing.
 3. Engine generator testing and load bank testing.
 4. Equipment and system startups.
 5. Electrical system orientation and inspections.
 6. Operation and maintenance training sessions.
- C. Schedule tests of day lighting equipment and systems during design outdoor conditions to observe performance.
- D. Schedule occupancy sensitive tests of equipment and systems during conditions of both minimum and maximum occupancy or use.

1.9 COORDINATION

- A. Division 01 – General Requirements: Requirements for coordination.
- B. Notify Commissioning Authority minimum of four weeks in advance of the following:
 - 1. Scheduled equipment and system startups.
 - 2. Scheduled automatic temperature control system checkout.
 - 3. Scheduled start of engine generator startup.
- C. Coordinate programming of lighting control system with construction and commissioning schedules.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 FUNCTIONAL TESTING

- A. Place electrical systems and equipment into full operation and continue operation during each working day of commissioning.

3.2 COMMISSIONING

- A. Day Light Sensitive Functional Performance Tests:
 - 1. Test day-lighting controls at varying outdoor conditions.
- B. Be responsible to participate in initial and alternate peak season test of systems required to demonstrate performance.
- C. Occupancy Sensitive Functional Performance Tests:
 - 1. Test equipment and systems affected by occupancy variations at minimum and peak loads to observe system performance.
 - 2. Participate in testing delayed beyond Final Completion to test performance with actual occupancy conditions.

3.3 CONSTRUCTION VERIFICATION CHECKLISTS

- A. Complete the following construction verification checklists for this project. Submit for CxA review and approval.
 - 1. CV-26 05 03: Wiring Connections
 - 2. CV-26 05 19: Building Wire and Cable
 - 3. CV-26 05 26: Grounding and Bonding
 - 4. CV-26 05 29: Electrical Hangers and Supports
 - 5. CV-26 05 33: Raceways and Boxes
 - 6. CV-26 05 34: Floor Boxes
 - 7. CV-26 05 53: Electrical Identification
 - 8. CV-26 05 73: Short Circuit/Coordination/Arc Flash Hazard Analysis Studies
 - 9. CV-26 05 80: Penetration Firestopping for Electrical
 - 10. CV-26 09 43: Networked Lighting Controls

11. CV-26 12 00: Pad-Mounted Transformers
12. CV-26 22 00: Dry Type Transformers
13. CV-26 24 16: Panelboards
14. CV-26 27 16: Cabinets and Enclosures
15. CV-26 27 26: Wiring Devices
16. CV-26 28 13: Fuses
17. CV-26 28 19: Enclosed Switches
18. CV-26 28 23: Enclosed Circuit Breakers
19. CV-26 29 13: Enclosed Controllers
20. CV-26 29 16: Enclosed Contactors
21. CV-26 29 33: Motor Wiring
22. CV-26 33 53: Static Uninterruptible Power Supplies
23. CV-26 35 53: Transient Voltage Surge Suppressor
24. CV-26 41 00: Facility Lightning Protection
25. CV-26 51 00: Interior Lighting
26. CV-26 56 00: Exterior Lighting
27. CV-26 60 00: Multiplexed Addressable Fire Alarm Detection System

3.4 FUNCTIONAL PERFORMANCE TESTS

- A. Complete the following functional performance tests;
 1. FPT-26 32 00: Generator Functional Performance Test.
 2. FPT-26 51 15: Lighting Controls Functional Performance Test.

END OF SECTION 260800

SECTION 260943 - NETWORKED LIGHTING CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Networked lighting control system and components.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 shall govern all work under this Section.
 - 2. Section 26 05 03 - Wiring Connections: Execution requirements for electric connections specified by this section.
 - 3. Section 26 05 33 - Raceway and Boxes: Product requirements for raceway and boxes for placement by this section.
 - 4. Section 26 05 53 – Electrical Identification: Product requirements for electrical identification items for placement by this section.
 - 5. Section 26 27 26 - Wiring Devices: Product requirements for wiring devices for placement by this section.

1.2 REFERENCES

- A. Government Electronics and Information Technology Association (EIA): EIA 709.1 - Control Network Protocol Specification.
- B. National Electrical Manufacturers Association (NEMA): NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
- C. National Fire Protection Association (NFPA): NFPA 70 - National Electrical Code.
- D. Underwriters Laboratories Inc. (UL):
 - 1. UL 50 - Enclosures for Electrical Equipment.
 - 2. UL 67 - Panelboards.
 - 3. UL 508 - Industrial Control Equipment.
 - 4. UL 916 - Energy Management Equipment.

1.3 SYSTEM DESCRIPTION

- A. Provide networked lighting control system consisting of components manufactured by single source.
- B. Provide networked lighting control system consisting of:
 - 1. Multiple relay panels linked over network wiring using open protocol for communications.
 - 2. Multiple relay panels linked over network wiring using open protocol for communications and be fully compliant with EIA 709.1.
 - 3. Relay panels and programmable switches connected together by networked wiring system extending from panel locations with single communications bus to allow switches to communicate with panels.
 - 4. System connected to single time clock mounted in interior of relay panel.

1.4 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Requirements for submittals.
- B. Shop Drawings: Indicate dimensioned drawings of lighting control system components and accessories.
 - 1. One Line Diagram: Indicating system configuration indicating panels, number and type of switches, data line, and network time clock.
 - 2. Drawings for each panel showing hardware configuration and numbering.
 - 3. Panel wiring schedules.
 - 4. Include typical wiring diagrams for each component.
- C. Product Data: Submit manufacturer’s standard product data for each system component.
- D. Manufacturer's Installation Instructions: Submit for each system component.
- E. Manufacturer's Certificate: Certify Products meet or exceeds specifications. Submit in writing system has been installed, adjusted, and tested in accordance with manufacturer's recommendations.
- F. Manufacturer's Field Reports: Submit system startup report indicating date of completion and acknowledgment of programming completion. Indicate acceptance of component and equipment installation, interconnecting wiring, and start-up of system software.

1.5 CLOSEOUT SUBMITTALS

- A. Division 01 – General Requirements: Requirements for submittals.
- B. Project Record Documents: Record the following information:
 - 1. Wiring diagrams reflecting field installed conditions with identified and numbered system components and devices.
 - 2. Drawings for each panel showing hardware configuration and numbering.
- C. Operation and Maintenance Data:
 - 1. Submit manufacturer’s published installation instructions, operating instructions, programming instructions, and operator’s guide.
 - 2. System user's guide and programmer's guide.
 - 3. Instruction books and manufacturer’s printed materials.
 - 4. Recommended renewal parts list.

1.6 QUALITY ASSURANCE

- A. Comply with NFPA 70 as applicable to electrical wiring work.
- B. Comply with NEMA 250 for type of electrical equipment enclosures.
- C. Provide panelboards with UL listing in accordance with UL 50, UL 67, and UL 916.
- D. Provide equipment complying with FCC emissions' standards in part 15 subpart J for Class A application.

1.7 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing lighting control system listed in this section, with minimum five years' experience.
- B. Installer: Company specializing in performing work of this section with minimum five years documented experience.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Division 01 – General Requirements: Requirements for transporting, handling, storing, and protecting products.
- B. Accept system components on site in manufacturer's packaging. Inspect for damage.
- C. Protect components by storing in manufacturer's containers indoor protected from weather.

1.9 WARRANTY

- A. Division 01 – General Requirements: Requirements for warranties.

PART 2 - PRODUCTS

2.1 NETWORKED LIGHTING CONTROL SYSTEM

- A. Manufacturers:
 - 1. Acuity Brands – nLight System (Basis of Design)
- B. Product Description: Networked lighting control system consisting of the following components: relay panels, network wiring, programmable network wired switches, programmable clock, software, and capability of integration into building automation system.

2.2 RELAY PANELS

- A. UL listed, NEMA 1 enclosure sized to accept up to number of relays indicated on the relay cabinet schedules.
- B. Power Supply: Transformer assembly with two 40 VA transformers with separate secondaries. Transformers include internal overcurrent protection with automatic reset and metal oxide varistor protection against power line spikes.
- C. Voltage: 120 or 277 VAC, 60 Hertz, plus or minus 10 percent.
- D. Mounting: Surface or Flush as indicated on the plans.
- E. Cover: Hinged, locking configuration with wiring schedule directory card.
- F. Interior: Bracket and intelligence board backplane with factory mounted and tested relays.

- G. Furnish with integral DIN rail mounting bar to allow for installation of system components. Furnish terminals to accept network wiring for connection of switches to system, or to allow network wiring to be run between multiple panels for network communications between panels.
- H. Furnish with individual on-off switches for both panel and network wiring power.
- I. Furnish 8 channels in each interior regardless of size, each with associated pushbutton to toggle channel on-off, and terminal block for separate dry contact input. Each relay in panel capable of being assigned to each channel, with overlapping allowed. Furnish each channel pushbutton with LED state indication.
- J. Furnish each channel pushbutton with LED status indication.
- K. Relays:
 - 1. Type: Momentary-pulsed mechanically latching contactors rated at 20 amps, 120 to 277 VAC attached to interior by plug-in type connector.
 - 2. Locate next to each relay individual override button and LED to indicate status - relay on, relay off, or relay failure.
 - 3. One 0-10 volt dimming output per relay.
 - 4. Furnish screw terminations for each wiring connection.
 - 5. Furnish each channel button's dry control contact input terminal with capability of accepting 2 or 3 wire, maintained or momentary inputs and 2 wire toggling input.
 - 6. Furnish each channel with isolated contact for use with status feedback or pilot light control.
 - 7. Relay Panel records channel wiring assignments and current status of each relay, in non-volatile memory to prevent data loss on power failure.
 - 8. Furnish LED status indication of power supply status. Furnish access to 24 VAC and 24 V rectified power for accessory devices within panel.
 - 9. Interior uses relays with pilot contact to provide individual relay feedback.
 - 10. Switching devices to control relay state. Devices can be either 2 or 3 wire, maintained or momentary inputs. Devices also accept 2 wire toggling input.
 - 11. System to comply with EIA 709.1 lighting controller profile and furnish capability for network connecting to EIA 709.1 compliant building automation system components without use of dry contacts, gateways, protocol converters or additional devices.
- L. Inputs.
 - 1. One programmable input for contact closure or photo-sensor signal.
 - 2. One input for every 8 relays.
 - 3. One maintained over-ride input.

2.3 NETWORK WIRING

- A. CAT 5e cables, T568B wiring convention.
- B. Maximum length: 1,500 feet.
- C. Maximum number of devices: 128 per control zone.

2.4 PROGRAMMABLE NETWORK WIRED SWITCHES

- A. Function: Allow individual controls.

- B. Multiple pushbuttons will comprise a single switch station location. Pushbuttons may consist of;
 - 1. On.
 - 2. Off.
 - 3. On/Off Toggle.
 - 4. Raise.
 - 5. Lower.
 - 6. Numbered for Scene Select.
- C. Configurations: As indicated on the Drawings.
- D. Configured to mount in a single gang box opening.
- E. Shall contain RJ-45 network ports for communications cabling terminations/bus connection.
- F. Features:
 - 1. Equipped with bi-color LED pilot light for individual buttons to indicate status of controlled relay or group of relays.
 - 2. Equipped with locator light.
 - 3. Furnish individual buttons with removable clear cover for labeling controlled loads.
- G. White buttons and white cover-plates.
- H. Acuity nPODM series.

2.5 PROGRAMMABLE CLOCK

- A. From each plug-in point on network wiring, time clock can be used to:
 - 1. Schedule each 8 channel groups in relay panel network.
 - 2. Program network wired switches.
- B. Includes user selectable functions to handle standard lighting control functions for each channel independently. Selectable functions include:
 - 1. Scheduled on and scheduled off.
 - 2. Manual on and scheduled off.
 - 3. Astronomical on and astronomical off with optional offset.
 - 4. Astronomical on and scheduled off with optional offset.
- C. Each channel capable of being assigned the following:
 - 1. Time delay from 1 to 256 minutes.
 - 2. Automatic blinking of lights before turning off to allow occupants opportunity to enter override. Time interval configurable.
- D. Features:
 - 1. Furnish clock with display and user interface.
 - 2. Capable of being adjusted for leap year, daylight savings dates, and holidays.

2.6 SOFTWARE

- A. Furnish plug-in capability for use in system commissioning, programming, monitoring, and control. Software capable of functioning with EIA 709.1 compliant network tool.

- B. After programming of system parameters is completed, system allows each user-definable feature such as schedules, relay groups, switch assignments to be field modified without need for configuration software or system integration expertise.

2.7 BAS INTEGRATION

- A. In addition to hardwired channel inputs, furnish system with capability for integration into building automation and control system direct digital control system without use of dry contact, gateways or protocol converters. Integration accomplished via network connections of EIA 709.1 compliant devices.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Mount switches, occupancy sensors and photocells as indicated on the Drawings.
- B. Label each low voltage wire clearly indicating connecting relay panel. Refer to Section 26 05 53 – Electrical Identification.
- C. Use only properly color coded, stranded wire. Install wire sizes as indicated on the Drawings.
- D. Mount relay panels as indicated on the Drawings. Wire numbered relays in panel to control power to each load.
- E. Identify power wiring with circuit breaker number controlling load. When multiple circuit breaker panels are feeding into relay panel, label wires to clearly indicate originating panel's designation.
- F. Terminate communication conductors and associated conduits external to factory supplied equipment.
- G. Test relays and switches after installation to confirm proper operation.
- H. Label each low voltage wire with relay number at each switch or sensor.
- I. Install wiring schedule directory card affixed to rear of panel cover to identify circuits, relays, and loads controlled.

3.2 FIELD QUALITY CONTROL

- A. Test relays and switches after installation to confirm proper operation and confirm correct loads are recorded on directory card in each panel.

3.3 MANUFACTURER'S FIELD SERVICES

- A. System Startup: Furnish manufacturer trained, factory authorized technician to confirm proper installation and operation of system components.
- B. Programming:

1. Furnish services of factory trained representative to perform programming of system. Assist Owner's personnel in developing control scenario for each application. Program Owner furnished control scenario.
2. Explain operation of control programs to Owner and conduct demonstration of project.
3. Include a minimum of 24 hours of Owner training on the system functions and programming.

3.4 ADJUSTING

- A. Division 01 – General Requirements: Requirements for starting and adjusting.
- B. Furnish factory trained technicians to functionally test each system component after installation to verify proper operation.

3.5 DEMONSTRATION

- A. Demonstrate operation of the following system components:
 1. Index system to occupied cycle and unoccupied cycle.
 2. Operation of switches.
 3. Operation of each type of occupancy sensors.
 4. Operation of each type of photocell.

1.3 SUBMITTALS

A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.

B. Shop Drawings: Indicate electrical characteristics and connection requirements, outline dimensions, connection and support points, weight, specified ratings and materials.

1. Manufacturer's published time-current curves (on full size logarithmic paper) of transformer high side fuses.
2. Drawings shall indicate, but not be limited to the following:

- a. An outline drawing, but front, top, and side views.
 - b. ANSI nameplate data.
 - c. Elementary diagrams and wiring diagrams with terminals identified of watt-hour meter and current transformers.
 - d. One-line diagram, including switch(es), current transformers, meters, and fuses.
 - e. Manufacturer's published time-current curves (on full size logarithmic paper) of transformer high side fuses.
3. Transformer Losses
- a. Submit certification from manufacturer indicating conformance with paragraph entitled "Specified Transformer Losses."
- C. Product Data: Submit electrical characteristics and connection requirements, standard model design tests, and options.
- D. Test Reports: Indicate procedures and results for specified factory and field testing and inspection.
- E. Manufacturer's Field Reports: Indicate activities on site, final adjustments and overcurrent protective device coordination curves, adverse findings, and recommendations.

1.4 CLOSEOUT SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for closeout submittals.
- B. Project Record Documents: Include copy of manufacturer's certified drawings.
- C. Operation and Maintenance Data: Submit maintenance procedures for sampling and maintaining fluid.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years' experience.
- B. Testing Agency: Company member of International Electrical Testing Association and specializing in testing products specified in this section with minimum five years' experience.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and protect products under provisions of Section 26 00 00 – Basic Electrical Requirements.
- B. Protect dry type transformers from moisture by using heaters in accordance with manufacturer's instructions.

1.7 FIELD MEASUREMENTS

- A. Verify field measurements prior to fabrication.

1.8 MAINTENANCE MATERIALS

- A. Section 26 00 00 – Basic Electrical Requirements: Spare parts and maintenance products.

- B. Furnish two each of special tools required to operate and maintain transformer.

1.9 EXTRA MATERIALS

- A. Section 26 00 00 – Basic Electrical Requirements: Spare parts and maintenance products.
- B. Furnish two of each size and type fuse.

PART 2 - PRODUCTS

2.1 LIQUID-FILLED TRANSFORMERS

- A. Manufacturers:
 - 1. Cooper Power Systems.
 - 2. GE Electrical.
 - 3. Howard Industries.
 - 4. ABB.
 - 5. Equivalent as acceptable to Engineer.
- B. Product Description: ANSI C57.12.26, three phase, pad mounted, self-cooled transformer unit.
- C. Cooling and Temperature Rise; IEEE C57.12.00; Class OA. [55] [65] degrees C, self-cooled.

2.2 THREE-PHASE PAD-MOUNTED TRANSFORMERS

- A. Meet requirements of IEEE C57.12.26, NEMA C57.12.22, and NEMA C57.12.28 and as specified herein.
- B. Compartments:
 - 1. High- and low-voltage compartments shall be separated by steel isolating barriers extending full height and depth of compartments. Compartment doors: Hinged lift-off type with stop in open position and three-point latching.
- C. High Voltage, Dead-Front:
 - 1. High-voltage compartment shall contain incoming line, insulated high-voltage load-break connectors, bushing well inserts, feed-thru inserts, three six high-voltage bushing wells configured for loop radial feed application, load-break switch handle(s), access to oil-immersed fuses, dead-front surge arresters, tap changer handle, connector parking stands with insulated standoff bushings, protective caps, and ground pad.
 - a. Insulated high-voltage load-break connectors: IEEE Std 386, rated 15 kV, 95 kV BIL. Current rating: 200 amperes rms continuous. Short time rating: 10,000 amperes rms symmetrical for time duration of 0.17 seconds. Connector shall have a steel reinforced hook-stick eye, grounding eye, test point, and arc-quenching contact material.
 - b. Bushing well inserts and feed-thru inserts: IEEE Std 386, 200 amperes, 15 kV Class. Provide bushing well insert for each bushing well unless indicated otherwise. Provide feed-thru inserts as indicated.
 - c. Load-break switch:
 - 1) Radial-feed oil-immersed type rated at 15 kV, 95 kV BIL, with a continuous current rating and load-break rating of 200 amperes and make-and-latch rating of

- 10,000 rms amperes symmetrical. Locate switch handle in high-voltage compartment.
- 2) Loop feed sectionalizer switches: Provide three, two-position, oil-immersed type switches to permit closed transition loop feed and sectionalizing. Each switch shall be rated at 15 kV, 95 kV BIL, with a continuous current rating and load-break rating of 200 amperes, and a make-and-latch rating of 10,000 rms amperes symmetrical. Locate switch handles in high-voltage compartment. Operation of switches shall be as follows:
 - d. Provide bayonet oil-immersed, expulsion fuses in series with oil-immersed, partial-range, current-limiting fuses. Bayonet fuse links shall sense both high currents and high oil temperature in order to provide thermal protection to transformer. Coordinate transformer protection with expulsion fuse clearing low-current faults and current-limiting fuse clearing high-current faults beyond interrupting rating of expulsion fuse. In order to eliminate or minimize oil spills, bayonet fuse assemblies shall include an oil retention valve inside housing which closes when fuse holder is removed and an external drip shield. Warning shall be conspicuously displayed within high-voltage compartment cautioning against removing or inserting fuses unless load-break switch is in open position and tank pressure has been released.
 - 1) Bayonet fuse assembly: 150 kV BIL.
 - 2) Oil-immersed current-limiting fuses: NEMA C37.47; 50,000 rms amperes symmetrical interrupting rating at system voltage specified.
 - e. Surge arresters: IEEE C62.11, rated 9 kV, fully shielded, dead-front, metal-oxide-varister, elbow type with resistance-graded gap, suitable for plugging into inserts. Provide three arresters for radial feed circuits. Provide three arresters for loop feed circuits.
 - f. Parking stands: Provide a parking stand near each bushing well. Provide insulated standoff bushings for parking of energized load-break connectors on parking stands.
 - g. Protective caps: IEEE Std 386, 200 amperes, 15 kV Class. Provide insulated protective caps (not shipping caps) for insulating and sealing out moisture from unused bushing well inserts and insulated standoff bushings.
- D. Low Voltage:
1. Low-voltage compartment shall contain low-voltage bushings with NEMA spade terminals, accessories, metering, stainless steel or laser-etched anodized aluminum diagrammatic transformer nameplate, and ground pad.
 - a. Accessories shall include drain valve with sampler device, fill plug, pressure relief device, liquid level gage, pressure-vacuum gage, and dial type thermometer with maximum temperature indicator.
- E. Transformer:
1. Transformer shall be rated as noted on Drawings, 95 kV BIL.
 2. Transformer voltage ratings: As noted on Drawings.
 3. Tap changer shall be externally operated, manual type for changing tap setting when transformer is de-energized. Provide four 2.5 percent full capacity taps, two above and two below rated primary voltage. Tap changers shall clearly indicate which tap setting is in use.
 4. Audible sound levels shall comply with following criteria:

<u>kVA</u>	<u>DECIBELS (MAX)</u>
30-75	51
112.5	55
150	55

225	55
300	55
500	56
750	57
1000	58
1500	60

5. Transformer shall include lifting lugs and provisions for jacking under base. Transformer base construction shall be suitable for using rollers or skidding in any direction. Provide transformer top with an access handhole. Transformer shall have its kVA rating conspicuously displayed on its enclosure. Transformer shall have an insulated low-voltage neutral bushing with NEMA spade terminal, and with removable ground strap.

F. Specified Transformer Losses:

1. No-load losses (NLL) shall be (see table below for maximum losses allowed) at 68 degrees F and load losses (LL) shall be (see table below for maximum losses allowed) at 185 degrees F. Values for specified losses shall be used for comparison with losses determined during routine tests. If routine test values for no-load losses exceed specified no-load losses by more than 10 percent, or total losses exceed specified total losses (sum of no-load and load losses) by more than 6 percent, transformer is unacceptable.
 - a. Maximum transformer losses shall comply with following criteria:

KVA	SEC. VOLT.	NLL (Watts)	LL (Watts)	Min. % Z
30	208Y/120	---	---	4.2
45	480Y/277	---	---	3.3
75	480Y/277	167	742	2.45
300	280Y/120	475	1,872	3.86
500	280Y/120	741	3,017	4.24
750	280Y/120	922	5,272	5.32
1,500	480Y/277	1,363	8,539	5.32

2. Insulating Liquid:
 - a. Insulating liquid shall be mineral oil unless otherwise noted on one-line diagram on Drawings.
 - b. Mineral oil: ASTM D3487, Type II, tested in accordance with ASTM D117. Provide identification of transformer as "non-PCB" and "Type II mineral oil" on nameplate.
 - c. Less-Flammable Transformer Liquids: NFPA 70 and FM P7825 for less-flammable liquids having a fire point not less than 570 degrees F tested per ASTM D92 and a dielectric strength not less than 33 kV tested per ASTM D877. Do not provide non-flammable transformer liquids including askarel and insulating liquids containing polychlorinated biphenyls (PCB's) and tetrachloroethylene (perchloroethylene), chlorine compounds, and halogenated compounds. Provide identification of transformer as "non-PCB" and "manufacturer's name and type of fluid" on nameplate.
 - d. DO NOT provide silicone insulated transformers.

2.3 DRY TYPE TRANSFORMERS

- A. Manufacturers:
 1. Square D.
 2. GE Electrical.
 3. Copper Power Systems.

4. ABB.
5. Equivalent as acceptable to Engineer.

- B. Product Description: ANSI C57.12.55; single three phase, pad-mounted, self-cooled transformer unit with solid-cast or resin-encapsulated windings.
- C. Cooling and Temperature Rise: ANSI C57.12.55; Class AA. 220 degrees C insulation class with 150 degrees C rise over 40 degrees C ambient.

2.4 SERVICE CONDITIONS

- A. Meet requirements for usual service conditions described in IEEE C57.12.00] [ANSI C57.12.55 and for specified unusual service conditions.
- B. Maximum Minimum Ambient Temperature: 95 degrees F.
- C. Altitude: 100 feet.

2.5 RATINGS

- A. As shown on Drawings.
- B. Primary Voltage: As shown on Drawings.
- C. Taps: Standard primary taps.
- D. Secondary Voltage: As shown on Drawings.
- E. Basic Impulse Level: 30 60 75 95 125 kV.

2.6 ACCESSORIES

- A. Accessories: IEEE C57.12.00, ANSI C57.12.55, standard accessories and magnetic liquid level gage, dial type thermometer.
- B. Tap Changer: Externally-operated type.
- C. Primary Terminations: Bushing wells conforming to IEEE 386; furnish three for radial feed. six for loop primary selective feed. Include bushings for insulated loadbreak connectors.
- D. Primary Terminations: Porcelain insulator with clamp-type connector.
- E. Primary Switching: Fused air switch, gang operated.
- F. Primary Switching: Internal liquid-immersed gang-operated load break switch. Furnish two, for primary selective switching loop feed.
- G. Primary Overcurrent Protection: Internally-mounted, liquid-immersed, expulsion fuses. Bayonet-type, liquid-immersed, expulsion fuses. Current-limiting fuses to conforming to ANSI C37.47.
- H. Secondary Terminations: Spade lugs.

- I. Secondary Switching and Overcurrent Protection: Molded case circuit breaker conforming to NEMA AB1.
- J. Other Accessories: Primary lightning arrestors; and secondary current transformers conforming to IEEE C57.13.

2.7 FABRICATION

- A. Conform to requirements of ANSI C57.12.28.

2.8 FACTORY FINISHING

- A. Clean surfaces before applying paint.
- B. Apply corrosion-resisting primer to surfaces.
- C. Apply finish coat of baked enamel paint to 2/4 mils thick.
- D. Finish Color: Manufacturer's standard dark light gray finish.

2.9 SOURCE QUALITY CONTROL (AND TESTS) - DRY TYPE TRANSFORMERS

- A. Provide factory tests conforming to IEEE C57.12.91. Include routine tests as defined in ANSI C57.12.55 and the following other tests:
 - 1. Impedance voltage and load loss.
 - 2. Dielectric tests.
 - 3. Audible sound level.
 - 4. Short circuit capability.
 - 5. Telephone influence factor (TIF).
- B. Make completed transformer available for inspection at manufacturer's factory prior to packaging for shipment. Notify Owner and Architect/Engineer at least thirty (30) days before inspection is allowed.
- C. Allow witnessing of factory inspections and tests at manufacturer's test facility. Notify Owner and Architect/Engineer at least thirty (30) days before inspections and tests are scheduled.
- D. Provide minimum 15 calendar days' notice of any changes to schedule dates.

2.10 SOURCE QUALITY CONTROL AND TESTS - LIQUID FILLED TRANSFORMERS

- A. Design Tests: IEEE C57.12.00, and IEEE C57.12.90. Section 5.1.2 in IEEE C57.12.80 states that "design tests are made only on representative apparatus of basically same design." Submit design test reports (complete with test data, explanations, formulas, and results), in same submittal package as catalog data and drawings for each specified transformer(s). Design tests shall have been performed prior to award of contract.
 - 1. Tests shall be certified and signed by a registered professional engineer.
 - 2. Temperature rise: "Basically same design" for temperature rise test means a pad-mounted transformer with same coil construction such as wire wound primary and sheet wound secondary, provide same kVA, provide same cooling type (OA), provide same temperature rise rating, and same insulating liquid as transformer specified.

3. Lightning impulse: "Basically same design" for lightning impulse dielectric test means a pad-mounted transformer with same BIL, same coil construction (such as wire wound primary and sheet wound secondary), and a tap changer, if specified. Design lightning impulse tests shall include both primary and secondary windings of that transformer.
 - a. IEEE C57.12.90, paragraph 10.3 entitled "Lightning Impulse Test Procedures," and IEEE C57.98.
 - b. State test voltage levels.
 - c. Provide photographs of oscilloscope display waveforms or plots of digitized waveforms with test report.
 4. Lifting and moving devices: "Basically same design" requirement for lifting and moving devices test means a test report confirming that lifting device being used is capable of handling weight of specified transformer in accordance with IEEE C57.12.26.
 5. Pressure: "Basically same design" for pressure test means a pad-mounted transformer with tank volume within 30 percent of tank volume of transformer specified.
- B. Routine and Other Tests: IEEE C57.12.00. Routine and other tests shall be performed by manufacturer on each actual transformer(s) prepared for this project to ensure that design performance is maintained in production. Submit test reports, by serial number and receive approval before delivery of equipment to project site. Required tests and testing sequence shall be as follows:
1. Cold resistance measurements (provide reference temperature).
 2. Phase relation.
 3. Ratio.
 4. No-load losses (NLL) and excitation current.
 5. Load losses (LL) and impedance voltage.
 6. Dielectric
 - a. Impulse.
 - b. Applied voltage.
 - c. Induced voltage.
 7. Leak.
- C. Make completed transformer available for inspection at manufacturer's factory prior to packaging for shipment. Notify Owner and Architect/Engineer at least thirty (30) days before inspection is allowed.
- D. Allow witnessing of factory inspections and tests at manufacturer's test facility. Notify Owner and Architect/Engineer at least thirty (30) days before inspections and tests are scheduled.
- E. Provide minimum fifteen (15) calendar days' notice of any changes to schedule dates.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify pads and supports are suitable for installation.

3.2 EXISTING WORK

- A. Disconnect and remove abandoned pad-mounted transformers. Cut abandoned raceway flush with surface of concrete pad.

- B. Clean and repair existing pad-mounted transformers to remain or to be reinstalled.

3.3 INSTALLATION

- A. Install in accordance with IEEE C57.94.
- B. Install plumb and level on concrete pad.
- C. Install safety labels in accordance with NEMA 260.
- D. Install engraved plastic nameplates in accordance with Section 26 05 53.
- E. Ground and bond substation in accordance with Section 26 05 26.
- F. Electrical installations shall conform to IEEE C2, NFPA 70, and to requirements specified herein. Provide new equipment and materials unless indicated or specified otherwise.

3.4 GROUNDING

- A. NFPA 70 and IEEE C2, except that grounding systems shall have a resistance to solid earth ground not exceeding 5 ohms.

3.5 GROUNDING ELECTRODES

- A. Provide driven ground rods, minimum two, for ground loop around transformer pad. Connect ground conductors to upper end of ground rods by exothermic weld. Provide compression connectors at equipment end of ground conductors.

3.6 PAD-MOUNTED TRANSFORMER GROUNDING

- A. Provide separate copper grounding conductors into Primary and Secondary compartment of transformer and connect ground conductors to ground loop around transformer pad. When work in addition to that indicated or specified is required to obtain specified ground resistance, provision of contract covering "Changes" shall apply.

3.7 CONNECTIONS

- A. Make joints in grounding conductors and loops by exothermic welds.

3.8 GROUND AND BONDING EQUIPMENT

- A. UL 467, except as indicated or specified otherwise.

3.9 TRANSFORMER GROUNDING

- A. Provide a 1/0 bare copper-ground conductor around transformer pad. Ground conductor shall be buried one foot deep and placed 3 feet laterally from transformer enclosure. Connect ground conductor to enclosure at two places using 1/0 copper.

3.10 FOUNDATION FOR EQUIPMENT AND ASSEMBLIES

- A. Mount transformer on concrete slab. Unless otherwise indicated, slab shall be at least 8 inches thick, reinforced with 6 by 6 - W2.9 by W2.9 mesh, placed uniformly 4 inches from top of slab. Slab shall be placed on a 6-inch-thick, well-compacted gravel base. Top of concrete slab shall be approximately 4 inches above finished grade. Edges above grade shall have 1/2-inch chamfer. Slab shall be of adequate size to project at least 8 inches beyond equipment.
- B. Stub up conduits, with bushings, 2 inches into cable wells in concrete pad. Coordinate dimensions of cable wells with transformer cable training areas.

3.11 FIELD QUALITY CONTROL

- A. Performance of Acceptance Checks and Tests: Perform in accordance with manufacturer's recommendations and include following visual and mechanical inspections and electrical tests, performed in accordance with NETA ATS.
- B. Pad-Mounted Transformers:
 - 1. Visual and mechanical inspection
 - a. Compare equipment nameplate information with specifications and approved shop drawings.
 - b. Inspect physical and mechanical condition. Check for damaged or cracked insulators and leaks.
 - c. Inspect all bolted electrical connections for high resistance using low-resistance ohmmeter, verifying tightness of accessible bolted electrical connections by calibrated torque-wrench method, or performing thermographic survey.
 - d. Verify correct liquid level in tanks.
 - e. Perform specific inspections and mechanical tests as recommended by manufacturer.
 - f. Verify correct equipment grounding.
 - g. Verify presence of transformer surge arresters.
 - 2. Electrical Tests
 - a. Perform resistance measurements through all bolted connections with low-resistance ohmmeter, if applicable.
 - b. Perform insulation-resistance tests.
 - c. Perform turns-ratio tests.
 - d. Perform insulation power-factor/dissipation-factor tests on windings.
 - e. Sample insulating liquid. Sample shall be tested for:
 - 1) Dielectric breakdown voltage.
 - 2) Acid neutralization number.
 - 3) Specific gravity.
 - 4) Interfacial tension.
 - 5) Color.
 - 6) Visual condition.
 - 7) Water in insulating liquid.
 - 8) Measure dissipation factor or power factor.
 - f. Perform dissolved gas analysis (DGA).
 - g. Test for presence of PCB.
 - h. Verify that tap-changer is set at specified ratio.
 - i. Verify proper secondary voltage phase-to-phase and phase-to-neutral after energization and prior to loading.
 - j. Test for presence of PCB.
 - k. Verify that tap-changer is set at specified ratio.

1. Verify proper secondary voltage phase-to-phase and phase-to-neutral after energization and prior to loading.
- C. Grounding System:
1. Visual and mechanical inspection
 - a. Inspect ground system for compliance with Drawings and Specifications.
 2. Electrical tests
 - a. Perform ground-impedance measurements utilizing fall-of-potential method. On systems consisting of interconnected ground rods, perform tests after interconnections are complete. On systems consisting of a single ground rod, perform tests before any wire is connected. Take measurements in normally dry weather, not less than 48 hours after rainfall. Use a portable ground testing megger in accordance with manufacturer's instructions to test each ground or group of grounds. Instrument shall be equipped with a meter reading directly in ohms or fractions thereof to indicate ground value of ground rod or grounding systems under test.
 - b. Submit measured ground resistance of each ground rod and grounding system, indicating location of rod and grounding system. Include test method and test setup (i.e., pin location) used to determine ground resistance and soil conditions at time measurements were made.
- D. Follow-Up Verification
1. Upon completion of acceptance checks and tests, Contractor shall show by demonstration in service that circuits and devices are in good operating condition and properly performing intended function. As an exception to requirements stated elsewhere in contract, Architect/Engineer shall be given five (5) working days advance notice of dates and times of checking and testing.
- E. Section 26 00 00 – Basic Electrical Requirements: Testing and inspection services; and Division 01 - Execution Requirements: Testing, adjusting, and balancing.
- F. Inspect and test in accordance with NETA ATS, except Section 4.
- G. Perform inspections and tests listed in NETA ATS, Section 7.2. [Include following optional tests:
1. Power factor or dissipation-factor tests.
 2. Winding-resistance tests for each winding at [nominal] [final] tap setting.
 3. Individual excitation current tests on each phase.
 4. Insulating liquid specific gravity, power factor, water content, dissolved gas, and total combustible gas.
 5. Operational test and adjustments on fan and pump controls and alarm functions.
 6. Percent oxygen test on nitrogen gas blanket.
- 3.12 ADJUSTING
- A. Section 26 00 00 – Basic Electrical Requirements: Testing, adjusting, and balancing.
 - B. Adjust primary taps so secondary voltage is above and within 2 percent of rated voltage.

END OF SECTION 261200

SECTION 262200 - DRY TYPE TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Dry Type General Purpose Transformers.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.

1.2 REFERENCES

- A. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA ST 1 – Specialty Transformers (Except General Purpose Types).
 - 2. NEMA ST 20 - Dry Type Transformers for General Applications.
- B. International Electrical Testing Association (NETA):
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

- A. Product Data: Submit outline and support point dimensions of enclosures and accessories, unit weight, voltage, kVA, and impedance ratings and characteristics, tap configurations, insulation system type, and rated temperature rise.
- B. Test Reports: Indicate loss data, efficiency at 25, 50, 75 and 100 percent rated load, and sound level.

1.4 CLOSEOUT SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for closeout submittals.
- B. Project Record Documents: Record actual locations of transformers.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years' experience.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and protect products under provisions of Section 26 00 00 – Basic Electrical Requirements.
- B. Store in clean, dry space. Maintain factory wrapping or provide additional canvas or plastic cover to protect units from dirt, water, construction debris, and traffic.

- C. Handle in accordance with manufacturer's written instructions. Lift only with lugs provided. Handle carefully to avoid damage to transformer internal components, enclosure, and finish.

PART 2 - PRODUCTS

2.1 GENERAL PURPOSE TRANSFORMERS

- A. Manufacturers:
 - 1. Square D.
 - 2. General Electric.
 - 3. Cutler-Hammer.
 - 4. Siemens.
 - 5. Equivalent as acceptable to Engineer.
- B. Product Description: NEMA ST 20, factory-assembled, air-cooled, dry type transformers, ratings as indicated on Drawings.
- C. Primary Voltage: Ratings indicated on Drawings.
- D. Secondary Voltage: Ratings indicated on Drawings.
- E. Insulation system shall be Class H or better and average winding temperature rise for rated kVA as follows:
 - 1. 1-15 kVA: Class 185 with 80/115 degrees C rise.
 - 2. 16-500 kVA: Class 220 with 80/115/150 degrees C rise.
- F. Case temperature: Do not exceed 35/40/50 degrees C rise above ambient at warmest point at full load.
- G. Winding Taps:
 - 1. Transformers Less than 15 kVA: Two 5 percent below rated voltage, full capacity taps on primary winding.
 - 2. Transformers 15 kVA and Larger: Two 2-1/2 percent taps above and two 2-1/2 percent taps below.
- H. Sound Levels: Maximum sound levels are as follows: (levels shown shall be measured at 5 feet from the transformer)
 - 1. 1-9 kVA: 40 dB.
 - 2. 10-50 kVA: 45 dB.
 - 3. 51-150 kVA: 50 dB.
 - 4. 151-300 kVA: 55 dB.
 - 5. 301-500 kVA: 60 dB.
 - 6. 501-700 kVA: 62 dB.
 - 7. 701-1000 kVA: 64 dB.
- I. Basic Impulse Level: 10 kV for transformers less than 300 kVA, 30 kV for transformers 300 kVA and larger.
- J. Ground core and coil assembly to enclosure by means of visible flexible copper grounding strap.

- K. Mounting:
 - 1. 1-15 kVA: Suitable for wall mounting.
 - 2. 16-75 kVA: Suitable for wall floor or trapeze mounting.
 - 3. Larger than 75 kVA: Suitable for floor or trapeze mounting.
- L. Cores shall be high grade, non-aging, sheet silicon steel laminations having core-plating insulation on both sides of each lamination.
- M. Coil Conductors: Continuous copper or aluminum windings with terminations brazed or welded. Cores shall be impregnated with non-hygroscopic varnish, and the coil/core shall be bolted to the bottom of the enclosure.
- N. Enclosure: NEMA ST 20, Type 1 Type 3R ventilated non-ventilated. Furnish lifting eyes or brackets.
- O. Isolate core and coil from enclosure using rubber vibration-absorbing mounts. No metal-to-metal contact shall occur between coil/core and enclosure.
- P. Metal Nameplate: Include transformer connection data and overload capacity based on rated allowable temperature rise. Include manufacturer's name, serial number, type, class, kVA, voltage, frequency, and internal wiring diagram.
- Q. Overload capacity shall be not less than 15 percent for continuous operation for 115 degrees C rise transformers.
- R. Transformer primary and secondary shall be rated for use with copper feeder conductors.
- S. Transformer shall have a UL "K" rating of 4 minimum.
- T. Sizes as indicated on drawings.

2.2 BUCK-AND-BOOST TRANSFORMERS

- A. Product Description: NEMA ST 1, factory-assembled, dry type two winding buck and boost transformers, ratings as indicated on Drawings.
- B. Insulation system and average winding temperature rise for rated kVA as follows:
 - 1. 0.25-2 kVA: Class 185 with 80 degrees C rise.
 - 2. 3-7.5 kVA: Class 220 with 80/115 degrees C rise.
- C. Primary Voltage: As indicated on Drawings.
- D. Secondary Voltage: As indicated on Drawings.
- E. Mounting: Wall.
- F. Coil Conductors: Copper or aluminum Continuous windings.
- G. Lugs: Suitable for terminating conductors sized for full load ampacity of transformer unit when operating in buck-and-boost configuration shown.
- H. Enclosure: NEMA ST 1, Type 1.

- I. Isolate core and coil from enclosure using vibration-absorbing mounts.
- J. Nameplate: Include transformer connection data.

2.3 SOURCE QUALITY CONTROL

- A. Production test each unit according to NEMA ST20.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify mounting supports are properly sized and located including concealed bracing in walls.

3.2 EXISTING WORK

- A. Disconnect and remove abandoned transformers.
- B. Maintain access and adequate ventilation to existing transformers and other installations remaining active and requiring access and ventilation. Modify installation or provide access panel or ventilation grilles.
- C. Clean and repair existing transformers to remain or to be reinstalled.

3.3 INSTALLATION

- A. Set transformer plumb and level.
- B. Use flexible conduit, in accordance with Section 26 05 33 – Raceway and Boxes, 2-foot minimum length, for connections to transformer case. Make conduit connections to side panel of enclosure.
- C. Support transformers in accordance with Section 26 05 29 – Electrical Hangers and Supports.
 - 1. Mount wall-mounted transformers using integral flanges or accessory brackets furnished by manufacturer.
 - 2. Mount floor-mounted transformers on vibration isolating pads suitable for isolating transformer noise from building structure. Floor mount on 3-1/2-inch-high concrete housekeeping pads.
 - 3. Mount trapeze-mounted transformers as indicated on Drawings.
- D. Provide seismic restraints.
- E. Install grounding and bonding in accordance with Section 26 05 26 – Grounding and Bonding.
- F. Touch up scratched or marred surfaces to match original finish.

3.4 FIELD QUALITY CONTROL

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.

1. Prior to energization of transformers, check phase-to-phase and phase-to-ground insulation resistance levels.
2. Check transformers for continuity of circuits and for start circuits.
3. Prior to wire and cable hook-ups, energize transformers and demonstrate functioning.

C. Perform inspections and tests listed in NETA ATS, Section 7.2.1.

3.5 ADJUSTING

- A. Section 26 00 00 – Basic Electrical Requirements: Testing, adjusting, and balancing.
- B. Measure primary and secondary voltages and make appropriate tap adjustments.

SECTION 26 24 16 - PANELBOARDS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Distribution Circuit Panelboards.
 - 2. Branch Circuit Panelboards.
 - 3. Electronic Grade Branch Circuit Panelboards.

- B. Related Sections:
 - 1. Applicable provisions of Section 26 00 00 – Basic Electrical Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.
 - 3. Section 26 05 26 - Grounding and Bonding.
 - 4. Section 26 05 53 - Electrical Identification.

1.2 REFERENCES

- A. Institute of Electrical and Electronic Engineers (IEEE):
 - 1. IEEE C62.41 – Recommended Practice on Surge Voltages in Low Voltage AC Power Circuits.

- B. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA AB 1 - Molded Case Circuit Breakers and Molded Case Switches.
 - 2. NEMA FU 1 – Low Voltage Cartridge Fuses.
 - 3. NEMA ICS 2 – Industrial Control and Systems: Controllers, Contactors, and Overload Relays, Rated Not More Than 2000 Volts AC or 750 Volts DC.
 - 4. NEMA ICS 5 - Industrial Control and Systems: Control Circuit and Pilot Devices.
 - 5. NEMA KS 1 – Enclosed and Miscellaneous Distribution Equipment Switches (600 Volts Maximum).
 - 6. NEMA PB 1 - Panelboards.
 - 7. NEMA PB 1.1 - General Instructions for Proper Installation, Operation, and Maintenance of Panelboards Rated 600 Volts or Less.

- C. International Electrical Testing Association (NETA):
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

- D. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electrical Code.

- E. Underwriters Laboratories Inc. (UL):
 - 1. UL 67 - Safety for Panelboards.
 - 2. UL 1283 – Electromagnetic Interference Filters.
 - 3. UL 1449 – Transient Voltage Surge Suppressors.

1.3 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.
- B. Shop Drawings: Indicate outline and support point dimensions, voltage, main bus ampacity, integrated short circuit ampere rating, circuit breaker arrangement and sizes.
- C. Product Data: Submit catalog data showing specified features of standard products.

1.4 CLOSEOUT SUBMITTALS

- A. Project Record Documents: Record actual locations of panelboards and record actual circuiting arrangements.
- B. Operation and Maintenance Data: Submit spare parts listing; source and current prices of replacement parts and supplies; and recommended maintenance procedures and intervals.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years' experience.

1.6 MAINTENANCE MATERIALS

- A. Furnish two of each panelboard key. Panelboards shall be keyed alike.

1.7 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Do not store panelboards exposed to weather.
- B. Protect panelboards against damage from work of other trades.

PART 2 - PRODUCTS

2.1 DISTRIBUTION PANELBOARDS

- A. Manufacturers:
 - 1. Square D, I-line Series.
 - 2. GE Electrical.
 - 3. Siemens.
 - 4. Cutler-Hammer.
 - 5. Equivalent as acceptable to Engineer.
- B. Product Description: NEMA PB 1, circuit breaker type panelboard.
- C. Panelboard Bus: Copper, current carrying components, ratings as indicated on Drawings. Furnish copper ground bus in each panelboard. Bus shall be rated per panelboard schedule, 100 amp minimum.

- D. Minimum integrated short circuit rating: 10,000 amperes rms symmetrical for 240- or 208-volt panelboards; 22,000 amperes rms symmetrical for 480-volt panelboards, unless otherwise indicated on Drawings. Panels shall be fully rated; series rating is not acceptable.
- E. Molded Case Circuit Breakers: NEMA AB 1, bolt-on type, circuit breakers with integral thermal and instantaneous magnetic trip handle for all poles. No handle ties of any sort will be approved. Provide circuit breakers UL listed as Type HACR for air conditioning equipment branch circuits.
- F. Circuit Breaker Accessories: Trip units as indicated on Drawings.
- G. Enclosure: NEMA PB 1, Type 1 indoors, 3R outdoor and damp or wet locations, maximum 9.5 inches deep, 42 inches wide, cabinet box.
- H. Provide cabinet front with hinged door with flush lock. Front cover shall allow access to wiring gutters without removal of panel trim. Hinged trim shall be held in place with screw fasteners. Finish in manufacturer's standard gray enamel.
- I. Where indicated on drawings, provide TVSS unit mounted integral to panel. TVSS unit shall meet Section 26 35 53 requirements.

2.2 BRANCH CIRCUIT PANELBOARDS

- A. Manufacturers:
 - 1. Square D, NQOD or NF Series.
 - 2. GE Electrical.
 - 3. Siemens.
 - 4. Cutler-Hammer.
 - 5. Equivalent as acceptable to Engineer.
- B. Product Description: NEMA PB1, circuit breaker type, lighting and appliance branch circuit panelboard.
- C. Panelboard Bus: Copper, current carrying components, ratings as indicated on Drawings, 100 amp minimum. Furnish copper ground bus in each panelboard.
- D. Minimum Integrated Short Circuit Rating: 10,000 amperes rms symmetrical for 208-volt or 240-volt panelboards; 14,000 amperes rms symmetrical for 480-volt panelboards, unless otherwise indicated on Drawings. Panels shall be fully rated; series rating is not acceptable.
- E. Molded Case Circuit Breakers: NEMA AB 1, bolt-on type thermal magnetic trip circuit breakers, with common trip handle for all poles; no handle ties of any sort will be approved. Type HACR for air conditioning equipment circuits, HID rated for high intensity discharge lighting systems, or as indicated on Drawings.
- F. Provide metal directory holders with clear plastic covers.
- G. Do not use tandem circuit breakers.
- H. Enclosure: NEMA PB 1, Type 1 indoors, Type 3R outdoors and damp or wet locations.
- I. Cabinet Box: 6 inches deep, 20 inches (508 mm) wide.

- J. Where indicated on drawings, provide TVSS units mounted integral to panel. TVSS unit shall meet Section 26 35 53 requirements.
- K. Furnish wiring gutters in accordance with NEC.
- L. Top or bottom feed as required.
- M. Furnish with branch breaker positions and nominal current rating as indicated on Drawings.
- N. Fronts:
 - 1. Dead front safety type.
 - 2. Door shall be built into panel front cover trim which allows access to breakers as well as to trim screw fasteners. Front cover construction with concealed trim screws and door hinges. Breaker access door shall have the following features:
 - a. Concealed piano hinge.
 - b. Flush stainless-steel cylinder tumbler type lock with spring loaded door pulls.
 - c. Locks keyed alike.
 - d. Code gauge steel with rust inhibiting primer and baked enamel finish.
- O. Circuit Directory:
 - 1. Suitable for complete descriptions.
 - 2. Clear plastic cover.
 - 3. Typewritten card, describing the loads served.
 - 4. Provide steel frame holder on inside cover of door to hold directory. Directory shall be covered with a sheet of clear plastic.

2.3 ELECTRONIC GRADE PANELBOARD

- A. Integral Surge Suppressor shall meet requirements of Section 26 35 53 – Voltage Regulators.
- B. Panelboard:
 - 1. Panelboard shall meet all requirements for Branch Circuit Panelboards with additional features listed below.
 - 2. UL 67 listed and TVSS device UL 1449 Component Recognized. TVSS device meets UL 1449. Furnish panelboard markings with clamp voltage at TVSS terminals and clamp voltage at panelboard line terminals.
 - 3. Provide interior with branch circuit breakers. Provide dedicated disconnect for TVSS.
 - 4. 200 percent rated copper neutral bus.

2.4 NAME PLATES

- A. Name Plates:
 - 1. Engraved, laminated plastic type.
 - 2. Letters 3/16-inch high minimum.
 - 3. White letters on black background.
 - 4. Verify panelboard designation with Owner's Representative.

PART 3 - EXECUTION

3.1 EXISTING WORK

- A. Maintain access to existing panelboard remaining active and requiring access. Modify installation or provide access panel.
- B. Clean and repair existing panelboards to remain or to be reinstalled.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's written instruction, applicable requirements of NEC, NECA's "Standard of Installation," NEMA PB1.1, and in accordance with recognized industry practices.
- B. Install flush or surface mounted as specified on drawings and schedules.
- C. Support panel cabinets independently to structure with no weight bearing on conduits.
- D. Install recessed panelboards to allow cover to be drawn tight against wall to provide neat appearance.
- E. Install surface mounted panelboard interior so there is no gap between the panelboard back-box and cover.
- F. Adjacent panel cabinets shall be of same size and mounted in horizontal alignment.
- G. Attach nameplates. Nameplates for panels in public areas shall be attached to the inside face of the cover. Nameplates for panels in equipment rooms and other non-public areas shall be attached to the outside face of the cover.
- H. Install panelboards plumb.
- I. Height: 6 feet to top of panelboard; install panelboards taller than 6 feet with bottom no more than 4 inches above floor.
- J. Install filler plates for unused spaces in panelboards.
- K. Provide typed circuit directory for each branch circuit panelboard. Revise directory to reflect circuiting changes to balance phase loads.
- L. Install engraved plastic nameplates in accordance with Section 26 05 53 – Electrical Identification.
- M. Install spare conduits out of each recessed panelboard to accessible location: (2) 1 inch to above ceiling, (2) 1 inch to floor below. Identify each as SPARE.
- N. Ground and bond panelboard enclosure according to Section 26 05 26 – Grounding and Bonding. Connect equipment ground bars of panels in accordance with NFPA 70.

3.3 FIELD QUALITY CONTROL

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.

3.4 INSPECTION

- A. Examine area to receive new panelboards to assure adequate clearance for installation.
- B. Start work only after unsatisfactory conditions are corrected.
- C. Inspect and test in accordance with NETA ATS, except Section 4.
- D. Perform circuit breaker inspections and tests listed in NETA ATS, Section 7.6.

3.5 ADJUSTING

- A. Adjust doors and operating mechanisms for free mechanical movement.
- B. Tighten lugs and bus connections.
- C. Clean interior of panelboard.
- D. Sand, prime and paint scratched or marred surfaces to match original finish.
- E. Measure steady state load currents at each panelboard feeder; rearrange circuits in panelboard to balance phase loads to within 20 percent of each other. Maintain proper phasing for multi-wire branch circuits.

END OF SECTION 262416

SECTION 262716 - CABINETS AND ENCLOSURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Section includes hinged cover enclosures, cabinets, terminal blocks, and accessories.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.

1.2 REFERENCES

- A. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - 2. NEMA ICS 4 - Industrial Control and Systems: Terminal Blocks.

1.3 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.
- B. Product Data: Submit manufacturer's standard data for enclosures, cabinets, and terminal blocks.
- C. Manufacturer's Installation Instructions: Submit application conditions and limitations of use stipulated by product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

1.4 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five years documented experience.

1.5 EXTRA MATERIALS

- A. Furnish under provisions of Section 26 00 00 – Basic Electrical Requirements.
- B. Furnish two of each key.

PART 2 - PRODUCTS

2.1 HINGED COVER ENCLOSURES

- A. Construction: NEMA 250, Type 1 3R 4 steel stainless steel fiberglass plastic enclosure.
- B. Covers: Continuous hinge, held closed by [flush latch operable by screwdriver key hasp and staple for padlock.

- C. Furnish interior plywood metal panel for mounting terminal blocks and electrical components; finish with white enamel.
- D. Enclosure Finish: Manufacturer's standard enamel None.

2.2 CABINETS

- A. Boxes: Galvanized steel with removable end walls.
- B. Box Size: 24 inches wide x inches high x 6 inches deep.
- C. Backboard: Furnish 3/4-inch thick plywood backboard for mounting terminal blocks. Paint with two coats of flat white paint.
- D. Fronts: Steel, flush surface type with concealed trim clamps, screw cover front, door with concealed hinge, and flush lock keyed to match branch circuit panelboard. Finish with gray baked enamel.
- E. Furnish metal barriers to form separate compartments wiring of different systems and voltages.
- F. Furnish accessory feet for free-standing equipment.

2.3 TERMINAL BLOCKS

- A. Terminal Blocks: NEMA ICS 4.
- B. Power Terminals: Unit construction type with closed back and tubular pressure screw connectors, rated 600-volts.
- C. Signal and Control Terminals: Modular construction type, suitable for channel mounting, with tubular pressure screw connectors, rated 300-volts.
- D. Furnish ground bus terminal block, with each connector bonded to enclosure.

2.4 PLASTIC WIRE MANAGEMENT RACEWAY

- A. Product Description: Plastic channel with hinged or snap-on cover.

PART 3 - EXECUTION

3.1 EXISTING WORK

- A. Remove abandoned cabinets and enclosures, including abandoned cabinets and enclosures above accessible ceiling finishes. Patch surfaces.
- B. Maintain access to existing cabinets and enclosures and other installations remaining active and requiring access. Modify installation or provide access panel.
- C. Extend existing cabinets and enclosures using materials and methods compatible with existing electrical installations, or as specified.

- D. Clean and repair existing cabinets and enclosures to remain or to be reinstalled.

3.2 INSTALLATION

- A. Install enclosures and boxes plumb. Anchor securely to wall and structural supports at each corner in accordance with Section 26 05 29 – Electrical Hangers and Supports.
- B. Install cabinet fronts plumb.

3.3 CLEANING

- A. Section 26 00 00 – Basic Electrical Requirements: Requirements for cleaning.
- B. Clean electrical parts to remove conductive and harmful materials.
- C. Remove dirt and debris from enclosure.
- D. Clean finishes and touch up damage.

END OF SECTION 262716

This page intentionally left blank

SECTION 262726 - WIRING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wall Switches.
 - 2. Wall Dimmers.
 - 3. Receptacles.
 - 4. Multi-Outlet Assembly.
 - 5. Occupancy Sensors.
 - 6. Device Plates.
 - 7. Decorative Box Covers.

- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 05 33 - Raceway and Boxes.
 - 3. Section 26 05 34 - Floor Boxes.
 - 4. Section 26 05 39 - Underfloor Raceway Assemblies.

1.2 REFERENCES

- A. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA WD 1 - General Requirements for Wiring Devices.
 - 2. NEMA WD 6 - Wiring Devices-Dimensional Requirements.

1.3 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.

- B. Product Data: Submit manufacturer's catalog information showing dimensions, colors, and configurations.

- C. Submit a Lighting Plan marked by manufacturer showing location, orientation and model number of occupancy sensors and power packs. Provide interconnecting wire diagrams and catalog cut sheets of occupancy sensors and power packs.

1.4 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Provide all wiring device types from a single manufacturer.

1. Use of a manufacturer's name and model or catalog number is for purpose of establishing standard of quality and general configuration desired.
- B. Devices and Cover Plate Colors:
 1. Device colors shall be white, unless noted otherwise.
 2. Unless noted otherwise, receptacles and light switches controlling emergency or critical loads shall be red in color.
 3. Adjustments in device or cover plate color shall be made in the field without additional compensation.
- C. Unless otherwise indicated acceptable manufacturers are:
 1. Hubbell.
 2. Leviton.
 3. Arrow-Hart, Inc.
 4. Pass & Seymour.

2.2 WALL SWITCHES

- A. Switches:
 1. Single Pole Switch: 20 amps, 120-277-volt, specification grade, back or side wired equal to Hubbell cat. No. HBL1221.
 2. Double Pole Switch: 20-amp, 120-277-volt, specification grade, back or side wired equal to Hubbell cat. No. HBL1222.
 3. Three-way Switch: 20 amps, 120-277-volt, specification grade, back or side wired equal to Hubbell cat. No. HBL1223.
 4. Four-way Switch: 20 amps, 120-277-volt, specification grade, back or side wired equal to Hubbell cat. No. HBL1224.
 5. Pilot Light (lighted) - Single Pole Switch: 20-amp, 120-277-volt, specification grade, clear polycarbonate toggle, back or side wired equal to Hubbell cat. No. HBL1221ILC.
 6. Keyed Single Pole Switch: 20-amp, 120-277-volt, specification grade, back or side wired equal to Hubbell cat. No. HBL1221L. Provide owner with a minimum of 4 keys for switches.
 7. Momentary Contact Switch: 20-amp, 120-277-volt, specification grade, back or side wired, three positions, center off equal to Hubbell cat. No. HBL1557.

2.3 WALL DIMMERS

- A. Manufacturers:
 1. Leviton.
 2. Lutron.
 3. Pass & Seymour.
- B. Product Description: NEMA WD 1, Type I, semiconductor dimmer with ON-OFF switch independent of brightness setting for incandescent lamps.
- C. Body and Handle: Plastic with linear slide. Device colors shall be white unless noted otherwise.
- D. Voltage: 120/277 volts.
- E. Power Rating: Dimmers shall be derated 25 percent to allow next size larger lamp to be installed in lighting fixtures controlled by dimmer, 1000 watts minimum.

F. Accessory Wall Switch: Match dimmer appearance.

2.4 RECEPTACLES

A. General:

1. Receptacles shall be flush mounted.
2. Receptacles shall have full grounding straps and be suitable for side or side and back wiring.
3. Receptacles shall be Hubbell Nos. listed below or equal by approved manufacturer.
4. Unless noted otherwise, receptacles shall be 125-volt, 2-pole, 3 wire grounding.
5. Device colors shall be white, unless noted otherwise.

B. Receptacles

1. Single Convenience Receptacle Where a single receptacle is wired to a dedicated 20 ampere: heavy duty, specification grade, 20-amp, 125-volt, NEMA 5-20R Hubbell cat. No. HBL5361.
2. General use Duplex Convenience Receptacle: heavy duty, specification grade, 15-amp, 125 volt, NEMA 5-15R Hubbell cat. No. HBL5262.
3. Duplex Receptacle Where a single duplex receptacle is wired to a dedicated 20 ampere: heavy duty, specification grade, 20-amp, 125 volt, NEMA 5-20R Hubbell cat. No. 5362.
4. Tamper-Resistant: Commercial specification grade, 20-amp Duplex, 125-volt, NEMA 5-20R, Hubbell cat. No. BR20TR.
5. Weather-Resistant: Corrosion resistant heavy duty, specification grade, 20-amp duplex, 125-volt, NEMA 5-20R, HBL53CM62 (Color – Yellow)
6. GFCI Receptacle: heavy duty, specification grade, self-testing, 20-amp, 125-volt, NEMA 5-20R, UL 2006 compliant, Hubbell cat. No. GFST20.
7. Tamper-Resistant GFCI: Heavy duty commercial grade, 20-amp duplex, 125-volt, NEMA 5-20R, UL 2006 compliant, Hubbell cat. No. GFTR20.
8. Weather-Resistant GFCI: Extra heavy-duty grade, 20-amp duplex, 125-volt, NEMA 5-20R, UL 2006 compliant, Hubbell cat. No. GFR5362.
9. Hospital Use Receptacle: hospital grade, 20-amp, 125 volt, NEMA 5-20R Hubbell cat. No. HBL8300.
10. Clock receptacle: receptacle, clock hanger, and stainless-steel Hubbell Cat. No. HBL5235.
11. Isolated ground duplex receptacle: Orange, heavy duty, specification grade, 20-amp, 125-volt, NEMA 5-20R Hubbell cat. No. IG5362.

C. Weatherproof Cover Plate: Gasketed die cast metal plate with hinged and gasketed device covers. Cover shall allow cords to be plugged in and cover closed. Provide Intermatic WP1010MC for single duplex receptacles or WP1030MC for double (quad) duplex receptacles.

D. Receptacles fed from emergency circuits shall be red.

2.5 SPECIAL PURPOSE OUTLETS

A. Refer to “Special Outlet Schedule” on Drawings.

B. Electrical Contractor shall be responsible for coordinating the following items with actual equipment being furnished for the project prior to installation of outlet.

1. Exact location and orientation of outlet. Field coordinate location of outlet with Engineer/Architect’s field representative, location shall not be scaled off electrical drawings.
2. Electrical characteristics of equipment, including voltage, phasing, ampacity, etc.

3. Physical characteristics of termination, e.g. receptacle configuration, cord-and-plug versus hard-wired equipment, etc.

2.6 WALL PLATES

- A. Provide wall plates for wiring devices, with ganging and cutouts as indicated and with metal screws for securing plates to devices, screw heads colored to match finish of plate.
- B. Decorative Cover Plate for flush mounted devices: Smooth, 302 stainless steel.
- C. Device plates for surface mounted 4-inch square boxes; 1/2-inch raised galvanized steel covers.
- D. Do not use jumbo cover Plates.
- E. Weatherproof Cover Plate: Gasketed die cast metal plate with hinged and gasketed device covers. Cover shall allow cords to be plugged in and cover closed. Provide Intermatic WP1010MC for single duplex receptacles or WP1030MC for double (quad) duplex receptacles.

2.7 MULTIOUTLET ASSEMBLY

- A. Manufacturers:
 1. Wiremold.
 2. Hubbell.
 3. Panduit.
- B. Multi-outlet Assembly: Sheet metal channel with fitted cover, with pre-wired receptacles, suitable for use as multi-outlet assembly.
- C. Size: As indicated on Drawings.
- D. Receptacles: Furnish covers and accessories to accept convenience receptacles specified in this Section.
- E. Receptacles: NEMA WD 6, type 5-20R, duplex receptacle.
- F. Receptacle Spacing: As indicated on Drawings or as required.
- G. Receptacle Color: Coordinate with the Architect.
- H. Channel Finish: Ivory enamel.
- I. Fittings: Furnish manufacturer's standard couplings, elbows, outlet and device boxes, and connectors.

2.8 OCCUPANCY SENSORS

- A. General:
 1. Unit shall have a convenient means to bypass sensor in case of failure, so lighting can be operated manually.
 2. Unit shall be provided with a readily viable test LED to indicate when sensor detects motion.
 3. Sensor sensitivity and time delay shall be adjustable. Time delay shall be adjustable from 1 minute to 30 minutes at a minimum.

4. Unit shall be UL or ETL listed.
 5. Unit shall be provided with a 3-year warranty.
 6. Occupancy sensors may be infrared, ultrasonic or combination type. Chosen manufacturer shall provide optimum technology needed for each space where a sensor is shown.
- B. Manufacturers:
1. Watt Stopper.
 2. Leviton.
 3. MyTech.
 4. Hubbell.
- C. Dual Technology Wall Switch:
1. Sensor shall use passive infrared and ultrasonic detection method for detecting room occupancy. Unit shall fit in/on a standard single gang switch box and require only two wires and a grounded box for operation.
 2. Rated capacity: 1000 watts minimum at 120 volts, 60 Hz, 1200 watts minimum at 277 volts, 60 Hz for fluorescent lamps, larger size to accommodate load as shown on Drawings.
 3. Switch shall have manual on/off button.
 4. Area of coverage shall be 250 square feet minimum, greater range to accommodate room size as shown on Drawings.
 5. Model Watt Stopper: DSW-301 Series.
- D. Ceiling-Mounted Dual Technology Occupancy Sensor:
1. Sensor shall employ both infrared and ultrasonic sensing methods to detect room occupancy. Unit shall fit in/on a standard octagon box.
 2. Rated capacity shall be 20-amps at 120- or 277- volts, for fluorescent lamps.
 3. Area of coverage shall be adjustable. Unit shall be provided with a dip switch to allow either detection technology to be independently configured.
 4. Unit shall be provided with a dip switch to select one of five different sensing modes as dictated by environmental factors.
 5. Model: Watt Stopper: DT-300.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify outlet boxes are installed at proper height.
- B. Verify wall openings are neatly cut and completely covered by wall plates.
- C. Verify branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.

3.2 PREPARATION

- A. Clean debris from outlet boxes.

3.3 EXISTING WORK

- A. Disconnect and remove abandoned wiring devices.

- B. Modify installation to maintain access to existing wiring devices to remain active.
- C. Clean and repair existing wiring devices to remain or to be reinstalled.

3.4 INSTALLATION

- A. Switches controlling equipment operation of which is not evident from switch position shall include pilot light in conjunction with proper switch.
- B. Each switch shall be complete with engraved plate to identify equipment being controlled. Provide black letters on clear background, 1/8-inch high, minimum.
- C. Do not install devices until after wall finishes have been completely applied.
- D. Any outlets installed prior to walls being finished and used for construction power shall be replaced at time of substantial completion.
- E. Install devices and wall plates plumb and level.
- F. Install switches with OFF position down.
- G. Install wall dimmers to achieve full rating specified and indicated after derating for ganging as instructed by manufacturer.
- H. Do not share neutral conductor on load side of dimmers.
- I. Install receptacles with grounding pole on top.
- J. Connect wiring device grounding terminal to outlet box with bonding jumper and branch circuit equipment grounding conductor.
- K. Route continuous green equipment grounding conductor with branch circuit conductors serving isolated ground receptacles. Terminate equipment ground on isolated ground bus in panelboards.
- L. Install emergency switches, which occur adjacent to normal light switches in separate boxes to maintain systems isolation in accordance with the NEC.
- M. Install decorative plates on switch, receptacle, and blank outlets in finished areas.
- N. Connect wiring devices by wrapping solid conductor around screw terminal. Install stranded conductor for branch circuits 10 AWG and smaller.
- O. When stranded conductors are used in lieu of solid, use crimp on fork terminals for device terminations. Do not place bare stranded conductors directly under device screws.
- P. Install galvanized steel plates on outlet boxes and junction boxes in unfinished areas, above accessible ceilings, and on surface mounted outlets.
- Q. Do not use terminals on wiring devices (hot or neutral) for feed-through connections, looped or otherwise make circuit connections via wire connectors and pigtails.

- R. Provide a layer of electrical tape around perimeter sides of each wiring device so that terminations are insulated.
- S. Where GFI protected receptacles are indicated on Drawings, each receptacle indicated shall be a GFI receptacle. Standard receptacles protected with an upstream GFI receptacle shall not be approved.
- T. Provide arc-fault circuit interrupter (AFCI) for Branch Circuits feeding receptacles in dwelling unit bedrooms. AFCI protection may be provided by an AFCI receptacle or AFCI device in circuit breaker panel feeding dwelling unit bedrooms.
- U. Multiple or Special Switch Stations:
 - 1. Grouped local switches under common cover plate as scheduled or noted on the drawings. Provide pilot lights on all circuits remote from general area or exterior to building. Eight-gang plate maximum - where two plates are required, same shall be equal in size and located one above the other. Switch plates shall include an engraved, Bakelite nameplate to identify function of each switch. Nameplate shall be screwed in place.
- V. Occupancy Sensors:
 - 1. Install sensors within rooms in accordance with manufacturer's guidelines and recommendations.
 - 2. Infrared sensors shall be placed where they will have a direct line of sight to occupied areas.
 - 3. Ultrasonic sensors shall not be placed immediately adjacent to HVAC diffusers. High velocity air movement may result in nuisance tripping of sensor.

3.5 INTERFACE WITH OTHER PRODUCTS

- A. Coordinate locations of outlet boxes provided under Section 26 05 33 – Raceway and Boxes to obtain mounting heights as indicated on Drawings.
- B. Coordinate installation of wiring devices with underfloor raceway service fittings provided under Section 26 05 39 – Underfloor Raceway Assemblies.
- C. Coordinate installation of wiring devices with floor box service fittings provided under Section 26 05 34 – Floor Boxes.

3.6 FIELD QUALITY CONTROL

- A. Division 01 – General Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Inspect each wiring device for defects.
- C. Operate each wall switch with circuit energized and verify proper operation.
- D. Verify each receptacle device is energized.
- E. Test each receptacle device for proper polarity.
- F. Test each GFCI receptacle device for proper operation.
- G. Occupancy Sensors:

1. Sensitivity Test: After sensor has been energized for at least 15 minutes, walk to middle of room (if conference room) or sit at normal desk position (if an office). Make no motion for 20 seconds. Move one arm up and down slowly. Test LED should blink.
2. Time Delay Test: Set time delay for 10 minutes. Walk into room to activate sensor, then leave room. Sensor must turn lights off at approximately 10 minutes.

H. If a device fails to properly operate, replace at no extra charge to Owner.

3.7 ADJUSTING

- A. Devices and face plates on a common wall with common mounting heights shall be level and square to each other. Adjustments required after installation shall be made without additional compensation.
- B. Mark conductors with panel and circuit number serving device, at device.
- C. Mark panel and circuit number serving device on backside of device plate with a permanent marking system that does not show through front of plate.

3.8 CLEANING

- A. Clean exposed surfaces to remove splatters and restore finish.

END OF SECTION 262726

SECTION 262813 - FUSES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fuses.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.

1.2 REFERENCES

- A. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA FU 1 - Low Voltage Cartridge Fuses.

1.3 DESIGN REQUIREMENTS

- A. Select fuses to provide appropriate levels of short circuit and over-current protection for the following components: wire, cable, bus structures, and other equipment. Design system to maintain component damage within acceptable levels during faults.
- B. Select fuses to coordinate with time current characteristics of other over-current protective elements, including other fuses, circuit breakers, and protective relays. Design system to maintain operation of device closest to fault operates.

1.4 FUSE PERFORMANCE REQUIREMENTS

- A. Main Service Switches Larger than 600 amperes: Class L, Bussmann low-peak or equivalent as acceptable to Engineer, bolt in, 200,000 ampere interrupting rating.
- B. Main Service Switches: Class RK1. Bussmann low-peak or equivalent as acceptable to Engineer, one-end rejection, 0-600-amp, 200,000 ampere interrupting rating.
- C. Load Feeder Switches Larger than 600 amperes: Class L. Bussmann low-peak or equivalent as acceptable to Engineer, bolt in, 200,000 ampere interrupting rating.
- D. Load Feeder Switches: Class RK1. Bussmann low-peak or equivalent as acceptable to Engineer, one-end rejection, 0-600-amp, 200,000 ampere interrupting rating.
- E. Motor Load Feeder Switches: Class RK1. Bussmann low-peak or equivalent as acceptable to Engineer, one-end rejection, 0-600-amp, 200,000 ampere interrupting rating.
- F. Motor and general-purpose Branch Circuits: Class RK1. Bussmann low-peak, LPS-R or equivalent as acceptable to Engineer, dual element, time delay with short circuit protection, 200,000 ampere interrupting rating.
- G. Lighting Branch Circuits: Class G.

H. Control Power Transformer Circuits: Class CC.

1.5 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.
- B. Product Data: Submit data sheets showing electrical characteristics, including time-current curves.

1.6 CLOSEOUT SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for closeout submittals.
- B. Project Record Documents: Record actual sizes, ratings, and locations of fuses.

1.7 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years' experience.

1.8 MAINTENANCE MATERIALS

- A. Section 26 00 00 – Basic Electrical Requirements: Spare parts and maintenance products.
- B. Furnish two fuse pullers.

1.9 EXTRA MATERIALS

- A. Section 26 00 00 – Basic Electrical Requirements: Requirements for extra materials.
- B. Furnish three spare fuses of each Class, size, and rating installed.

PART 2 - PRODUCTS

2.1 FUSES

- A. Manufacturers:
 - 1. Littlefuse.
 - 2. Cooper, Bussmann Division.
 - 3. Mersen.
 - 4. Equivalent as acceptable to Engineer.
- B. Dimensions and Performance: NEMA FU 1, Class as specified or as indicated on Drawings.
- C. Voltage: Rating suitable for circuit phase-to-phase voltage.

2.2 SPARE FUSE CABINET

- A. Manufacturers:
 - 1. B-Line.
 - 2. Ferraz-Shawmut.

3. Unity Mfg.
 4. Equivalent as acceptable to Engineer.
- B. Product Description: Wall-mounted sheet metal cabinet with shelves, suitably sized to store spare fuses and fuse pullers specified.
 - C. Doors: Hinged, with hasp for Owner's padlock.
 - D. Finish: Gray enamel.

PART 3 - EXECUTION

3.1 EXISTING WORK

- A. Remove fuses from abandoned circuits.
- B. Maintain access to existing fuses and other installations remaining active and requiring access. Modify installation or provide access panel.

3.2 INSTALLATION

- A. Install fuse with label oriented so manufacturer, type, and size are easily read.
- B. Install spare fuse cabinet as indicated on Drawings.

END OF SECTION 262813

This page intentionally left blank

SECTION 262819 - ENCLOSED SWITCHES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fusible and Non-fusible switches.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 28 13 - Fuses.

1.2 REFERENCES

- A. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA FU 1 - Low Voltage Cartridge Fuses.
 - 2. NEMA KS 1 - Enclosed and Miscellaneous Distribution Equipment Switches (600 Volts Maximum).
- B. International Electrical Testing Association (NETA):
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements and Division 01 – General Requirements: Procedures for submittals.
- B. Product Data: Submit switch ratings and enclosure dimensions.

1.4 CLOSEOUT SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements and Division 01 – General Requirements: Procedures for closeout submittals.
- B. Project Record Documents: Record actual locations of enclosed switches and ratings of installed fuses.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years' experience.

PART 2 - PRODUCTS

2.1 FUSIBLE SWITCH ASSEMBLIES

- A. Manufacturers:

1. Square D.
 2. Cutler Hammer/Eaton.
 3. Siemens.
 4. General Electric.
- B. Product Description: NEMA KS 1, Type HD with externally operable handle interlocked to prevent opening front cover with switch in ON position, enclosed load interrupter knife switch. Provide means to temporarily override interlock and allow door to be opened with switch on.
- C. Fuse clips: Designed to accommodate NEMA FU 1, Class R fuses.
- D. Enclosure: NEMA KS 1, to meet conditions. Fabricate enclosure from steel finished with manufacturer's standard gray enamel.
1. Interior Dry Locations: Type 1.
 2. Exterior Locations: Type 3R.
 3. Wet Locations: Type 4.
- E. Service Entrance: Switches identified for use as service equipment are to be labeled for this application. Furnish solid neutral assembly and equipment ground bar.
- F. Furnish switches with entirely copper current carrying parts.
- G. Provide ANSI/UL Class RK1, dual element, time delay, 600-volt fuses in disconnect switches, sized as shown on drawings.
- H. Quick make and break operator mechanism.
- I. Handle attached to box, not cover.
- J. Handle position indication, ON in up position and OFF in down position.
- K. Padlock provisions for up to three padlocks in OFF position.
- L. UL listed lugs for type and size of wire specified.
- M. Spring reinforced fuse clips for Type R fuses.
- N. Provisions for insulated or grounded neutral.
- 2.2 NONFUSIBLE SWITCH ASSEMBLIES
- A. Same requirements as for fusible switches except that provisions for fuses are to be omitted.
- 2.3 ELEVATOR DISCONNECT SWITCHES
- A. Disconnect switches associated with elevator feeder circuits shall have additional features designed to facilitate code required interface between fire alarm system devices and elevator operations.
- B. Ampacity shall be equal to or greater than the feeder overcurrent device amp rating.
- C. Integral control transformer with primary voltage compatible with elevator feeder voltage.

- D. Shunt trip disconnect switch.
- E. Provide wiring between disconnect and addressable fire alarm control module. Control module will change state to initiate elevator shunt trip. Shunt trip will be a function of the elevator disconnect switch.
- F. Fuses sized per elevator manufacturer's requirements.
- G. Red LED Pilot light.
- H. Relay to be used to monitor shunt trip voltage.
- I. NEMA type 1 enclosure.
- J. Basis of Design is Bussman PS series elevator disconnect.

2.4 SWITCH RATINGS

- A. Switch Rating: Horsepower rated for AC or DC as indicated on Drawings.
- B. Short Circuit Current Rating: UL listed for 200,000 rms symmetrical amperes when used with or protected by Class R fuses (30-600 ampere switches employing appropriate fuse rejection schemes).

PART 3 - EXECUTION

3.1 EXISTING WORK

- A. Disconnect and remove abandoned enclosed switches.
- B. Maintain access to existing enclosed switches and other installations remaining active and requiring access. Modify installation or provide access panel.
- C. Clean and repair existing enclosed switches to remain or to be reinstalled.

3.2 INSTALLATION

- A. Provide disconnect switches for loads as required by code. Review HVAC and Plumbing specifications to determine what equipment is furnished with disconnect switches.
- B. Install all loose disconnect switches whether furnished under this contract or not. "Loose" switches are defined as those that are not integral to a piece of equipment and are not installed by the equipment manufacturer.
- C. Electrical Contractor shall determine need for a disconnect switch requirements for each specific load.
- D. Contractor shall include in their bid all disconnect switches required whether indicated on the drawings or not.
- E. Install enclosed switches plumb.

- F. Height: 5 feet to operating handle.
- G. Install fuses for fusible disconnect switches. Refer to Section 26 28 13 - Fuses for product requirements.
- H. Install engraved plastic nameplates in accordance with Section 26 05 53 – Electrical Identification.
- I. Apply adhesive tag on inside door of each fused switch indicating NEMA fuse class and size installed.
- J. Install in accordance with manufacturer’s written instructions, applicable requirements of NEC and NECA’s “Standard of Installation,” and in accordance with recognized industry practices.
- K. Locate disconnect switches as shown on drawings or as required by NEC.
- L. Install on equipment support where feasible, or anchor firmly to wall or structural surface.
- M. Provide control circuit interlock as required by NEC.

3.3 ADJUSTMENT

- A. Adjust covers and operating mechanism for free mechanical movement.
- B. Verify overcurrent protection to provide proper operation and compliance with NEC.
- C. Tighten wire and cable connections.
- D. Clean interior of enclosure.
- E. Touch up scratched or marred surfaces to match original finish.

3.4 FIELD QUALITY CONTROL

- A. Section 26 00 00 – Basic Electrical Requirements and Division 01 – General Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA Acceptance Testing Specifications.

END OF SECTION 262819

SECTION 262823 - ENCLOSED CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Molded-case Circuit Breakers.
 - 2. Insulated-case Circuit Breakers.
 - 3. Individual Enclosures.

- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.
 - 3. Section 26 05 29 – Electrical Hangers and Supports.
 - 4. Section 26 05 53 - Electrical Identification.

1.2 REFERENCES

- A. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA AB 1 - Molded Case Circuit Breakers and Molded Case Switches.

- B. International Electrical Testing Association (NETA):
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.

- B. Product Data: Submit catalog sheets showing ratings, trip units, time current curves, dimensions, and enclosure details.

1.4 CLOSEOUT SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for closeout submittals.

- B. Project Record Documents: Record actual locations and continuous current ratings of enclosed circuit breakers.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

1.6 EXTRA MATERIALS

- A. Furnish extra materials under provisions of Section 26 00 00 – Basic Electrical Requirements.

- B. Furnish three of each size and type of current limiter.

PART 2 - PRODUCTS

2.1 MOLDED CASE CIRCUIT BREAKER

- A. Manufacturers:
 - 1. Equivalent as acceptable to Engineer.
- B. Product Description: Enclosed, molded-case circuit breaker conforming to NEMA AB 1, suitable for use as service entrance equipment where applied.
- C. Service Conditions:
 - 1. Temperature: degrees F.
 - 2. Altitude: feet.
- D. Field-Adjustable Trip Circuit Breaker: Circuit breakers with frame sizes 200 amperes and larger have mechanism for adjusting long time short time continuous current short time long time pickup current setting for automatic operation. Range of Adjustment: seconds. amperes. percent.
- E. Field-Changeable Ampere Rating Circuit Breaker: Circuit breakers with frame sizes 200 amperes and larger have changeable trip units.
- F. Current Limiting Circuit Breaker: Circuit breaker indicated as current-limiting have automatically-resetting current limiting elements in each pole. Let-through Current and Energy: Less than permitted for same size Class RK-5 fuse.
- G. Solid-State Circuit Breaker: Electronic sensing, timing, and tripping circuits for adjustable current settings; ground fault trip with [integral ground fault sensing zero sequence type ground fault sensor; instantaneous trip; and adjustable short time trip.
- H. Current Limiter: Designed for application with molded case circuit breaker.
 - 1. Coordinate limiter size with trip rating of circuit breaker to prevent nuisance tripping and to achieve interrupting current rating specified for circuit breaker.
 - 2. Interlocks trip circuit breaker and prevent closing circuit breaker when limiter compartment cover is removed or when one or more limiter is not in place or has operated.
- I. Accessories: As indicated on Drawings. Conform to NEMA AB 1.
 - 1. Shunt Trip Device: 120 volts, AC DC.
 - 2. Undervoltage Trip Device: 120 volts, AC DC.
 - 3. Auxiliary Switch: 120 volts, AC DC.
 - 4. Alarm Switch: 120 volts, AC DC.
 - 5. Electrical Operator: 120 volts, AC DC.
 - 6. Handle Lock: Provisions for sealing padlocking.
 - 7. [Insulated] Grounding Lug: In each enclosure.
- J. Enclosure: NEMA AB 1, to meet conditions. Fabricate enclosure from steel finished with manufacturer's standard gray enamel aluminum gray polyester plastic stainless steel.
 - 1. Interior Dry Locations: Type 1.
 - 2. Exterior Locations: Type 3R/4
 - 3. Industrial Locations: Type 4 4X 5 12 12K.
 - 4. Locations: Type.

- K. Service Entrance: Switches identified for use as service equipment are to be labeled for this application. Furnish solid neutral assembly and equipment ground bar.
- L. Multi-phase circuit breakers shall have single handle trips for all phases. Handle ties or other field installed common trip hardware is not permitted.

2.2 INSULATED CASE CIRCUIT BREAKER

- A. Manufacturers:
 - 1. Equivalent as acceptable to Engineer.
- B. Product Description: Enclosed, insulated-case circuit breaker conforming to NEMA AB 1, suitable for use as service entrance equipment where applied.
- C. Service Conditions:
 - 1. Temperature: degrees F.
 - 2. Altitude: feet above sea level.
- D. Trip Unit: Electronic sensing, timing, and tripping circuits for adjustable current settings; ground fault trip with [integral ground fault sensing zero sequence type ground fault sensor; instantaneous trip; and adjustable short time trip.
- E. Accessories: As indicated on Drawings. Conform to NEMA AB 1.
 - 1. Shunt Trip Device: 120 volts, AC DC.
 - 2. Undervoltage Trip Device: 120 volts, AC DC.
 - 3. Auxiliary Switch: 120 volts, AC DC
 - 4. Alarm Switch: 120 volts, AC DC.
 - 5. Electrical Operator: 120 volts, AC DC.
 - 6. Handle Lock: Provisions for sealing padlocking.
 - 7. Insulated Grounding Lug: In each enclosure.
- F. Enclosure: NEMA AB 1, to meet conditions. Fabricate enclosure from steel finished with manufacturer's standard gray enamel aluminum gray polyester plastic stainless steel.
 - 1. Interior Dry Locations: Type 1.
 - 2. Exterior Locations: Type 3R/4.
 - 3. Industrial Locations: Type 4 4X 5 12 12K.
 - 4. Locations: Type.
- G. Service Entrance: Switches identified for use as service equipment are to be labeled for this application. Furnish solid neutral assembly and equipment ground bar.
- H. Multi-phase circuit breakers shall have single handle trips for all phases. Handle ties or other field installed common trip hardware is not permitted.

PART 3 - EXECUTION

3.1 EXISTING WORK

- A. Disconnect and remove abandoned enclosed circuit breakers.

- B. Maintain access to existing enclosed circuit breakers and other installations remaining active and requiring access. Modify installation or provide access panel.
- C. Clean and repair existing enclosed circuit breakers to remain or to be reinstalled.

3.2 INSTALLATION

- A. Install enclosed circuit breakers plumb. Provide supports in accordance with Section 26 05 29 – Electrical Hangers and Supports.
- B. Height: 5 feet to operating handle.
- C. Locate and install engraved plastic nameplates in accordance with Section 26 05 53 – Electrical Identification.

3.3 FIELD QUALITY CONTROL

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.
- C. Perform inspections and tests listed in NETA ATS, Section 7.6.1.1.

3.4 ADJUSTING

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Adjust trip settings to coordinate circuit breakers with other overcurrent protective devices in circuit.
- C. Adjust trip settings to provide adequate protection from overcurrent and fault currents.

END OF SECTION 262823

SECTION 262913 - ENCLOSED CONTROLLERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Manual Motor Controllers.
 - 2. Magnetic Motor Controllers.
 - 3. Individual Enclosures.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 - Basic Electrical Requirements.
 - 3. Section 26 05 29 – Electrical Hangers and Supports.
 - 4. Section 26 28 13 - Fuses.

1.2 REFERENCES

- A. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA AB 1 - Molded Case Circuit Breakers and Molded Case Switches.
 - 2. NEMA FU 1 - Low Voltage Cartridge Fuses.
 - 3. NEMA ICS 2 - Industrial Control and Systems: Controllers, Contactors, and Overload Relays, Rated Not More Than 2000 Volts AC or 750 Volts DC.
 - 4. NEMA ICS 5 - Industrial Control and Systems: Control Circuit and Pilot Devices.
 - 5. NEMA ICS 6 - Industrial Control and Systems: Enclosures.
 - 6. NEMA KS 1 - Enclosed and Miscellaneous Distribution Equipment Switches (600 Volts Maximum).
- B. International Electrical Testing Association (NETA):
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

- A. Section 26 00 00 - Basic Electrical Requirements: Procedures for submittals.
- B. Product Data: Submit catalog sheets showing voltage, controller size, ratings and size of switching and overcurrent protective devices, short circuit ratings, dimensions, and enclosure details.
- C. Test Reports: Indicate field test and inspection procedures and test results.

1.4 CLOSEOUT SUBMITTALS

- A. Section 26 00 00 - Basic Electrical Requirements: Procedures for closeout submittals.
- B. Project Record Documents: Record actual locations and ratings of enclosed controllers.
- C. Operation and Maintenance Data: Submit Replacement parts list for controllers.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years' experience.

PART 2 - PRODUCTS

2.1 MANUAL MOTOR CONTROLLER

- A. Manufacturers:
 - 1. Square D.
 - 2. Rockwell-Automation.
 - 3. Cutler-Hammer.
 - 4. General Electric.
 - 5. Equivalent as acceptable to Engineer.
- B. Product Description: NEMA ICS 2, AC general-purpose, Class A, manually operated, full-voltage controller with overload element, NO auxiliary contact, and toggle operator.
- C. Enclosure: NEMA ICS 6, Type 1 indoors, unless otherwise noted.
- D. Starter inoperative, unless thermal unit is in position.
- E. Provision for padlocking in the "off" position.
- F. NEMA standards for size and horsepower rating.
- G. Provisions for resetting starter after overloads trip the starter. Overload shall not automatically reset.

2.2 FRACTIONAL-HORSEPOWER MANUAL CONTROLLER

- A. Manufacturers:
 - 1. Square D.
 - 2. Rockwell-Automation.
 - 3. Cutler-Hammer.
 - 4. General Electric.
 - 5. Equivalent as acceptable to Engineer.
- B. Product Description: NEMA ICS 2, AC general-purpose, Class A, manually operated, full-voltage controller for fractional horsepower induction motors, with thermal overload unit, and toggle operator.
- C. Enclosure: NEMA ICS 6, Type 1 indoors, unless otherwise noted.
- D. Starter inoperative, unless thermal unit is in position.
- E. Provision for padlocking in the "off" position.
- F. NEMA standards for size and horsepower rating.

- G. Provisions for resetting starter after overloads trip the starter.

2.3 MOTOR STARTING SWITCH

- A. Manufacturers:
 - 1. Square D.
 - 2. Rockwell-Automation.
 - 3. Cutler-Hammer.
 - 4. General Electric.
 - 5. Equivalent as acceptable to Engineer.
- B. Product Description: NEMA ICS 2, AC general-purpose Class A manually operated, full-voltage controller for fractional horsepower induction motors, without thermal overload unit, with toggle operator.
- C. Enclosure: NEMA ICS 6, Type 1 indoors, unless otherwise noted.

2.4 FULL-VOLTAGE NON-REVERSING CONTROLLERS

- A. Manufacturers:
 - 1. Square D.
 - 2. Rockwell-Automation.
 - 3. Cutler-Hammer.
 - 4. General Electric.
 - 5. Equivalent as acceptable to Engineer.
- B. Product Description: NEMA ICS 2, AC general-purpose Class A magnetic or solid-state controller for induction motors rated in horsepower.
- C. Overload Relay: NEMA ICS 2.
- D. Product Features:
 - 1. Cover Mounted Pilot Devices: NEMA ICS 5, heavy duty oiltight type as indicated in specification and on drawings.
 - 2. Pilot Device Contacts: NEMA ICS 5, Form Z, rated A150.
 - 3. Pushbuttons: Flush type as indicated in specification and on drawings.
 - 4. Indicating Lights: Transformer type as indicated on specification and on drawings.
 - 5. Selector Switches: Rotary type.
 - 6. Relays: NEMA ICS 2.
 - 7. Control Power Transformers.
- E. Combination Controllers: Combine motor controllers with disconnect in common enclosure, using motor circuit protector conforming to NEMA AB 1, with integral instantaneous magnetic trip in each pole. Obtain IEC Class 2 coordinated component protection.
- F. Combination Controllers: Combine motor controllers with disconnect in common enclosure, using fusible switch conforming to NEMA KS 1, enclosed knife switch with externally operable handle. Fuse clips: Designed to accommodate NEMA FU 1, Class R fuses. Obtain IEC Class 2 coordinated component protection.
- G. Starter inoperative, unless thermal unit is in position.

- H. Provision for padlocking in the “off” position.
- I. Green pilot light to indicate when motor is running.
- J. NEMA standards for size and horsepower rating.
- K. Provisions for resetting starter after overloads trip the starter. Overloads shall not automatically reset.
- L. Enclosure: NEMA ICS 6, to meet conditions. Fabricate enclosure from steel finished with manufacturer's standard gray enamel.
 - 1. Interior Dry Locations: Type 1.
 - 2. Exterior Locations: Type 3R.
 - 3. Wet Locations: Type 4.

2.5 TWO-SPEED CONTROLLERS

- A. Manufacturers:
 - 1. Square D.
 - 2. Rockwell-Automation.
 - 3. Cutler-Hammer.
 - 4. General Electric.
 - 5. Equivalent as acceptable to Engineer.
- B. Product Description: NEMA ICS 2, AC general-purpose Class A magnetic or solid-state controller for induction motors rated in horsepower. Include integral time delay transition between FAST and SLOW speeds.
- C. Overload Relay: NEMA ICS 2.
- D. Product Features:
 - 1. Cover Mounted Pilot Devices: NEMA ICS 5, heavy duty oiltight type as indicated in specification and on drawings.
 - 2. Pilot Device Contacts: NEMA ICS 5, Form Z, rated A150.
 - 3. Pushbuttons: Flush type as indicated in specification and on drawings.
 - 4. Indicating Lights: Transformer type as indicated on specification and on drawings.
 - 5. Selector Switches: Rotary type.
 - 6. Relays: NEMA ICS 2.
 - 7. Control Power Transformers.
- E. Combination Controllers: Combine motor controllers with disconnect in common enclosure, using motor circuit protector conforming to NEMA AB 1, with integral instantaneous magnetic trip in each pole. Obtain IEC Class 2 coordinated component protection.
- F. Combination Controllers: Combine motor controllers with disconnect in common enclosure, using fusible switch conforming to NEMA KS 1, enclosed knife switch with externally operable handle. Fuse clips: Designed to accommodate NEMA FU 1, Class R fuses. Obtain IEC Class 2 coordinated component protection.
- G. Starter inoperative, unless thermal unit is in position.

- H. Provision for padlocking in the “off” position.
- I. Green pilot light to indicate when motor is running.
- J. NEMA standards for size and horsepower rating.
- K. Provisions for resetting starter after overloads trip the starter. Overloads shall not automatically reset.
- L. Enclosure: NEMA ICS 6, to meet conditions. Fabricate enclosure from steel finished with manufacturer's standard gray enamel.
 - 1. Interior Dry Locations: Type 1.
 - 2. Exterior Locations: Type 3R.
 - 3. Wet Locations: Type 4.

2.6 FULL-VOLTAGE REVERSING CONTROLLERS

- A. Manufacturers:
 - 1. Square D.
 - 2. Rockwell-Automation.
 - 3. Cutler-Hammer.
 - 4. General Electric.
 - 5. Equivalent as acceptable to Engineer.
- B. Product Description: NEMA ICS 2, AC general-purpose Class A magnetic or solid-state controller for induction motors rated in horsepower. Include electrical interlock [and integral time delay transition] between FORWARD and REVERSE rotation.
- C. Overload Relay: NEMA ICS 2.
- D. Product Features:
 - 1. Cover Mounted Pilot Devices: NEMA ICS 5, heavy duty oiltight type as indicated in specification and on drawings.
 - 2. Pilot Device Contacts: NEMA ICS 5, Form Z, rated A150.
 - 3. Pushbuttons: Flush type as indicated in specification and on drawings.
 - 4. Indicating Lights: Transformer type as indicated on specification and on drawings.
 - 5. Selector Switches: Rotary type.
 - 6. Relays: NEMA ICS 2.
 - 7. Control Power Transformers.
- E. Combination Controllers: Combine motor controllers with disconnect in common enclosure, using motor circuit protector conforming to NEMA AB 1, with integral instantaneous magnetic trip in each pole. Obtain IEC Class 2 coordinated component protection.
- F. Combination Controllers: Combine motor controllers with disconnect in common enclosure, using fusible switch conforming to NEMA KS 1, enclosed knife switch with externally operable handle. Fuse clips: Designed to accommodate NEMA FU 1, Class R fuses. Obtain IEC Class 2 coordinated component protection.
- G. Starter inoperative, unless thermal unit is in position.

- H. Provision for padlocking in "off" position.
- I. Green pilot light to indicate when motor is running.
- J. NEMA standards for size and horsepower rating.
- K. Provisions for resetting starter after overloads trip the starter. Overloads shall not automatically reset.
- L. Enclosure: NEMA ICS 6, to meet conditions. Fabricate enclosure from steel finished with manufacturer's standard gray enamel.
 - 1. Interior Dry Locations: Type 1.
 - 2. Exterior Locations: Type 3R.
 - 3. Wet Locations: Type 4.

2.7 OVERLOAD RELAY - GENERAL APPLICATION

- A. One-piece thermal unit construction.
- B. One bi-metallic or melting alloy type overload relay per phase, manually reset.
- C. Interchangeable thermal units.
- D. Thermal units must be in place to operate starter.
- E. Replaceable overload relay circuit contacts.
- F. Trip at 6 times FLA in 20 seconds.

2.8 OVERLOAD RELAY - SUBMERSIBLE PUMPS AND HERMETICALLY SEALED MOTORS

- A. One-piece thermal unit construction.
- B. One bi-metallic or melting alloy type overload relay per phase, manually reset.
- C. Interchangeable thermal units.
- D. Thermal units must be in place to operate starter.
- E. Replaceable overload relay circuit contacts.
- F. Trip at 6 times LRA in 3-5 seconds.

2.9 NEMA STANDARDS FOR SIZE AND HORSEPOWER RATINGS

- | | | |
|--------------|---------------|---------------|
| A. NEMA Size | Max HP @ 208V | Max HP @ 480V |
|--------------|---------------|---------------|

1	7.5	10
2	10	25
3	25	50
4	40	100
5	75	200
6	150	400

B. NEMA Size 1 minimum, or as noted on drawings.

2.10 CONTROL CIRCUITS (FOR MAGNETIC OR SOLID-STATE CONTROLLERS)

- A. Provide a control transformer mounted in starter enclosure. Verify the control voltage required with the temperature control contractor.
- B. Two fuses on control transformer primary side and single fuse on secondary line. Provide Class CC type fuses.
- C. One secondary line grounded.
- D. Transformer sized for device, accessories connected there to and 25% extra capacity minimum.
- E. Coil Operating Voltage: 120 volts, 60 hertz, unless otherwise noted.

2.11 ACCESSORIES (FOR MAGNETIC OR SOLID-STATE CONTROLLERS)

- A. Overload reset button mounted in enclosure cover.
- B. Heavy duty, oil-tight, green “running” light mounted in enclosure cover.
- C. Heavy duty, oil-tight, Hand-Off-Auto selector switch mounted in enclosure cover.
- D. Furnish two normally open and one normally closed field convertible auxiliary contacts in each starter.

PART 3 - EXECUTION

3.1 EXISTING WORK

- A. Disconnect and remove abandoned enclosed motor controllers.
- B. Maintain access to existing enclosed motor controllers and other installations to remain active and to require access. Modify installation or provide access panel.
- C. Clean and repair existing enclosed motor controllers to remain or to be reinstalled.

3.2 INSTALLATION

- A. Install enclosed controllers plumb. Provide supports in accordance with Section 26 05 29 – Electrical Hangers and Supports.

- B. Height: 5 feet to operating handle.
- C. Install fuses for fusible switches. Refer to Section 26 28 13 - Fuses for product requirements.
- D. Select and install overload heater elements in motor controllers to match installed motor characteristics.
- E. Install engraved plastic nameplates. Refer to Section 26 05 53 – Electrical Identification for product requirements and location.
- F. Neatly type label and place inside each motor controller door identifying motor served, nameplate horsepower, full load amperes, code letter, service factor, and voltage/phase rating. Place label in clear plastic holder.
- G. Motor starters shall be furnished by Contractor supplying motor requiring a starter, unless otherwise noted.
- H. Contractor shall check drawings and specifications of other trades to determine requirements for motor disconnect switches. Electrical Contractor shall provide, where required by Code and for motors out of sight of the controller, all disconnect switches not specifically supplied by others.
- I. Motors shall be set in place by others and associated motor starters and controllers shall be turned over to Electrical Contractor for installation.
- J. Any contractor supplying starters and controllers shall index same and provide Electrical Contractor with written instructions as to proper location in sufficient time to permit installation of a concealed raceway system.
- K. Review HVAC and plumbing specifications and provide all line voltage wiring and connections to controls and auxiliary equipment specified as to be provided by Electrical Contractor or Division 26.
- L. Verify proper rotation of each motor as it is being wired or before motor is energized for any reason.

3.3 FIELD QUALITY CONTROL

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.
- C. Perform inspections and tests listed in NETA ATS, Section 7.16.1.

END OF SECTION 262913

SECTION 262916 - ENCLOSED CONTACTORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Enclosed Contactors for Lighting and General Purposes.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
2. Section 26 00 00 - Basic Electrical Requirements.
3. Section 26 05 29 – Electrical Hangers and Supports.
4. Section 26 28 13 - Fuses.

1.2 REFERENCES

A. National Electrical Manufacturers Association (NEMA):

1. NEMA AB 1 - Molded Case Circuit Breakers and Molded Case Switches.
2. NEMA FU 1 - Low Voltage Cartridge Fuses.
3. NEMA ICS 2 - Industrial Control and Systems: Controllers, Contactors, and Overload Relays, Rated Not More Than 2000 Volts AC or 750 Volts DC.
4. NEMA ICS 5 - Industrial Control and Systems: Control Circuit and Pilot Devices.
5. NEMA ICS 6 - Industrial Control and Systems: Enclosures.
6. NEMA KS 1 - Enclosed and Miscellaneous Distribution Equipment Switches (600 Volts Maximum).

B. International Electrical Testing Association (NETA):

1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.

B. Product Data: Submit dimensions, size, voltage ratings and current ratings.

1.4 CLOSEOUT SUBMITTALS

A. Section 26 00 00 – Basic Electrical Requirements: Procedures for closeout submittals.

B. Project Record Documents: Record actual locations and ratings of enclosed contactors.

C. Operation and Maintenance Data: Submit instructions for replacing and maintaining coil and contacts.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

PART 2 - PRODUCTS

2.1 GENERAL PURPOSE CONTACTORS

- A. Manufacturers:
 - 1. Equivalent as acceptable to Engineer.
- B. Product Description: NEMA ICS 2, AC general purpose magnetic contactor.
- C. Coil operating voltage: 120 480 volts, 60 Hertz.
- D. Poles: To match circuit configuration and control function.
- E. Product Features:
 - 1. Cover Mounted Pilot Devices: NEMA ICS 5, standard-duty heavy-duty oiltight type with Form Z contacts, rated A150.
 - 2. Pushbutton: ON/OFF function, with unguarded recessed shrouded shielded covered lockable configuration.
 - 3. Selector Switch: ON/OFF ON/OFF/AUTOMATIC function, with rotary action.
 - 4. Indicating Light: RED GREEN lens, transformer resistor type, with incandescent led neon lamp.
 - 5. Auxiliary Contacts: One, normally open normally closed field convertible in addition to seal-in contact.
 - 6. Relays: NEMA ICS 2.
 - 7. Control Power Transformers: 120 volt secondary, VA minimum, in each enclosed contactor. Furnish fused [primary and] secondary, and bond unfused leg of secondary to enclosure.
- F. Combination Contactors: Combine contactors with thermal magnetic circuit breaker conforming to NEMA AB 1, with integral thermal and instantaneous magnetic trip in each pole.
- G. Combination Contactors: Combine contactors with enclosed knife switch conforming to NEMA KS 1, with externally operable handle and fuse clips designed to accommodate NEMA FU 1, Class R/J fuses.
- H. Enclosure: NEMA ICS 6, to meet conditions. Fabricate enclosure from [steel finished with manufacturer's standard gray enamel aluminum gray plastic].
 - 1. Interior Dry Locations: Type 1.
 - 2. Exterior Locations: Type 3R/4
 - 3. Locations: Type.

2.2 LIGHTING CONTACTORS

- A. Manufacturers:
 - 1. Equivalent as acceptable to Engineer.
- B. Product Description: NEMA ICS 2, magnetic lighting contactor.
- C. Configuration: Electrically held Mechanically held, 2/3 wire control.
- D. Coil operating voltage: 120/480 volts, 60 Hertz.

- E. Poles: To match circuit configuration and control function.
- F. Contact Rating: Match branch circuit overcurrent protection, considering derating for continuous loads.
- G. Accessories:
 - 1. Cover Mounted Pilot Devices: NEMA ICS 5, standard-duty heavy-duty oiltight type with Form Z contacts, rated A150
 - 2. Pushbutton: ON/OFF function, with unguarded recessed shrouded shielded covered lockable configuration.
 - 3. Selector Switch: ON/OFF ON/OFF/AUTOMATIC function, with rotary action.
 - 4. Indicating Light: RED GREEN lens, transformer resistor type, with incandescent led neon lamp.
 - 5. Auxiliary Contacts: One, normally open normally closed field convertible in addition to seal-in contact.
 - 6. Relays: NEMA ICS 2.
 - 7. Control Power Transformers: 120 volt secondary, VA minimum, in each enclosed contactor. Furnish fused primary and secondary, and bond unfused leg of secondary to enclosure.
- H. Combination Contactors: Combine contactors with thermal magnetic circuit breaker conforming to NEMA AB 1, with integral thermal and instantaneous magnetic trip in each pole.
- I. Combination Contactors: Combine contactors with enclosed knife switch conforming to NEMA KS 1, with externally operable handle and fuse clips designed to accommodate NEMA FU 1, Class R/J fuses.
- J. Enclosure: NEMA ICS 6, to meet conditions. Fabricate enclosure from [steel finished with manufacturer's standard gray enamel aluminum gray plastic].
 - 1. Interior Dry Locations: Type 1.
 - 2. Exterior Locations: Type 3R/4
 - 3. Locations: Type.

PART 3 - EXECUTION

3.1 EXISTING WORK

- A. Disconnect abandoned enclosed contactors and remove abandoned enclosed contactors.
- B. Maintain access to existing enclosed contactors and other installations remaining active and requiring access. Modify installation or provide access panel.
- C. Clean and repair existing enclosed contactors to remain or to be reinstalled.

3.2 INSTALLATION

- A. Install enclosed contactors [as indicated on Drawings], in accordance with NECA "Standard of Installation."
- B. Install enclosed contactors plumb. Provide supports in accordance with Section 26 05 29 – Electrical Hangers and Supports.

- C. Height: 5 feet to operating handle.
- D. Install fuses for fusible switches. Refer to Section 26 28 13 - Fuses for product requirements.
- E. Install engraved plastic nameplates. Refer to Section 26 05 53 –Electrical Identification for product requirements and location.

3.3 FIELD QUALITY CONTROL

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.
- C. Perform inspections and tests listed in NETA ATS, Section 7.16.1.

END OF SECTION 262916

SECTION 262933 - MOTOR WIRING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Connections and wiring to motors.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.
 - 3. Section 26 05 19 - Building Wire and Cable.
 - 4. Section 26 05 26 - Grounding and Bonding.
 - 5. Section 26 05 53 - Electrical Identification.
 - 6. Section 26 28 19 - Enclosed Switches.

1.2 REFERENCES

- A. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electric Code.

1.3 QUALITY ASSURANCE

- A. Installation shall conform to the requirements of the following agencies:
 - 1. National Electrical Code (NEC).
 - a. Including State of Wisconsin and local supplements.
 - 2. National Electrical Contractors Association (NECA).
 - a. NECA - Standard of Installation.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 GENERAL

- A. Motor starters shall be furnished by Contractor supplying motor requiring a starter.
- B. Drawings show anticipated horsepower loads and circuit sizes. Loads and circuit sizes shall be used as a guide to provide final performance requirements. Verify actual requirements with Contractor and install accordingly under this Contract.
- C. Contractor to verify, and correct if necessary, if heater elements in starters match installed motor characteristics.
- D. Contractor shall check drawings and specifications of other trades to determine requirements for motor disconnect switches. In each case, Contractor shall install all required disconnect switches.

- E. Contractor shall provide, where required by Code and for motors out of sight of controller, all disconnect switches not specifically supplied by others.
- F. Unless otherwise indicated on drawings or elsewhere in these specifications, all motors shall be furnished by others.
- G. Motors shall be set in place by others and associated motor starters and controllers shall be turned over to Electrical Contractor for installation.
- H. Contractor supplying starters and controllers shall index same and provide Electrical Contractor with written instructions as to proper location in sufficient time to permit installation of a concealed raceway system.
- I. Control wiring shall be responsibility of HVAC Contractor. Electrical Contractor shall extend circuit to control transformers and make final 120V transformer connections. Transformers will be supplied by HVAC Contractor. Control transformer shall be in starter enclosure.
- J. Review HVAC and plumbing specifications and provide all line voltage wiring and connections to controls and auxiliary equipment specified as to be provided by Electrical Contractor or Division 26.
- K. On motor wiring schedule, column stating "starter wiring" refers to line voltage wiring from starter to motor.
- L. Final conduit connection to motor shall be made with liquid-tight flexible metal conduit or flexible metal conduit, except where prohibited by any other section of these specifications.
- M. All conductors serving motors shall be stranded.
- N. Install a separate green equipment grounding conductor, with circuit conductors, to all motors.
- O. Verify proper rotation of each motor as it is being wired or before motor is energized for any reason.

END OF SECTION 262933

SECTION 263353 - STATIC UNINTERRUPTIBLE POWER SUPPLIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Static uninterruptible power supply.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.

1.2 REFERENCES

- A. Institute of Electrical and Electronics Engineers (IEEE):
 - 1. IEEE 1184 - Guide for the Selection and Sizing of Batteries for Uninterruptible Power Systems.
- B. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - 2. NEMA PE 1 - Uninterruptible Power Systems.
- C. International Electrical Testing Association (NETA):
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.
- B. Shop Drawings: Indicate electrical characteristics and connection requirements. Indicate battery rack dimensions; battery type, size, dimensions, and weight; detailed equipment outlines, weight, and dimensions; location of conduit entry and exit; single-line diagram indicating metering, control, and external wiring requirements; heat rejection and air flow requirements.
- C. Product Data: Submit catalog sheets and technical data sheets to indicate physical data and electrical performance, electrical characteristics, and connection requirements.
- D. Manufacturer's Field Reports: Indicate inspections, findings, and recommendations.

1.4 CLOSEOUT SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for closeout submittals.
- B. Operation and Maintenance Data: Submit description of operating procedures; servicing procedures; list of major components; recommended remedial and preventive maintenance procedures; and spare parts list.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and protect products under provisions of Section 26 00 00 – Basic Electrical Requirements.
- B. Protect equipment from extreme temperature and humidity by storing in conditioned space.
- C. Protect equipment from dust and debris by wrapping unit in dust tight cover and storing away from construction activity.
- D. Deliver batteries no sooner than days before charging.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Section 26 00 00 – Basic Electrical Requirements: Environmental conditions.

1.8 WARRANTY

- A. Section 26 00 00 – Basic Electrical Requirements: Product warranties and product bonds.
- B. Furnish five-year manufacturer warranty.

1.9 MAINTENANCE SERVICE

- A. Section 26 00 00 – Basic Electrical Requirements: Maintenance service.
- B. Furnish service and maintenance of uninterruptible power supply for one year from Date of Substantial Completion.

PART 2 - PRODUCTS

2.1 STATIC UNINTERRUPTIBLE POWER SUPPLY

- A. Manufacturers:
 - 1. Best Power Technology.
 - 2. Liebert Corp.
 - 3. Square D.
 - 4. MGE
 - 5. Equivalent as acceptable to Engineer.
- B. Product Description: [Nonredundant] [Parallel redundant] [Dual redundant] uninterruptible power supply with reverse transfer.
- C. System Ratings and Operating Characteristics:

1. System Continuous Rating: As indicated on Drawings, over entire battery voltage range at specified power factor. Maintain output voltage within specified limits at load from full load to no-load.
2. Battery Capacity: As indicated on Drawings.
3. Voltage Rating: 120/208 277/480 volts, 1 3 phase.
4. Input Voltage Operating Range: Plus or minus 10 percent.
5. Input Frequency Operating Range: 60 Hz. plus or minus 3 Hz.
6. Input Current Limit: Adjustable to maximum of 125 percent required to operate at full load with battery bank on float charge.
7. Current Walk-in: 25 to 100 percent in fifteen seconds.
8. UPS Power Factor Over Full Range of Loads and Input Voltages: 74 to 100 percent, lagging.
9. Harmonic Distortion of Input Current Wave Form: 5 percent maximum at full load.
10. Output Voltage Regulation:
 - a. Plus or minus percent for balanced load, full range of DC input and no load to full load variations.
 - b. Plus or minus percent for 50 percent unbalanced load, full range of DC input and no load to full load variations.
 - c. Plus or minus percent during maximum overload of system.
11. Output Voltage Adjustment: Plus or minus percent.
12. Output Free Running Frequency: 60 Hz Plus or minus 0.5 percent.
13. Frequency Adjustment: Plus or minus Hz.
14. Output Harmonic Distortion: Maximum 5 percent rms total harmonic distortion (THD) and maximum 3 percent any single harmonic, at rated frequency and voltage, from 10 percent load to full load and over battery voltage range, measured into linear load.
15. Voltage Transient Response for Application of 0 to 50 Percent, 50 to 100 Percent, 100 to 50 Percent, and 50 to 0 Percent Step Loads, and Transfer To and From Bypass Line:
 - a. Plus 8, minus 10 percent for maximum of 8.3 milliseconds.
 - b. Plus or minus 5 percent for maximum of 25 milliseconds.
 - c. Plus or minus 3 percent for maximum of 50 milliseconds.
 - d. percent for maximum of milliseconds.
 - e. Recovery to steady state within 100 milliseconds after out-of-tolerance variation.
16. Phase Displacement:
 - a. 120 plus or minus 1 degrees for balanced loads.
 - b. 120 plus or minus 4 degrees for 50 percent unbalanced loads.
 - c. 120 plus or minus degrees for.
17. Three-phase Overload Ratings:
 - a. 1000 percent for 5 cycles; via static switch.
 - b. 150 percent for 10 seconds.
 - c. 125 percent for 10 minutes.
 - d. percent for minutes.
18. Output Current Limit: 150 percent of rated output current.
19. Voltage Unbalance: 3 percent maximum line-line with 100 percent load unbalance.
20. Efficiency: percent at full load, percent at percent load, minimum. Measure efficiency of unit including battery and isolation transformer losses.

D. Design:

1. Inverter Type: Pulse-width modulated Ferroresonant transformer Step-wave design.
2. Designed for capacity expansion by addition of parallel modules in field with minimum downtime.

3. Rectifier/Charger Capacity: Sufficient to supply full load to inverter while recharging fully-discharged battery to 95 percent of full capacity in four hours or less; and within input current limits specified.
4. Furnish means for on-line testing of UPS, including test points to allow adjusting and servicing. Furnish means for testing static switch while load is bypassed to utility.
5. Mean Time Between Failures: 60,000 hours, minimum.
6. Cooling: Forced convection or natural convection. Furnish forced air-cooled unit with redundant cooling so failure of one cabinet cooling fan or fan circuit does not affect continued operation at full load and ambient temperature of 77 degrees F or lower.
7. Operate battery floating, isolated from UPS AC input and AC output. Furnish battery resistance grounded through 5,000 - 10,000 ohms for purpose of ground fault sensing.
8. Do not use continuous moving parts or electron tubes. Accomplish power switching using semiconductor devices.
9. Construct equipment so each power component capable of replacement without soldering iron or special tools.
10. Use front-panel removable plug-in control modules.

E. Controls:

1. AC input circuit breaker.
2. "Inverter operate" switch to initiate inverter operation.
3. "Inverter standby" switch to cause inverter to cease operation.
4. "Static switch transfer" switch to permit manual actuation of static transfer switch.
5. "Static switch lock-out" switch to inhibit automatic retransfer of load to inverter.
6. Battery charge timer.
7. "Indicator test" switch.
8. Static switch preferred input circuit breaker
9. Static switch output circuit breaker
10. Static switch bypass circuit breaker.
11. Controls for maintenance bypass switch.

F. Indicators:

1. "Inverter synchronized to utility."
2. "Load connected to utility."
3. "Static transfer switch inhibited."
4. "High/low DC voltage."
5. "Overtemperature."
6. "Inverter output overload."

G. Meters: Use 1 percent accuracy meters to indicate the following:

1. Rectifier/charger DC voltage and current.
2. Utility, inverter output, and load AC voltage.
3. Load AC current.
4. Inverter output and utility frequency.
5. UPS output watts.

H. Wall-mounted Alarm Panel: Surface Flush mounted annunciator panel with the following monitoring and alarm functions:

1. "Utility power available."
2. "Utility bypass power available."
3. "Inverter output available."
4. "Inverter synchronized to utility."

5. "Load connected to inverter output."
6. "Load connected to utility bypass power (alarm)."
7. "Static transfer switch inhibited (alarm)."
8. "High/low DC voltage (alarm)."
9. "Overtemperature (alarm)."
10. "Inverter output overload (alarm)."
11. Audible alarm (sounds when any of above alarm conditions occur).
12. Alarm/indicator "silence/test" switch.

I. Fabrication:

1. Electroplate brackets and securing hardware with corrosion resistant material. Secure bolts, studs and nuts with lock washers.
2. Identify internal wiring at each end of conductor. Furnish cabinet grounding lug.
3. Conversion Equipment Enclosure: NEMA 250, Type 1 enclosure allowing access from front for servicing adjustments and connections. Access through hinged door equipped with tumbler lock and latch handle. Equip cabinet for fork truck lifting.
4. Equip air inlet with permanent type filters and pressurize cabinet or use gaskets around door and panel openings to prevent entry of dirt.
5. Cabinet finish: Primed and painted inside and outside with suitable semi-gloss enamel.

2.2 BATTERY

- A. Storage Battery: Lead calcium heavy duty industrial battery, designed for auxiliary power service. Furnish battery with impact resistant plastic case. Furnish cells with explosion proof vents, clear containers, and ample space for plate growth without stressing container and cover.
- B. Ampere-Hour Rating: Sized in accordance with IEEE 1184.
- C. Battery Racks: Maximum of three tier, entirely steel construction, with plastic insulating rails at points of contact with battery case. Paint racks with acid resistant paint.

2.3 SOURCE QUALITY CONTROL

- A. Furnish shop inspection and testing of components and completed UPS assembly.
- B. Make completed UPS available for inspection at manufacturer's factory prior to packaging for shipment. Notify Architect/Engineer at least seven days before inspection is allowed.
- C. Allow witnessing of factory inspections and tests at manufacturer's test facility. Notify Owner at least seven days before inspections and tests are scheduled.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify HVAC Systems are operational to maintain specified environmental conditions.

3.2 EXISTING WORK

- A. Disconnect and remove abandoned uninterruptible power supplies and accessories.

- B. Clean and repair existing uninterruptible power supplies and accessories to remain or to be reinstalled.

3.3 FIELD QUALITY CONTROL

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.
- C. Perform inspections and tests listed in NETA ATS, Section 7.22.
- D. Verify specification performance criteria.
- E. Measure battery discharge and recharge times.
- F. Simulate fault in each system component and utility power.
- G. Operate unit at 77 degrees F for eight hours.
- H. Perform other tests as recommended by manufacturer.

3.4 MANUFACTURER'S FIELD SERVICES

- A. Section 26 00 00 – Basic Electrical Requirements: Manufacturer's field services.
- B. Prepare and start up UPS.

3.5 ADJUSTING

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Adjust output voltage to within 1 percent of nominal.
- C. Adjust output frequency to within 0.6 percent of nominal.

3.6 DEMONSTRATION AND TRAINING

- A. Furnish 8 hours of instruction for two persons, to be conducted at project site with manufacturer's representative.

3.7 PROTECTION OF INSTALLED CONSTRUCTION

- A. Section 26 00 00 – Basic Electrical Requirements: Protecting installed construction.

END OF SECTION 263353

SECTION 263553 - TRANSIENT VOLTAGE SURGE SUPPRESSOR

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Transient Voltage Surge Suppressors.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.
 - 3. Section 26 24 13 - Switchboards: Transient voltage surge suppressors integrated in switchboards.
 - 4. Section 26 24 16 - Panelboards: Transient voltage surge suppressors integrated in panelboards.

1.2 REFERENCES

- A. Institute of Electrical and Electronics Engineers (IEEE):
 - 1. IEEE 1100 - Recommended Practice for Powering and Grounding Electronic Equipment.
 - 2. IEEE C62.41 - Recommended Practice on Surge Voltages in Low-Voltage AC Power Circuits.
 - 3. IEEE C62.45 - Guide on Surge Testing for Equipment Connected to Low-Voltage AC Power Circuits.
- B. National Electrical Manufacturers Association (NEMA):
 - 1. NEMA LS 1 - Low Voltage Surge Protection Devices.
- C. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electrical Code, Article 285.
 - 2. NFPA 780 - Standard for the Installation of Lightning Protection Systems.
- D. Underwriters Laboratories Inc. (UL):
 - 1. UL 1283 - Electromagnetic Interference Filters.
 - 2. UL 1449 - Transient Voltage Surge Suppressors.

1.3 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.
- B. Product Data: Submit capacity, dimensions, weights, details, and wiring configuration.
- C. UL 1449 Second Edition Listing, Standard for Safety, Transient Voltage Surge Suppressors, documentation.
- D. UL 1283 Listing, Electromagnetic Interference Filters, documentation.
- E. IEEE C62.41, Category C3 (20kV-1.2/50, 10kA-8/20 μ s waveform) clamping voltage test results.

1.4 CLOSEOUT SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for closeout submittals.
- B. Project Record Documents: Record actual locations of transient voltage surge suppressors.
- C. Operation and Maintenance Data: Submit manufacturer's descriptive literature, installation instructions, and maintenance and repair data.

1.5 QUALITY ASSURANCE

- A. List individual units under UL 1449 and UL 1283.
- B. Perform Work in accordance with state and local codes.

1.6 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five years' experience.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and protect products under provisions of Section 26 00 00 – Basic Electrical Requirements.
- B. Accept equipment on site in factory packaging. Inspect for damage.
- C. Protect equipment from damage by providing temporary covers until construction is complete in adjacent space.

1.8 WARRANTY

- A. Section 26 00 00 – Basic Electrical Requirements: Requirements for warranties.

PART 2 - PRODUCTS

2.1 TRANSIENT VOLTAGE SURGE SUPPRESSOR (TVSS)

- A. Manufacturers:
 - 1. Cutler-Hammer, Inc.
 - 2. General Electric Company.
 - 3. Square D Company.
 - 4. Siemens Energy & Automation, Inc., TPS Series.
 - 5. Equivalent as acceptable to Engineer.
- B. Manufacturer of SPD shall be the same as manufacturer of distribution equipment in which devices are installed and shipped.
- C. TVSS shall be installed by and shipped from electrical distribution equipment manufacturer's factory.

- D. Product Description: Surge protective devices for protection of AC electrical circuits.
- E. Each module shall be fused with a surge rated fuse.
- F. Unit Operating Voltage: As indicated on Drawings.
- G. TVSS shall have a UL approved means of disconnect.
- H. TVSS shall have copper bus for surge current path. Small round wiring connections shall not be used in the path for surge current diversion.
- I. Construction:
 - 1. Balanced Suppression Platform: Equally distribute surge current to Metal Oxide Varistor (MOV) components to ensure equal stressing and maximum performance. Furnish surge suppression platform with equal impedance paths to each matched MOV.
 - 2. Internal Connections: Hardwired with connections using low impedance conductors and compression fittings.
 - 3. Safety and Diagnostic Monitoring: Equipped with standard overcurrent protection:
 - a. Continuous monitoring of fusing system.
 - b. Monitor individual MOV's (including neutral to ground). Capable of identifying open circuit failures not monitored by conventional fusing systems.
 - c. Monitor for overheating in each mode due to thermal runaway.
 - d. Furnish green and red solid-state indicator light on each phase. Absence of green light and presence of red light indicates which phases have been damaged. Fault detection activates flashing trouble light and alarm. An alarm on/off switch shall be provided to silence the alarm. Units not capable of detecting open circuit damage, thermal conditions, and over current will not be accepted.
 - 4. Labeling: Permanently affix UL 1449 suppression voltage ratings to unit.
- J. Rating:
 - 1. Electrical Noise Filter: Furnish each unit with high performance EMI/RFI noise rejection filter. Electric line noise attenuation no less than 50 dB at 100 kHz using MIL-STD-220A insertion loss test method.
- K. Accessories:
 - 1. Local audible alarm.
 - 2. Form C dry contacts one normally open (NO) and one normally closed (NC) for remote status monitoring.
- L. SPD shall be listed in accordance with UL 1449 Second Edition and UL 1283, Electromagnetic Interference Filters.
- M. SPD shall be listed in accordance with UL 1449 Second Edition to include Section 37.3 highest Short Circuit Current Rating (SCCR) of 200 kA.
- N. SPD shall be tested with the Category C3 high exposure waveform (20kV-1.2/50µs, 10kA-8/20µs) per ANSI/IEEE C62.41 - 1991.
- O. Pulse life test: Capable of protecting against and surviving 5000 ANSI/IEEE C62.41 Category C3 transients without failure or degradation of clamping voltage by more than 10 percent:

- P. Service Entrance Type TVSS shall have a minimum surge current rating of 160 kA per phase.
- Q. Distribution type TVSS shall have a minimum surge current rating of 120 kA per phase.
- R. Protection Modes: For Wye configured system, furnish device with directly connected suppression elements between line to line (L-L), line-neutral (L-N), line-ground (L-G), and neutral-ground (N-G). For Delta configured system, furnish device with suppression elements between line to line (L-L) and line to ground (L-G).
- S. Do not exceed the following for maximum UL 1449 suppression voltage ratings:

Modes	208Y/120	480Y/277
WYE - L-N; L-G; N-G	400 V	800 V

- T. TVSS shall be designed to withstand a maximum continuous operating voltage of not less than 115 percent of nominal RMS voltage.

2.2 SOURCE QUALITY CONTROL AND TESTS

- A. [Section 26 00 00 – Basic Electrical Requirements] [Section 01 40 00 - Quality Requirements] [Division 01 – General Requirements]: Field inspecting, testing, adjusting, and balancing.
- B. Test units to specified surge ratings to ensure devices will achieve required life expectancy and reliability. Testing to full ratings also verifies internal construction quality of suppressors. Provide withstand testing for each mode and each phase basis.
- C. Perform actual Let-Through voltage test data in form of oscillograph results for ANSI/IEEE C62.41 Catalog C3 (20 kV, 10 kA), Catalog C1 (6 kV, 3 kA), and Catalog. B3 (6 kv, 500 A at 100 kHz) tested in accordance with ANSI/IEEE C62.45.
- D. Perform spectrum analysis of each unit based on MIL-STD-220A test procedures between 50 kHz and 200 kHz verifying device noise attenuation exceeds 50 dB at 100 kHz.
- E. Perform test verifying suppressors can survive published surge current rating for each mode and each phase basis. Test wave based on ANSI/IEEE C62.41, 8x20 microsecond current wave.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify existing conditions before starting work.
- B. Verify mounting area is ready for equipment.
- C. Verify circuit rough-ins are at correct location.

3.2 INSTALLATION

- A. Mount internally to new power distribution equipment or on existing distribution equipment as noted on drawings.

- B. Install in accordance with IEEE 1100.
- C. Install using direct bus bar connection.
- D. Install indicator lights and trouble alarms in face of power distribution equipment.
- E. Install with maximum conductor length of 14 inches. Install suppressor with internal fusing.

END OF SECTION 263553

This page is intentionally left blank.

SECTION 264100 - FACILITY LIGHTNING PROTECTION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Air Terminals.
 - 2. Interconnecting Conductors.
 - 3. Grounding and Bonding for Lightning Protection.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.

1.2 REFERENCES

- A. Lightning Protection Institute (LPI):
 - 1. LPI 175 - Standard of Installation.
- B. National Fire Protection Association (NFPA):
 - 1. NFPA 780 - Standard for the Installation of Lightning Protection Systems.
- C. Underwriters Laboratories Inc. (UL):
 - 1. UL 96 - Lightning Protection Components.
 - 2. UL 96A - Installation Requirements for Lightning Protection Systems.

1.3 SYSTEM DESCRIPTION

- A. Description: Conductor system protecting entire building and having UL Master Label LPI Certification.

1.4 SUBMITTALS

- A. Division 01 – General Requirements: Submittal procedures.
- B. Shop Drawings: Indicate layout of air terminals, grounding electrodes, and bonding connections to structure and other metal objects. Include terminal, electrode, and conductor sizes, and connection and termination details.
- C. Product Data: Submit catalog sheets showing dimensions and materials of each component and include indication of listing in accordance with UL 96.
- D. Test Reports: Indicate procedures and results for specified factory and field testing and inspection.
- E. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.
- F. Certificate of Compliance: Submit certificate from authority having jurisdiction indicating approval of lightning protection systems.

1.5 CLOSEOUT SUBMITTALS

- A. Division 01 – General Requirements: Closeout procedures.
- B. Project Record Documents: Record actual locations of air terminals, grounding electrodes, bonding connections, and routing of system conductors.

1.6 QUALITY ASSURANCE

- A. Perform Work in accordance with NFPA 780.
- B. Perform Work in accordance with UL 96A and furnish Master Label.
- C. Perform Work in accordance with LPI-175 and furnish LPI Certification.
- D. Maintain one copy of each document on site.

1.7 QUALIFICATIONS

- A. Manufacturer: Company specializing in lightning protection equipment with minimum five years documented experience.
- B. Installer: Authorized installer of manufacturer with minimum five years [documented] experience.
- C. Inspection Agency: Company or individual specializing in lightning protection inspecting with minimum five years documented experience.

1.8 PRE-INSTALLATION MEETINGS

- A. Division 01 – General Requirements: Pre-installation meeting.
- B. Convene minimum one week prior to commencing work of this section.

1.9 FIELD MEASUREMENTS

- A. Verify field measurements prior to fabrication.

1.10 COORDINATION

- A. Division 01 – General Requirements: Coordination and project conditions.
- B. Coordinate Work with roofing and exterior and interior finish installations.

PART 2 - PRODUCTS

2.1 COMPONENTS

- A. Manufacturers:
 - 1. Equivalent as acceptable to Engineer.

- B. Product Listing: UL 96.
- C. Air Terminals:
 - 1. Material: Copper Aluminum.
 - 2. Configuration: Tubular Solid.
 - 3. Use adhesive base for single-ply roof installations.
 - 4. Air Terminal for Chimney: Lead-coated copper.
 - 5. Decorations: Ball. Direction vane. Compass set.
 - 6. Grounding Rods: Solid copper. Stainless steel.
 - 7. Ground Plate: Copper.
 - 8. Conductors:
 - a. Material: Copper Aluminum.
 - b. Configuration: Cable. Strip. Solid rod.
- D. Connectors and Splicers: Bronze. Aluminum.

PART 3 - EXECUTION

3.1 EXISTING WORK

- A. Remove exposed abandoned air terminals, interconnecting cable, and grounding electrodes, and other lightning protection components. Cut cable flush with walls, floors, and roof; patch surfaces.
- B. Maintain access to existing grounding and bonding connections, and other installations remaining active and requiring access. Modify installation or install access panel.
- C. Extend existing lightning protection installations using materials and methods compatible with existing installations and as specified.
- D. Clean and repair existing remaining or reinstalled lightning protection components.

3.2 INSTALLATION

- A. Install in accordance with NFPA 780, UL 96A, and LPI-175.
- B. Connect conductors using mechanical connectors. exothermic welding process. Protect adjacent construction elements and finishes from damage.
- C. Conceal interior conductors within building finishes. Conceal exterior conductors where practical.
- D. Bond exterior metal bodies on building to lightning protection system

3.3 FIELD QUALITY CONTROL

- A. Division 01 – General Requirements: Testing and inspection services. Division 01 – General Requirements: Testing, adjusting, and balancing.
- B. Perform inspection and testing in accordance with UL 96A.

END OF SECTION 264100

SECTION 265100 - INTERIOR LIGHTING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Interior Luminaires.
 - 2. Interior Lamps.
 - 3. Ballasts.
 - 4. Fluorescent Emergency Ballasts.
 - 5. Exit Signs.
 - 6. Emergency Battery Units.
 - 7. Accessories.

- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.

1.2 REFERENCES

- A. American National Standards Institute (ANSI):
 - 1. ANSI C82.1 - Electric Lamp Ballast-Line Frequency Fluorescent Lamp Ballast.
 - 2. ANSI C82.4 - Ballasts-for High-Intensity-Discharge Lamps (Multiple-Supply Type).

1.3 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.

- B. Shop Drawings:
 - 1. Include outline drawings, catalog cut sheets, lamp and ballast data, support points, weights, accessory information, and performance data for each luminaire type.
 - 2. For all luminaries with paint color or finish options, include single color original of manufacturers color or finish choices for Architects review.

- C. Product Data: Submit dimensions, ratings, and performance data.

- D. Record Drawings: For installations utilizing remotely mounted low voltage transformers, Electrical Contractor shall provide set of record drawings indicating location of installed transformers to facilitate future maintenance.

- E. Samples: Submit two color chips 3 x 3 inch in size illustrating luminaire finish color where indicated in luminaire schedule.

1.4 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

PART 2 - PRODUCTS

2.1 GENERAL – INTERIOR LIGHTING

- A. Furnish all labor, materials, tools, equipment, and services for all interior lighting, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of all other trades.
- C. Although such work is not specifically indicated, furnish and install all supplementary or miscellaneous items, appurtenances and devices incidental to or necessary for sound, secure and complete installation.

2.2 INTERIOR LUMINAIRES

- A. Subject to compliance with requirements, fixtures that may be incorporated into work include products specified in lighting fixture schedule on Drawings, and equals listed in accompanying notes.
- B. Basic catalog number only is indicated in lighting fixture schedule. Electrical Contractor shall furnish complete lighting fixtures in quantities, and row lengths as shown on Drawings, including plaster frames, ends, or caps, couplings, connectors, suspension assemblies, mounting brackets and all auxiliary accessories as required.
- C. Reference schedule for description of fixture nomenclature and associated ceiling type and suspension system.
- D. Housing:
 - 1. Shall be free from burrs, sharp corners and edges.
 - 2. Shall be steel, unless noted otherwise, formed and supported to prevent warping and sagging.
 - 3. Provide spring loaded latches for all troffers.
- E. Mounting Accessories:
 - 1. Recessed fixtures:
 - a. Provide trim type and accessories required for installation in ceiling types specified shown on reflected ceiling plan.
 - b. Fixtures mounted in sloped ceilings shall be provided with sloped ceiling adapters and appropriate trim rings and other accessories as required.
 - 2. Surface mounted fixtures: Provide ceiling spacers as required for fixtures not labeled as suitable for direct mounting to a low density ceiling.
 - 3. Suspended fixtures:
 - a. Provide swivel canopy to accommodate any sloped ceilings shown on plans.
 - b. Provide pendant or cable length required to suspend luminaries at indicated height.
 - c. Swivel hangers in mechanical equipment areas shall be shock absorbing type.
- F. Finishes:
 - 1. Painted finishes shall be polyester powder painted enamel finish, and painted after fabrication unless noted otherwise.
 - 2. Polished, brushed or other metal finishes shall be finished with clear coat to inhibit finish deterioration and corrosion.

3. Finish types and colors shall be verified with Architect/Engineer prior to ordering.

G. Louvers, Reflectors, Lenses:

1. Louvers and reflectors shall be semi-specular, low iridescent, clear alzak, unless noted otherwise.
2. Parabolic louver depth shall have minimum actual dimension of 3 inches, unless noted otherwise.
3. Acrylic lenses shall be pattern 12 prismatic, overall 0.125 inch minimum thickness.

H. Provide IC rated light fixtures for light fixtures that will be in contact with insulation.

2.3 FLUORESCENT BALLASTS

A. Manufacturers:

1. Advance Transformer.
2. Universal.
3. Osram/Sylvania.

B. Product Description: Electronic ballast, Program Start, suitable for lamps specified, with universal input voltage that will accept any line voltage between 120-277 volts, unless noted as 480 volts on drawings.

C. Fluorescent ballasts shall be electronic type, unless noted otherwise, and shall meet the following standards:

1. UL Listed (Class P) Sound Rating A and CSA certified.
2. Comply with EMI and RFI limits set by FCC (CFR 47 part 18) or NEMA and not interfere with normal electrical equipment.
3. Meet applicable standards designated by ANSI.
4. Be potted or conformal coated in metallic case and not contain PCB's.
5. Provide normal rated lamp life as stated by lamp manufacturers with rated life at 3 hour burn time for each start.

D. Nominal power factor of 0.95 or higher.

E. Total harmonic distortion of less than 10 percent at 120 or 277 volts.

F. Ballast factor 0.85 or better.

G. Frequency of operation shall be 20 khz – 50 khz and units shall operate without visible flicker.

H. Operating temperature shall not exceed 65 degrees C at any point on case at 40 degree C ambient.

I. Ballasts shall carry minimum three (3) year warranty covering replacement parts and labor for life of warranty.

J. Ballasts shall be marked with manufacturer's name, part number, supply voltage, power factor, open circuit voltage, current draw for each lamp type and UL Listing.

K. Ballasts shall withstand line transients as defined in IEEE 587, Category A.

- L. Fluorescent ballasts, other than electronic type, shall only be used where specifically noted on Drawings, shall be of High Power Type, CBM and ETL Certified, Best Energy Saving Type and Sound Rated where available.

2.4 HIGH INTENSITY DISCHARGE (HID) BALLASTS

- A. Built in, automatically resetting thermal protector which disconnects ballast from power line in event of overheating.
- B. Provide F-Can ballast to minimize sound level. F-Can ballast are encased in fluorescent ballast type cans and potted with asphalt or polyester insulating material to minimize noise.
- C. Temperature Rating:
 - 1. For fixtures installed within conditioned spaces rating shall be 104 degrees F.
 - 2. For fixtures installed within non-conditioned spaces rating shall be 131 degrees F.
- D. HID ballasts shall be provided with three (3) year warranty.
- E. HID ballasts Class A noise rating up through 175 watts and Class B for 250 and 400 watts.

2.5 LAMPS

- A. General – Lamps:
 - 1. Lamps shall be provided new.
 - 2. Approved manufacturers;
 - a. Fluorescent:
 - 1) Philips.
 - 2) Osram/Sylvania.
 - 3) General Electric.
 - b. HID:
 - 1) Venture.
 - 2) Philips.
 - 3) Osram/Sylvania.
 - 4) General Electric.
 - c. Incandescent:
 - 1) Philips.
 - 2) Osram/Sylvania.
 - 3) General Electric.
- B. Fluorescent:
 - 1. Color temperature: 3,500K unless noted otherwise.
 - 2. Minimum Color Rendering Index (CRI): 85 unless noted otherwise.
 - 3. Lamp life: Minimum 20,000 hours average based on three hours per start when used on rapid start circuits.
 - 4. Lamps shall be 32 watt, T8, minimum 2,900 lumens initial, rapid start, unless noted otherwise.
 - 5. Lamps shall meet EPA TCLP standards for disposal as non-hazardous waste.
- C. HID:
 - 1. Metal halide lamps shall be pulse start type.

2.6 FLUORESCENT EMERGENCY BALLASTS

- A. Manufacturers:
 - 1. Bodine.
 - 2. Iota.
- B. Fluorescent emergency ballasts shall be compatible with electronic, standard, energy saving, and dimming AC ballasts.
- C. Fluorescent emergency ballasts shall be UL Listed for factory or field installation inside, on top of, or remote from fixture.
- D. Fluorescent emergency ballasts shall operate the following lamps:
 - 1. T8 lamps: Two (2) F32T8 lamps at 1,350 lumens for minimum of 90 minutes.
- E. Fluorescent emergency ballasts shall have minimum five (5) year warranty.
- F. Provide ballast with test switch in fixture or with remote test switch flush mounted in ceiling or on wall at location acceptable to Engineer/Architect.

2.7 EXIT SIGNS

- A. Exit signage shall have 6-inch high lettering meeting code and standard requirements of federal, state, and local jurisdictions where project is located.
- B. Provide directional arrows as indicated and required by authorities having jurisdiction.
- C. Provide mounting accessories as required to back, end, pendant, or top mount in accordance with project requirements.
- D. Provide with internal, pre-wired Nicad battery backup where noted in light fixture schedule.
- E. Exit signage shall be modular design, facilitating replacement of individual parts.
- F. Exit signage shall be illuminated by LED's, unless noted otherwise in light fixture schedule.
- G. Provide exit signs that have internal battery backup with integral test switch.

2.8 INTEGRAL LIGHT FIXTURE GENERATOR TRANSFER DEVICE (GTD)

- A. Where indicated on the Lighting Fixture Schedule, provide light fixtures with an integral GTD that utilizes relay switching to automatically transfer the fixture's circuit from a normal source (switched or un-switched) to an un-switched emergency circuit when the normal power circuit is lost. Devices shall be installed by the fixture manufacturer at the manufacturer's fixture assembly location.
- B. Specifications for the GTD are:
 - 1. UL 924 Listed Emergency Lighting Transfer Switching Component.
 - 2. Dual voltage input, either 120 or 277 volts.
 - 3. Designed to be used on a one GTD for one fixture basis. Inputs fused to carry a maximum load of three amps.
 - 4. Rated for temperatures between -4 degrees F and 149 degrees F.

5. Approximate size of 8 inches x 1.18 inch x 1.18 inch. Approximately weight of 0.5 pounds.
6. Suitable for indoor or damp locations.
7. Acceptable for use with either fluorescent or LED lamps.
8. Inputs will typically include a switched circuit (normal or emergency), an unswitched normal circuit, and an un-switched emergency circuit.

C. Acceptable Manufacturers: Philips-Bodine.

PART 3 - EXECUTION

3.1 EXISTING WORK

- A. Disconnect and remove abandoned luminaires, lamps, and accessories.
- B. Extend existing interior luminaire installations using materials and methods as specified.
- C. Clean and repair existing interior luminaires to remain or to be reinstalled.

3.2 INSTALLATION

- A. Install suspended luminaires using pendants supported from swivel hangers. Install pendant length required to suspend luminaire at indicated height.
- B. Support luminaires larger than 2 x 4 foot size independent of ceiling framing.
- C. Locate recessed ceiling luminaires as indicated on Drawings. Coordinate all discrepancies between lighting and reflected ceiling plans with architect.
- D. Install surface mounted luminaires plumb and adjust to align with building lines and with each other. Secure to prevent movement.
- E. Install recessed luminaires to permit removal from below.
- F. Install recessed luminaires using accessories and firestopping materials to meet regulatory requirements for fire rating.
- G. Install earthquake clips to secure recessed grid-supported luminaires in place.
- H. Install wall-mounted luminaires at height as indicated on Drawings.
- I. Install accessories furnished with each luminaire.
- J. Make wiring connections to branch circuit using building wire with insulation suitable for temperature conditions within luminaire.
- K. Install specified lamps in each luminaire.
- L. Electrical Contractor shall check Structural Drawings, architectural reflected ceiling plans, General Construction Drawings and Mechanical Drawings to verify construction and type of surface on or in which lighting fixtures are installed, for ceiling construction proper type of suspended ceiling and space above same and possible conflicts with equipment of other trades.

1. Determine specific ceiling construction including ceiling materials and ceiling suspension system in each area where suspended ceiling is to be provided.
2. Verify suspended ceiling type with ceiling contractor prior to releasing lighting fixtures for delivery.
3. Furnish fixture of type scheduled complete with accessories necessary to make installation accordance with manufacturer's recommendations including plaster frames, couplings and connectors, suspension assemblies mounting brackets and other auxiliary equipment.

M. Bond fixtures and metal accessories to branch circuit equipment grounding conductor.

N. Fixture Connections:

1. Surface and wall recessed fixtures shall be connected directly to junction box or solid conduit.
2. Ceiling recessed fixtures shall be connected to flexible metal conduit, originating at solidly supported J-Box.
3. Flexible metal conduit shall be minimum 3/8 inch diameter. Conduit length shall allow movement of fixture for maintenance purposes.
4. Minimum wire size shall be #12 AWG.

O. Provide box-outs and other accessories around recessed fixtures as required to maintain fire ratings for spacing required from insulation in ceiling space. Final installation shall meet regulatory requirements and manufacturer's recommendations.

P. Contractor shall verify exit signs are provided and visible along all exit paths shown on Architectural Life Safety Plan.

3.3 FIELD QUALITY CONTROL

- A. Operate each luminaire after installation and connection.
- B. Inspect for proper connection and operation.

3.4 ADJUSTING

- A. Aim and adjust luminaires as indicated on Drawings and adjust as directed by designated Owner personnel.

3.5 CLEANING

- A. Remove dirt and debris from enclosures.
- B. Clean photometric control surfaces as recommended by manufacturer.
- C. Clean finishes and touch up damage.

3.6 PROTECTION OF FINISHED WORK

- A. Division 01 – General Requirements: Protecting finished work.
- B. Relamp luminaires having failed or noticeable dim lamps at Substantial Completion.

END OF SECTION 265100

SECTION 265600 - EXTERIOR LIGHTING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Exterior Luminaries.
 - 2. Poles.
 - 3. Accessories.
- B. Related Sections
 - 1. Applicable provisions of Division 01 – General Requirements shall govern all work under this Section.
 - 2. Section 26 00 00 – Basic Electrical Requirements.

1.2 UNIT PRICE - MEASUREMENT AND PAYMENT

- A. Exterior Luminaire:
 - 1. Basis of Measurement: Each.
 - 2. Basis of Payment: Includes concrete base, luminaire pole, and luminaire with lamps and accessories. connection to power source.

1.3 REFERENCES

- A. American National Standards Institute (ANSI):
 - 1. ANSI C82.1 - Electric Lamp Ballast-Line Frequency Fluorescent Lamp Ballast.
 - 2. ANSI C82.4 - Ballasts-for High-Intensity-Discharge and Low-Pressure Sodium Lamps (Multiple-Supply Type).
 - 3. ANSI O5.1 - Wood Poles, Specifications and Dimensions.

1.4 SUBMITTALS

- A. Section 26 00 00 – Basic Electrical Requirements: Procedures for submittals.
- B. Shop Drawings: Indicate dimensions and components for each luminaire not standard Product of manufacturer.
- C. Product Data: Submit dimensions, ratings, and performance data.
- D. Samples: Submit two color chips 3 x 3 inch in size illustrating luminaire finish color where indicated in luminaire schedule.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

1.6 MOCK-UP

- A. Section 26 00 00 – Basic Electrical Requirements: Mock-up requirements.

- B. Construct mock-up of to measure luminaire performance. Include 4 luminaries.
- C. Locate where indicated on Drawings.
- D. Incorporate accepted mockup as part of Work.
- E. Remove mockup when directed by Engineer.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and protect products under provisions of Section 26 00 00 – Basic Electrical Requirements.
- B. Store and handle solid wood poles in accordance with ANSI O5.1.

1.8 COORDINATION

- A. Furnish bolt templates and pole mounting accessories to installer of pole foundations.

1.9 MAINTENANCE MATERIALS

- A. Section 26 00 00 – Basic Electrical Requirements: Spare parts and maintenance products.
- B. Furnish two of each lamp installed.
- C. Furnish two gallons of touch-up paint for each different painted finish and color.
- D. Furnish two ballasts of each lamp type installed.

PART 2 - PRODUCTS

2.1 LUMINARIES

- A. Product Description: Complete exterior luminaire assemblies, with features, options, and accessories as scheduled.
- B. Substitutions: Equivalent as acceptable to Engineer.
 - 1. Refer to Lighting Fixture Schedule on construction documents.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify foundations are ready to receive fixtures.

3.2 EXISTING WORK

- A. Disconnect and remove abandoned exterior luminaries.

- B. Extend existing exterior luminaire installations using materials and methods [compatible with existing installations, or] as specified.
- C. Clean and repair existing exterior luminaries to remain or to be reinstalled.

3.3 INSTALLATION

- A. Install concrete bases for lighting poles at locations as indicated on Drawings, in accordance with Section 03 31 00 – Structural Concrete.
- B. Install poles plumb. Install shims double nuts to adjust plumb. Grout around each base.
- C. Install lamps in each luminaire.
- D. Bond and ground luminaries, metal accessories and metal poles in accordance with Section 26 05 26 – Grounding and Bonding. Install supplementary grounding electrode at each pole.

3.4 FIELD QUALITY CONTROL

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Operate each luminaire after installation and connection. Inspect for improper connections and operation.
- C. Measure illumination levels to verify conformance with performance requirements.
- D. Take measurements during night sky, without moon or with heavy overcast clouds effectively obscuring moon.

3.5 ADJUSTING

- A. Section 26 00 00 – Basic Electrical Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Aim and adjust luminaries to provide illumination levels and distribution as indicated on Drawings.

3.6 CLEANING

- A. Section 26 00 00 – Basic Electrical Requirements: Final cleaning.
- B. Clean photometric control surfaces as recommended by manufacturer.
- C. Clean finishes and touch up damage.

3.7 PROTECTION OF FINISHED WORK

- A. Section 26 00 00 – Basic Electrical Requirements: Protecting finished work.
- B. Relamp luminaries having failed lamps at Substantial Completion.

END OF SECTION 265600

SECTION 27 05 26 - GROUNDING AND BONDING FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Minimum requirements for equipment and cable installations in communications equipment rooms (Telecommunications Closets).
2. Included in this section are minimum composition requirements and installation methods for following:
 - a. Grounding Electrode System
 - b. Busbars
 - c. Bonding accessories

B. Related Sections:

1. Applicable provisions of Division 01- General Requirements shall govern all work under this Section.
2. Section 26 05 26 – Grounding and Bonding for Electrical Systems.
3. Section 27 05 28 – Pathways for Communications Systems.
4. Section 27 05 29 – Hangers and Supports for Communications Systems.
5. Section 27 10 00 – Structured Cabling.

1.2 REFERENCES

A. Building Industry Consulting Service International, Inc. (BICSI):

1. BICSI TDM Manual - Telecommunications Distribution Methods Manual.

B. National Fire Protection Association (NFPA):

1. NFPA 70 - National Electrical Code.

C. Telecommunication Industry Association/Electronic Industries Alliance (TIA/EIA):

1. ANSI/TIA 568 - Commercial Building Telecommunications Cabling Standard.
2. TIA 569 - Commercial Building Standard for Telecommunications Pathways and Spaces.
3. ANSI/TIA 606 - Administration Standard for the Telecommunications Infrastructure of Commercial Buildings.
4. ANSI-J-STD – 607 Joint Standard for Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications.
5. TIA/EIA 607 - Commercial Building Grounding and Bonding Requirements for Telecommunications.

1.3 SUBMITTALS

A. Division 01 – General Requirements: Requirements for submittals.

B. Provide product data for the following:

1. Manufacturers cut sheets, specifications and installation instructions for all products (submit with bid).

1.4 CLOSEOUT SUBMITTALS

- A. Division 01 – General Requirements: Procedures for closeout submittals.
- B. Project Record Documents: Record actual locations of components and grounding electrodes.

1.5 QUALITY ASSURANCE

- A. All cable and equipment shall be installed in neat and workmanlike manner. All methods of construction that are not specifically described or indicated in contract documents shall be subject to control and approval of Owner or Owner Representative. Equipment and materials shall be of quality and manufacture indicated. Equipment specified is based upon acceptable manufacturers listed. Where “approved equal” is stated, equipment shall be equivalent in every way to that of equipment specified and subject to approval.
- B. Strictly adhere to all Building Industry Consulting Service International (BICSI), Electronic Industries Alliance (EIA) and Telecommunications Industry Association (TIA) recommended installation practices when installing communications/data cabling.

1.6 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five (5) years’ documented experience.
- B. Installer: Company specializing in performing work of this section with minimum five (5) years’ experience approved by manufacturer.

PART 2 - PRODUCTS

2.1 GROUNDING ELECTRODE SYSTEM

- A. When required Grounding Electrode System shall meet the following.
 - 1. Active grounding system constantly replenishing moisture into the soil
 - 2. Provide low resistance to ground
 - 3. Provide season to season stability
 - 4. Be maintenance-free for 30 years
 - 5. Contain no hazardous materials or chemicals
- B. Manufacturers
 - 1. Equivalent as acceptable to Engineer.

2.2 WALL-MOUNT BUSBARS

- A. Telecommunications Main Grounding Busbar (TMGB)
 - 1. Telecommunications Main Grounding Busbar (TMGB) shall be constructed of .25 inch (6.4 mm) thick solid copper bar.
 - 2. Busbar shall be 4 inches (100 mm) high and 20 inches (510 mm) long and shall have 30 attachment points (two rows of 15 each) for two-hole grounding lugs.
 - 3. Hole pattern for attaching grounding lugs shall meet requirements of ANSI-J-STD – 607-A and shall accept 27 lugs with 5/8-inch hole centers and 3 lugs with 1-inch hole centers.

4. Busbar shall include wall-mount stand-off brackets, assembly screws and insulators creating 4-inch standoff from wall.
5. Busbar shall be UL Listed as grounding and bonding equipment.

B. Telecommunications Grounding Busbar (TGB)

1. Telecommunications Grounding Busbar (TGB) shall be constructed of .25-inch-thick solid copper bar.
2. Busbar shall be 2 inches high and 12 inches long and shall have 9 attachment points (one row) for two-hole grounding lugs.
3. Hole pattern for attaching grounding lugs shall meet the requirements of ANSI-J-STD – 607-A and shall accept 6 lugs with 5/8-inch hole centers and 3 lugs with 1-inch hole centers.
4. Busbar shall include wall-mount stand-off brackets, assembly screws and insulators creating 4-inch standoff from the wall.
5. Busbar shall be UL Listed as grounding and bonding equipment.

2.3 BONDING ACCESSORIES

A. Compression Lugs

1. Compression lugs shall be manufactured from electroplated tinned copper.
2. Compression lugs shall have two holes spaced on 5/8 inch or 1-inch centers, as stated below, to allow secure two bolt connections to busbars.
3. Compression lugs shall be sized to fit specific size conductor, sizes #6 to 4/0, as stated below.
4. Compression lugs shall be UL Listed as wire connectors.

B. Antioxidant Joint Compound

1. Oxide inhibiting joint compound for copper-to-copper, aluminum-to-aluminum or aluminum-to-copper connections.

C. C-Type, Compression Taps

1. Compression taps shall be manufactured from copper alloy.
2. Compression taps shall be C-shaped connectors that wrap around two conductors forming irreversible splice around conductors; installation requires hydraulic crimping tool.
3. Compression taps shall be sized to fit specific size conductors, sizes #2 AWG to 4/0, as stated below.
4. Compression taps shall be UL Listed.

D. Pedestal Clamp with Grounding Connector

1. Pedestal clamp shall be made from electroplated tinned copper or bronze. Installation hardware will be stainless steel.
2. Pedestal clamps shall be sized to fit specific size conductor, size #6 and/or 2/0, as stated below.
3. Pedestal clamp installation hardware shall be sized to attach to round and/or square raised access floor pedestals that are 1-1/8 inch to 1-3/4 inch in diameter, as stated below.
4. Pedestal clamp shall provide straight (in-line) or cross (intersection) support for up to two conductors.
5. Pedestal clamp shall be UL Listed as grounding and bonding equipment.

E. Pipe Clamp with Grounding Connector

1. Pipe clamp shall be made from electroplated tinned bronze. Installation hardware will be stainless steel.

2. Pipe clamp shall be sized to fit up to two conductors ranging in size from #6 to 250 MCM; conductors must be same size.
 3. Pipe clamp installation hardware shall be sized to attach to pipes, sizes 1 inch to 6 inch (.75 inch to 6.63 inch in diameter), as stated below.
 4. Pipe clamp shall be UL Listed as grounding and bonding equipment.
- F. Equipment Ground Jumper Kit
1. Kit includes one 24-inch L insulated ground jumper with a straight two-hole compression lug on one end and an L-shaped two-hole compression lug on the other end, two plated installation screws, an abrasive pad and .5 ounce tube of antioxidant joint compound.
 2. Ground conductor is an insulated green/yellow stripe #6 AWG wire
 3. Lugs are made from electroplated tinned copper and have two mounting holes spaces .5 inch to .625 inch apart that accept 1/4-inch screws.
 4. Jumper will be made with UL Listed components.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Outdoor Grounding and Bonding Connections
1. All outdoor grounding and bonding (earthing) connections shall be accomplished using exothermic welding.
- B. Wall-Mount Busbars
1. Attach busbars to wall with appropriate hardware according to manufacturer's installation instructions.
 2. Conductor connections to the TMGB or TGB shall be made with two-hole bolt-on compression lugs sized to fit busbar and conductors.
 3. Each lug shall be attached with stainless steel hardware after preparing bond according to manufacturer recommendations and treating bonding surface on busbar with antioxidant to help prevent corrosion at bond.
 4. Wall-mount busbar shall be bonded to ground as part of overall Telecommunications Bonding and Grounding System.
- C. Rack-Mount Busbars and Ground Bars
1. When rack or cabinet supports active equipment or any type of shielded cable or cable termination device requiring ground connection, add rack-mount horizontal or vertical busbar or ground bar to rack or cabinet. Rack-mount busbar or ground bar provides multiple bonding points on rack for rack and rack-mount equipment.
 2. Attach rack-mount busbars and ground bars to racks or cabinets according to manufacturer's installation instructions.
 3. Bond rack-mount busbar or ground bar to room's TMGB or TGB with appropriately sized hardware and conductor.
- D. Rack Grounding
1. Every rack and cabinet shall be bonded to TMGB or TGB.
 2. Minimum bonding connection to racks and cabinets shall be made with two-hole compression lug sized to fit conductor and rack and installed according to manufacturer recommendations.
 3. Remove paint between rack/cabinet and compression lug, clean surface and use antioxidant between rack and terminal block to help prevent corrosion at bond.

E. Pedestal Clamp

1. At minimum, bond every sixth raised access floor pedestal with minimum #6 AWG conductor to TMGB or TGB using pedestal clamp sized to fit pedestal and conductor and installed according to manufacturer's recommendations.
2. If pedestal clamps are used to construct signal reference grid, bond signal reference grid to TMGB or TGB and bond each rack and/or cabinet to signal reference grid using compression tap or similar non-reversible bonding component sized to fit both conductors.
3. Remove paint between pedestal and pedestal clamp, clean surface and use antioxidant between pedestal and clamp to help prevent corrosion at bond.
4. Remove insulation from conductors where wires attach to pedestal clamp.

F. Pipe Clamp

1. Bond metal pipes located inside data center computer room with minimum #6 AWG conductor to TMGB or TGB using pipe clamp sized to fit pipe and conductor and installed according to manufacturer's recommendations.
2. Remove paint between pipe and pipe clamp, clean surface and use antioxidant between pipe and clamp to help prevent corrosion at bond.
3. Remove insulation from conductors where wires attach to pipe clamp.

G. Equipment Ground Jumper Kit

1. Bond equipment to vertical rack-mount busbar or groundbar using ground jumper according to manufacturer's recommendations.
2. Clean the surface and use antioxidant between compression lugs on jumper and rack-mount busbar or groundbar to help prevent corrosion at bond.

3.2 FIELD QUALITY CONTROL

- A. Division 01 – General Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Visually inspect from each bus bar to main grounding electrode service location.
- C. Test in accordance with BICSI TDM Manual, TIA/EIA 607, and NFPA 70.
- D. When improper grounding is found, check entire project and correct. Perform retest.

END OF SECTION 270526

This Page Intentionally Left Blank

SECTION 270528 - PATHWAYS FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Scope of Work

1. Install empty raceway system, including underfloor and overhead distribution system, fish wire, terminal cabinets, outlet boxes, floor boxes, pull boxes, cover plates, conduit, sleeves and caps, cable troughs, service poles, miscellaneous and positioning material to constitute complete system, as indicated for distribution of Telecommunications wiring which includes cables for Data, Voice, Video, Audio, Security and future signal requirements.
2. Location at which all new telecommunications wiring will terminate is called Telecom Outlet (TO). There are several styles of outlets:
 - a. New construction
 - b. Existing construction typical
 - c. Existing construction variations
 - d. Telephone (Voice) only
 - e. Data only
3. Furnish and install split channel raceway and outlet boxes as specified in Drawings and as specified herein.
4. Furnish and install conduit stubs in walls and floors for cable routes.

B. Related Sections:

1. Applicable provisions of Division 01- General Requirements shall govern all work under this Section.
2. Section 26 05 26 – Grounding and Bonding for Electrical Systems.

- F. Telecommunication Industry Association/Electronic Industries Alliance (TIA/EIA):
1. ANSI/TIA - 568-B Commercial Building Telecommunications Cabling Standard.
 2. ANSI/TIA - 569-A Commercial Building Standard for Telecommunications Pathways and Spaces.
 3. ANSI/TIA – 606 Administration Standard for the Telecommunications Infrastructure of Commercial Buildings.
- G. Underwriters’ Laboratories (UL):
1. UL and cUL E209183.
 2. UL 1479 – Standard for Fire Tests of Penetration Firestops.

1.3 QUALITY ASSURANCE

- A. All cable and equipment shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in contract documents shall be subject to control and approval of Owner or Owner Representative. Equipment and materials shall be of quality and manufacture indicated. Equipment specified is based upon acceptable manufacturers listed. Where “approved equal” is stated, equipment shall be equivalent in every way to that of equipment specified and subject to approval.
- B. Strictly adhere to all Building Industry Consulting Service International (BICSI), Electronic Industries Alliance (EIA) and Telecommunications Industry Association (TIA) recommended installation practices when installing communications/data cabling.
- C. Assure that "as installed" system is correctly and completely documented including engineering drawings, manuals, and operational procedures in such a manner as to support maintenance and future expansion of the system.
- D. Material and work specified herein shall comply with applicable requirements of current revision of the following:
1. ANSI-J-STD – 607 Joint Standard for Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications

1.4 SUBMITTALS

- A. Division 01 – General Requirements: Requirements for submittals.

- B. Product Data: For features, ratings, and performance of each component specified.
- C. Submit manufacturer's instructions for storage, handling, protection, examination, preparation, operation, and installation of products. Include application conditions or limitations of use stipulated by any product testing agency. Submit for the following:
 - 1. Wall Boxes
 - 2. Raceway
 - 3. Conduit
 - 4. Conduit Bushings
- D. Shop Drawings
 - 1. Component List: List manufacturer, part number, and quantity of each component.
 - 2. Include dimensioned plan and elevation views of equipment rooms, labeling each individual component. Show raceway assemblies, method of field assembly, workspace requirements, and access for cable connections.

1.5 CLOSEOUT SUBMITTALS

- A. Division 01 – General Requirements: Procedures for closeout submittals.
- B. Project Record Documents: Record actual locations of components and grounding electrodes.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials to site in manufacturer's original un-opened containers and packaging, with labels clearly indication manufacturer and material.
- B. Store materials in dry area indoors, protected from damage and in accordance with manufacturer's instructions.
- C. Protect materials and finishes during handling and installation to prevent damage.

PART 2 - PRODUCTS

2.1 Telecom Outlets (TO)

- A. Manufacturers
 - 1. Equivalent as acceptable to Engineer.
- B. New construction TO consist of one (1) 4-11/16 inch square by 2-1/8 inch deep flush mounted box. Each outlet box shall have EMT conduit stubbed above drop ceiling or extended into hallway cabletray. Conduits size is as follows:
 - 1. For Outlets with 3 or less cables, use 1 inch EMT conduit
 - 2. For Outlets with 3-6 cables, use 1.25 inch EMT conduit
 - 3. For all other sizes, calculate fill ratio at 40 percent for proper sized conduit
- C. Existing surface-mounted construction TO typically consists of surface-mounted raceway including base, cover, end fitting, entrance end fitting, and (2) 1 inch EMT conduits stubbed out top of entrance end fitting to above ceiling or out to nearest hallway distribution system. Size of raceway is site dependent based on number of conductors to be installed.

- D. Intent of installation of TOs which consist of raceway is as follows:
1. Where ceilings are accessible, raceway and entrance end fitting shall extend above ceiling and conduits installed above ceiling in room to nearest hallway distribution system.
 2. Where ceilings are partially accessible, or if Drawings and/or Specifications indicate installation of access panels, raceway shall extend above ceiling and conduits installed above ceiling in room to nearest hallway distribution system.
 3. Where ceilings are inaccessible or no ceilings exist, raceway shall extend up as close to ceiling as practical to allow installation of conduits as high as possible to nearest hallway distribution system.

2.2 HORIZONTAL DISTRIBUTION SYSTEMS

- A. Conduit System (Renovations only, where conduit exists)
1. Provide conduits secured to wall above corridor ceilings as shown on Drawings or as specified herein for installation of telecommunications cables.
 2. Corridor conduits shall be 4 inch EMT, furnished in 10 foot lengths wherever possible, with no sharp edges, reamed as necessary, evenly supported at two locations per 10 foot section spacing. Conduits shall be sized and quantified to account for handling cables in all TO conduits at 40 percent fill back to TR and/or ER rooms. Verify size prior to installation. Bushings and/or connectors on ends of EMT are required.
 3. All conduits shall be installed stacked and attached to walls unless conditions exist which prohibit this type of installation. When this condition exists, mount conduits side-by-side supported with 3/8 inch rod attached to building structure utilizing unistrut channel to form trapeze. Double nut top and bottom at unistrut. Utilize conduit clamp to secure conduits to unistrut.
 4. Provide measured pull line in each conduit rated at 1200 lbs. minimum. Increments must be in 12 inch steps.
 5. Grounding of conduits is not required per NEC #250-33, Exception No. 2. shall be painted except conduit above suspended ceilings or in mechanical, electrical or telecommunication rooms. Color to match that of surface installed upon or as directed by Owner's Representative. Coordinate with other trades prior to painting.
 6. Provide restorable fire stops inside and around conduits as recommended by UL1479 or ASTM E814 for all conduits penetrating fire-rated construction. Fire rated construction to be verified with AHJ. See Section 27 05 32 – Firestopping for Telecommunications Systems for more information.
- B. Corridor Cable Tray System
1. Complete wall mounted or suspended aluminum cable tray system and necessary accessories shall be provided as shown on plans. Install entire cable tray system in accordance with manufacturer's minimum installation practices and all local governing codes.
 2. Coordinate installation of cable tray with other trades to allow a minimum of 12 inches above, 12 inches in front, and 12 inches below of clearance from piping, conduits, ductwork, etc. Allowance must be provided for access to tray with reasonable room to work. Obstructions to tray must be minimized and cannot block more than 6 feet of tray at any point in run.
 3. Submittal drawings, in form of 8 1/2 x 11 inch catalog cut sheets, shall be provided for the following items: cable tray, fittings, accessories and load data.
 4. Cable tray shall not be loaded beyond 60 percent of manufacturer's recommended load capacity.
 5. Install wall mounted cable tray on both sides of hallway as shown on drawings and where applicable.

6. Where new cable tray distribution system encounters a wall, install sufficient 4 inch EMT sleeves through wall so cabling does not exceed 20 percent fill.
 7. Where cable tray is exposed below ceiling, install appropriate solid bottom inserts to conceal cables.
 8. Install cable tray dropouts where large quantities of cables exit distribution system.
 9. Cable tray must be sized to facilitate sufficient growth capacity for migration cable plant to coexist in same tray as existing cable plant, wherever possible.
 10. Manufacturer of cable tray in corridors and telecom rooms shall be B-Line, Cablofil or Panduit.
- C. Telecommunication Room Ladder Rack (Universal Cable Runway)
1. Ladder rack shall be manufactured from 3/8 inch wide by 1-1/2 inches high tubular steel with .065 inch wall thickness.
 2. Ladder rack (side stringers) will be 9 feet-11½ inches long. Cross members will be welded in between stringers on 12 inch intervals/centers beginning 5-3/4 inch from one end so that there are 10 cross members per ladder rack. There will be 10-1/2 inch of open space in between each cross member.
 3. Ladder rack will be delivered individually boxed, and available in width(s) specified below.
 4. Ladder rack will be UL Classified for suitability as equipment grounding conductor only (installer must remove paint or use ground straps at splices and intersections).
 5. Finish shall be epoxy-polyester hybrid powder coat (paint) in the color(s) specified below.
- D. Horizontal 90 degree Turns (Cable Runway E-Bend)
1. Horizontal 90 degree turns shall be manufactured from 3/8 inch wide by 1-1/2 inch high tubular steel with .065 inch wall thickness.
 2. Stringers (sides) will be formed in 90 degree arc. Cross members will be welded in between stringers on approximate 23 degree increments so that there are 5 cross members per turn. Welded assembly will have 15 inch inside radius and will create smooth horizontal 90 degree turn.
 3. Horizontal 90 degree turns will be available in width(s) specified below.
 4. Finish shall be epoxy-polyester hybrid powder coat (paint) in color(s) specified below.
- E. Vertical-To-Horizontal 90 degree Turns (Cable Runway Outside Radius Bend)
1. Vertical-to-horizontal 90 degree turns shall be manufactured from 3/8 inch wide by 1-1/2 inch high tubular steel with .065 inch wall thickness.
 2. Stringers (sides) will be formed in 90 degree arc with 12-1/2 inch outside radius. Cross members will be welded in between stringers on approximate 23 degree increments so that there are 3 cross members per turn. Welded assembly will create smooth 90 degree vertical-to-horizontal turn.
 3. Vertical-to-horizontal 90 degree turns will be available in width(s) specified below.
 4. Finish shall be epoxy-polyester hybrid powder coat (paint) in color(s) specified below.
- F. Horizontal-To-Vertical 90 degree Turns (Cable Runway Inside Radius Bend)
1. Horizontal-to-vertical 90 degree turns shall be manufactured from 3/8 inch wide by 1-1/2 inch high tubular steel with .065 inch wall thickness.
 2. Stringers (sides) will be formed in 90 degree arc with 12-1/2 inch outside radius. Cross members will be welded in between stringers on approximate 23 degree increments so that there are 3 cross members per turn. Welded assembly will create smooth 90 degree horizontal-to-vertical turn.
 3. Horizontal-to-vertical 90 degree turns will be available in width(s) specified below.
 4. Finish shall be epoxy-polyester hybrid powder coat (paint) in color(s) specified below.

G. Ladder Rack Splices

1. Splice kits will provide method of mechanically connecting ladder rack sections and turns together end-to-end or side-to-end to form continuous pathway for cables.
2. Grounding kits will provide method of bonding ladder rack sections and turns together that is independent of pathway splices. Grounding kit should be constructed of UL Listed components. Preferred solution is #6 AWG green insulated stranded copper conductor connected on both ends to ladder rack using two-hole compression lugs and stainless steel hardware.
3. Insulator bar kit will provide means of electrically isolating individual ladder rack sections through end-to-end splice separated with non-conductive material. Preferred solution is 3/8 inch wide by 1-1/2 inch high by 5-1/2 inch long insulator bar made of Delrin® (by DuPont, Delrin is registered trademark of E.I. du Pont de Nemours and Company).
4. Splices (splice plates) will be manufactured from steel. Splice, grounding and insulator bar kits will include installation hardware.
5. Finish (of splice plates and hardware) shall be zinc plate in the color(s) specified below. Colors are applied as chem. film over zinc plate.

H. Ladder Rack Supports

1. Supports will be sized to match width of ladder rack that is supported. Some supports will work with multiple or all widths of ladder rack.
2. Each support will include means of mechanically securing ladder rack to support.
3. Supports will be manufactured from steel or aluminum.
4. Finish shall be epoxy-polyester hybrid powder coat (paint) in color(s) specified below or zinc plate with gold chem. finish specified gold. Included hardware shall be zinc plated with gold chem. finish.

I. All open pathway/trays shall be installed minimum of six (6) inches away from any light fixture or other source of EMI (Electromagnetic Interference).

J. All pathways shall be grounded per NEC Article 250.

K. Provide external grounding strap at expansion joints, sleeves and crossover and at other locations where pathway/tray continuity is interrupted.

L. Support all pathways from building construction. Do not support pathways from ductwork, piping, or equipment hangers.

M. Install cable tray level and straight unless noted on construction drawings.

N. Ladder Tray Raceway and Accessories Color – [BLACK] [CLEAR] [ZINK].

2.3 STATION CONDUITS

A. Station conduit is defined as conduit that originates at TO and rises within walls or is exposed from raceway and extends up into drop ceiling or over to hallway distribution system.

B. Provide station conduits from TOs to above drop ceiling or extend over to hallway distribution systems consisting of 1 inch EMT minimum or appropriate size as shown on Drawings or as specified herein for installation of telecommunications cables.

- C. Provide insulating press fit bushing on all telecommunications conduits including interconnecting nipples and stub to distribution system. To prevent conflicts with other cables or conduits to cable tray, conduit shall be stubbed not less than 6 inches above or below conduit/cable tray center line. Where space permits, every effort shall be made to bend station conduits down such that flow of installed cables promotes minimum length back to TR and least amount of bends in cables. Bushings must be rated to be used in environmental air handling space (Plenum).
- D. Provide measured pull line in 12 inch increments in each empty conduit to hallway distribution system.
- E. Indelibly mark station conduit at hallway distribution end with Room # that conduit serves.
- F. Use of 90 degree electrical pulling elbows is prohibited.
- G. Do not include more than two 90 degree bends between pulling points when installing station conduit runs. If path of station conduits requires more than 180 degrees of total bends, installation of appropriate sized junction box is required. See section 2.4 for junction box requirements.
- H. Place appropriate sized junction box in each individual station conduit run that exceeds 100 feet in length.
- I. Use of third bend in conduit is only acceptable if:
 - 1. Total conduit run is reduced by 15 percent.
 - 2. Conduit size is increased to next trade size.
 - 3. One of bends is located within 12 inches of cable feed end.

2.4 JUNCTION BOX REQUIREMENTS FOR STATION CONDUITS

- A. If station conduit route exceeds 180 degree of total bends limitation, appropriate sized junction box is required within straight section of conduit run.
- B. Each station conduit run requires separate junction box. Sharing of junction box by multiple conduits is prohibited.
- C. Junction box shall not be used in place of bend. All junction boxes in station conduit paths shall be installed within straight section of conduit run.

2.5 SERVICE ENTRANCE CONDUITS

- A. Minimum of (2) 4 inch IMC conduits shall be installed from nearest utility tunnel on outside of building as shown on Drawings. Terminate entrance conduits entering ER rooms from below grade to extend 4 inches above finished floor. Location of entrance conduits shall be within 12 inches of room corners.
- B. Terminate entrance conduits entering ER rooms from above ceiling height to extend 4 inches below finished ceiling or 12 inches above cable tray.
- C. Terminate entrance conduits entering an ER rooms from below ceiling height to extend 4 inches into room.

- D. Entrance conduits shall be continuous into building and to ER. Securely fasten all entrance conduits to building to withstand any cable placing operation. Do not include more than two 90 degree bends between pulling points when installing entrance conduits.
- E. On exterior wall penetrations, seal both sides of wall around outside of conduit with hydraulic cement to prevent water from entering building. Seal inside of conduit on both sides with conduit plugs, water plugs, or duct sealer to prevent water, vapors, or gases from entering building.

2.6 PATHWAY REQUIREMENTS FOR ENTRANCE CONDUITS

- A. If entrance conduits exceeds 180 degree of total bends limitation, appropriate sized junction box, manhole, or hand hole is required.
- B. As-built drawings of entrance conduit path required to be submitted to Owner's Representative before covered with soil.

2.7 RISER CONDUITS

- A. Riser conduits shall only be used when noted on Construction Documents for special applications only. Riser conduits are not required as general rule for riser system. However, when required:
 - 1. Minimum of (2) 4 inch conduits shall be installed between ER room and each TR room as shown on Drawings.
 - 2. Conduits entering ER and TR rooms shall be reamed or bushed and terminated not more than 4 inches from entrance wall and within 12 inches of room corners.
 - 3. Conduits entering ER and TR rooms from below floor shall be terminated not more than 4 inches above finished floor.
 - 4. Conduits for riser cables shall be continuous and separate from all other conduit or enclosed raceway systems. Do not include more than two 90 degree bends between pulling points when installing riser conduits. Where junction boxes are required, locate in accessible areas, such as above suspended ceilings in hallways.
 - 5. Conduits shall not be less than 4 inch trade size and be equipped with measured pull line at 12 inch increments rated at minimum 1200 pound test.
 - 6. Provide restorable fire stops inside and around conduits as recommended by UL1479 or ASTM E814 for all conduits penetrating fire-rated construction. Fire-rated construction to be verified with AHJ. See Section 27 05 32 – Firestopping for Telecommunications Systems for more information.
 - 7. Provide insulating press fit bushing on all telecommunications riser conduits. Bushings must be rated to be used in environmental air handling space (Plenum).
 - 8. Manufacturer of insulating bushing on all telecommunication conduits shall be Arlington or equal.
 - 9. Riser conduits shall not be used for distribution of horizontal cables.

2.8 FIRESTOPPING

- A. In all buildings, floor/ceiling assemblies, stairs, and elevator penetrations must be sealed with 2-hour fire stop assembly at a minimum, unless otherwise noted.
- B. Contact Owner's Representative to identify walls which are fire-rated construction. Walls must be sealed with 2-hour fire stop assembly at minimum.

- C. Communication pathways requiring fire stopping shall utilize removable/re-usable fire stopping putties for ease of moves, adds and changes.
- D. All fire stopping penetrations shall conform to the recommended practices listed in UL1479 or ASTM.
- E. See Section 27 05 32 - Firestopping for Telecommunications Systems.

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS

- A. Intention of telecommunications conduits is to provide route between ER and TR rooms, routes from TRs throughout building floors to hallways, and routes from hallway distribution systems into rooms to individual TOs for telecommunications cabling.
- B. Installation of new pathways shall not interfere with existing pathways in such a way that installation of new cables within the existing pathway is made more difficult.

3.2 EXAMINATION

- A. Examine areas to receive cable management system. Notify Owner's Representative of conditions that would adversely affect installation or subsequent utilization of system.
- B. Do not proceed with installation until unsatisfactory conditions are corrected.

3.3 INSTALLATION

- A. Install in accordance with recognized industry practices, to ensure that equipment complies with requirements of NEC, and applicable portions of NFPA 70B and NECA "Standards of Installation" pertaining to general electrical installation practice.
- B. Coordinate installation with other trades.
- C. Field verification is required before installation.
- D. Install cable management system at locations indicated on Drawings and in accordance with manufacturer's instructions.

3.4 FIELD QUALITY CONTROL

- A. Division 01 – General Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Test in accordance with BICSI TDM Manual.

END OF SECTION 270528

This Page Intentionally Left Blank

SECTION 270529 - HANGERS AND SUPPORTS FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.1 WORK INCLUDES

- A. Work covered under this section consists of furnishing of all necessary labor, supervision, materials, equipment, and services to completely execute system of non-continuous cable supports as described in this specification.
- B. Related Sections:
 - 1. Applicable provisions of Division 01- General Requirements shall govern all work under this Section.
 - 2. Section 03 31 00 - Structural Concrete: Product requirements for concrete for placement by this section.
 - 3. Section 26 05 29 - Hangers and Supports for Electrical Systems.
 - 4. Section 27 05 32 – Firestopping for Telecommunications System.
 - 5. Section 28 05 27 - Hangers and Supports for Electronic Safety and Security.

1.2 SCOPE OF WORK

- A. This Section includes minimum requirements for support structures for Communications Systems for project as outlined in Bid Document.
 - 1. Non-continuous cable supports (2.3A)
 - 2. Adjustable non-continuous cable support sling (2.3B)
 - 3. Multi-tiered non-continuous cable support assemblies (2.3C)
 - 4. Non-continuous cable support assemblies from tee bar (2.3D)
 - 5. Non-continuous cable support assemblies from drop wire/ceiling (2.3E)
 - 6. Non-continuous cable support assemblies from beam, flange (2.3F)
 - 7. Non-continuous cable support assemblies from C & Z Purlin (2.3G)
 - 8. Non-continuous cable support assemblies from wall, concrete, or joist (2.3H)
 - 9. Non-continuous cable support assemblies from threaded rod (2.3I)
 - 10. Raised floor non-continuous cable support assemblies (2.3J)
 - 11. Cantilever-Mounted Option for non-continuous cable supports (2.3K)
 - 12. Installation accessories for non-continuous cable supports (2.3L)

1.3 REFERENCES

- A. ASTM International (ASTM):
 - 1. ASTM A109 - Standard Specification for Steel, Strip, Carbon, Cold-Rolled.
 - 2. ASTM A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
 - 3. ASTM A167 - Standard Specification for Stainless and heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
 - 4. ASTM A480 - Standard Specification for General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plate, Sheet, and Strip.
 - 5. ASTM A568 - Standard Specification for Steel, Sheet, Carbon, and High-Strength, Low-Alloy Hot-Rolled and Cold-Rolled
 - 6. ASTM A653 G60 - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-coated (Galvannealed) by the Hot-Dip process

7. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar
8. ASTM A682 - Standard Specification for Steel, Strip, High-Carbon, Cold-Rolled, Spring Quality
9. ASTM A879 - Standard Specification for Steel Sheet, Zinc Coated by the Electrolytic Process for Applications Requiring Designation of the Coating Mass on Each Surface
10. ASTM A924 - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
11. ASTM B117 - Standard Method of Salt Spray (Fog) Testing
12. ASTM B633 - Standard Specification for Electro-deposited Coatings of Zinc on Iron and Steel
13. ASTM B695-90 - Standard Specification for coatings of Zinc Mechanically Deposited on Iron and Steel
14. ASTM D610 - Standard test Method for Evaluating Degree of Rusting on Painted Steel Surfaces

B. National Fire Protection Association (NFPA):

1. NFPA 70 - National Electrical Code.

C. Telecommunication Industry Association/Electronic Industries Alliance (TIA/EIA):

1. ANSI/ TIA-568 Commercial Building Telecommunications Cabling Standard, current revision level.
2. ANSI/ TIA-569 Commercial Building Standard for Telecommunications Pathways and Spaces, current revision level.

D. Underwriters Laboratories Inc. (UL):

1. UL 2043 - Standard for Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces.

1.4 SUBMITTALS

A. Division 01 – General Requirements: Requirements for submittals.

B. Submit product data on non-continuous cable support devices, including attachment methods. Product data to include, but not limited to materials, finishes, approvals, load ratings, and dimensional information.

C. Firestopping Schedule:

1. Submit schedule of opening locations and sizes, penetrating items, and required listed design numbers to seal openings to maintain fire resistance rating of adjacent assembly.

D. Manufacturer's Installation Instructions:

1. Hangers and Supports: Submit special procedures and assembly of components.
2. Firestopping: Submit preparation and installation instructions.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.5 QUALITY ASSURANCE

A. Non-continuous cable supports and cable support assemblies shall be listed by Underwriters Laboratories for Canadian and US standards (cULus).

- B. Non-continuous cable supports shall have manufacturers name and part number stamped on part for identification.
- C. Manufacturer: Company specializing in manufacturing products specified in this section with minimum of five years documented experience in industry, and certified ISO 9000.

1.6 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five (5) years documented experience.
- B. Installer: Company specializing in performing work of this section with minimum years documented experience approved by manufacturer.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Division 01 – General Requirements: Requirements for transporting, handling, storing, and protecting products.
- B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- C. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Division 01 – General Requirements: Environmental conditions affecting products on site.
- B. Do not apply firestopping materials when temperature of substrate material and ambient air is below 60 degrees F.
- C. Maintain this minimum temperature before, during, and for minimum three (3) days after installation of firestopping materials.
- D. Provide ventilation in areas to receive solvent cured materials.

1.9 COORDINATION

- A. Coordinate installation of hangers, supports and cables with other trades.

PART 2 - PRODUCTS

2.1 NON-CONTINUOUS CABLE SUPPORT SYSTEMS

- A. Manufacturers
 1. ERICO CADDY
 2. COOPER B-LINE
 3. Equivalent as acceptable to Engineer.
- B. Non-continuous cable supports shall provide bearing surface of sufficient width to comply with required bend radii of high-performance cables; cULus Listed.

- C. Non-continuous cable supports shall have flared edges to prevent damage while installing cables.
- D. Non-continuous cable supports sized 1-5/16 inch and larger shall have cable retainer strap to provide containment of cables within hanger. Cable retainer strap shall be removable and reusable and be suitable for use in air handling spaces.
- E. Non-continuous cable supports shall have electro-galvanized or G60 finish and shall be rated for indoor use in non-corrosive environments.
- F. Stainless Steel non-continuous cable supports are intended for indoor and outdoor use in non-corrosive environments or where only mildly corrosive conditions apply.
- G. Multi-Tiered Non-Continuous Cable Support Assemblies
 - 1. Multi-tiered non-continuous cable support assemblies shall be used where separate cabling compartments are required. Assemblies may be factory assembled or assembled from pre-packaged kits. Assemblies shall consist of steel angled hanger bracket holding up to six non-continuous cable supports, rated for indoor use in non-corrosive environments; cULus Listed.
 - 2. If required, multi-tier support bracket may be assembled to manufacturer recommended specialty fasteners including beam clamps, flange clips, C and Z purlin clips.

2.2 Non-Continuous Cable Support Assemblies From Tee Bar

- A. Tee bar support bracket with one non-continuous cable support, factory or jobsite assembled; rated for indoor use in non-corrosive environments; cULus Listed.
- B. Non-Continuous Cable Support Assemblies From Drop Wire/Ceiling
 - 1. Fastener to wire/rod with one non-continuous cable support, factory or jobsite assembled; rated for indoor use in non-corrosive environments; cULus Listed.
- C. Non-Continuous Cable Support Assemblies From Beam, Flange
 - 1. Fastener to beam or flange with one non-continuous cable support, factory or jobsite assembled; rated for indoor use in non-corrosive environments; cULus Listed.
- D. Non-Continuous Cable Support Assemblies From C & Z Purlin
 - 1. Fastener to C or Z purlin with one non-continuous cable support, factory or jobsite assembled; rated for indoor use in non-corrosive environments, cULus Listed.
- E. Non-Continuous Cable Support Assemblies From Wall, Concrete, or Joist
 - 1. Fastener to wall, concrete, or joist with one non-continuous cable support, factory or jobsite assembled; rated for indoor use in non-corrosive environments, cULus Listed.
- F. Non-Continuous Cable Support Assemblies From Threaded Rod
 - 1. Fastener to threaded rod with one non-continuous cable support, factory or jobsite assembled, rated for indoor use in non-corrosive environments, cULus Listed.
 - 2. Multi-tiered support bracket shall have static load limit of 300 lbs.
 - 3. U-hooks and Double J-hook shall attach directly to threaded rod using standard nuts.
- G. Raised Floor Non-Continuous Cable Support Assemblies
 - 1. Fastener to raised (access) floor pedestal with one non-continuous cable support, factory or jobsite assembled, rated for indoor use in non-corrosive environments; cULus Listed.

H. Cantilever-Mounted Cable Supports

1. U-hook shall be able to be assembled to wide variety of wall mount brackets.
2. Spacing of individual U-hooks as needed, max of 4 feet to 5 feet apart.
3. U-hooks may have optional attachment of cable roller for ease in pulling cables.

I. Installation Accessories for Non-Continuous Cable Supports

1. Cable Pulley
 - a. Non-continuous cable supports may be used as installation tool when removable pulley assembly is included. Pulley shall be made of plastic and be without sharp edges. Pin and bail assembly must be able to be secured to J-Hook during cable installation. Pulley must remain secured while cables are being pulled.
 - b. Pin and roller assembly must be removed after cables are installed.
2. Cable Protector
 - a. Protective steel tube shall fit over threaded rod and be at least 4 inches in length.
 - b. Tube shall prevent damage to cables placed in or pulled through CAT-CMTM U-hooks. Tube shall not inhibit pulling of cables.

2.3 FINISHES

A. ASTM B633 Standard Specification for Electro-deposited Coatings of Zinc on Iron and Steel

1. ASTM B 695 Standard Specification for coatings of Zinc Mechanically Deposited on Iron and Steel
2. ASTM A123 Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
3. ASTM A924/A924M Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by Hot-Dip Process

B. Non-continuous cable supports used where only mildly corrosive conditions apply shall be stainless steel, AISI type 304.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Installation and configuration shall conform to requirements of current revision levels of ANSI/EIA/TIA Standards 568 & 569, NFPA 70 (National Electrical Code), applicable local codes, and to the manufacturer's installation instructions.
- B. Do not exceed load ratings specified by manufacturer.
- C. Adjustable non-continuous support sling shall have static load limit of 100 lbs.
- D. Follow manufacturer's recommendations for allowable fill capacity for each size non-continuous cable support.
- E. Locate pathways per Telecommunications Drawings.

3.2 FIELD QUALITY CONTROL

- A. Division 01 – General Requirements: Requirements for testing, adjusting, and balancing.

3.3 PROTECTION OF FINISHED WORK

- A. Division 01 – General Requirements: Requirements for protecting finished Work.
- B. Protect adjacent surfaces from damage by material installation.

END OF SECTION 270529

SECTION 270532 - FIRESTOPPING FOR TELECOMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 07 Specification Sections, apply to this Section.
- B. Cable fill calculations must be included to show maximum cable fill ratio for each Firestopping System and cable type.

1.2 SUMMARY

- A. Section Includes
 - 1. This Section describes requirements for furnishing and installing firestopping for fire-rated construction. This includes all openings in fire-rated floors, walls and other rated elements of construction, both blank (empty) and those accommodating items such as cables, conduits, pipes, ducts, etc.
 - a. Fireblocking for Concrete Floor or Wall Sleeved Cables.
 - b. Fireblocking for Gypsum Wall Sleeved Cables.
 - c. Fireblocking for Concrete Block Wall Sleeved Cables.
- B. Related Sections:
 - 1. Applicable provisions of Division 01- General Requirements shall govern all work under this Section.
 - 2. Section 27 05 26 – Grounding and Bonding for Communication Systems.
 - 3. Section 27 05 29 – Hangers and Supports for Communication Systems.

1.3 REFERENCES

- A. ASTM International (ASTM):
 - 1. ASTM E119 - Fire Tests of Building Construction and Materials.
 - 2. ASTM E814 - Fire Tests of Through-Penetration Fire Stops.
- B. BOCA – Basic/National Building Code
- C. ICBO – Uniform Building Code
- D. National Fire Protection Association (NFPA):
 - 1. ANSI/NFPA 70 – National Electrical Code (NEC).
 - 2. NFPA 101 - Life Safety Code.
- E. SSBCCI – Standard Building Code.
- F. Telecommunications Industry Association (TIA):
 - 1. TIA 569 – Commercial Building Standard for Telecommunications Pathways & Spaces.
- G. Underwriters Laboratories Inc. (UL):
 - 1. UL Fire Resistance Directory – Penetration Firestops System (XHE2) and Fill, Void or Cavity Materials.

2. UL 1479 - Fire Tests of Through-Penetration Firestops

1.4 SUBMITTALS

- A. Division 01 – General Requirements: Requirements for submittals.
- B. Submit manufacturer’s product literature and installation procedures for each type of Firestop material to be installed. Literature shall indicate product characteristics, typical uses, performance and limitation criteria and test data. Submit cured samples of firestop materials.
- C. Shop drawings: Show typical installation details for methods of installation. Indicate which firestop materials will be used where and when applications requirements to meet Specific jobsite conditions.
- D. Product Data: Shall be clearly marked to indicate all technical information which specifies full compliance with requirements of this section and Contract Documents, including the following:
 - 1. Copy of UL illustration of each proposed system indicating manufacturer’s approved modifications.
 - 2. Each condition requiring penetration seals in proposed UL systems materials, anchorage, methods of installation and actual adjacent construction.
- E. Applicator’s Qualification Statement: Shall include list of projects indicating required experience.

1.5 QUALITY ASSURANCE

- A. Firestopping systems (materials and design) shall conform to both Flame (F) ratings and Time (T) ratings as required by local building code and as tested by nationally accepted test agencies per ASTM E814 or UL 1479 fire tests in configuration that is representative of field conditions.
- B. Work of this section shall be performed by company which specializes installing UL Classified penetration seals required for this Project, with minimum of five years of documented successful experience and shall be performed by skilled Workmen thoroughly experience in necessary crafts.
- C. Deliver material in manufacturer’s original, unopened containers or packages with manufacturer’s name, product identification, lot number, UL label, and mixing and installation instructions as applicable.
- D. Store materials in original, unopened containers or packages, and under conditions recommended by manufacturer.
- E. All firestop materials shall be installed prior to expiration of shelf life.

1.6 COORDINATION

- A. Coordinate layout and installation of Firestopping System with other trades.
- B. Revise locations and elevations from those indicated as required to suit field conditions and as approved by Architect.

- C. Storage and Handling: Avoid breakage, denting and scoring finishes. Damaged products will not be installed. Store devices and accessories in original cartons and in clean dry space; protect from weather and construction traffic. Wet materials will be unpacked and dried before storage.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturers
 - 1. Equivalent as acceptable to Engineer.
- B. Materials and products required for work of this section shall not contain asbestos or polychlorinated biphenyls (PCB).
- C. Manufacturer and Firestopping System must be approved by local AHJ before purchase or installation.

2.2 GENERAL

- A. Provide and install firestopping materials to meet applicable codes and installation requirements for each firestopping application. Products using caulking, putties, wrap strips, mortars, composite boards and/or mechanical devices shall be used as appropriate for specific condition.

2.3 CAULKING

- A. When caulking is used, provide and install flexible caulking materials. Cured firestop materials 1/8 thick shall be able around 1 inch mandrell without breaking.

2.4 FIRESTOP

- A. Do not use any firestop products which re-emulsify, leach active intumescent ingredients or dissolve when placed in water after curing. Product must withstand passage of cold smoke, either as inherent property of system or by use of separate product included as part of UL system or device, and designed to perform this function.

2.5 PENETRATION SEALS

- A. Penetration seals (firestopping material) shall be asbestos-free and capable of maintaining effective barrier against flame, smoke and gases in compliance with requirements of ASTM E814 and UL 1479.
- B. Materials shall meet and be acceptable for use by all three model building codes, Basic/National Building Code, Building Code and Standard Building Code, per National Evaluation Service, Inc. report # NER-243.
- C. Materials shall meet requirements of NFPA 101 and NFPA 70.
- D. Materials shall be suitable for firestopping of penetrations made by steel, glass, plastic and insulated pipe, conduit, bus duct, noninsulated pipe and ductwork.
- E. On insulated pipe, fire-rating classification must not require removal of insulation.

- F. Rating of penetration seals shall not be less than rating of time-rated floor or wall assembly.
- G. Systems shown below are examples and other equal systems may be approved or required by AHJ.
- H. 2-Hour Rated Concrete Floor
 - 1. Penetrants: Multiple pipes.
 - 2. UL System: No. 93.
- I. 2-hour Rated Concrete Floor
 - 1. Penetrants: Maximum 30 inch dia. Metal pipe/conduit.
 - 2. UL System: No.319
- J. 1-2 –Hour Rated Gypsum Board Wall
 - 1. Penetrant: Metal pipe/conduit.
 - 2. UL System: No. 147
- K. 2-Hour Rated Gypsum Board Wall
 - 1. Penetrant: Metal pipe/conduit.
 - 2. UL System: No. 147
- L. 3-Hour Rated Concrete Wall
 - 1. Penetrant: Metal duct, maximum 2 foot square and maximum dimension of 30 inches.
 - 2. UL System: No. 105

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine areas and condition where Firestops are to be installed and notify Architect of conditions detrimental to proper and timely completion of work. Do not proceed with work until unsatisfactory conditions have been corrected by contractor in manner acceptable to Architect.

3.2 CONDITIONS REQUIRING FIRESTOPPING

- A. Provide firestopping for conditions specified whether or not firestopping is indicated, and if indicated, whether such material is designed as insulation, safing, or otherwise.
- B. At any point where fire rated wall is penetrated with cable or conduit.
- C. Penetrations
 - 1. Penetrations include conduit, cable wire, pipe, duct or other elements which pass through one or both outer surfaces of fire rated floor, wall or partition.
 - 2. These requirements for penetrations shall apply whether or not sleeves have been provided, and whether or not penetrations are to be equipped with escutcheons or other trim. If penetrations are sleeved firestop any annular space between sleeve and wall opening.
- D. Provide firestopping to fill miscellaneous voids and openings in fire-rated construction as specified herein.

3.3 INSTALLATION

- A. Installation of Firestops shall be performed by applicator/installer qualified and trained by manufacturer. Installation shall be performed in strict accordance with manufacturer's detailed installation procedures.
- B. Apply Firestops in accordance with fire test reports, fire resistance requirements, acceptable sample installations, and manufacturer's recommendations.
- C. Coordinate with plumbing, mechanical, electrical and other trades to assure that all pipe, conduit, cable, and other items which penetrate fire-rated construction have been permanently installed prior to installation of Firestop.
- D. Field Quality Control
 - 1. Prepare and install firestopping systems in accordance with manufacturer's printed instructions and recommendations.
 - 2. Follow safety procedures recommended in Material Safety Data Sheets.
 - 3. Finish surfaces of firestopping which is to remain exposed in completed work to uniform and level condition.
 - 4. All areas of work must be accessible until inspection by applicable Code Authorities.
 - 5. Correct unacceptable firestops and provide additional inspection to verify compliance with this specification at no additional cost.
- E. Calculate maximum cable fill ratio for each FireStopping System and cable type. Do not exceed maximum fill ratio.
- F. Prepare and install firestopping systems in accordance with manufacturer's printed instructions and recommendations.

3.4 WARRANTY

- A. Comply with General Conditions, and include but not be limited to:
 - 1. Repairs and replacement of penetration seals which fail in joint adhesion, cohesion, abrasion, resistance, weather resistance, extrusion resistance, migration resistance, stain resistance, or general durability, or appear to deteriorate in any other manner not clearly specified in submitted manufacturer's data as inherent quality of material for exposure indicated.

3.5 CLEANING

- A. Remove spilled and excess materials adjacent to firestopping without damaging adjacent surfaces.
- B. Leave finished work in neat, clean condition with no evidence of spillovers or damage to adjacent surfaces.

END OF SECTION 270532

This Page Intentionally Left Blank

SECTION 270533 - CONDUITS AND BACKBOXES FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Outlets.
 - 2. Conduits.

- B. Related Sections:
 - 1. Applicable provisions of Division 01- General Requirements shall govern all work under this Section.
 - 2. Section 27 05 26 - Grounding and Bonding for Communications Systems.
 - 3. Section 27 05 29 - Hangers and Supports for Communications Systems.
 - 4. Section 27 05 36 - Cable Trays for Communications Systems.
 - 5. Section 27 05 53 - Identification for Communications Systems.

1.2 REFERENCES

- A. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electrical Code.

- B. Telecommunication Industry Association/Electronic Industries Alliance (TIA/EIA):
 - 1. ANSI/ TIA-568 Commercial Building Telecommunications Cabling Standard, current revision level.
 - 2. ANSI/ TIA-569 Commercial Building Standard for Telecommunications Pathways and Spaces, current revision level.

- C. Underwriters Laboratories Inc. (UL):
 - 1. UL 651 – Standard for Schedule 40, 80, Type EB and A Rigid PVC Conduit and Fittings.
 - 2. UL 797 – Standard for Electrical Metallic Tubing - Steel.

1.3 OUTLETS

- A. Each data outlet in wall or floor shall be served by one (1) 1 inch conduit and double-gang deep device box with single-gang mud ring.

- B. Wall mounted telephones shall be served by one 0.75 inch conduit and single-gang deep device box with single-gang mud ring. Outlet box shall be mounted at center height of 48 inch above finished floor, unless otherwise specified on drawing, and shall have clearance of 12 inch of wall surface on all sides.

- C. All outlet conduits shall be stubbed into accessible ceiling space.

- D. All outlet conduits shall have burrs and any other abrasive elements removed and insulating bushing shall be installed on both ends.

- E. No section of conduit shall be longer than 100 feet between pull points.

- F. No more than 180 degrees of conduit bends shall be permitted between pull points.

- G. Minimum inside radius for any bend of outlet conduit shall be six times inside diameter of that conduit.

1.4 CONDUITS

- A. Electric metallic tubing: Comply with UL 797. Tubing shall have hot dipped galvanized exterior, enamel-coated interior.
- B. Flexible conduit shall not be used in lieu of conduit bends and offsets.
- C. PVC conduit: Comply with UL 651, listed for use with 90 degrees C conductors operating at 90 degrees C.

1.5 STANDARDS COMPLIANCE

- A. General standards: Comply with current revision of TIA 569 as amended.

1.6 SUBMITTALS

- A. Division 01 – General Requirements: Requirements for submittals.
- B. Provide product data for the following:
 - 1. Manufacturers cut sheets, specifications and installation instructions for all products (submit with bid).

1.7 CLOSEOUT SUBMITTALS

- A. Division 01 – General Requirements: Requirements for submittals.
- B. Project Record Documents:
 - 1. Record actual routing of conduits larger than two (2) Inch.
 - 2. Record actual locations and mounting heights of outlet, pull, and junction boxes.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Division 01 – General Requirements: Product storage and handling requirements.
- B. Storage and Handling: Avoid breakage, denting and scoring finishes. Damaged products will not be installed. Store materials in original cartons and in clean dry space; protect from weather and construction traffic. Wet materials will be unpacked and dried before storage.

1.9 COORDINATION

- A. Division 01 – General Requirements: Coordination and project conditions.
- B. Coordinate mounting heights, orientation and locations of outlets mounted above counters, benches, and backsplashes.
- C. Coordinate installation of labels with other trades.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Equivalent as acceptable to Engineer.

2.2 APPROVED PRODUCTS

- A. Dry location device boxes: Manufacturer shall meet specified requirements.
- B. Wet location boxes: Manufacturer shall meet specified requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Division 01 – General Requirements: Coordination and project conditions.
- B. Verify outlet locations and routing and termination locations of raceway prior to rough-in.

3.2 INSTALLATION

- A. Installation and configuration shall conform to requirements of current revision levels of ANSI/EIA/TIA Standards 568 & 569, NFPA 70 (National Electrical Code), applicable local codes, and to the manufacturer's installation instructions.
- B. Install conduits using techniques, practices, and methods that are consistent with Category 6 or higher requirements and that supports Category 6 or higher performance of completed and linked signal paths, end to end.
- C. Follow manufacturer's recommendations for allowable fill capacity for each size non-continuous cable support.

3.3 ADJUSTING

- A. Division 01 – General Requirements: Testing, adjusting, and balancing.
- B. Adjust flush-mounting outlets to make front flush with finished wall material.
- C. Install knockout closures in unused openings in boxes.

3.4 CLEANING

- A. Division 01 – General Requirements: Final cleaning.
- B. Clean interior of boxes to remove dust, debris, and other material.
- C. Clean exposed surfaces and restore finish.

END OF SECTION 270533

SECTION 280528.29 - HANGERS AND SUPPORTS FOR ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Conduit supports.
2. Formed steel channel.
3. Spring steel clips.
4. Sleeves.
5. Mechanical sleeve seals.
6. Firestopping relating to electronic safety and security work.
7. Firestopping accessories.
8. Equipment bases and supports.

B. Related Sections:

1. Section 03 30 00 - Cast-In-Place Concrete: Product requirements for concrete for placement by this section.
2. Section 07 84 00 - Firestopping: Product requirements for firestopping for placement by this section.
3. Section 26 05 29 - Hangers and Supports for Electrical Systems.
4. Section 27 05 29 - Hangers and Supports for Communications Systems.

1.2 REFERENCES

A. ASTM International:

D. Underwriters Laboratories Inc.:

1. UL 263 - Fire Tests of Building Construction and Materials.
2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.
3. UL 1479 - Fire Tests of Through-Penetration Firestops.
4. UL 2079 - Tests for Fire Resistance of Building Joint Systems.
5. UL - Fire Resistance Directory.

E. Intertek Testing Services (Warnock Hersey Listed):

1. WH - Certification Listings.

1.3 DEFINITIONS

- A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

1.4 SYSTEM DESCRIPTION

- A. Firestopping Materials: Comply with requirements of Section 07 84 00.
- B. Firestop interruptions to fire rated assemblies, materials, and components.

1.5 PERFORMANCE REQUIREMENTS

- A. Firestopping Materials: Comply with requirements of Section 07 84 00.
- B. Firestopping: Provide certificate of compliance from authority having jurisdiction indicating approval of materials used.

1.6 SUBMITTALS

- A. Section 01 33 00 - Submittal Procedures: Requirements for submittals.
- B. Shop Drawings: Indicate system layout with location and detail of trapeze hangers.
- C. Product Data:
 - 1. Hangers and Supports: Submit manufacturers catalog data including load capacity.
 - 2. Firestopping: Submit data on product characteristics, performance and limitation criteria.
- D. Firestopping Schedule: Submit schedule of opening locations and sizes, penetrating items, and required listed design numbers to seal openings to maintain fire resistance rating of adjacent assembly.
- E. Design Data: Indicate load carrying capacity of trapeze hangers and hangers and supports.
- F. Manufacturer's Installation Instructions:
 - 1. Hangers and Supports: Submit special procedures and assembly of components.
 - 2. Firestopping: Submit preparation and installation instructions.
- G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.
- H. Firestopping Engineering Judgments: For conditions not covered by UL or WH listed designs, submit judgments by licensed professional engineer suitable for presentation to authority having jurisdiction for acceptance as meeting code fire protection requirements.

1.7 QUALITY ASSURANCE

- A. Through Penetration Firestopping of Fire Rated Assemblies: UL 1479 or ASTM E814 with 0.10-inch water gage minimum positive pressure differential to achieve fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.
 - 1. Wall Penetrations: Fire F-Ratings as indicated on Drawings, but not less than 1-hour.

2. Floor and Roof Penetrations: Fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.
 - a. Floor Penetrations Within Wall Cavities: T-Rating is not required.
- B. Through Penetration Firestopping of Non-Fire Rated Floor [and Roof] Assemblies: Materials to resist free passage of flame and products of combustion.
 1. Noncombustible Penetrating Items: Noncombustible materials for penetrating items connecting maximum of three stories.
 2. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.
- C. Fire Resistant Joints in Fire Rated Floor, Roof, and Wall Assemblies: ASTM E1966 or UL 2079 to achieve fire resistant rating as indicated on Drawings for assembly in which joint is installed.
- D. Fire Resistant Joints Between Floor Slabs and Exterior Walls: ASTM E119 with 0.10-inch water gage minimum positive pressure differential to achieve fire resistant rating as indicated on Drawings for floor assembly.
- E. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.
- F. Perform Work in accordance with State Municipality of standard.
- G. Maintain one copy of each document on site.

1.8 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years documented experience.
- B. Installer: Company specializing in performing work of this section with minimum years documented experience approved by manufacturer.

1.9 PRE-INSTALLATION MEETINGS

- A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.
- B. Convene minimum one week prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Section 01 60 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.
- B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- C. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

1.11 ENVIRONMENTAL REQUIREMENTS

- A. Section 01 60 00 - Product Requirements: Environmental conditions affecting products on site.

- B. Do not apply firestopping materials when temperature of substrate material and ambient air is below 60 degrees F.
- C. Maintain this minimum temperature before, during, and for minimum 3 days after installation of firestopping materials.
- D. Provide ventilation in areas to receive solvent cured materials.

PART 2 - PRODUCTS

2.1 CONDUIT SUPPORTS

- A. Hanger Rods: Threaded high tensile strength galvanized carbon steel with free running threads.
- B. Beam Clamps: Malleable Iron, with tapered hole in base and back to accept either bolt or hanger rod. Set screw: hardened steel.
- C. Conduit clamps for trapeze hangers: Galvanized steel, notched to fit trapeze with single bolt to tighten.
- D. Conduit clamps - general purpose: One-hole malleable iron for surface mounted conduits.
- E. Cable Ties: High strength nylon temperature rated to 185 degrees F. Self-locking.

2.2 FORMED STEEL CHANNEL

- A. Product Description: Galvanized 12 gage) thick steel. With holes 1-1/2 inches on center.

2.3 SPRING STEEL CLIPS

- A. Product Description: Mounting hole and screw closure.

2.4 SLEEVES

- A. Furnish materials in accordance with State Municipality standards.
- B. Sleeves for Through Non-fire Rated Floors: 18 gage thick galvanized steel.
- C. Sleeves for Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 gage thick galvanized steel.
- D. Sleeves for Through Fire Rated and Fire Resistive Floors and Walls, and Fire Proofing: Prefabricated fire rated sleeves including seals, UL listed.
- E. [Stuffing] [Fire-stopping] Insulation: Glass fiber type, non-combustible.

2.5 MECHANICAL SLEEVE SEALS

- A. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and

pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.6 FIRESTOPPING

- A. Firestopping Materials: Comply with requirements of Section 07 84 00.
- B. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.
 - 1. Silicone Firestopping Elastomeric Firestopping: Single component silicone elastomeric compound and compatible silicone sealant.
 - 2. Foam Firestopping Compounds: Single Multiple component foam compound.
 - 3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
 - 4. Fiber Stuffing and Sealant Firestopping: Composite of mineral ceramic fiber stuffing insulation with silicone elastomer for smoke stopping.
 - 5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
 - 6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
 - 7. Firestop Pillows: Formed mineral fiber pillows.
- C. Color: Dark gray Black.

2.7 FIRESTOPPING ACCESSORIES

- A. Installation Accessories: Comply with requirements of Section 07 84 00.
- B. Dam Material: Permanent:
 - 1. Mineral fiberboard.
 - 2. Mineral fiber matting.
 - 3. Sheet metal.
 - 4. Plywood or particle board.
 - 5. Alumina silicate fire board.
- C. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.
- D. General:
 - 1. Furnish UL listed products or products tested by independent testing laboratory.
 - 2. Select products with rating not less than rating of wall or floor being penetrated.
- E. Non-Rated Surfaces:
 - 1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where conduit is exposed.
 - 2. For exterior wall openings below grade, furnish modular mechanical type seal consisting of interlocking synthetic rubber links shaped to continuously fill annular space between conduit and cored opening or water-stop type wall sleeve.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.
- B. Verify openings are ready to receive sleeves.
- C. Verify openings are ready to receive firestopping.

3.2 PREPARATION

- A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter affecting bond of firestopping material.
- B. Remove incompatible materials affecting bond.
- C. Install backing damming materials to arrest liquid material leakage.
- D. Obtain permission from Engineer/Architect before using powder-actuated anchors.
- E. Do not drill or cut structural members.
- F. Obtain permission from Engineer/Architect before drilling or cutting structural members.

3.3 INSTALLATION - HANGERS AND SUPPORTS

- A. Anchors and Fasteners:
 - 1. Concrete Structural Elements: Provide precast inserts.
 - 2. Steel Structural Elements: Provide [beam clamps] [, spring steel clips] [, steel ramset fasteners] [, and] [welded fasteners].
 - 3. Concrete Surfaces: Provide [self-drilling anchors] [and] [expansion anchors].
 - 4. Hollow Masonry, Plaster, and Gypsum Board Partitions: Provide [toggle bolts] [and] [hollow wall fasteners].
 - 5. Solid Masonry Walls: Provide [expansion anchors] [and] [preset inserts].
 - 6. Sheet Metal: Provide sheet metal screws.
 - 7. Wood Elements: Provide wood screws.
- B. Inserts:
 - 1. Install inserts for placement in concrete forms.
 - 2. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
 - 3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over 4 inches.
 - 4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
 - 5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut [above] [flush with top of] [recessed into and grouted flush with] slab.
- C. Install conduit and raceway support and spacing in accordance with NEC.
- D. Do not fasten supports to pipes, ducts, mechanical equipment, or conduit.

- E. Install multiple conduit runs on common hangers.
- F. Supports:
 - 1. Fabricate supports from structural steel or formed steel channel. Install hexagon head bolts to present neat appearance with adequate strength and rigidity. Install spring lock washers under nuts.
 - 2. Install surface mounted cabinets and panelboards with minimum of four anchors.
 - 3. In wet and damp locations install steel channel supports to stand cabinets and panelboards 1 inch off wall.
 - 4. Support vertical conduit at every [other] floor.

3.4 INSTALLATION - FIRESTOPPING

- A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, conduit and other items, requiring firestopping.
- B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.
- C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating, to uniform density and texture.
- D. Compress fibered material to maximum 40 percent of its uncompressed size.
- E. Place foamed material in layers to ensure homogenous density, filling cavities and spaces. Place sealant to completely seal junctions with adjacent dissimilar materials.
- F. Place intumescent coating in sufficient coats to achieve rating required.
- G. Remove dam material after firestopping material has cured. Dam material to remain.
- H. Fire Rated Surface:
 - 1. Seal opening at [floor,] [wall,] [partition,] [ceiling,] [and] [roof] as follows:
 - a. Install sleeve through opening and extending beyond minimum of 1 inch on both sides of building element.
 - b. Size sleeve allowing minimum of 1-inch void between sleeve and building element.
 - c. Pack void with backing material.
 - d. Seal ends of sleeve with UL listed fire resistive silicone compound to meet fire rating of structure penetrated.
 - 2. Where [cable tray,] [bus,] [cable bus,] [conduit,] [wireway,] [trough,] [and] penetrates fire rated surface, install firestopping product in accordance with manufacturer's instructions.
- I. Non-Rated Surfaces:
 - 1. Seal opening through non-fire rated [wall,] [partition] [floor,] [ceiling,] [and] [roof opening] as follows:
 - a. Install sleeve through opening and extending beyond minimum of 1 inch on both sides of building element.
 - b. Size sleeve allowing minimum of 1-inch void between sleeve and building element.
 - c. Install type of firestopping material recommended by manufacturer.

2. Install [escutcheons] [floor plates] [or] [ceiling plates] where conduit, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
3. Exterior wall openings below grade: Assemble rubber links of mechanical seal to size of conduit and tighten in place, in accordance with manufacturer's instructions.
4. Interior partitions: Seal pipe penetrations at computer rooms, telecommunication rooms, and data rooms. Apply sealant to both sides of penetration to completely fill annular space between sleeve and conduit.

3.5 INSTALLATION - EQUIPMENT BASES AND SUPPORTS

- A. Provide housekeeping pads of concrete, minimum 3-1/2 inches thick and extending 6 inches beyond supported equipment. Refer to Section 03 30 00.
- B. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.
- C. Construct supports of steel members formed steel channel. Brace and fasten with flanges bolted to structure.

3.6 INSTALLATION - SLEEVES

- A. Exterior watertight entries: Seal with adjustable interlocking rubber links.
- B. Conduit penetrations not required to be watertight: Sleeve and fill with silicon foam.
- C. Set sleeves in position in forms. Provide reinforcing around sleeves.
- D. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.
- E. Extend sleeves through floors 1 inch above finished floor level. Caulk sleeves.
- F. Where conduit or raceway penetrates floor, ceiling, or wall, close off space between conduit or raceway and adjacent work with stuffing fire stopping insulation and caulk airtight. Provide close fitting metal collar or escutcheon covers at both sides of penetration.
- G. Install chrome plated steel plastic stainless steel escutcheons at finished surfaces.

3.7 FIELD QUALITY CONTROL

- A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for testing, adjusting, and balancing.
- B. Inspect installed firestopping for compliance with specifications and submitted schedule.

3.8 CLEANING

- A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for cleaning.
- B. Clean adjacent surfaces of firestopping materials.

3.9 PROTECTION OF FINISHED WORK

- A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for protecting finished Work.
- B. Protect adjacent surfaces from damage by material installation.

END OF SECTION 280528.29

This Page Intentionally Left Blank

SECTION 28 05 28 - CONDUITS AND BACKBOXES FOR ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes conduit and tubing, surface raceways, wireways, outlet boxes, pull and junction boxes, and handholes.
- B. Related Sections:
 - 1. Section 26 05 03 - Equipment Wiring Connections.
 - 2. Section 26 05 33 - Raceway and Boxes for Electrical Systems.
 - 3. Section 26 05 34 - Floor Boxes for Electrical Systems.
 - 4. Section 26 05 36 - Cable Trays for Electrical Systems.
 - 5. Section 26 05 39 - Underfloor Raceways for Electrical Systems.
 - 6. Section 26 27 16 - Electrical Cabinets and Enclosures.
 - 7. Section 26 27 26 - Wiring Devices.
 - 8. Section 27 05 33 - Conduits and Backboxes for Communications Systems.

1.2 UNIT PRICE - MEASUREMENT AND PAYMENT

- A. Raceway:
 - 1. Basis of Measurement: By linear foot.
 - 2. Basis of Payment: Includes materials, delivery, handling, and installing.
- B. Boxes:
 - 1. Basis of Measurement: By cubic foot.
 - 2. Basis of Payment: Includes materials, delivery, handling, and installing.

1.3 REFERENCES

- A. American National Standards Institute:
 - 1. ANSI C80.1 - Rigid Steel Conduit, Zinc Coated.
 - 2. ANSI C80.3 - Specification for Electrical Metallic Tubing, Zinc Coated.
 - 3. ANSI C80.5 - Aluminum Rigid Conduit - (ARC).
- B. National Electrical Manufacturers Association:
 - 1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - 2. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.
 - 3. NEMA OS 1 - Sheet Steel Outlet Boxes, Device Boxes, Covers, and Box Supports.
 - 4. NEMA OS 2 - Nonmetallic Outlet Boxes, Device Boxes, Covers, and Box Supports.
 - 5. NEMA RN 1 - Polyvinyl Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit.
 - 6. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Tubing and Conduit.
 - 7. NEMA TC 3 - PVC Fittings for Use with Rigid PVC Conduit and Tubing.

1.4 SYSTEM DESCRIPTION

- A. Raceway and boxes located as indicated on Drawings, and at other locations required for splices, taps, wire pulling, equipment connections, and compliance with regulatory requirements. Raceway and boxes are shown in approximate locations unless dimensioned. Provide raceway to complete wiring system.
- B. Underground More than 5 feet outside Foundation Wall: Provide rigid steel conduit, intermediate metal conduit, plastic coated conduit, thick wall nonmetallic conduit and thin-wall nonmetallic conduit. Provide cast metal boxes or nonmetallic handhole.
- C. Underground Within 5 feet from Foundation Wall: Provide rigid steel conduit, intermediate metal conduit, plastic coated conduit, thick wall nonmetallic conduit and thin-wall nonmetallic conduit. Provide cast metal or nonmetallic boxes.
- D. In or Under Slab on Grade: Provide rigid steel conduit, intermediate metal conduit, plastic coated conduit, thick wall nonmetallic conduit and thin-wall nonmetallic conduit. Provide cast or nonmetallic metal boxes.
- E. Outdoor Locations, Above Grade: Provide rigid steel and aluminum conduit, intermediate metal conduit and electrical metallic tubing. Provide cast metal or nonmetallic outlet, pull, and junction boxes.
- F. In Slab Above Grade: Provide rigid steel conduit, intermediate metal conduit, electrical metallic tubing and thickwall nonmetallic conduit. Provide cast sheet metal nonmetallic boxes.
- G. Wet and Damp Locations: Provide rigid steel and aluminum conduit, intermediate metal conduit, electrical metallic tubing, thickwall nonmetallic conduit and, nonmetallic tubing. Provide cast metal or nonmetallic outlet, junction, and pull boxes. Provide flush mounting outlet box in finished areas.
- H. Concealed Dry Locations: Provide rigid steel and aluminum conduit, intermediate metal conduit, electrical metallic tubing, thickwall nonmetallic conduit and nonmetallic tubing. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.
- I. Exposed Dry Locations: Provide rigid steel and aluminum conduit, intermediate metal conduit, electrical metallic tubing and thickwall nonmetallic conduit. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.

1.5 DESIGN REQUIREMENTS

- A. Minimum Raceway Size: 3/4 inch unless otherwise specified.

1.6 SUBMITTALS

- A. Section 01 33 00 - Submittal Procedures: Submittal procedures.
- B. Product Data: Submit for the following:
 - 1. Flexible metal conduit.

2. Liquidtight flexible metal conduit.
3. Nonmetallic conduit.
4. Flexible nonmetallic conduit.
5. Nonmetallic tubing.
6. Raceway fittings.
7. Conduit bodies.
8. Surface raceway.
9. Wireway.
10. Pull and junction boxes.
11. Handholes.

- C. Manufacturer's Installation Instructions: Submit application conditions and limitations of use stipulated by Product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, and installation of Product.

1.7 CLOSEOUT SUBMITTALS

- A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.
- B. Project Record Documents:
1. Record actual routing of conduits larger than 2 inch.
 2. Record actual locations and mounting heights of outlet, pull, and junction boxes.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.
- B. Protect conduit from corrosion and entrance of debris by storing above grade. Provide appropriate covering.
- C. Protect PVC conduit from sunlight.

1.9 COORDINATION

- A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.
- B. Coordinate installation of outlet boxes for equipment connected under Section 26 05 03.
- C. Coordinate mounting heights, orientation and locations of outlets mounted above counters, benches, and backsplashes.

PART 2 - PRODUCTS

2.1 METAL CONDUIT

- A. Rigid Steel Conduit: ANSI C80.1.
- B. Rigid Aluminum Conduit: ANSI C80.5.
- C. Intermediate Metal Conduit (IMC): Rigid steel.

- D. Fittings and Conduit Bodies: NEMA FB 1; material to match conduit. furnish aluminum fittings with steel conduit. all steel fittings.

2.2 PVC COATED METAL CONDUIT

- A. Product Description: NEMA RN 1; rigid steel conduit with external PVC coating, 20/40 mil thick.
- B. Fittings and Conduit Bodies: NEMA FB 1; steel fittings with external PVC coating to match conduit.

2.3 FLEXIBLE METAL CONDUIT

- A. Product Description: Interlocked steel aluminum construction.
- B. Fittings: NEMA FB 1.

2.4 LIQUIDTIGHT FLEXIBLE METAL CONDUIT

- A. Product Description: Interlocked steel aluminum construction with PVC jacket.
- B. Fittings: NEMA FB 1.

2.5 ELECTRICAL METALLIC TUBING (EMT)

- A. Product Description: ANSI C80.3; galvanized tubing.
- B. Fittings and Conduit Bodies: NEMA FB 1; steel or malleable iron, compression set screw indenter type.

2.6 NONMETALLIC CONDUIT

- A. Product Description: NEMA TC 2; Schedule 40/80 PVC.
- B. Fittings and Conduit Bodies: NEMA TC 3.

2.7 NONMETALLIC TUBING

- A. Product Description: NEMA TC 2.
- B. Fittings and Conduit Bodies: NEMA TC 3.

2.8 SURFACE METAL RACEWAY

- A. Product Description: Sheet metal channel with fitted cover, suitable for use as surface metal raceway.
- B. Finish: Gray Buff enamel. Stainless steel.
- C. Fittings, Boxes, and Extension Rings: Furnish manufacturer's standard accessories; match finish on raceway.

2.9 SURFACE NONMETAL RACEWAY

- A. Product Description: Plastic Fiberglass channel with fitted cover, suitable for use as surface raceway.
- B. Finish: Gray.
- C. Fittings, Boxes, and Extension Rings: Furnish manufacturer's standard accessories, finish to match raceway.

2.10 WIREWAY

- A. Product Description: General purpose Oiltight and dust-tight Raintight type wireway.
- B. Knockouts: Manufacturer's standard None Bottom only.
- C. Size: 4 x 4 inch 6 x 6 inch 8 x 8 inch 12 x 12 inch; length as indicated on Drawings.
- D. Cover: Hinged Screw cover with full gaskets.
- E. Connector: Slip-in Flanged.
- F. Fittings: Lay-in type with removable top, bottom, and side; captive screws drip shield.
- G. Finish: Rust inhibiting primer coating with gray enamel finish.

2.11 OUTLET BOXES

- A. Sheet Metal Outlet Boxes: NEMA OS 1, galvanized steel.
 - 1. Luminaire and Equipment Supporting Boxes: Rated for weight of equipment supported; furnish 1/2 inch male fixture studs where required.
 - 2. Concrete Ceiling Boxes: Concrete type.
- B. Nonmetallic Outlet Boxes: NEMA OS 2.
- C. Cast Boxes: NEMA FB 1, Type FD, aluminum cast ferrous alloy. Furnish gasketed cover by box manufacturer. Furnish threaded hubs.
- D. Wall Plates for Finished Areas: As specified in Section 26 27 26.
- E. Wall Plates for Unfinished Areas: Furnish gasketed cover.

2.12 PULL AND JUNCTION BOXES

- A. Sheet Metal Boxes: NEMA OS 1, galvanized steel.
- B. Hinged Enclosures: As specified in Section 26 27 16.
- C. Surface Mounted Cast Metal Box: NEMA 250, Type 4 4X 6; flat-flanged, surface mounted junction box:
 - 1. Material: Galvanized cast iron Cast aluminum.
 - 2. Cover: Furnish with ground flange, neoprene gasket, and stainless steel cover screws.

- D. In-Ground Cast Metal Box: NEMA 250, Type 6, outside inside flanged, recessed cover box for flush mounting:
 - 1. Material: Galvanized cast iron Cast aluminum.
 - 2. Cover: Smooth Nonskid cover with neoprene gasket and stainless steel cover screws.
 - 3. Cover Legend: "ELECTRIC".

- E. Fiberglass Concrete composite Handholes: Die-molded, glass-fiber concrete composite hand holes:
 - 1. Cable Entrance: Pre-cut 6 inch x 6 inch cable entrance at center bottom of each side.
 - 2. Cover: Glass-fiber concrete composite, weatherproof cover with nonskid finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.
- B. Verify outlet locations and routing and termination locations of raceway prior to rough-in.

3.2 EXISTING WORK

- A. Remove exposed abandoned raceway, including abandoned raceway above accessible ceiling finishes. Cut raceway flush with walls and floors, and patch surfaces.
- B. Remove concealed abandoned raceway to its source.
- C. Disconnect abandoned outlets and remove devices. Remove abandoned outlets when raceway is abandoned and removed. Install blank cover for abandoned outlets not removed.
- D. Maintain access to existing boxes and other installations remaining active and requiring access. Modify installation or provide access panel.
- E. Extend existing raceway and box installations using materials and methods compatible with existing electrical installations, or as specified.
- F. Clean and repair existing raceway and boxes to remain or to be reinstalled.

3.3 INSTALLATION

- A. Install Work in accordance with State Municipality of Highways Public Work's standards.
- B. Ground and bond raceway and boxes in accordance with Section 26 05 26.
- C. Fasten raceway and box supports to structure and finishes in accordance with Section 26 05 29.
- D. Identify raceway and boxes in accordance with Section 26 05 53.
- E. Arrange raceway and boxes to maintain headroom and present neat appearance.

3.4 INSTALLATION - RACEWAY

- A. Raceway routing is shown in approximate locations unless dimensioned. Route to complete wiring system.
- B. Arrange raceway supports to prevent misalignment during wiring installation.
- C. Support raceway using coated steel or malleable iron straps, lay-in adjustable hangers, clevis hangers, and split hangers.
- D. Group related raceway; support using conduit rack. Construct rack using steel channel specified in Section 26 05 29; provide space on each for 25 percent additional raceways.
- E. Do not support raceway with wire or perforated pipe straps. Remove wire used for temporary supports
- F. Do not attach raceway to ceiling support wires or other piping systems.
- G. Construct wireway supports from steel channel specified in Section 26 05 29.
- H. Route exposed raceway parallel and perpendicular to walls.
- I. Route raceway installed above accessible ceilings parallel and perpendicular to walls.
- J. Route conduit in and under slab from point-to-point.
- K. Maximum Size Conduit in Slab Above Grade: 3/4 1/2 inch. Do not cross conduits in slab larger than 1/2 inch.
- L. Maintain clearance between raceway and piping for maintenance purposes.
- M. Maintain 12 inch clearance between raceway and surfaces with temperatures exceeding 104 degrees F.
- N. Cut conduit square using saw or pipe cutter; de-burr cut ends.
- O. Bring conduit to shoulder of fittings; fasten securely.
- P. Join nonmetallic conduit using cement as recommended by manufacturer. Wipe nonmetallic conduit dry and clean before joining. Apply full even coat of cement to entire area inserted in fitting. Allow joint to cure for minimum 20 minutes.
- Q. Install conduit hubs or sealing locknuts to fasten conduit to sheet metal boxes in damp and wet locations and to cast boxes.
- R. Install no more than equivalent of three 90 degree bends between boxes. Install conduit bodies to make sharp changes in direction, as around beams. Install hydraulic one-shot bender to fabricate factory elbows for bends in metal conduit larger than 2 inch size.
- S. Avoid moisture traps; install junction box with drain fitting at low points in conduit system.

- T. Install fittings to accommodate expansion and deflection where raceway crosses seismic , control and expansion joints.
- U. Install suitable pull string or cord in each empty raceway except sleeves and nipples.
- V. Install suitable caps to protect installed conduit against entrance of dirt and moisture.
- W. Surface Raceway: Install flat-head screws, clips, and straps to fasten raceway channel to surfaces; mount plumb and level. Install insulating bushings and inserts at connections to outlets and corner fittings.
- X. Close ends and unused openings in wireway.

3.5 INSTALLATION - BOXES

- A. Install wall mounted boxes at elevations to accommodate mounting heights as indicated on Drawings. specified in section for outlet device.
- B. Adjust box location up to 10 feet prior to rough-in to accommodate intended purpose.
- C. Orient boxes to accommodate wiring devices oriented as specified in Section 26 27 26.
- D. Install pull boxes and junction boxes above accessible ceilings and in unfinished areas only.
- E. In Accessible Ceiling Areas: Install outlet and junction boxes no more than 6 inches from ceiling access panel or from removable recessed luminaire.
- F. Locate flush mounting box in masonry wall to require cutting of masonry unit corner only. Coordinate masonry cutting to achieve neat opening.
- G. Do not install flush mounting box back-to-back in walls; install with minimum 6 inches separation. Install with minimum 24 inches separation in acoustic rated walls.
- H. Secure flush mounting box to interior wall and partition studs. Accurately position to allow for surface finish thickness.
- I. Install stamped steel bridges to fasten flush mounting outlet box between studs.
- J. Install flush mounting box without damaging wall insulation or reducing its effectiveness.
- K. Install adjustable steel channel fasteners for hung ceiling outlet box.
- L. Do not fasten boxes to ceiling support wires or other piping systems.
- M. Support boxes independently of conduit.
- N. Install gang box where more than one device is mounted together. Do not use sectional box.
- O. Install gang box with plaster ring for single device outlets.

3.6 INTERFACE WITH OTHER PRODUCTS

- A. Install conduit to preserve fire resistance rating of partitions and other elements, using materials and methods in accordance with Section 07 84 00 26 05 29.
- B. Route conduit through roof openings for piping and ductwork or through suitable roof jack with pitch pocket. Coordinate location with roofing installation specified in Section.
- C. Locate outlet boxes to allow luminaires positioned as indicated on Drawings reflected ceiling plan.
- D. Align adjacent wall mounted outlet boxes for switches, thermostats, and similar devices.

3.7 ADJUSTING

- A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.
- B. Adjust flush-mounting outlets to make front flush with finished wall material.
- C. Install knockout closures in unused openings in boxes.

3.8 CLEANING

- A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.
- B. Clean interior of boxes to remove dust, debris, and other material.
- C. Clean exposed surfaces and restore finish.

END OF SECTION 280528

This Page Intentionally Left Blank

SECTION 283100 - FIRE DETECTION AND ALARM

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes fire alarm control panels, manual fire alarm stations, automatic smoke and heat detectors, fire alarm signaling appliances, and auxiliary fire alarm equipment and power and signal wire and cable.
- B. Related Sections:
 - 1. Section 08 71 00 - Door Hardware: Door closers, electric locks, electric releases.
 - 2. Section 21 12 00 - Fire-Suppression Standpipes: Flow detection and alarm devices.
 - 3. Section 21 13 13 - Wet-Pipe Sprinkler Systems: Flow detection and alarm devices.
 - 4. Section 21 13 16 - Dry-Pipe Sprinkler Systems: Flow detection and alarm devices.
 - 5. Section 21 13 26 - Deluge Fire-Suppression Sprinkler Systems: Flow detection and alarm devices.
 - 6. Section 23 33 00 - Air Duct Accessories: Smoke dampers.
 - 7. Section 25 50 00 - Integrated Automation Facility Controls.
 - 8. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.
 - 9. Section 26 05 26 - Grounding and Bonding for Electrical Systems.
 - 10. Section 28 05 53 - Identification for Electronic Safety and Security.

1.2 REFERENCES

- A. National Fire Protection Association:
 - 1. NFPA 72 - National Fire Alarm Code.
 - 2. NFPA 262 - Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces.

1.3 SYSTEM DESCRIPTION

- A. Fire Alarm System: NFPA 72, manual and automatic local fire alarm system with connections to municipal system. with connections to central station.
- B. Alarm Sequence of Operation: Actuation of initiating device causes the following system operations:
 - 1. Local fire alarm signaling devices sound and display with march time signal.
 - 2. Non-coded Zone-coded signal transmits to municipal connection. remote station equipment. central station.
 - 3. Location of alarm zone indicates on fire alarm control panel and on remote annunciator panel.
 - 4. Signal transmits by zone to building smoke removal system.
 - 5. Signal transmits to building elevator control panel, initiating return to main floor or alternate floor and lockout for fire service.
 - 6. Signal transmits to building mechanical controls, shutting down fans and operating dampers.
 - 7. Signal transmits by zone to release door hold-open devices.
 - 8. Signal releases magnetic door hold opens.
 - 9. Signal releases electric door locks.

- C. Drill Sequence of Operation: Manual drill function causes alarm mode sequence of operation.
- D. Trouble Sequence of Operation: System or circuit trouble causes the following system operations:
 - 1. Visual and audible trouble alarm indicates by zone at fire alarm control panel.
 - 2. Visual and audible trouble alarm indicates at remote annunciator panel.
 - 3. Trouble signal transmits to municipal connection. remote station. central station.
- E. Zoning: As indicated on Drawings.

1.4 SUBMITTALS

- A. Section 01 33 00 - Submittal Procedures: Submittal procedures.
- B. Shop Drawings: Indicate system wiring diagram showing each device and wiring connection; indicate annunciator layout, and design calculations.
- C. Product Data: Submit catalog data showing electrical characteristics and connection requirements.
- D. Test Reports: Indicate procedures and results for specified field testing and inspection.
- E. Manufacturer's Field Reports: Indicate activities on site, adverse findings, and recommendations.

1.5 CLOSEOUT SUBMITTALS

- A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.
- B. Project Record Documents: Record actual locations of fire alarm equipment.
- C. Operation and Maintenance Data: Submit manufacturer's standard operating and maintenance instructions.

1.6 QUALITY ASSURANCE

- A. Provide wiring materials located in plenums with peak optical density not greater than 0.5, average optical density not greater than 0.15, and flame spread not greater than 5 feet (1.5 m) when tested in accordance with NFPA 262.
- B. Perform Work in accordance with State Municipality of Highways Public Work's standard.
- C. Maintain one copy of each document on site.

1.7 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience, and with service facilities within 100 miles of project.
- B. Installer: Certified fire alarm installer with service facilities within 100 miles of Project.
- C. Design fire alarm under direct supervision of Professional Engineer experienced in design of this Work and licensed at Project location. in State of

1.8 MAINTENANCE SERVICE

- A. Section 01 70 00 - Execution and Closeout Requirements: Maintenance service.
- B. Furnish service and maintenance of fire alarm equipment for one year from Date of Substantial Completion.

1.9 MAINTENANCE MATERIALS

- A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.
- B. Furnish ten manual station break-glass rods.
- C. Furnish six keys of each type.

1.10 EXTRA MATERIALS

- A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.
- B. Furnish three of each type of automatic smoke detector without base.

PART 2 - PRODUCTS

2.1 CONTROL PANEL

- A. Product Description: Modular fire alarm control panel with flush surface wall-mounted enclosure.
- B. Power supply: Adequate to serve control panel modules, remote detectors, remote annunciators, smoke dampers, relays, and alarm signaling devices. Include battery-operated emergency power supply with capacity for operating system in standby mode for 24 hours followed by alarm mode for 5 minutes.
- C. System Supervision: Component or power supply failure places system in trouble mode.
- D. Initiating Device Circuits: Supervised zone module with alarm and trouble indication; occurrence of single ground or open condition places circuit in trouble mode but does not disable circuit from initiating alarm.
- E. Indicating Appliance Circuits: Supervised march time signal module, sufficient for signal devices connected to system; occurrence of single ground or open condition places circuit in trouble mode but does not disable circuit from signaling alarm.
- F. Municipal Trip Circuit: Output connections for future use. connection to local energy shunt trip parallel telephone circuit municipal master fire alarm box. remote station transmitter. Include municipal trip DISCONNECT switch.
- G. Remote Station Signal Transmitter: Electrically supervised digital alarm communicator transmitter, capable of transmitting alarm and trouble signals over telephone lines to central station receiver.

- H. Auxiliary Relays: Sufficient SPDT auxiliary relay contacts for each detection zone to provide accessory functions specified.

2.2 MANUAL FIRE ALARM STATIONS

- A. Product Description: Manual single-action double-action station with break-glass rod.
- B. Mounting: Semi-Flush Surface.
- C. Type: Coded Non-coded.
- D. Backbox: Manufacturer's standard.

2.3 SPOT HEAT DETECTOR

- A. Product Description: Fixed temperature, Combination rate-of-rise and fixed temperature, spot heat detector.
- B. Temperature Rating: 135 degrees F.
- C. Rate-of-Rise: 15 degrees F.

2.4 CEILING SMOKE DETECTOR

- A. Product Description: NFPA 72, ionization type photoelectric type ceiling smoke detector with the following features:
 - 1. Adjustable sensitivity.
 - 2. Plug-in base.
 - 3. Auxiliary relay contact.
 - 4. Integral thermal element rated 135 degrees F.
 - 5. Visual indication of detector actuation.
 - 6. Comply with UL 268.
- B. Mounting: 4-inch outlet box.
- C. Furnish two-wire detector with common four-wire detector with separate power supply and signal circuits.

2.5 DUCT-MOUNTED SMOKE DETECTOR

- A. Product Description: NFPA 72, ionization type photoelectric type with the following features:
 - 1. Auxiliary SPDT relay contact.
 - 2. Key-operated normal-reset-test switch.
 - 3. Duct sampling tubes extending width of duct.
 - 4. Visual indication of detector actuation.
 - 5. Duct-mounted housing.
 - 6. Comply with UL 268A.
- B. Furnish two-wire detector with common four-wire detector with separate power supply and signal circuits.

2.6 FLAME DETECTOR

- A. Product Description: NFPA 72, ultraviolet infrared radiation type flame detector.

2.7 ALARM BELLS

- A. Product Description: NFPA 72, vibrating, single-stroke, electric bell with the following features:
 1. Operating mechanism behind dome.
 2. Integral strobe lamp and flasher with red lettered "FIRE" on white lens.
 3. Size: 8 10 inch.
 4. Sound Rating: 81 dB at 10 feet.

2.8 ALARM LIGHTS

- A. Product Description: NFPA 72, strobe lamp and flasher with red lettered "FIRE" on white lens.

2.9 ALARM HORN

- A. Product Description: NFPA 72, surface flush projector type fire alarm horn with the following features:
 1. Sound Rating: 87 dB at 10 feet.
 2. Integral strobe lamp and flasher with red lettered "FIRE" on white lens.
- B. Product Description: Exterior mounted siren horn with the following features:
 1. Sound Rating: 120 dB at 10 feet.

2.10 REMOTE ANNUNCIATOR

- A. Product Description: Supervised remote. Remote annunciator including audible and visual indication of fire alarm by zone, and audible and visual indication of system trouble.
- B. Mounting: Factory mounted in flush surface wall-mounted enclosure.

2.11 DOOR RELEASE

- A. Product Description: Magnetic door holder with integral diodes to reduce buzzing.
- B. Coil voltage: 24 VDC.

2.12 WIRE AND CABLE

- A. Product Description: Non-power limited fire-protective signaling cable, copper conductor, 150-volt insulation rated 60 degrees C. Power limited fire-protective signaling cable, copper conductor, 300 volts insulation rated 105 degrees C.
- B. Cable Located Exposed in Plenums: Power limited fire-protective signaling cable classified for fire and smoke characteristics, copper conductor, 300 volts insulation rated 105 degrees C, suitable for use in air handling ducts, hollow spaces used as ducts, and plenums.
- C. Fire alarm circuit conductors have insulation color or code as follows:
 1. Power Branch Circuit Conductors: Black, red, white.
 2. Initiating Device Circuit: Black, red.

3. Detector Power Supply: Violet, brown.
4. Signal Device Circuit: Blue (positive), white (negative).
5. Door Release: Gray, gray.
6. Municipal Trip Circuit: Orange, orange.
7. Municipal Fire Alarm Loop: Black, white.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.
- B. Verify products and systems receiving devices are ready for installation.

3.2 EXISTING WORK

- A. Remove exposed abandoned fire alarm wiring, including abandoned wiring above accessible ceiling finishes. Cut cable flush with walls and floors, and patch surfaces.
- B. Disconnect and remove abandoned fire alarm equipment.
- C. Maintain access to existing fire alarm equipment and other installations remaining active and requiring access. Modify installation or provide access panel.
- D. Extend existing fire alarm installations using materials and methods compatible with existing installations, or as specified.
- E. Clean and repair existing fire alarm equipment to remain or to be reinstalled.

3.3 INSTALLATION

- A. Install manual station with operating handle 4 feet 6 inches above floor.
- B. Install audible and visual signal devices 7 feet 6 inches above floor.
- C. Install 16 14 AWG minimum size conductors for fire alarm detection and signal circuit conductors in conduit. cable.
- D. Mount end-of-line device in control panel. box with last device or separate box adjacent to last device in circuit.
- E. Mount outlet box for electric door holder to withstand 80 pounds pulling force.
- F. Connect conduit and wire to door release devices, sprinkler flow switches, sprinkler valve tamper switches, fire suppression system control panels, and duct smoke detectors.
- G. Automatic Detector Installation: Conform to NFPA 72.
- H. Install engraved plastic nameplates in accordance with Section 28 05 53.
- I. Ground and bond fire alarm equipment and circuits in accordance with Section 26 05 26.

3.4 FIELD QUALITY CONTROL

- A. Section 01 40 00 - Quality Requirements 01 70 00 - Execution and Closeout Requirements: Field inspecting, testing, adjusting, and balancing.
- B. Test in accordance with NFPA 72 and local fire department requirements.

3.5 MANUFACTURER'S FIELD SERVICES

- A. Section 01 40 00 - Quality Requirements: Manufacturer's field services.
- B. Include services of certified technician to supervise installation, adjustments, final connections, and system testing.

3.6 DEMONSTRATION AND TRAINING

- A. Furnish 8 hours of instruction each for two persons, to be conducted at project site with manufacturer's representative.

END OF SECTION 283100

This Page Intentionally Left Blank

SECTION 310200 - GENERAL REQUIREMENTS FOR SITEWORK

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section governs only technical specifications related to site work construction.
- B. Section Includes:
 - 1. Definitions.
 - 2. Field Engineering.
 - 3. Pre-installation Meeting.
 - 4. Demonstration and Training Meeting.
 - 5. Submittal Procedures.
 - 6. Traffic Control Plan.
 - 7. Quality Control Requirements.
 - 8. Erosion and Sediment Control.
 - 9. Proposed Products List.
 - 10. Product Requirements.
 - 11. Project Closeout Procedures.
- C. Related Divisions:
 - 1. Division 02 – Existing Conditions.
 - 2. Division 31 – Earthwork.
 - 3. Division 32 – Exterior Improvements.
 - 4. Division 33 – Utilities.

1.2 DEFINITIONS

- A. Field Engineering: Contractor's establishment of elevations, lines, and levels as indicated on Drawings, utilizing recognized engineering survey practices.
- B. Pre-installation Meeting: Meeting to discuss a product or material, typically complex in nature, and review manufacturer's precautions, restrictions, and installation procedures.
- C. Demonstration and Training Meeting: Contractor and/or manufacturer representative administered demonstration and training sessions for Owner for each portion of equipment and products that are required to have training in proper operation and maintenance.
- D. Submittal Procedures: Specified requirements regarding procedures related to submission of product data, Shop Drawings, manufacturer's certificates, and substitutions.
- E. Traffic Control Plan: Plan developed consistent with Manual on Uniform Traffic Control Devices (MUTCD).
- F. Quality Control: Inspection, analysis, and other relevant actions taken to provide control over what is being done, manufactured, or fabricated, so that a desirable level of quality is achieved and maintained during duration of the Work.

- G. Erosion and Sediment Control: Enforcement of state law and city or county ordinance for erosion and sediment control including installation, maintenance, and regular Contractor inspection and repair.
- H. Proposed Product List: Prepared listing of all materials and products intended to be used for site work related to sewer and water utilities, aggregates, and soils, and pavement mix designs.
- I. Product Requirements: Product information regarding manufacturer's data, preparation, fabrication, conveying and erection of Work including material, machinery, components, equipment, fixtures, and systems incorporated in Work.
- J. Project Closeout Procedures: Process that provides acceptance of project by Owner and Engineer/Architect including verification and documentation of required project records, and retention of other essential project documentation.

1.3 FIELD ENGINEERING

- A. Employ Land Surveyor registered in State of Florida and acceptable to Owner, Engineer/Architect and Construction Manager.
- B. Contractor shall locate and protect survey control and reference points. Promptly notify Owner, Engineer/Architect and Construction Manager of discrepancies discovered.
- C. Control datum for survey is that established by Owner provided survey.
- D. Verify setbacks and easements; confirm drawing dimensions and elevations.
- E. Provide required field engineering services. Establish elevations, lines, and levels, utilizing recognized engineering survey practices.
- F. Submit copy of site drawing and certificate signed by registered Land Surveyor certifying elevations and locations of the Work are in conformance with Contract Documents.
- G. Maintain complete and accurate log of control and survey work as Work progresses.
- H. On completion of foundation walls and major site improvements, prepare certified survey illustrating dimensions, locations, angles, and elevations of building construction and site utilities work.
- I. Protect survey control points prior to starting site work; preserve permanent reference points during construction.
- J. Promptly report to Owner, Engineer/Architect and Construction Manager loss or destruction of reference point or relocation required because of changes in grades or other reasons.
- K. Replace dislocated survey control points based on original survey control. Make no changes without prior written notice to Owner, Engineer/Architect and Construction Manager.
- L. A Registered Land Surveyor shall replace damaged property corners at Contractor's expense.

1.4 PREINSTALLATION MEETING

- A. When required in individual specification sections, convene preinstallation meeting at Project site prior to commencing work of specific section.
- B. Require attendance of parties directly affecting, or affected by, Work of specific section.
- C. Notify Owner, Engineer/Architect and Construction Manager four (4) days in advance of meeting date.
- D. Prepare agenda and preside at meeting:
 - 1. Review conditions of installation, preparation and installation procedures.
 - 2. Review coordination with related work.
- E. Record minutes and distribute copies within two (2) days after meeting to participants, with two (2) copies to Owner, Engineer/Architect and Construction Manager and those affected by decisions made.

1.5 DEMONSTRATION AND TRAINING MEETING

- A. Contractor shall schedule and administer demonstration and training sessions for Owner for each portion of equipment and products that are required to have training in proper operation and maintenance.
- B. Contractor shall schedule representatives of equipment manufacturer to attend demonstration and training sessions to provide additional information as necessary.

1.6 SUBMITTAL PROCEDURES

- A. Contractor shall provide Engineer/Architect electronic PDF copies of specific submittal information regarding products and materials of this specification section with extended permission of Architect.
- B. Submit Shop Drawings and product data in electronic PDF copies covering identified equipment and materials that will become a permanent part of Work to Engineer/Architect for review.
- C. Electronically submit material information, product data, and shop drawings in PDF format directly to [redacted]@graef-usa.com]. For questions related to submittals review and miscellaneous questions, contact [[redacted] at (414) 266-_____]] [(608) 242-_____] [(920) 592-_____].
- D. Shop Drawings and product data shall include drawings, descriptive information, and sufficient detail to show kind, size, arrangement, and operation of component materials and devices needed for installation and coordination with other materials and equipment.
- E. All submittals, regardless of origin, shall be stamped with approval of Contractor and identified with name of the Project, Contractor's name, and references to applicable specification sections and Drawings.
- F. Each submittal shall indicate intended use of item in Work. When manufacturer data sheets are submitted, clearly identify applicable items and cross out inapplicable data.

- G. Manufacturer's data sheets shall be current and include issue number and date.
- H. Contractor's stamp of approval is a representation to Engineer/Architect that Contractor accepts full responsibility for determining and verifying all quantities, dimensions, field construction criteria, materials, catalog numbers, and similar data, and that Contractor reviewed and coordinated each submittal with requirements of the Work.
- I. Contractor shall accept full responsibility for completeness of each submission. When an item consists of components from several sources, Contractor shall submit a complete initial submittal including all components.
- J. Identify deviations from Specifications and Drawings on each submittal and tabulate in Contractor's letter of transmittal. Such submittals shall indicate details of proposed changes, including modifications to other facilities that may result from deviation, and required piping and wiring diagrams.
- K. Submit electronic PDF copies of each drawing and necessary data to Engineer/Architect. Engineer/Architect will return two marked copies to Contractor. Electronic copies will not be acceptable.
- L. Engineer/Architect will not accept submittals from anyone but Contractor or Architect.
- M. Submittals shall be consecutively numbered in direct sequence of submittal and without division by subcontracts or trades.
- N. Review of Shop Drawings and Product Data:
 - 1. Engineer/Architect's review of Shop Drawings and product data will cover only general conformity to Drawings and Specifications, external connections, and dimensions that affect layout. Engineer/Architect's review does not indicate a thorough review of all dimensions, quantities, and details of material, equipment, device, or item shown.
 - 2. Engineer/Architect's review shall not relieve Contractor of Contractor's responsibility for errors, omissions, or deviations in drawings and data, or of sole responsibility for compliance with the Work.
 - 3. Engineer/Architect's submittal review period shall be a maximum of seven (7) days from date of submittal or resubmittal.
 - 4. When Shop Drawings and data are returned marked "NOT ACCEPTABLE" or "RETURNED FOR CORRECTION", Contractor shall make corrections as noted by Engineer/Architect and resubmit six (6) corrected copies. Electronic copies will not be acceptable.
 - 5. When Shop Drawings and product data are returned marked "EXCEPTIONS NOTED" or "APPROVED AS SUBMITTED", no additional copies need be submitted unless requested by Engineer/Architect at time of review.
- O. Re-submittal of Shop Drawings and Product Data:
 - 1. Contractor shall accept full responsibility for completeness of each re-submittal.
 - 2. Contractor shall verify that resubmittal provides all corrected data and additional information previously requested by Engineer/Architect.
 - 3. When corrected files are re-submitted, Contractor shall indicate in writing revisions made.
 - 4. Requirements specified for initial submittals also apply to re-submittals.
 - 5. Re-submittals shall bear number of first submittal followed by a letter (A, B, etc.) to indicate sequence of re-submittal.

6. Make re-submittals within seven (7) days of date of letter returning material to be modified or corrected.

P. Substitutes and “Or-Equal” Items:

1. Whenever a material or article is specified or described by using a single name of a proprietary product or a single name of a particular manufacturer or vendor, specified item mentioned shall be understood as establishing type, function, and quality desired.
2. Whenever two or more names of proprietary products or particular manufacturers or vendors are used, it shall be understood that products of one named supplier shall be furnished with no options or substitutions allowed.
3. Products, materials, or equipment not specified by proprietary name and submitted as a proposed substitute shall be reviewed and approved or rejected by Owner, Engineer/Architect or Construction Manager.

N.T.S. – Discuss next paragraphs with your client prior to including this language into this section. When Contractor proposes a product, material, or equipment as a substitute that is not listed as an approved manufacturer under Part 2 – Products within individual technical specification sections, we (GRAEF) are allowed to charge a fee for each substitution request received from Contractor.

4. [Cost of proposed substitution review is subject to financial reimbursement from Contractor to [Engineer] [Engineer/Architect] for time taken for review and verification in the amount of [\$200.00] [\$_____] dollars for each hour of review and verification.]
5. [Contractor shall be liable for all costs incurred by [Engineer] [Engineer/Architect] related to each substitution review, including proposed substitutions which are rejected.]

1.7 TRAFFIC CONTROL PLAN

- A. Submit a traffic control plan for construction in public right-of-way in accordance with the “Manual on Uniform Traffic Control Devices.”
- B. Data to be included on a traffic control plan will vary depending upon complexity of project, volume of traffic affected, and roadway geometrics where construction is being performed.
- C. Traffic control plan must clearly depict exact sequence of construction operation(s), construction to be performed, and traveled way that will be utilized by all movements of traffic during each phase of construction.
- D. Multiple phases of construction will require a separate traffic control plan for each different construction phase or operation.

1.8 QUALITY CONTROL REQUIREMENTS

- A. Construction Notification:
 1. Contractor shall be responsible for locating existing underground installations in advance of excavating or trenching by contacting local utility identification agency.
- B. Licenses, Permits, and Certificates:
 1. All licenses, permits, and certificates, required for, and in connection with site and utility work shall be secured by Contractor at their sole cost and expense.
 2. Contractor will be required to pay any permit fees required for utility work.

3. Contractor shall comply with all requirements and recommendations of authority or authorities issuing license, permit, or certificate.
- C. Easements and Rights-of-Way:
1. Contractor will confine construction operations to areas designated on Drawings or identified by Engineer/Architect, Owner's Representative or Construction Manager.
 2. Contractor shall use care in placement of construction tools, equipment, excavated materials, pipe materials, and supplies so as to minimize damage to property and minimize interference with the public.
- D. Protection of Property:
1. Contractor shall protect from damage or injury all property including survey monuments, property markers, and benchmarks. Items damaged shall be replaced or repaired at Contractor's expense.
 2. Locate existing utilities and utility services in advance of excavation and protect against damage. Changes in grade and alignment may be made to Work to avoid conflicts with existing structures if approved by Owner, Engineer/Architect and/or Construction Manager.
- E. Reference Standards:
1. Reference to standards, specifications, manuals, or codes of any technical society, organization, or association, or to laws or regulations of any governmental authority, whether such reference be specific or by implication, shall mean latest edition of appropriate standard, specification, manual, code, law, or regulation in effect on date of first advertisement for the Work, unless specifically stated otherwise in Contract Documents.
 2. Should there be a conflict in Reference Standards, Contractor shall request clarification from Owner, Engineer/Architect and Construction Manager before proceeding.
- F. Compaction and Gradation Testing:
1. Contractor shall provide and pay for compaction and gradation testing by an Owner, Engineer/Architect and Construction Manager approved independent testing laboratory.
 - a. Make two (2) initial gradation tests for each type of bedding and backfill material, and make one additional gradation test for each additional 500 tons of each material.
 - b. Moisture-density (Proctor) tests and relative density tests on materials, and in-place field density tests, shall be made at intervals determined by Owner, Engineer/Architect or Construction Manager.
 - c. Perform compaction testing in accordance with procedures specified in Section 31 23 17 – Site Excavation, Backfill, and Compaction.
- G. Traffic Control - General:
1. Protect streets, roads, highways, and other public thoroughfares that are to be temporarily closed or restricted for traffic flow by effective barricades equipped with operational warning signals.
 2. Locate barricades at nearest intersecting public highway or street on each side of blocked section.
 3. Cover open trenches and other excavations with steel plates and have suitable barricades, signs, and lights to provide adequate protection to the public. Provide obstructions such as material piles and equipment with similar warning signs and lights.
- H. Maintenance of Traffic:
1. Maintain effected traffic areas throughout duration of construction, in accordance with local, state, or federal requirements which govern Work area.

2. Contractor is responsible for maintaining traffic.
3. Contractor shall conduct work to minimize interference with traffic, vehicular or pedestrian.
4. Contractor shall obtain and pay for any permit required by local authority for areas where traffic will be obstructed.
5. Contractor shall provide and maintain suitable and safe bridges, detours, or other temporary measures for accommodating public and private travel.
6. Contractor shall provide at least 24 hours' notice to owners of private drives before performing Work which would obstruct safe passage by drive owner.
7. Illuminate barricades and obstructions with warning lights from sunset to sunrise.
8. Store material storage and perform Work on or alongside public streets and highways to minimize obstruction and inconvenience to public.

I. Traffic Control Devices:

1. Contractor shall provide barricades, cones, construction warning signs, flagmen, and incidental devices to protect personnel and equipment on the Work site.

1.9 EROSION AND SEDIMENT CONTROL

- A. Comply with requirements specified in Section 31 25 13 – Erosion and Sediment Controls and as indicated on Drawings.

1.10 PROPOSED PRODUCTS LIST

- A. Within seven (7) days after date of Notice to Proceed, submit list of major products proposed for use, with name of manufacturer, trade name, and model number of each product.
- B. For products specified only by reference standards, give manufacturer, trade name, model or catalog designation, and reference standards.

1.11 PRODUCT REQUIREMENTS

- A. Products include material, equipment, and systems.
- B. Comply with specifications and referenced standards as minimum requirements.
- C. Components required to be supplied in quantity within a Specification section shall be same, and shall be interchangeable.
- D. Do not use materials and equipment removed from existing structure, except as specifically required or allowed by Contract Documents.
- E. Products Specified by Reference Standards or by Description Only: Furnish any product meeting those standards.
- F. Products Specified by Naming Two (2) or More Manufacturers: Furnish products of one named manufacturer meeting specifications; no options or substitutions allowed.
- G. Products Specified by Naming One (1) or More Manufacturers or with a Provision for Substitutions: Submit a request for substitution of a proposed equal.

1.12 PROJECT CLOSEOUT PROCEDURES

- A. Project Records Documents:
1. Contractor shall maintain, on site, one (1) set of the following record documents:
 - a. Drawings.
 - b. Specifications.
 - c. Approved Shop Drawings.
 - d. Product data.
 - e. Samples.
 2. Contractor shall store Record Documents separate from documents used for construction.
 3. Contractor shall record actual revisions to the Work and maintain information concurrent with construction progress.
 4. Contractor shall legibly mark each item to record actual construction including:
 - a. Measured horizontal and vertical locations of new utilities and existing underground utilities and appurtenances referenced to permanent surface improvements.
 - b. Field changes of dimensions and Drawing details.
 - c. Details not on original Drawings.
 5. Submit Record Documents to Owner, Engineer/Architect and Construction Manager at Final Inspection, including:
 - a. Project Drawings.
 - b. Survey notes.
 - c. Approved submittals.
 - d. Operation and Maintenance Manuals.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 310200

SECTION 310513 - SOILS FOR EARTHWORK

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Subsoil materials.
 - 2. Topsoil materials.

- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
 - 2. Section 02 41 13 - Site Demolition.
 - 3. Section 31 05 16 - Aggregates for Earthwork.
 - 4. Section 31 10 00 - Site Clearing.
 - 5. Section 31 23 17 – Site Excavation, Backfill, and Compaction.
 - 6. Section 31 25 13 – Erosion and Sediment Control: Erosion and sediment control requirements.

1.2 REFERENCES

- A. State of Florida Department of Transportation (FDOT):
 - 1. Standard Specifications for Road and Bridge Construction, Current Edition with latest supplements.
 - 2. <http://www.dot.state.fl.us/specificationsoffice/implemented/specbooks/2010bk.shtm>

- B. ASTM International (ASTM):
 - 1. ASTM D2487 - Classification of Soils for Engineering Purposes (Unified Soil Classification System).
 - 2. ASTM D5268 – Topsoil Used for Landscaping Purposes.

1.3 SUBMITTALS

- A. Section 01 33 00 - Submittal Procedures, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.

- B. Samples: Submit, in airtight containers, 10 lb. sample of each type of fill to testing laboratory.

- C. Product Data: Submit testing laboratory results for each type of specified soil.

- D. Materials Source: Submit name of source of imported materials.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with Florida Department of Transportation standards.

PART 2 - PRODUCTS

2.1 SUBSOIL MATERIALS

A. Subsoil Type S1:

1. Excavated and re-used material, Imported borrow, Select or local borrow, Structural.
2. Graded.
3. Free of lumps larger than three (2) inches, rocks larger than two (1) inches, and debris.
4. Contractor shall provide 10 lb sample of existing site material to laboratory for soil classification analysis conforming to ASTM D2487.

B. Subsoil Type S2:

1. Imported borrow, Select or local borrow, Structural.
2. Graded.
3. Free of lumps larger than [three (3) inches, rocks larger than [two (2) inches, and debris.
4. Imported subsoil and borrow shall be similar in composition when compared to existing site subsoil.
5. Contractor shall provide 10 lb sample of proposed imported borrow material to laboratory for soil classification analysis conforming to ASTM D2487.

2.2 SOURCE QUALITY CONTROL

- A. Section 01 40 00 - Quality Requirements, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework: Testing and analysis of soil material.
- B. When tests indicate materials do not meet specified requirements, change material and retest.
- C. Furnish materials of each type from same source throughout the Work.

PART 3 - EXECUTION (Not Used)

END OF SECTION 310513

SECTION 310516 - AGGREGATES FOR EARTHWORK

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Aggregate materials and designations for building, structure, aggregate base course.
2. Aggregate materials and designations for backfill.
3. Materials and designations for drainage aggregate.
4. Aggregate materials and designations for grading purposes.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
2. Section 02 41 13 – Site Demolition.
3. Section 31 05 13 – Soils for Earthwork.
4. Section 31 23 17 – Site Excavation, Backfill, and Compaction.
5. Section 31 25 13 – Erosion and Sediment Control: Erosion control requirements.

1.2 REFERENCES

C. ASTM International (ASTM):

1. ASTM C33 – Standard Specification for Concrete Aggregates.
2. ASTM C136 – Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates.

1.3 SUBMITTALS

- A. [Section 01 33 00 – Submittal Procedures, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Product Data: Submit gradation information for each type of aggregate specified. Gradation results shall be taken within the past three (3) months from contract date.
- C. Samples: Submit, in airtight containers, 10 lb sample of each type of fill to testing laboratory.
- D. Materials Source: Submit name of source of imported materials.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with Florida Department of Transportation standards.

PART 2 - PRODUCTS

2.1 AGGREGATE MATERIALS

Florida Aggregates:

The following are State of Florida DOT gradation designations; refer to project Geotechnical Report for in depth project information and recommendations, if available.

*Size No. 24 – Coarse Aggregate for Granular Fill

*Size No. 467 – Dense-Graded Aggregate for Building, Pavement and Structure Base

*Size No 68– Open-Graded Aggregate for Drainage Fill under Buildings, Pavements and Structures

Designation	Size No. 24	Size No. 467	Size No. 68
3-inch	100	----	----
2-1/2-inch	90-100	----	----
2-inch	----	100	----
1-1/2-inch	25-60	95-100	----
1-inch	----	----	----
3/4-inch	0-10	35-70	90-100
1/2--inch	0-5	----	----
3/8-inch	----	10-30	30-65
No. 4	----	0-5	5-25
No. 8	----	----	0-10
No. 16	----	----	0-5

- A. Aggregate Type A1 (Gravel): Crushed Gravel; free of organic matter and debris; graded in accordance with:
 - 1. FDOT Size No. 68.
- B. Aggregate Type A2 (Gravel): Crushed Gravel; free of organic matter and debris; graded in accordance with:
 - 1. FDOT Size No. 467.
- C. Aggregate Type A3 (Recycled): Crushed Concrete; free of from wood, steel, roots, bark or other extraneous material; graded in accordance with:
 - 1. FDOT Size No. 467.
- D. Aggregate Type A4 (Recycled): Crushed Asphaltic Concrete; free of from wood, steel, roots, bark or other extraneous material; graded in accordance with:
 - 1. FDOT Size No. 467.
- E. Aggregate Type A5 (Stone): Crushed Stone; free of clay, shale, organic matter; graded in accordance with:
 - 1. FDOT Size No. 68.
- F. Aggregate Type A6 (3/8-Inch Stone Chips): Crushed stone; free of clay, shale, organic matter; graded in accordance with the following limits:

<u>Sieve Size</u>	<u>Percent Passing</u>
1/2-inch	100
3/8-inch	85 - 100
No. 4	10 - 30
No. 8	0 - 10
No. 16	0 - 5

- G. Aggregate Type A7 (3/4-Inch Stone Chips): Crushed stone; free of clay, shale, organic matter; graded in accordance with the following limits:

<u>Sieve Size</u>	<u>Percent Passing</u>
1-inch	100
3/4-inch	90 - 100
3/8-inch	20 - 55
No. 4	0 - 10
No. 8	0 - 5

- H. Aggregate Type A8 (Pea Gravel): Fractured, washed, free of clay, shale, organic matter; graded in accordance with the following limits:

1. Minimum Size: 1/4-inch.
2. Maximum Size: 3/8-inch.

- I. Aggregate Type A9 (Granular Fill): Natural gravel/stone; free of clay, shale, organic matter; graded in accordance with:

1. FDOT Size No. 24.

- J. Aggregate Type A10 (Bank Run Sand/Gravel): Natural river or bank sand; free of silt, clay, loam, friable or soluble materials, and organic matter; graded in accordance with following limits:

<u>Sieve Size</u>	<u>Percent Passing</u>
2-inch	95 - 100
No. 4	35 - 60
Finer Than No. 200	5 - 15

- K. Aggregate Type A11 (Drainage Aggregate): Crushed stone; free of clay, shale, organic matter; graded in accordance with the following limits:

<u>Sieve Size</u>	<u>Percent Passing</u>
1-inch	100 - 75
3/4-inch	50 - 75
No. 4	0 - 60
No. 40	0 - 50
No. 200	0 - 5

- L. Aggregate Type A12 (Bedding Sand): Unwashed bank-run sand or rejected concrete sand; approximately six (6) percent fine clay or loam particles but free of silt and clay or loam lumps consisting of durable particles ranging in size from fine to coarse in uniform combinations; maximum moisture content shall be 10 percent, graded within following limits:

<u>Sieve Size</u>	<u>Percent Passing</u>
1-inch	100
No. 16	45 - 80
No. 200	2 - 10

- M. Aggregate Type A13 (Sand Fill): Natural river or bank sand; free of silt, clay, or loam, friable or soluble materials, or organic matter; consisting of durable particles ranging in size from fine to coarse in uniform combinations; maximum moisture content shall be 10 percent, graded within following limits:

<u>Sieve Size</u>	<u>Percent Passing</u>
3/8-inch	100
No. 4	95 - 100
No. 8	75 - 90
No. 16	55 - 75
No. 30	30 - 50
No. 50	10 - 25
No. 100	2 - 10
No. 200	0

- N. Aggregate Type A14 (Stone): Crushed Stone; free of clay, shale, organic matter; graded in accordance with ASTM C33, Size No. 2.

2.2 SOURCE QUALITY CONTROL

- A. Section 01 40 00 – Quality Requirements, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework: Testing and analysis of aggregates.
- B. When tests indicate materials do not meet specified requirements, change material or material source and retest.
- C. Furnish materials of each type from same source throughout the Work.

PART 3 - EXECUTION (Not Used)

END OF SECTION 310516

SECTION 311000 - SITE CLEARING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Removal of grass and vegetation.
2. Removal of trees, shrubs, and other plant life.
3. Herbicide application.
4. Removal of site debris.
5. Clearing activities near existing permanent utilities and structures.
6. Protection of project entrances and exits.

B. Related Sections:

1. Applicable provisions of Section 31 02 00 - General Requirements for Sitework shall govern Work under this Section.
2. Section 02 41 13 - Site Demolition: Removal of site demolition material.
3. Section 02 41 16 - Structure Demolition: Removal of structure demolition material.
4. Section 31 13 00 - Tree Removal and Grubbing: Removal of trees and saplings including stumps and roots.
5. Section 31 22 13 - Rough Grading: Removal of topsoil and subsoil.
6. Section 31 23 16 - Utility Trench Excavation, Backfill, and Compaction: Backfill and compaction of cleared areas.
7. Section 31 23 17 - Site Excavation, Backfill, and Compaction: Backfill and compaction of cleared areas.
8. Section 31 23 18 - Rock Removal: Removal of rocks and boulders.
9. Section 31 25 13 - Erosion and Sediment Controls.
10. Section 32 01 00 - Site Restoration: Restoration of site affected by construction activities.
11. Section 32 96 00 - Shrub and Tree Transplanting: Shrub and tree relocation.

<http://cfpub.epa.gov/npdes/stormwater/swppp.cfm>

1.3 DEFINITIONS

- A. Tree - Woody perennial plant, single main stem with trunk, diameter of six (6) inches or greater. Multiple-stem trees with forks up to four (4) feet from ground elevation shall be considered a cluster of trees. Trees that fork above four (4) feet shall be considered a single tree.
- B. Sapling - Woody perennial plant with single stem with trunk less than six (6) inches in diameter.
- C. Root Zone - Area around a tree extending as far from tree base as longest horizontal branches.
- D. Surface Water - Soil water that flows through ditch lines, creeks, and streams by gravity.
- E. Grubbing - To clear project site by removing roots and stumps.
- F. Clearing - Cutting down of bushes and trees and the digging and removal of their roots and stumps.
- G. Clearing Limits - Area designated on Drawings scheduled for clearing operations within project site or right-of-way.
- H. Herbicide - Post emergence type, used to kill entire plant or vegetation, including root system.

1.4 SUBMITTALS

- A. Section 01 33 00 - Submittal Procedures Division 01 – General Requirements Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Submit product data for herbicide, including manufacturer's instructions, usage, and hazardous materials sheets.

1.5 REGULATORY REQUIREMENTS

- A. Contractor shall comply with local, state, and federal regulations applicable to Work of this Section.
- B. Contractor shall comply with and be solely responsible for compliance with U.S. Department of Labor OSHA Part 1926 Safety and Health Regulations for Construction for this Work.
- C. Contractor performing Work of this Section shall be solely responsible for identifying, furnishing, installing and maintaining equipment and materials required by State and Federal regulations to establish safe working conditions during Work of this Section.
- D. Conform to applicable code for environmental requirements, disposal of debris, burning debris on site and use of herbicides.
- E. Coordinate clearing Work with utility companies.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Herbicide:

1. Pre-emergence Herbicide: Liquid or wettable powder form; type which controls plants emerging from seed, but has no harmful effect on established plants when applied at recommended rates; resist leaching, and remain effective throughout one growing season.
2. Post-Emergence Herbicide: Water soluble and deactivate upon contact with soil, leaving no harmful residue; vegetation control herbicide when applied to leaves and stems of plants, is absorbed and translocated to all parts of plant including roots and underground stem; capable of killing entire plant.

PART 3 - EXECUTION

3.1 NOTIFICATION

- A. Contractor, prior to any excavation work, shall notify (1) a designated locating service; (2) utilities, governmental agencies, entities, known to, or which can reasonably be assumed to, have above or below ground pipe, conduit cables, structures, or similar items within limits of project; to locate and mark location of such items.
- B. In accordance with Florida Statutes Chapter 556, "Underground Facility Damage Prevention and Safety Act," every "Person" as defined in 556.102(9) shall be solely responsible to provide advance notice to "Sunshine State One-Call of Florida, Inc." (800-638-4097) not more than five nor less than two (2) working days prior to commencement of any Excavation or Demolition, as defined in the statute, required to perform work contained in this Project, and further said "Person" shall comply with all other requirements of this Statute relative to Excavator's Work. [Florida Statute Chapter 556 - Underground Facility Damage Prevention and Safety Act](#)

3.2 PREPARATION

- A. Verify erosion control is in place prior to start of Work.
- B. Verify that existing plant life designated to remain is tagged or identified and protected.
- C. Identify a temporary waste area and/or salvage area for placing removed materials.

3.3 PROTECTION

- A. Maintain and repair damaged erosion control items throughout Work.
- B. Protect utilities that remain, from damage.
- C. Do not divert or relocate surface water without prior written approval from Engineer/Architect, Owner's Representative and/or Construction Manage].
- D. Protect trees, plant growth, and features designated to remain as final landscaping.
- E. Protect benchmarks, survey control points, and existing structures from damage or displacement.

- F. Keep entrances and exits, and adjacent roadways affected, free of debris from clearing operations.

3.4 CLEARING

- A. Clear area required for access to site and execution of Work.
- B. Remove trees and shrubs within marked areas. Remove stumps, root zone.
- C. Remove surface rock larger than two (2) inches.
- D. Clear undergrowth and deadwood, without disturbing subsoil.
- E. Apply herbicide to remaining stumps to inhibit growth.

3.5 REMOVAL

- A. Remove debris, rock, and extracted plant life from site.
- B. Notify Engineer/Architect, Owner's Representative and/or Construction Manager if underground storage tanks and piping is uncovered during Work.
- C. Cease work in immediate area of tanks until direction is given to proceed.

END OF SECTION 311000

SECTION 312317 - SITE EXCAVATION, BACKFILL, AND COMPACTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Verification of subsurface conditions and utilities prior to excavation.
2. Saw cutting of pavements prior to excavation.
3. Excavation for building, structure foundation.
4. Excavation for slabs-on-grade, grade-beam slab.
5. Excavation of trenches for sanitary sewer collection system.
6. Excavation of trenches for storm sewer collection system.
7. Excavation of trenches for water distribution system.
8. Building, Structure backfilling to subgrade elevations.
9. Backfill under slabs-on-grade, grade beam slab.
10. Backfill requirements for utility trenches.
11. Backfill for over-excavation corrections.
12. Consolidation and compaction.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
2. Section 31 05 16 – Aggregates for Earthwork: Aggregate backfill materials.
3. Section 31 25 13 – Erosion and Sediment Controls.
4. Section 33 10 13 – Water Main Installation: Installation of public water main system.
5. Section 33 11 00 – Site Water System: Installation of site water lines for private use.
6. Section 33 11 19 – Fire Suppression Water Distribution Piping: Installation of fire service main for private use.
7. Section 33 12 13 – Water Service Laterals: Installation of water service laterals.
8. Section 33 40 13 – Storm Sewer Installation: Installation of public storm sewer system.
9. Section 33 41 00 – Site Storm Sewer System: Installation of storm sewer system.
10. Section 33 42 13 – Pipe Culverts: Installation of pipe culverts.

7. ASTM D2487 - Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System).
8. ASTM D6072 - Practice for Obtaining Samples of Geosynthetic Clay Liners.
9. ASTM D6938 – Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).

1.3 SUBMITTALS

- A. Section 01 33 00 - Submittal Procedures, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Samples: Submit 10 lb. sample of each type of specified fill to testing laboratory, in airtight containers.
- C. Provide certified analysis of material(s) to Engineer/Architect, Geotechnical Engineer, Owner's Representative, Construction Manager prior to any use on Work.

1.4 REGULATORY REQUIREMENTS

- A. Contractor shall comply with all local, state, and federal regulations applicable to Work of this Section.
- B. Contractor shall comply with and be solely responsible for compliance with U.S. Department of Labor OSHA Part 1926 Safety and Health Regulations for Construction for this Work.
- C. Contractor performing Work of this Section shall be solely responsible for identifying, furnishing, installing and maintaining equipment and materials required by state and federal regulations to establish safe working conditions during Work of this Section.

PART 2 - PRODUCTS

2.1 BEDDING AND BACKFILL MATERIALS

- A. Water Main Bedding: Type A12, as defined in Section 31 05 16 – Aggregates for Earthwork.
- B. Sewer Bedding (18 Inches in Diameter and Less): Type A6, as defined in Section 31 05 16 – Aggregates for Earthwork.

- C. Sewer Bedding (Greater than 18 Inches in Diameter): Type A7, as defined in Section 31 05 16 – Aggregates for Earthwork.
- D. Crushed Gravel Backfill: Type A1 as defined in Section 31 05 16 – Aggregates for Earthwork.
- E. Crushed Stone Backfill: Type A5 as defined in Section 31 05 16 – Aggregates for Earthwork.
- F. Site Excavated Material (Spoil) Backfill: Type S1 as defined in Section 31 05 13 – Soils for Earthwork.
- G. Imported Subsoil Material Backfill: Type S2 as defined in Section 31 05 13 – Soils for Earthwork.

2.2 AGGREGATE SLURRY BACKFILL

- A. Place materials in a clean cement mixer truck and thoroughly mixed in following quantities:

1,350 lbs.	sand
775 lbs.	1-1/4 Inch stone
1,150 lbs.	3/4 Inch stone
25 gals.	(+0 to -0.5) water/cu.yd.
- B. Lean concrete backfill shall conform to above with addition of a minimum of one bag of cement per cubic yard.

2.3 PIPE INSULATION

- A. Extruded polystyrene board to ASTM C578, Type V, rigid, closed cell type, with integral high density skin.
 - 1. Thermal Resistance: Typical 5 year aged value of R-5 per 1 inch of thickness per ASTM C518.
 - 2. Board Size: 24 x 96 x 2-inch thick. Square edges.
 - 3. Compressive Strength: Minimum 100 psi per ASTM D1621.
 - 4. Water Absorption: 0.7 percent by volume maximum per ASTM D2842.
 - 5. Insulation shall be:
 - a. Dow Chemical Company STYROFOAM™ Highload 100; [Dow Chemical Styrofoam Highload 100 Insulation](#).
 - b. Or Approved Equal.

PART 3 - EXECUTION

3.1 NOTIFICATION

- A. Contractor, prior to any excavation work, shall notify (1) a designated locating service; (2) all utilities, governmental agencies, entities, known to, or which can reasonably be assumed to have above or below ground pipe, conduit cables, structures, or similar items within limits of project; to locate and mark location of such items.
- B. In accordance with Florida Statutes Chapter 556, "Underground Facility Damage Prevention and Safety Act," every "Person" as defined in 556.102(9) shall be solely responsible to provide advance notice to "Sunshine State One-Call of Florida, Inc." (800-638-4097) not more than five

nor less than two (2) working days prior to commencement of any Excavation or Demolition, as defined in the statute, required to perform work contained in this Project, and further said "Person" shall comply with all other requirements of this Statute relative to Excavator's Work. [Florida Statute Chapter 556 - Underground Facility Damage Prevention and Safety Act](#)

3.2 SITE VERIFICATION

- A. Verify that survey benchmark and intended elevations for Work are as indicated.

3.3 FIELD MEASUREMENTS

- A. Verify that survey benchmark and intended elevations for the Work are as shown on Drawings.
- B. Primary line and grade will be furnished by Owner and will be established by Owner, Engineer/Architect and Contractor.
- C. Contractor shall employ a Registered Land Surveyor, registered in the State of Florida to perform all survey work related to primary line and grade for project utilities.
- D. Contractor shall check accuracy of line and grade stakes by means of visual and taping checks and shall be responsible for protection and preservation of such stakes established by Registered Land Surveyor.
- E. Contractor shall bear sole responsibility for correct transfer of all construction lines and grades from primary line and grade points and for correct alignment and grade of finished structure, based upon primary line and grade established by Registered Land Surveyor.
- F. Except for those lot corners and survey monuments that fall within trench excavation, Contractor shall be solely responsible for protection and/or replacement of all survey corners that exist throughout work area.
- G. Corners will be located and marked by Owner or Engineer/Architect, upon request by Contractor, prior to commencing its work.
- H. A Registered Land Surveyor shall replace damaged corners at Contractor's expense.

3.4 SAWING AND BREAKING PAVEMENT

- A. Saw concrete pavement, slabs, or bases to full-depth, slab, or base prior to removal.
- B. Saw cut asphalt surface course and asphalt binder course full depth before removal.
- C. Cut pavements evenly along edges of excavation prior to their removal in such a way as to avoid excessive removal or ragged, uneven edges.
- D. A drop weight or other type of machinery for breaking pavement when approved by Engineer/Architect, Owner's Representative or Construction Manager may be used when such usage does not become a nuisance or a source of damage to underground or adjacent structures.
- E. Prior to employing a drop weight, Contractor shall verify that there are no nearby underground structures that would be injured by its use.

- F. Contractor shall be solely responsible for any damage caused thereby.
- G. Engineer/Architect, Owner's Representative and Construction Manager reserves right to order discontinuance of use of such drop weight at any time.

3.5 PREPARATION FOR EXCAVATION

- A. Identify required lines, levels, contours, and datum.
- B. Stake and flag locations of known utilities.
- C. Notify utility company to remove and/or relocate utilities that interfere with Work.
- D. Protect above and below grade utilities indicated to remain.
- E. Protect plant life, lawns and other features remaining as portion of final landscaping.
- F. Protect benchmarks, survey control points, existing structures, fences, sidewalks, paving, and curbs from excavating equipment and vehicular traffic.
- G. Cut out soft areas of subgrade not capable of in situ compaction. Backfill with Type A2, as specified in Section 31 05 16 – Aggregates for Earthwork, fill and compact to density equal to or greater than requirements for subsequent backfill material.

3.6 FIELD QUALITY CONTROL FOR EXCAVATION

- A. Field inspection will be performed under provisions of Section 01 40 00 – Quality Requirements, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework.
- B. Provide for visual inspection of bearing surfaces.

3.7 [BUILDING] [STRUCTURE] EXCAVATION

- A. Underpin adjacent structures that may be damaged by excavation work, including utilities and pipe chases.
- B. Excavate subsoil required to accommodate building foundation, slabs-on-grade and site structures and construction operations.
- C. Machine slope banks to angle of repose or less, until shored.
- D. Excavation cut not to interfere with normal 45 degree bearing splay of foundation.
- E. Grade top perimeter of excavation to prevent surface water from draining into excavation.
- F. Hand trim excavation. Remove loose matter.
- G. Remove lumped subsoil, boulders, and rock.
- H. Notify Engineer of unexpected subsurface conditions and discontinue affected Work in area until notified to resume work.

- I. Correct unauthorized excavation at no extra cost to Owner.
- J. Correct areas over-excavated in error.
- K. Stockpile excavated material in area designated on site and remove excess material not being reused, from site. Remove excavated material from site.

3.8 EXPOSING EXISTING SANITARY SEWER, STORM SEWER AND WATER MAIN

- A. Before excavation of trench is begun, Contractor shall uncover stub end of existing utility to which new utility is to be connected. This will permit adjustments in line and grade and verify connection required.
- B. Securely plug existing terminations in manholes to which new utilities are to be connected to prevent entry of construction water and debris into active system.
- C. Contractor shall be responsible to verify that plug(s) are in place at end of each workday.
- D. Contractor shall remove any water or debris from terminal manhole as required but not less than once a week.

3.9 TRENCH EXCAVATION

- A. Excavate subsoil required for installation of utility.
- B. Excavate trenches at top of pipe to a maximum width based on dimension of outside diameter of pipe plus 24 inches to enable installation of pipe and to allow inspection.
- C. Width at top of pipe may be increased with prior approval of Engineer/Architect, Owner's Representative or Construction Manager to allow for stringers and sheathing when required.
- D. Provide pipe laid in open-cut trench with six (6) inch minimum clearance between outside face of pipe barrel and face of sheathing or sidewall of trench.
- E. Maximum width of trench at ground surface shall not exceed width of trench at top of pipe by more than two (2) feet without prior request to Engineer/Architect, Owner's Representative or Construction Manager, unless it is specifically allowed on Drawings.
- F. Place excavated material stored along trench excavation a minimum distance back from edge of trench. Determine distance by angle of repose of trench material to prevent surcharging of trench wall material leading to potential shearing of trench wall and collapse of trench.
- G. Store excavated material to be used for trench backfilling so that it will not interfere with:
 - 1. Public travel.
 - 2. Adjacent property owners or tenants.
 - 3. Other Contractors.
- H. Contractor shall immediately remove and dispose of excavated material which is not to be used as trench backfill, unless directed otherwise by Contract Documents.
- I. Engineer/Architect, Owner's Representative and Construction Manager reserves right to order up to 10 percent of surplus excavated material to be delivered to Owner's streets, alleys, public

properties, or locations designated by Engineer/Architect, Owner's Representative or Construction Manager.

- J. Cost of delivering and leveling such surplus material to any point within a driving distance of two miles from site of work shall be include in unit prices bid for work.
- K. After delivery to designated location, material shall be leveled off at direction of Engineer/Architect, Owner's Representative or Construction Manager.
- L. Contractor shall maintain all finished excavations free of water or sewage during Work.
- M. Hand trim excavation. Remove loose matter.
- N. Remove lumped subsoil, boulders, and rock up to 1/3 cubic yard, measured by volume.
- O. Correct unauthorized excavation and over-excavated areas at no cost to Owner.
- P. Excavate no more trench in advance of completed pipe laying operations than can be completed and backfilled by end of workday.
- Q. Do not obstruct more than one street crossing by same trench at any one time.

3.10 TRENCH BEDDING

- A. Keep trench bottom free of water prior to placement of bedding and laying of pipe.
- B. Place and shape bedding material to pipe, to a minimum depth of three inches under bell and four inches under spigot and compact to 95 percent modified Proctor density.
- C. Support pipe during placement and compaction of bedding material.
- D. Bring bedding and cover material over top of pipe to a minimum compacted depth of 12 inches, compact to specified density.
- E. Where sand is used for cover material, compact sand with portable plate compactor to a depth of twelve inches in two lifts of six (6) inches each for initial cover over pipe.

3.11 PIPE INSULATION

- A. Insulate water pipes with less than six (6) foot of cover with a minimum four (4) inch thick sheet of extruded polystyrene insulation.
- B. Sanitary sewers or storm sewers containing building condensate or clearwater shall have a minimum four (4) inch thick sheet of extruded polystyrene insulation when cover is less than:
 - 1. 60 inches in paved areas.
 - 2. 42 inches in non-paved areas.
- C. Extend insulation a minimum of two (2) feet each side of pipe centerline.
- D. Sheet insulation shall be minimum two (2) feet each side of pipe centerline and in addition shall have four (4) inches of insulation board placed vertically at end of horizontal board to bottom of excavated trench.

3.12 PROTECTION

- A. Protect excavations by methods required to prevent cave-in or loose soil from falling into excavation.
- B. Protect bottom of excavations and soil adjacent to and beneath foundation from freezing.

3.13 EXAMINATION PRIOR TO BACKFILLING

- A. Verify fill material to be reused are acceptable.
- B. Verify foundation perimeter drainage installation has been inspected.

3.14 BACKFILLING

- A. Backfill with materials and to contours and elevations shown on Drawings. Generally, compact subgrade to density requirements for subsequent backfill materials.
- B. Place specified backfill in loose lift layers. Use compaction equipment that will achieve desired compaction requirements.
- C. Systematically backfill to allow for natural settlement. Do not backfill over porous, wet, frozen, or spongy subgrade surfaces.
- D. Where sidewall material is loose or unstable, place geotextile cloth material over sidewall prior to backfilling.
- E. Employ a placement method that does not disturb or damage pipe in trench.
- F. Maintain optimum moisture content of backfill materials to attain required compaction density.
- G. Backfill simultaneously on each side of unsupported non-basement foundation walls.
- H. Slope grade away from building minimum two (2) inches in 10 feet, unless noted otherwise.
- I. Make grade changes gradual. Blend slope into level areas.
- J. Leave fill material stockpile areas completely free of excess fill materials.
- K. Remove surplus backfill materials from site.

3.15 MECHANICAL COMPACTION

- A. Mechanically compact backfill by means of a tamping roller, sheepsfoot roller, pneumatic tire roller, vibrating roller, or other mechanical tampers. Impact, free-fall, or "stomping" type compaction equipment shall not be allowed.
- B. Flooding or jetting of backfill for compaction purposes shall not be allowed.
- C. Contractor shall furnish written notification to Engineer/Architect, Owner's Representative or Construction Manager prior to start of work as to size and type of mechanical compaction equipment to be used.

- D. Place material for mechanically compacted backfill in lifts, which, prior to compaction, shall not exceed thickness specified below for type of compaction equipment used:
 - 1. Vibratory equipment including vibratory plate, vibratory smooth-wheel rollers, and vibratory pneumatic-tired rollers: maximum lift thickness two (2) feet.
 - 2. Rolling equipment, including sheepsfoot (both vibratory and non-vibratory), grid, smooth-wheel (non-vibratory), pneumatic-tired (non-vibratory), and segmented wheels: maximum lift thickness one (1) foot.
 - 3. Hand-directed mechanical tampers: maximum lift thickness of six (6) inches.

3.16 TOLERANCES FOR BACKFILL

- A. Top Surface of Backfill: Plus or minus 1 inch from required elevations.

3.17 COMPACTION REQUIREMENTS

- A. Granular Material shall be compacted to 95 percent of modified Proctor density.
- B. Excavated Material to be used for backfill shall be compacted to a density equal to adjacent undisturbed trench wall or as specified.

3.18 FIELD QUALITY CONTROL

- A. Field inspection and testing will be performed under provisions of Section 01 40 00 – Quality Requirements, Division 01 – General Requirements, Section 31 02 00 - General Requirements for Sitework.
- B. Testing and analysis of fill material will be performed in accordance with ASTM D698, D1557 and Section 01 40 00 – Quality Requirements, Division 01 - General Requirements, Section 31 02 00 - General Requirements for Sitework.
- C. Compaction and moisture testing will be performed in accordance with ASTM D6938 and Section 01 40 00 – Quality Requirements, Division 01 – General Requirements, Section 31 02 00 - General Requirements for Sitework.
- D. If tests indicate Work does not meet specified requirements, remove Work, replace, and retest at no cost to Owner.

3.19 PROTECTION OF FINISHED WORK

- A. Reshape and recompact fills subjected to vehicular traffic.
- B. Contractor shall have available a supply of steel plates with minimum dimensions of four (4) feet by eight (8) feet by one (1) inch.
- C. Use plates to bridge open trenches crossing roadways and secure against possibility of shifting or dropping into excavation.
- D. During winter months, do not leave plates in roadway overnight.

3.20 SCHEDULE OF BACKFILL

- A. Section 31 05 16 – Aggregates for Earthwork defines “A” designated fill materials and Section 31 05 13 – Soils for Earthwork defines “S” designated fill materials.
- B. Fill to Correct Over-Excavation:
 - 1. Aggregate Type A2 fill, flush to required elevation, compacted to 90 percent modified Proctor density.
 - 2. Lean concrete to minimum compressive strength of 1000 psi.
- C. Foundations:
 - 1. Aggregate Type A2 fill. Place materials in continuous loose lifts layers not exceeding seven (7) inch depth, compacted to 95 percent modified Proctor density.
- D. Below Grade Slabs and Basement Slabs:
 - 1. Aggregate Type A5 fill. Place materials in continuous loose lifts layers not exceeding nine (9) inch depth, compacted to 95 percent modified Proctor density.
- E. Interior Slab-On-Grade:
 - 1. Aggregate Type A2 fill. Place materials in continuous loose lifts layers not exceeding seven (7) inch depth, compacted to 95 percent modified Proctor density.
- F. Exterior Slab-On-Grade:
 - 1. Aggregate Type A1, A2 and A3 fill. Place materials in continuous loose lifts layers not exceeding seven (7) depth, compacted to 95 percent modified Proctor density.
- G. Foundation Drainage - Stone Cover:
 - 1. Aggregate Type A5 fill. Place materials in continuous loose lifts layers not exceeding nine (9) inch depth, compacted to 95 percent modified Proctor density.]
- H. Utility Piping - Stone Bedding and Cover:
 - 1. Aggregate Type A6 or A7 fill depending on pipe size. Place materials in continuous loose lifts layers not exceeding nine (9) inch depth, compacted to 95 percent modified Proctor density.
- I. Utility Piping - Sand Bedding and Cover:
 - 1. Aggregate Type A11 fill. Place materials in continuous loose lifts layers not exceeding 12-inch depth, compacted to 95 percent modified Proctor density.
- J. Utility Trench – Backfill in Paved Areas:
 - 1. Aggregate Type A1 or A2 fill. Place materials in continuous loose lifts layers not exceeding 12-inch depth, compacted to 95 percent modified Proctor density.
- K. Utility Trench – Backfill in Non-paved Areas:
 - 1. Subsoil Type S1 or S2 fill, to six (6) inches below finish grade. Place materials in continuous loose lifts layers not exceeding 12-inch depth, compacted to 90 percent modified Proctor density.
- L. Fill Under Roadways or Driveways.
 - 1. Aggregate Slurry Fill placed to 12 inches below finish grade, placed in continuous applications.]

M. Fill Under Grass Area.

1. Subsoil Type S1 or S2 fill, to six (6) inches below finish grade. Place materials in continuous loose lifts layers not exceeding 12-inch depth, compacted to 90 percent modified Proctor density.

N. Frequency of Compaction Tests:

1. General Excavation and Fill: One (1) Test for Every 1000 Cubic Yards.
2. Excavation and Backfill for Trenches (Gravel): One (1) Test for Every 300 Cubic Yards.
3. Excavation and Backfill for Trenches (Spoil): One (1) Test for Every 750 Cubic Yards.
4. Undercut Excavation: One (1) Test for Every 1000 Cubic Yards.

SECTION 312323 - ENGINEERED SOIL FOR SITE WORK

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Furnishing and placing engineered soil.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
2. Section 31 05 13 – Soils for Earthwork.
3. Section 31 25 13 – Erosion and Sediment Control: Slope protection and erosion control.

1.2 REFERENCES

A. AOAC International (AOAC); [AOAC International Website](#).

1. Official Methods of Analysis.

B. ASTM International (ASTM):

1. ASTM C88 - Test Method for Soundness of Aggregates by Use of Sodium Sulfate or Magnesium Sulfate.
2. ASTM C131 - Test Method for Resistance to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine.
3. ASTM D422 – Test Method for Particle-Size Analysis of Soils.
4. ASTM D1557 - Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft³ (2,700 kN-m/m³)).
5. ASTM D1883 - Test Method for CBR (California Bearing Ratio) of Laboratory-Compacted Soils.

C. ISRIC - World Soil Information (ISRIC); [ISRIC Website](#).

1. Technical Paper 9 – Procedures for Soil Analysis.
2. United States Department of Agriculture –Natural Resources Conservation Service (NCRS);
 - a. Acres of Prime Farmland.
 - b. Soil Texture Calculator.

1.3 SUBMITTALS

A. Section 01 33 00 – Submittal Procedures, Section 31 02 00 – General Requirements for Sitework, Division 01 – General Requirements: Requirements for submittals.

B. At least 30 days prior to ordering materials, Contractor shall submit representative samples, certificates, manufacturer's literature and certified tests for materials specified below to Geotechnical Engineer and Engineer.

C. Do not order materials until Geotechnical Engineer or Engineer reviews and approves required samples, certificates, manufacturer's literature, and test results. Delivered materials shall closely match approved samples.

- D. Approval shall not constitute final acceptance. Geotechnical Engineer and Engineer reserves right to reject, on or after delivery, any material not meeting these specifications.
- E. Submit two (2) 1/2 cubic foot representative samples of clay loam and two (2) two cubic foot representative samples of engineered soil mixes in this section for testing, analysis, and approval.
- F. Submit one (1) set of samples for every 500 cubic yards of material to be delivered. In the event of multiple source fields for clay loam, submit a minimum of one set of samples per source field or stockpile.
- G. Take samples randomly throughout field or stockpile at locations as directed by Geotechnical Engineer or Engineer and package in presence of Geotechnical Engineer or Engineer.
- H. Contractor shall deliver samples to testing laboratories and have test results sent directly to Geotechnical Engineer and Engineer. Label samples including location of source of material, date of sample, and Contractors name.
- I. Testing laboratory shall use one (1) sample for testing purposes. Submit second sample of clay loam and engineered soil to Geotechnical Engineer and Engineer at same time as test analysis as a record of soil color and texture.
- J. Submit locations of source fields for clay loam.
- K. Submit a list of chemicals and herbicides applied to clay loam for last five (5) years and a list of crops grown in clay loam source fields for last three (3) years.
- L. Submit soil test analysis reports for each sample of clay loam and engineered soil from an approved soil-testing laboratory.
- M. Geotechnical Engineer or Engineer shall approve soil testing laboratory. Testing laboratory for particle size and chemical analysis may be a public agricultural extension service agency or agricultural experiment station.
- N. Submit a bulk density of sample and particle size analysis including the following gradient of mineral content:

<u>NCRS Texture Designation</u>	<u>Size in mm.</u>
Gravel	+2 mm
Sand	0.05 - 2 mm
Silt	0.0002-0.05 mm
Clay	minus 0.002 mm

- O. Perform sieve analysis and compare to NCRS Soil Texture System. Perform sieve analysis by a combined hydrometer and wet sieving using sodium hexametaphosphate as a dispersant in compliance with ASTM D422 after destruction of organic matter by hydrogen peroxide.
- P. Submit a chemical analysis, performed in accordance with current AOAC methods, including the following:
 - 1. pH and Buffer pH.

2. Percent organic matter as determined by loss of ignition of oven dried samples. Test samples shall be oven dried to a constant weight at a temperature of 230 degrees F, plus or minus nine (9) degrees.
 3. Analysis for nutrient levels by parts per million including nitrate nitrogen, ammonium nitrogen, phosphorus, potassium, magnesium, manganese, iron, zinc, calcium, and extractable aluminum.
 4. Nutrient test shall include testing laboratory recommendations for supplemental additions to soil as calculated by amount of material to be added per volume of soil for type of plants to be grown in soil.
 5. Analysis for levels of toxic elements and compounds including arsenic, boron, cadmium, chromium, copper, lead mercury, molybdenum, nickel, zinc, and PCB. Test results shall be cited in milligrams per kilogram.
 6. Soluble salt by electrical conductivity of a 1:2 soil/water sample measured in Millimho per cm.
 7. Cation Exchange Capacity (CEC) per ISRIC.
 8. Carbon/Nitrogen Ratio.
- Q. Submit 5-point minimum moisture density curve based on ASTM D1557 test results for each engineered soil sample without removing oversized aggregate.
- R. Submit California Bearing Ratio test results for each engineered soil sample compacted to peak standard density. Soaked CBR, ASTM D1883, shall equal or exceed a value of 50.
- S. Submit measured dry-weight percentage of stone in mixture.
- T. Approved engineered soil samples shall be standard for each lot of 500 cubic yards of material.
- U. Testing and analysis shall be at Contractor's expense.
- V. Maintenance Instructions:
1. Prior to time of final acceptance of the Work, submit maintenance instructions for use, removal and replacement of engineered soil for licensor's use.
 2. Instructions shall be reviewed by Project Engineer as a pre-condition for final acceptance of the Work.
- W. Submit a proposed plan and vertical section layout of engineered soil to Geotechnical Engineer and Engineer for review.
- X. Submit one cubic foot sample per each 500 cubic yards of required material, and for each sample, the following analysis for crushed stone. Geotechnical Engineer or Engineer shall approve soil testing laboratory.
- Y. Provide a particle size analysis including the following gradient of mineral content:

<u>NCRS Texture Designation</u>	<u>Size in mm.</u>
3@	+76 mm
2-1/2@	63-76 mm
2@	50-63 mm
1-1/2@	37-50 mm
1@	25-37 mm

NCRS Texture Designation	Size in mm. Cont.
3/4@	19-25 mm
Fine gravel	2-19 mm
Sand	0.05 -2 mm
Silt	0.002-0.05 mm
Clay	minus 0.002 mm

- Z. Provide manufacturers analysis of the following:
1. Loose and rodded unit weight.
 2. Bulk specific gravity and absorbency.
 3. Stone dimension and surface texture description.
 4. Documentation of acceptance for use as FDOT approved aggregate.

AA. Provide a percent pore space analysis defined as follows:

$$\text{Rodded Unit Weight divided by Bulk Specific Gravity X 100}$$

- BB. Submit one pound sample of each type of fertilizer and three (3) certificates showing composition and analysis. Submit purchase receipt for each fertilizer showing total quantity purchased for project prior to installation.
- CC. Submit Landscape or Pavement Material Contractor's qualifications outlining projects of similar quality, schedule requirements and construction detailing over last five (5) years.
- DD. Qualifications shall include names of all similar projects, year completed, location, description of scope of work including types and quantities of planting mix/pavement material installed and name, address and telephone number of owner or owner's representative.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver or place soils in frozen, wet, or muddy conditions.
- B. Deliver material at or near optimum compaction moisture content.
- C. Do not deliver or place materials in an excessively moist condition beyond two (2) percent above optimum compaction moisture content.
- D. Protect soils and mixes from absorbing excess water and from erosion.
- E. Do not store materials unprotected from large rainfall events. Do not allow excess water to enter site prior to compaction.
- F. If water is introduced into material after grading, allow material to drain or aerate to optimum compaction moisture content.

1.5 EXAMINATION OF CONDITIONS

- A. Contractor shall inspect areas to receive engineered soil before starting work and shall report any defects such as incorrect grading or inadequate compaction to Geotechnical Engineer and Engineer prior to beginning this work.

- B. Contractor shall be responsible for judging full extent of work requirements involved, including, but not limited to, potential need for temporary storage and staging of soils, moving soil stockpiles at site to accommodate scheduling of other work and need to protect installed soils from compaction, erosion and contamination.

1.6 QUALITY ASSURANCE

- A. Qualifications of Landscape or Pavement Material Contractor:
 - 1. The Work of this section shall be performed by a Landscape Contracting firm which has a minimum of five (5) years experience successfully installing planting mix of a similar quality, schedule requirement and construction detailing to this project. Submit proof of this experience in accordance with requirements of Article 1.3 – Submittals.

PART 2 - PRODUCTS

2.1 CLAY LOAM

- A. Clay loam shall be a “loam” based on NCRS soil texture classification system as determined by mechanical analysis (ASTM D422) and it shall be of uniform composition, without admixture of subsoil.
- B. Clay loam shall be free of stones greater than one-half inch, lumps, plants and their roots, debris, and other extraneous matter over one (1) inch in diameter or excess of smaller pieces of same materials as determined by Geotechnical Engineer or Engineer.
- C. Clay loam shall not contain toxic substances harmful to plant growth. Clay loam shall be obtained from naturally well-drained areas, which have never been stripped of top soil before and have a history of satisfactory vegetative growth.
- D. Clay loam shall contain not less than two (2) or more than five (5) percent organic matter as determined by loss on ignition of oven-dried samples. Test samples shall be oven-dried to a constant weight at a temperature of 230 degrees F., plus or minus nine (9) degrees.
- E. Mechanical analysis for a loam/clay loam shall be as follows:

NCRS Textural Class	% of total weight
Gravel	less than 5%
Sand	20 - 45%
Silt	20 - 50%
Clay	20- 40%

- F. Chemical analysis: Meet or be amended to meet the following criteria.
 - 1. pH between 5.5 to 6.5.
 - 2. Percent organic matter 2–5 percent by dry weight.
 - 3. Nutrient levels as required by testing laboratory recommendations for type of plants to be grown in soil.
 - 4. Toxic elements and compounds below U.S. Environmental Protection Agency Standards for Exceptional Quality sludge or local standard; whichever is more stringent.
 - 5. Soluble salt less than 1.0 Millimho per cm.

6. Cation Exchange Capacity (CEC) greater than 10.
7. Carbon/Nitrogen Ratio less than 33:1.

G. Clay loam shall be product of a commercial processing facility specializing in production of stripped natural topsoil. No topsoil shall come from NCRS-classified prime farmland.

2.2 FERTILIZER

- A. Provide commercial fertilizer complying with state and federal fertilizer laws. Deliver fertilizer in original unopened containers bearing manufacturer's certificate of compliance covering analysis, which shall be furnished to Geotechnical Engineer and Engineer.
- B. Fertilizer shall be formulated for mixing into soil and be certified by manufacturer to provide controlled release of nitrogen continuously for a period of no less than nine (9) months and no more than 12 months.
- C. Fertilizer percentages of weight of ingredients and application rates shall be as recommended by soil testing results.

2.3 SULFUR

- A. Sulfur shall be commercial granular, 96 percent pure sulfur, delivered in containers with name of manufacturer, material, and analysis appearing on container.
- B. Sulfur used to lower soil pH above 6.5 shall be ferrous sulfate formulation.

2.4 LIME

- A. Agricultural limestone containing a minimum of 85 percent carbonates.
- B. Minimum gradation: 100 percent passing 10 mesh sieve; 98 percent passing 20 mesh sieve; 55 percent passing 60 mesh sieve; and 40 percent passing 100 mesh sieve.

2.5 CRUSHED STONE

- A. Crushed Stone shall be FDOT certified crushed stone. 90 - 100 percent of stone shall pass 1-1/2-inch sieve, 20-55 percent shall pass 1-inch sieve, and 10 percent shall pass 3/4-inch sieve. A ratio of nominal maximum to nominal minimum particle size of 2 is required.
- B. Acceptable aggregate dimensions will not exceed 2.5:1.0 for any two dimensions chosen.
- C. Minimum 90 percent with one fractured face, minimum 75 percent with two or more fractured faces.
- D. Results of Aggregate Soundness Loss test, ASTM C88, shall not exceed 18 percent.
- E. Losses from LA Abrasion tests, ASTM C131, shall not exceed 40 percent.

2.6 HYDROGEL

- A. Water absorbent synthetic polymer which may be potassium based and/or crosslinked.
 1. Amereq Corporation - Gelscape; <http://www.amereq.com/>; (800) 832-8788.

2. JRM Chemical Inc. – Soilmoist; <http://www.soilmoist.com/>; (800) 962-4010.
3. Aquatrols Corporation – Supersorb; <http://aquatrols.com/?LOCALE=USA>; (800) 257-7797.
4. Or Approved Equal.

2.7 WATER

- A. Contractor shall be responsible to furnish his own supply of water to site at no extra cost. Work injured or damaged due to lack of water, or use of too much water, shall be Contractor's responsibility to correct. Water shall be free from impurities injurious to vegetation.

2.8 ENGINEERED SOIL

- A. A uniformly blended mixture of crushed stone, clay loam and hydrogel, mixed to the following proportion:

Material	Unit Of Weight
Crushed Stone	100 units dry weight
Loam	As determined by mix test (Approx. 20 units)
Hydrogel	0.03 units dry weight
Total moisture	ASTM D1557 optimum moisture

- B. Determine initial mix design for testing by adjusting ratio between crushed stone and clay loam (see Appendices I and II). Adjust final mix dry weight mixing proportion to decrease soil in mixture if CBR test results fail to meet acceptance (CBR # 50).

PART 3 - EXECUTION

3.1 MIX DESIGN

- A. Prepare sample engineered soil mixes to determine ratio of mix components. Submit for approval.
- B. Submit samples and test results of each mix component for approval. Based on samples and analysis of mix components.
- C. Geotechnical Engineer and Engineer and Contractor will jointly determine a mix ratio to be tested for conformance with requirements of specifications.
- D. For engineered soil quantities greater than 500 cubic yards, test mix ratio for each clay loam or crushed stone where testing indicates a significant difference in physical analysis of clay loam or crushed stone as determined by Geotechnical Engineer and Engineer.
- E. Geotechnical Engineer and Engineer may request testing of additional engineered soil mix ratio samples in the event that further refinement of mix is necessary.
- F. Submit to Geotechnical Engineer and Engineer proposed fertility amendment recommendations including amounts and types of fertilizers and pH adjustments for each mix ratio. Include fertility adjustments as part of mixing process.

3.2 SOIL MIXING AND QUALITY CONTROL TESTING

- A. Perform engineered soil mixing at Contractor's yard using appropriate soil measuring, mixing and shredding equipment of sufficient capacity and capability to assure proper quality control and consistent mix ratios.
- B. No mixing of engineered soil at project site shall be permitted. Portable pugging may be used.
- C. Maintain adequate moisture content during mixing process. Soils and mix components shall easily shred and break down without clumping.
- D. Soil clods shall easily break down into a fine crumbly texture. Soils shall not be overly wet or dry.
- E. Contractor shall measure and monitor amount of soil moisture at mixing site periodically during mixing process.
- F. Mixing procedure for front-end loader shall be as follows:
 - 1. On a flat asphalt or concrete paved surface, spread an 8 inch to 12-inch layer of crushed stone.
 - 2. Spread specified amount of dry hydrogel evenly over stone.
 - 3. Spread a proportional amount of clay loam over dry hydrogel and crushed stone according to mix design.
 - 4. Blend entire amount by turning, using a front-end loader or other suitable equipment until a consistent blend is produced.
- G. Add moisture gradually and evenly during blending and turning operation as required to achieve required moisture content.
- H. Delay applications of moisture for 10 minutes prior to successive applications.
- I. Once established, mixing should produce a material within one (1) percent of optimum moisture level for compaction.
- J. A pugging operation mixing procedure may be as follows:
 - 1. Feed a known weight of crushed stone into mixing trough.
 - 2. Add hydrogel slurry into trough and mix slurry and stone into a uniform blend.
 - 3. Meter in soil in proper proportion of clay loam soil while stone-slurry mixture is in motion.
 - 4. Add water to bring mixture to target moisture content after factoring in water from slurry and clay-loam moisture a portable pugging operation.
 - 5. Add soil amendments to alter soil fertility including fertilizers and pH adjustment at time of mixing at rates recommended by soil test.
 - 6. Adjust soil pH to fall within a value of 5.5 and 6.5 two months after mixing if material is stored, unless mixing with a high pH stone. Once pavement is laid, no adjustment should be imposed.
 - 7. Adjust soil component carbon/nitrogen ratio to be less than 33:1 within two (2) months after mixing.
- K. Contractor shall mix sufficient material in advance of time needed at job site to allow adequate time for final quality control testing as required by progress of the Work.

- L. Store engineered soil in piles of approximately 500 cubic yards and number each pile for identification and quality control purposes.
- M. Protect storage piles from rain and erosion by covering with plastic sheeting.
- N. During mixing process, Contractor shall take two (2) one (1) cubic foot quality control samples per 500 cubic yards of production from final engineered soil.
- O. Take samples from random locations in numbered stockpiles as required by this specification. Test each sample for particle size analysis and chemical analysis as described above. Submit results directly to Geotechnical Engineer and Engineer for review and approval.
- P. Quality control sample clay loam/crushed stone ratio's shall be no greater or less than two (2) percent of approved test sample as determined by splitting a known weight of oven dried material on a No. 4 sieve.
- Q. In the event that quality control samples vary significantly from approved engineered soil sample, as determined by Geotechnical Engineer and Engineer, remix and retest any lot of soil that fails to meet correct analysis making adjustments to mixing ratios and procedures to achieve approved consistency.

3.3 UNDERGROUND UTILITIES AND SUBSURFACE CONDITIONS

- A. Notify Geotechnical Engineer and Engineer of any subsurface conditions which will affect Contractor's ability to complete the Work.
- B. Locate and confirm location of underground utility lines and structures prior to starting any excavation.
- C. Repair any underground utilities or foundations damaged by Contractor during progress of this Work. Cost of repairs shall be at Contractor's expense.

3.4 SITE PREPARATION

- A. Do not proceed with installation of engineered soil material until walls, curb footings and utility work in area have been installed. For site elements dependent on engineered soil for foundation support, postpone installation until immediately after installation of engineered soil.
- B. Install subsurface drain lines as shown on Drawings prior to installation of engineered soil material.
- C. Excavate and compact proposed sub-grade to depths, slopes and widths as shown on Drawings. Maintain required angles of repose of adjacent materials as shown on Drawings. Do not over excavate compacted subgrades of adjacent pavement or structures.
- D. Confirm that subgrade is at proper elevation and compacted as required. Slope subgrade elevations parallel to finished grade and or toward subsurface drain lines as shown on Drawings.
- E. Clear excavation of construction debris, trash, rubble, and any foreign material. In the event that fuels, oils, concrete washout silts, or other material harmful to plants have been spilled into

subgrade material, excavate soil sufficiently to remove harmful material. Fill any over excavation with approved fill and compact to required subgrade compaction.

- F. Do not proceed with installation of engineered soil until utility work in area has been installed. Subsurface drainage systems shall be operational prior to installation of engineered soils.
- G. Protect adjacent walls, walks, and utilities from damage or staining by soil. Use 1/2-inch plywood or plastic sheeting as directed to cover existing concrete, metal, and masonry work and other items as directed during progress of the Work.
- H. Clean up trash and any soil or dirt spilled on any paved surface at end of each working day.
- I. Any damage to paving or architectural work caused by soils installation shall be repaired by Contractor at its expense.
- J. Maintain silt and sediment control devices required by applicable regulations. Provide adequate methods to assure that trucks and other equipment do not track soil from site onto adjacent property and public right of way.

3.5 INSTALLATION OF ENGINEERED SOIL MATERIAL

- A. Install engineered soil and compact in six (6) to eight (8) inch lifts to full depth, including where trees and plants will be placed. Compact final lift along with adjacent aggregate fill to create a level paving surface.
- B. Compact materials to 95 percent modified Proctor density. No compaction shall occur when moisture content exceeds maximum as specified.
- C. Delay compaction 24 hours if moisture content exceeds maximum allowable and protect engineered soil during delays in compaction with plastic or plywood as directed by Geotechnical Engineer or Engineer.
- D. Bring engineered soils to finished grades as shown on Drawings. Immediately protect engineered soil material from contamination by toxic materials, trash, debris, water containing cement, clay, silt, or materials that will alter particle size distribution of mix with plastic or plywood as directed by Geotechnical Engineer and Engineer.
- E. Install trees after engineered soil has been placed. Dig pit for root ball with a small backhoe operated from street in order to protect pavers. If engineered soil fails because tree pit is too steeply dug, soil will need to be recompacted.
- F. After tree is installed, backfill hole with engineered soil and recompact. Hand tamp area directly over root ball to avoid damage to tree. Compact other areas with a small plate compactor. Rest tree on a compacted mound of subgrade or on engineered soil.
- G. For perennials, scrap off engineered soil to allow for a minimum typical planting depth of 12 inches. Where perennials are adjacent to a tree, backfill engineered soil and compact to allow for modified topsoil borrow to be added to create perennial bed at top layer.
- H. Use filter fabric below perennial roots, between topsoil and engineered soil. In no way should filter fabric be used to restrict tree roots from engineered soil.

- I. Engineered soil should not be left exposed during winter. Cover open areas with a tarp and plywood.
- J. Geotechnical Engineer and Engineer may periodically check material being delivered and installed at site for color and texture consistency with approved sample provided by Contractor as part of submittal for engineered soil.
- K. In the event that installed material varies significantly from approved sample, Geotechnical Engineer and Engineer may request that Contractor test installed engineered soil.
- L. Remove any soil which varies significantly from approved testing results, as determined by Geotechnical Engineer and Engineer, and install new engineered soil meeting these specifications.

3.6 FINE GRADING

- A. After initial placement and rough grading of engineered soil but prior to start of fine grading, Contractor shall request review of rough grading by Geotechnical Engineer and Engineer. Contractor shall set sufficient grade stakes for checking finished grades.
- B. Adjust finish grades to meet field conditions as directed.
- C. Provide smooth transitions between slopes of different gradients and direction.
- D. Fill dips and remove any bumps in overall plane of slope.
- E. Tolerance for dips and bumps in engineered soil areas shall be a three (3) inch deviation from plane in 10 feet.
- F. Geotechnical Engineer and Engineer shall inspect and approve fine grading prior to installation of other items to be placed on engineered soil.
- G. Geotechnical Engineer and Engineer will inspect the Work upon request by Contractor.
- H. Geotechnical Engineer and Engineer shall receive request for inspection from Contractor at least 10 days before anticipated date of inspection.

3.7 ACCEPTANCE STANDARDS

- A. Geotechnical Engineer and Engineer will inspect the Work upon request by Contractor. Geotechnical Engineer and Engineer shall receive request for inspection at least 10 days before anticipated date of inspection.

3.8 CLEANUP

- A. Upon completion of engineered soil installation operations, thoroughly clean areas within the project limits.
- B. Remove excess fills, soils, and mix stockpiles and legally dispose of waste materials, trash and debris.
- C. Remove tools and equipment and provide a clean, clear site.

- D. Sweep, do not wash, paving and other exposed surfaces of dirt and mud until paving has been installed over engineered soil material.
- E. Do no washing until finished materials covering engineered soil material are in place.

END OF SECTION 312323

SECTION 312513 - EROSION AND SEDIMENT CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Equipment and materials for erosion and sediment control to minimize erosion and siltation during construction.
 2. Erosion and sediment control provisions detailed on Drawings and specified herein are minimum requirements for erosion control program.
 3. Contractor to provide additional erosion and sediment control materials and methods required by state or local ordinances, whichever is more stringent.
- B. Related Sections:
1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.

1.2 REFERENCES

- A. ASTM International (ASTM):
1. ASTM D4355 – Test Method for Deterioration of Geotextiles by Exposure to Light, Moisture and Heat in a Xenon Arc Type Apparatus.
 2. ASTM D4491 – Test Methods for Water Permeability of Geotextiles by Permittivity.
 3. ASTM D4632 - Test Method for Grab Breaking Load and Elongation of Geotextiles.
 4. ASTM D4751 - Test Method for Determining Apparent Opening Size of a Geotextile.
- B. State of Florida Department of Environmental Protection, Stormwater Erosion and Sedimentation Control Inspector's Manual.
- C. State of Florida Department of Environmental Protection (FDEP)
http://www.flwaterpermits.com/home/floridawater_permits.html#EnvironmentalPermit
- D. State of Florida Department of Transportation Standard Specifications for Road and Bridge Construction, Current Edition.
- E. County of Okaloosa.
1. Ordinance for Construction Site Erosion Control.

1.3 DEFINITIONS

- A. Definitions shall be in accordance with the Stormwater Erosion and Sedimentation Control Inspector's Manual provided by the Florida Department of Environmental Protection, as defined by each topic.

1.4 SUBMITTALS

- A. Section 01 33 00 – Submittal Procedures, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.

- B. Provide erosion control plan indicating proposed methods, materials, and schedule for effecting erosion and siltation control to prevent erosion damage to site and adjacent area.
- C. Plan shall include following:
 - 1. Proposed methods for erosion and siltation control.
 - 2. Erosion plan scale of 1 inch equals 40 feet, indicating location of erosion control materials, siltation basins, etc.
 - 3. Schedule for implementation of plan.
 - 4. Provision for maintenance and upkeep of erosion control and siltation materials, identifying persons responsible for said maintenance.

1.5 REGULATORY REQUIREMENTS

- A. Comply with County of Okaloosa ordinance for construction site erosion control.
- B. Comply with applicable state and federal rules and regulations governing erosion and siltation on construction sites.
- C. Permit
 - 1. Apply for, pay fee, and obtain State stormwater discharge permit.

1.6 EROSION CONTROL PRINCIPLES

- A. Keep disturbed area small.
- B. Stabilize disturbed areas with mechanical or structural and vegetative methods.
- C. Keep runoff low through use of short slopes, low gradients, and preservation of natural vegetative cover.
- D. Protect disturbed areas from storm water runoff.
- E. Retain sediment within site boundaries.
- F. Implement a thorough maintenance and follow-up program.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. The following erosion control standards and practices shall be provided and installed in accordance with the State of Florida Department of Environmental Protection, Stormwater Erosion and Sedimentation Control Inspector's Manual.
- B. Stabilized Construction Exit;
 - 1. Provide stabilized construction exits at locations indicated on Erosion Control Plan.
 - 2. Stabilized construction exits shall meet the following requirements:
 - a. Aggregate size shall be FDOT No.1 Coarse Aggregate, 1-1/2 inch to 3-1/2 inch stone.
 - b. Exit thickness shall be a minimum of 6 inches, compacted to 95 percent modified proctor.
 - c. Entrance width shall extend full width of vehicular ingress or egress points.

- d. Entrance length shall be not less than 50 feet. Flare exit at road for turning radius requirements.
- e. Provide filter fabric under coarse aggregate to eliminate the migration of stone into the underlying soil from heavy construction traffic.
- f. Filter fabric shall be in accordance with specified silt fence requirements.
- g. Provide culvert under entrance at ditch line. Size culvert to handle anticipated flows.
3. Construction vehicle tire washing shall be implemented if mud and debris from construction site is not removed from driving on coarse aggregate entrance prior to entering onto public roads and streets.
4. Wash water shall be carried away from the entrance to a sediment trapping facility.

C. Silt Fence;

1. Provide silt fence at locations indicated on Erosion Control Plan.
2. Synthetic filter fabric shall be a pervious sheet of propylene, nylon, polyester, or polyethylene yarn. It shall contain ultraviolet ray inhibitors and stabilizers to provide a minimum of 6 months of expected usable construction life at a temperature range of 0 degrees F. to 120 degrees F..
3. Stakes for a silt fence shall be 1 x 2 inches wood (preferred), or equivalent metal with a minimum length of 3 feet.
4. Wire fence reinforcement for silt fences using standard-strength filter cloth shall be a minimum of 36 inches in height, shall be a minimum of 14 gauge, and shall have a maximum mesh spacing of 6 inches.
5. Height of a silt fence shall not exceed 36 inches. Higher fences may impound volumes of water sufficient to cause failure of the structure.
6. Filter fabric shall be purchased in a continuous roll cut to the length of the barrier to avoid the use of joints. When joints are necessary, filter cloth shall be spliced as described below.
7. Posts shall be spaced a maximum of 10 feet apart at the barrier location and driven securely into the ground a minimum of 12 inches.
8. When extra-strength fabric is used without the wire support fence, post spacing shall not exceed 6 feet.
9. A trench shall be excavated approximately 4 inches wide and 4 inches deep along the line of posts and upslope from the barrier.
10. When standard-strength filter fabric is used, a wire mesh support fence shall be fastened securely to the upslope side of the posts using heavy-duty wire staples at least 1 inch long, tie wires, or hog rings.
11. Wire shall extend into the trench a minimum of 2 inches and shall not extend more than 36 inches above the original ground surface.
12. Standard-strength filter fabric shall be stapled or wired to the fence, and 8 inches of the fabric shall be extended into the trench. Fabric shall not extend more than 36 inches above the original ground surface.
13. When extra-strength filter fabric and closer post spacing are used, the wire mesh support fence may be eliminated. In this case, the filter fabric is stapled or wired directly to the posts with all other provisions described above applying.
14. When attaching two silt fences together, place the end post of the second fence inside the end post of the first fence. Rotate both posts at least 180 degrees in a clockwise direction to create a tight seal with the filter fabric. Drive both posts into the ground and bury the flap.
15. Trench shall be backfilled and the soil compacted over the filter fabric.
16. The most effective application consists of a double row of silt fences spaced a minimum of 3 feet apart, so that if the first row collapses it will not fall on the second row. Wire or synthetic mesh may be used to reinforce the first row.

17. When used to control sediments from a steep slope, silt fences should be placed away from the toe of the slope for increased holding capacity.
18. Silt fences shall be removed when they have served their useful purpose, but not before the upslope area has been permanently stabilized.

D. Filter Sock;

1. A synthetic filter sock shall be a photodegradable or biodegradable mesh netting material providing a minimum of 9 months of expected usable life at a temperature range of 0 degrees F. to 120 degrees F.
2. The media within the filter sock shall contain composted material suitable for removing solids and soluble pollutants from stormwater runoff.
3. Posts for the filter sock shall be 2 x 2 inches wood (preferred), or equivalent metal with a maximum height of 3 feet.
4. Posts shall be spaced a maximum of 10 feet apart at the barrier location and driven securely into the ground a minimum of 8 inches in clay soils or 12 inches for sand soils. For use on pavement, heavy concrete blocks shall be used behind the filter socks for stabilization.
5. When joining two filter socks together, overlap the two sections by about a foot. Drive a stake into the ground through each filter sock.
6. Filter socks shall be removed or cut open when they have served their useful purpose, but not before the upslope area is permanently stabilized.
7. Filter socks shall not be used in perennial, ephemeral, or intermittent streams.

E. Temporary Diversion Berm;

1. Maximum allowable drainage area is 5 acres.
2. Minimum allowable height measured from the upslope side of the berm is 18 inches. The top width shall be a minimum of 2 feet with a minimum base width of 4.5 feet.
3. Side slopes shall be 3:1 or flatter.
4. Channel behind the berm shall have a positive grade to a stabilized outlet. If the channel slope is less than or equal to 2 percent, no stabilization is required. If the slope is greater than 2 percent, the channel shall be stabilized in accordance with Stormwater Conveyance Channel Standard.
5. Diverted runoff, if free of sediment, must be released through a stabilized outlet or channel.
6. Sediment-laden runoff must be diverted and released through a sediment trapping facility.
7. Whenever feasible, the berm should be built before construction begins on the project.
8. Berm shall be adequately compacted to prevent failure.
9. Temporary or permanent seeding and mulch shall be applied to the berm within 15 days of construction.
10. Berm should be located to minimize damage by construction operations and traffic.

F. Temporary Fill Diversion;

1. Maximum allowable drainage area is 5 acres.
2. Minimum height of the supporting ridge shall be 9 inches.
3. Channel shall have a positive grade to a stabilized outlet.
4. Diverted runoff should be released through a stabilized outlet, slope drain, or sediment-trapping measure.
5. Diversion shall be constructed at the top of the fill at the end of each workday as needed.
6. Diversion shall be located at least 2 feet inside the top edge of the fill.
7. Supporting ridge of the lower side shall be constructed with a uniform height along its entire length.

G. Temporary Slope Drain;

1. Maximum allowable drainage area per drain is 5 acres.
2. Slope drain shall consist of heavy-duty flexible material designed for this purpose.
3. Diameter of the slope drain shall be equal over its entire length. Reinforced hold-down grommets shall be spaced at 10 foot maximum intervals.
4. For small flows and/or short slopes, an open top chute (Overside drain) may be used in place of a pipe.
5. Size of Slope Drain shall be as follows:

<u>Maximum Drainage Area (Acres)</u>	<u>Pipe Diameter (Inches)</u>
0.5	12
1.5	18
2.5	21
3.5	24
5.0	30

6. The entrance to the slope drain shall consist of a standard FDOT "Flared End-Section for Metal Pipe Culverts." Extension collars shall consist of a 12-inch long corrugated metal pipe. Watertight fittings shall be provided.
7. An earthen berm shall be used to direct stormwater runoff into the temporary slope drain and shall be constructed according to the Diversion Standard.
8. Height of the berm at the center line of the inlet shall be equal to the diameter of the pipe (D) plus 6 inches. Where the berm height is greater than 18 inches at the inlet, it shall be sloped at the rate of 3:1 or flatter to connect with the remainder of the berm.
9. Outlet of the slope drain shall be protected from erosion according to the Outlet Protection Standard.
10. Slope drain shall be placed on undisturbed soil or well-compacted fill.
11. Entrance section shall slope toward the slope drain at the minimum rate of 1/2-inch per foot.
12. Soil around and under the entrance section shall be hand-tamped in 8 inch lifts to the top of the berm to prevent piping failure around the inlet.
13. Slope drain shall be securely staked to the slope at the grommets provided.
14. Slope drain sections shall be securely fastened together and have watertight fittings.

H. Storm Drain Inlet Protection:

1. Drainage area shall be no greater than 1 acre.
2. Inlet protection device shall be constructed to facilitate the cleanout and disposal of trapped sediment and to minimize interference with construction activities.
3. Inlet protection devices shall be constructed so that any resultant ponding or stormwater will not cause excessive inconvenience or damage to adjacent areas or structures.

I. Fabric Drop Inlet Sediment Filter:

1. Fabric shall be cut from a continuous roll to avoid joints.
2. Stakes shall be 2 x 4 inches wood (preferred) or equivalent metal with a minimum length of 3 feet.
3. Staples shall be of heavy duty wire at least 1/2- inch long.
4. Stakes shall be spaced around the perimeter of the inlet a maximum of 3 feet apart and securely driven into the ground a minimum of 8 inches. A frame of 2 x 4 inches of wood shall be constructed around the top of the stakes for proper stability.
5. A trench shall be excavated approximately 4 inches wide and 4 inches deep around the outside perimeter of the stakes.

6. Fabric shall be stapled to the wooden stakes, and 8 inches of the fabric shall be extended into the trench. The height of the filter barrier shall be a minimum of 15 inches and shall not exceed 18 inches.
 7. Trench shall be backfilled and the soil compacted over the fabric.
- J. Gravel and Wire Mesh Drop Inlet Sediment Filter:
1. Wire mesh shall be laid over the drop inlet so that the wire extends a minimum of 1 foot beyond each side of the inlet structure.
 2. Hardware cloth or comparable wire mesh with 1/2- inch openings shall be used. If more than 1 strip of mesh is necessary, the strips shall be overlapped at least 1 foot.
 3. FDOT No. 1 Coarse Aggregate (1.5 to 3.5 inch) stone shall be placed over the wire mesh.
 4. Depth of the stone shall be at least 12 inches over the entire inlet opening.
 5. Stone shall extend beyond the inlet opening at least 18 inches on all sides.
 6. If the stone filter becomes clogged with sediment so that it no longer adequately performs its function, the stones must be pulled away from the inlet, cleaned, and replaced.
- K. Block and Gravel Drop Inlet Sediment Filter:
1. Place concrete blocks lengthwise on their sides in a single row around the perimeter of the inlet, with the ends of adjacent blocks abutting.
 2. Height of the barrier can be varied, depending on design needs, by stacking combinations of 4, 8, and 12 inch wide blocks.
 3. The barrier of blocks shall be at least 12 inches high and no greater than 24 inches high.
 4. Wire mesh shall be placed over the outside vertical face (webbing) of the concrete blocks to prevent stone from being washed through the holes in the blocks. Hardware cloth or comparable wire mesh with 1/2- inch openings shall be used.
 5. Provide FDOT No. 1 Coarse Aggregate (1.5 to 3.5 inch) stone shall be piled against the wire to the top of the block barrier.
 6. If the stone filter becomes clogged with sediment so that it no longer adequately performs its function, the stone must be pulled away from the blocks, cleaned, and replaced.
 7. As a very temporary alternative, pervious burlap bags filled with gravel may be placed around the inlet, provided that there are no gaps between the bags.
 8. Either of these two practices may be installed on pavement or bare ground.
- L. Sod Drop Inlet Sediment Filter:
1. Soil shall be prepared and sod installed according to the specifications in Sub-Article 7.6 – Sodding.
 2. Sod shall be placed to form a turf mat covering the soil for a distance of 4 feet from each side of the inlet structure.
- M. Prefabricated Drop Inlet Internal Filter Bag:
1. Remove the grate over the catch basin and insert the filter device, then replace the grate to hold the device in position.
 2. When sediments have accumulated to within 1 foot of the grate, the filter insert must be removed by a front-end loader or forklift.
 3. The filter may be discarded and replaced, or it may be emptied, cleaned, and reused.
- N. Filter Sock Drop Inlet Filter:
1. The filter sock should be placed around the entire circumference of the drop inlet and should allow for at least 1 foot of overlap on either side of the opening being protected. Stakes should be used to keep the sock in place.
 2. Under low-flow conditions, a 9-inch or 12-inch sock diameter should suffice.

3. Sediment will collect around the outside of the filter sock and should be removed when the sediment reaches one-half of the sock height.
- O. Prefabricated Drop Inlet External Filter:
1. Place the device over the inlet. If the inlet has a grate, the device shall be secured to the grate by means of a long toggle bolt. If the grate is not present, the device shall be bolted directly to the concrete.
 2. Sediments shall be removed when they have accumulated to within 1 foot of the top of the device. The filter fabric elements shall be cleaned or replaced at that time.
- P. Gravel Curb Inlet Sediment Filter:
1. Hardware cloth or comparable wire mesh with 1/2- inch openings shall be placed over the curb inlet opening so that at least 12 inches of wire extends across the top of the inlet cover and at least 12 inches of wire extends across the concrete gutter from the inlet opening.
 2. Stone shall be piled against the wire so as to anchor it against the gutter and inlet cover and to cover the inlet opening completely. FDOT No. 1 Coarse Aggregate shall be used.
 3. An overflow weir can be constructed of 2 x 4 inch boards to lessen ponding from this practice.
 4. If the stone filter becomes clogged with sediment so that it no longer adequately performs its function, the stone must be pulled away from the block, cleaned, and replaced.
- Q. Block and Gravel Curb Inlet Sediment Filter:
1. Two concrete blocks shall be placed on their sides abutting the curb at either side of the inlet opening.
 2. A 2 x 4 inch board shall be cut and placed through the outer holes of each spacer block to help keep the front blocks in place.
 3. Concrete blocks shall be placed on their sides across the front of the inlet and abutting the spacer blocks.
 4. Wire mesh shall be placed over the outside vertical face (webbing) of the concrete blocks to prevent stone from being washed through the holes in the blocks. Hardware cloth with 1/2- inch openings shall be used.
 5. FDOT No. 1 Coarse Aggregate shall be piled against the wire to the top of the barrier.
 6. If the stone filter becomes clogged with sediment so that it no longer adequately performs its function, the stone must be pulled away from the block, cleaned, and replaced.
 7. As an alternative, gravel-filled burlap bags may be stacked tightly around the curb inlet.
- R. Curb and Gutter Sediment Barrier:
1. Place gravel-filled burlap bags on gently sloping street segments according to the spacing chart.
 2. Place two or more bags at each interval in a manner that provides maximum support.
 3. When stacking several bags high, leave a one-bag gap to provide an overflow spillway.
 4. Sediments must be removed after each rain event.
- S. Temporary Sediment Trap:
1. The sediment trap must have an initial storage volume of 134 cubic yards, or 3,600 cubic feet per acre of drainage area, measured from the low point of the ground to the crest of the gravel outlet. Sediment should be removed from the basin when the volume is reduced by one-half.
 2. For a natural basin, the volume may be approximated as follows:
 - a. $V = 0.4 \times A \times D$
 - b. where:

- 1) V = the storage volume in cubic feet (ft³).
- 2) A = the surface area of the flood area at the crest of the outlet, in square feet (ft²).
- 3) D = the maximum depth, measured from low point in trap to crest of outlet, in ft.
3. If excavation is necessary to attain the required storage volume, the side slopes should be no steeper than 2:1.
4. The maximum height of the sediment trap embankment shall be 5 feet as measured from the low point. See the following table showing minimum top widths (W) and outlet heights (H_o) for various embankment heights (H). The side slopes of the embankment shall be 2:1 or flatter.
5. Minimum Top Width (W) and Outlet Height (H_o) Required for Sediment Trap Embankment According to Height of Embankment (feet) as follows:

H	H_o	W
2.0	1.0	2.0
2.5	1.5	2.5
3.0	2.0	2.5
3.5	2.5	3.0
4.0	3.0	3.0
4.5	3.5	4.0
5.0	4.0	4.5

6. Outlets shall be designed, constructed, and maintained so that sediment does not leave the trap and erosion of the outlet does not occur.
7. A trap may have several different outlets, with each outlet conveying part of the flow based on the criteria below.
8. The combined outlet capacity shall be sufficient for the drainage area. For example, a 12 foot earth outlet, adequate for 2 acres, and a 12 inch pipe outlet, adequate for 1 acre, could be used for a 3 acre drainage area.
9. There are four types of outlets for sediment traps. Each sediment trap is named according to the type of outlet that it has. Each type has different design criteria and will be discussed separately. The types are as follows:
 - a. An Earth Outlet Sediment Trap consists of a basin formed by excavation and/or an embankment.
 - 1) The trap has a discharge point over or cut into natural ground.
 - 2) The outlet width (feet) shall be equal to 6 times the drainage area (acres).
 - 3) If an embankment is used, the outlet crest shall be at least 1 foot below the top of the embankment.
 - 4) The outlet shall be free of any restriction to flow.
 - 5) The earthen embankment shall be seeded with temporary or permanent vegetation within 15 days of construction.
 - b. A Pipe Outlet Sediment Trap consists of a basin formed by an embankment, or an excavation and an embankment.
 - 1) The outlet for the trap is through a perforated riser and a pipe through the embankment.
 - 2) The outlet pipe and riser shall be made of corrugated metal. The riser diameter shall be of the same or larger diameter than the pipe.
 - 3) The top of the embankment shall be at least 1-1/2 feet above the crest of the riser. At least the top two-thirds of the riser shall be perforated with 1/2 inch diameter holes spaced 8 inches vertically and 10 to 12 inches horizontally.
 - 4) All pipe connections shall be watertight.

Minimum Pipe Diameter for Pipe Outlet Sediment Trap
According to Maximum Size of Drainage Area

Minimum Pipe Diameter in Inches	Maximum Drainage Area in Acres
12	1
18	2
21	3
24	4
30	5

- c. A Stone Outlet Sediment Trap consists of a basin formed by an embankment or excavation and an embankment.
 - 1) The outlet for the sediment trap shall consist of a crushed stone section of the embankment located at the low point in the basin.
 - 2) The minimum length of the outlet shall be 6 feet times the acreage of the drainage area. The crest of the outlet must be at least 1 foot below the top of the embankment, to ensure that the flow will travel over the stone and not the embankment. The outlet shall be constructed of FDOT No. 1 size crushed stone.
 - d. A Storm Inlet Sediment Trap consists of a basin formed by excavation or natural ground that discharges through an opening in a storm drain inlet structure.
 - 1) This opening can either be the inlet opening or a temporary opening made by omitting bricks or blocks in the inlet.
 - 2) The trap shall be between 1 and 2 feet deep, measured from the low point of the inlet.
 - 3) A yard drain inlet or an inlet in the median strip of a dual highway would use the inlet opening for an outlet.
 - 4) A curb inlet would require a temporary opening.
 - 5) The trap should be out of the roadway to avoid interference with construction.
 - 6) Placing the trap on the opposite side of the opening and diverting water from the roadway to the trap is one means of accomplishing this.
 - e. Other Trap Applications:
 - 1) At times a small trap may be constructed in a drainage channel using the culvert for a road crossing. Straw bales or gravel-filled bags may be used, provided that there are no gaps in the installation. In larger traps, baffles may be required to ensure adequate flow length and prevent short-circuiting.
10. Trap Installation Requirements:
- a. The area under the embankment shall be cleared, grubbed, and stripped of any vegetation and root mat. To facilitate cleanout, the pool area should be cleared.
 - b. Fill material for the embankment shall be free of roots or other woody vegetation, organic material, large stones, and other objectionable material.
 - c. The embankment should be compacted in 8 inch layers by traversing it with construction equipment.
 - d. The earthen embankment shall be seeded with temporary or permanent vegetation within 15 days of construction.
 - e. Construction operations shall be carried out so that erosion and water pollution are minimized.
 - f. The structure shall be removed and the area stabilized when the upslope drainage area has been stabilized.

- T. Temporary Sediment Basins:
 - 1. Site Preparation:

- a. Areas under the embankment and any structural works shall be cleared, grubbed, and stripped of topsoil to remove trees, vegetation, roots, or other objectionable material.
- b. To facilitate cleanout and restoration, the pool area, measured at the top of the principal spillway, will be cleared of all brush and trees.
2. Maximum drainage area, unless the structure is designed as a permanent pond by a qualified professional engineer, shall have a maximum allowable drainage area into the basin of 150 acres.
3. Basin design capacity shall be at least 134 cubic yards or 3,600 cubic feet per acre of drainage area measured from the bottom of the basin to the crest of the principal spillway (riser pipe).
4. Sediment should be removed from the basin when the volume of the basin has been reduced to 55 cubic yards per acre of drainage area.
5. The elevation of the sediment cleanout level should be calculated and clearly marked on the riser.
6. In no case shall the sediment cleanout level be higher than 1 foot below the top of the riser.
7. To improve the sediment-trapping efficiency of the basin, the effective flow length must be twice the effective flow width.
8. This basin shape may be attained by properly selecting the site of the basin, by excavation, or by the use of baffles.
9. The embankment must have a minimum top width of 8 feet.
10. The side slopes must be 2:1 or flatter.
11. The embankment may have a maximum height of 10 feet if the side slopes are 2:1. If the side slopes are 2.5:1 or flatter, the embankment may have a maximum height of 15 feet.
12. Spillway Design:
 - a. The outlets for the basin may consist of a combination of principal and emergency spillways or a principal spillway alone.
 - b. In either case, the outlet(s) must pass the peak runoff expected from the drainage area for a ten-year storm without damage to the embankment of the basin.
 - c. Runoff computations shall be based on the soil cover conditions that are expected to prevail during the life of the basin.
 - d. The spillways designed by the procedures contained in this BMP will NOT necessarily result in any reduction in the peak rate of runoff.
 - e. If a reduction in peak runoff is needed, the appropriate hydrographs should be generated to choose the basin and outlet sizes.
 - f. To increase the efficiency of the basin, the spillway(s) must be designed to maintain a permanent pool of water between storm events.
13. Principal Spillway Design:
 - a. The principal spillway shall consist of a solid (non-perforated), vertical pipe or box of corrugated metal or reinforced concrete joined by a watertight connection to a horizontal pipe (barrel) extending through the embankment, with an outlet beyond the downstream toe of the fill.
 - b. If the principal spillway is used in conjunction with an emergency spillway, the principal spillway shall have a minimum capacity of 0.2 cfs per acre of drainage area when the water surface is at the crest of the emergency spillway.
 - c. If no emergency spillway is used, the principal spillway must be designed to pass the entire peak flow expected from a 10-year storm.
14. Design Elevations:
 - a. If the principal spillway is used together with an emergency spillway, the crest of the principal spillway shall be a minimum of 1 foot below the crest of the emergency spillway.

- b. If no emergency spillway is used, the crest of the principal spillway shall be a minimum of 3 feet below the top of the embankment.
 - c. In either case, a minimum freeboard of 1 foot shall be provided between the design high water and the top of the embankment.
15. Antivortex Device and Trash Rack:
- a. An antivortex device and trash rack shall be attached to the top of the principal spillway to improve the flow of water into the spillway and prevent floating debris from being carried out of the basin.
 - b. The antivortex device shall be of the concentric type.
16. Dewatering:
- a. Dewatering shall be done in a way that removes the relatively clean water without removing any of the sediment that has settled out and without removing any appreciable quantities of floating debris.
 - b. As a minimum, provisions shall be made to dewater the basin down to the sediment cleanout elevation. This can be accomplished by providing a hole at the maximum sediment retention elevation. The dewatering hole shall be no larger than 4 inches in diameter.
 - c. It is also advantageous, but not required, to provide for dewatering of trapped sediment before cleanout. Basin underdrains are generally installed for this purpose.
17. Principal Spillway Base:
- a. The base of the principal spillway must be firmly anchored to prevent it from floating. If the riser of the spillway is greater than 10 feet in height, computations must be made to determine the anchoring requirements. As a minimum, a factor of safety of 1.25 shall be used (downward forces = 1.25 x upward forces).
 - b. For risers 10 feet or less in height, the anchoring may be done in one of the two following ways:
 - 1) A concrete base 18 inches thick and twice the width of riser diameter shall be used and the riser embedded 6 inches into the concrete.
 - 2) A square steel plate, a minimum of 1/4 inch thick and having a width equal to twice the diameter of the riser, shall be welded to the base of the riser. The plate shall then be covered with 2-1/1 feet of stone, gravel, or compacted soil to prevent flotation.
18. Principal Spillway Barrel:
- a. The barrel of the principal spillway, which extends through the embankment, shall be designed to carry the flow provided by the riser of the principal spillway with the water level at the crest of the emergency spillway.
 - b. The connection between the riser and the barrel must be watertight.
 - c. The outlet of the barrel must be protected to prevent erosion or scour of downstream areas.
19. Anti-Seep Collars:
- a. Anti-seep collars shall be used on the barrel of the principal spillway within the normal saturation zone of the embankment to increase the seepage length by at least 10%, if either of the following two conditions is met:
 - 1) The settled height of the embankment exceeds 10 feet.
 - 2) The embankment has a low silt-clay content (Unified Soil Classes SM or GM) and the barrel is greater than 10 inches in diameter.
 - b. Anti-seep collars shall be installed within the saturated zone.
 - c. Maximum spacing between collars shall be 14 times the projection of the collar above the barrel.
 - d. Collars shall not be closer than 2 feet to a pipe joint.

- e. Collars should be placed sufficiently far apart to allow space for hauling and compacting equipment.
 - f. Connections between the collars and the barrel shall be watertight.
20. Emergency Spillway Design:
- a. Emergency spillway shall consist of an open channel constructed next to the embankment over undisturbed material or properly compacted fill.
 - b. Emergency spillway shall have a control section at least 20 feet in length. The control section is a level portion of the spillway channel at the highest elevation in the channel.
 - c. The primary spillway and the emergency spillway shall both discharge to stabilized outlets.
21. Emergency Spillway Capacity:
- a. The emergency spillway shall be designed to carry the peak rate of runoff expected from a 10-year storm, less any reduction due to the flow through the principal spillway.
22. Emergency Spillway Design Elevations:
- a. The design high water through the emergency spillway shall be at least 1 foot below the top of the embankment.
 - b. The crest of the emergency spillway channel shall be at least 1 foot above the crest of the principal spillway.
23. Emergency Spillway Location:
- a. Emergency spillway channel shall be located to avoid fill material.
 - b. If emergency spillway channel is constructed on fill, the fill will be properly compacted in lifts.
 - c. Emergency spillway channel shall be located so as to avoid sharp turns or bends.
 - d. Emergency spillway channel shall return the flow of water to a defined channel downstream from the embankment.
24. Emergency Spillway Maximum Velocities:
- a. Maximum allowable velocity in the emergency spillway channel depends on the type of lining used.
 - b. For non-erodible linings, such as concrete or asphalt paving and riprap, design velocities may be increased.
 - c. However, the emergency spillway channel shall return the flow to the natural channel at a non-eroding velocity.
25. Stabilization of the Embankment and Basin:
- a. Embankment of the sediment basin shall be temporarily seeded within 15 days after its completion.
 - b. If excavation is required in the basin, side slopes should not be steeper than 2:1.
26. Sediment Cleanout:
- a. Sediment shall be removed from the basin when the capacity is reduced to 55 cubic yards per acre of drainage area.
 - b. This elevation should be clearly marked, preferably on the riser.
 - c. Plans for the sediment basin shall state the methods for disposing of sediment removed from the basin.
 - d. Possible alternatives are the use of the material in fill areas onsite or removal to an approved offsite dump.
27. Sediment Basin Removal:
- a. Sediment basin plans shall show the final disposition of the sediment basin after the upstream drainage area is stabilized.
 - b. The plans shall specify methods for the removal of excess water lying over the sediment, the stabilization of the basin site, and the disposal of any excess material.
 - c. Sediment shall not be flushed into the stream or drainageway.
28. Public Safety:

- a. Sediment basins can be very dangerous to the general public, therefore, they should be fenced or otherwise made inaccessible to people or animals unless this is deemed unnecessary due to the remoteness of the site or other circumstances.
 - b. Strategically placed signs around the impoundment reading "DANGER—QUICKSAND" should also be installed. In any case, local ordinances and regulations regarding health and safety must be adhered to.
29. Cutoff Trench:
- a. For earth fill embankments, a cutoff trench shall be excavated along the centerline of the dam. Minimum depth shall be 2 feet.
 - b. Cutoff trench shall extend up both abutments to the riser crest elevation. The minimum bottom width shall be 4 feet, but wide enough to allow the operation of compaction equipment.
 - c. Side slopes shall be no steeper than 1:1. Compaction requirements shall be the same as those for the embankment.
 - d. Trench shall be drained during the backfilling and compacting operations.
 - e. Embankment fill material shall be taken from approved borrow areas.
 - f. Fill material shall be clean mineral soil, free of roots, woody vegetation, oversized stones, rocks, or other objectionable material.
 - g. Areas on which fill is to be placed shall be scarified prior to the placement of fill.
 - h. Fill material should contain sufficient moisture so that it can be formed by hand into a ball without crumbling.
 - i. If water can be squeezed out of the ball, it is too wet for proper compaction.
 - j. Fill material will be placed in 6 to 8 inch continuous layers over the entire length of the fill.
 - k. Compaction shall be obtained by routing the hauling equipment over the fill so that the entire surface of the fill is traversed by at least 1 wheel or tread track of the equipment, or by using a compactor.
 - l. Embankment shall be constructed to an elevation 10 percent higher than the design height to allow for settlement if compaction is obtained with hauling equipment.
 - m. If compactors are used for compaction, the overbuild may be reduced to not less than 5 percent.
30. Principal Spillway Installation:
- a. Riser of the principal spillway shall be securely attached to the barrel by a watertight connection.
 - b. Barrel and riser shall be placed on a firm, compacted soil foundation.
 - c. Base of the riser shall be firmly anchored according to design criteria to prevent its floating.
 - d. Pervious material such as sand, gravel, or crushed stone shall not be used as backfill around the barrel or anti-seep collars.
 - e. Fill material shall be placed around the pipe in 4 inch layers and compacted by hand at least to the same density as the embankment.
 - f. A minimum of 2 feet of fill shall be hand-compacted over the barrel before crossing it with construction equipment.
31. Emergency Spillway Installation:
- a. Emergency spillway should not be constructed over fill material.
 - b. Design elevations, widths, and entrance and exit channel slopes are critical to the successful operation of the spillway and should be adhered to closely during construction.
32. Vegetative Stabilization:
- a. Embankment and emergency spillway of the sediment basin shall be stabilized with temporary vegetation within 15 days of completion of the basin.

33. Erosion and Sediment Control:
 - a. Construction of the sediment basin shall be carried out in a manner such that erosion and water pollution are minimized downstream.
34. Final Disposal:
 - a. When temporary structures have served their intended purpose and the contributing drainage area has been properly stabilized, the embankment and resulting sediment deposits are to be leveled or otherwise disposed of according to the approved pollution control plan.

U. Temporary Check Dam;

1. Drainage area of the ditch or swale being protected should not exceed 10 acres.
2. Maximum height of the check dam should be 2 feet.
3. Center of the check dam must be at least 6 inches lower than the outer edges.
4. Maximum spacing between the dams should be such that the toe of the upstream dam is at the same elevation as the top of the downstream dam.
5. Stone check dams should be constructed of FDOT No. 1 Coarse Aggregate 1.5 to 3.5 inch stone.
6. Hand or mechanical placement will be necessary to achieve complete coverage of the ditch or swale and to ensure that the center of the dam is lower than the ends.
7. Check dams should be checked for sediment accumulation after each significant rainfall.
8. Sediment shall be removed when it reaches one-half of the original height or before.
9. Regular inspections should be made to ensure that the center of the dam is lower than the edges.
10. Erosion caused by high flows around the edges of the dam should be corrected immediately.
11. Check dams shall be removed when their useful life has been completed.
12. In temporary ditches and swales, check dams should be removed and the ditch filled in when it is no longer needed.
13. In permanent structures, check dams should be removed when a permanent lining can be installed.
14. In grass-lined ditches, check dams should be removed when the grass has matured sufficiently to protect the ditch or swale.
15. The area beneath the check dams should be seeded and mulched or sodded, depending on runoff velocity, immediately after the dams are removed.
16. If stone check dams are used in grass-lined channels that will be mowed, care should be taken to remove all the stone from the dam when the dam is removed.
17. This should include any stone that has washed downstream.

V. Exfiltration Trench;

1. Trenches in Rock:
 - a. Exfiltration facilities cut into permeable rock are often used in the Miami vicinity.
 - b. These trenches are the least expensive infiltration system to construct; however, the following conditions must be met:
 - 1) Rock must be able to support a specified wheel load on a covering concrete slab or other suitable cover.
 - 2) Rock must be amenable to excavation without blasting.
 - c. The inlet to the system can be placed directly over the slab cover, with discharge directly into the trench.
 - d. A more acceptable method is to set the inlet and catch basin adjacent to the trench and pipe the inflow to the trench. This technique lessens the introduction of debris into the system.
 - e. Manhole access must be provided to facilitate cleaning and inspection.

2. Trenches in Stable Soil:
 - a. In this type of trench, perforated or slotted pipe is normally used as the conduit.
 - b. Coarse aggregate between the pipe and trench wall prevents sidewall collapse and distributes collected water to the trench walls.
 - c. Whether the pipe is included or not, the trench is usually 4 to 5 feet wide and deep enough to reach a permeable soil layer.
 - d. Coarse aggregate or other free-draining material is generally placed in the bottom of the trench and brought up to a specified pipe flowline grade, generally a minimum of 2 feet.
 - e. Perforated or slotted pipe is then placed in the trench, which is backfilled with coarse aggregate to the design storage elevation.
 - f. A typical Dade County installation includes a 6 inch thickness of finer-textured filter material or pea rock placed over the aggregate backfill.
 - g. Trench is normally covered with a geotextile to prevent the sand or fill used for cover from piping and possible surface subsidence.
 - h. These trench cross-sections are typical of most installations in extreme southern Florida.
 - i. The configuration is applicable in other areas where the soil or substrate is stable and provides sufficient infiltration capacity.
 - j. Even where infiltration rates are marginal, the system could supplement the drainage requirements of a positive outfall system by storing and infiltrating a portion of the stormwater into the soil, thus reducing the downstream requirements of the positive system.
3. Trenches in Cohesionless Soil or Sand:
 - a. Although trenches in cohesionless soil require a different type of construction, the design, final shape, and size are the same as for a trench in stable soil.
 - b. Side slopes of 1.5:1 or 2:1 may be required, if the walls are not shored during construction.
 - c. Filter cloth must be used along the periphery of the trench to prevent the migration of soil fines into the coarse aggregate backfill.
 - d. In a trench system where perforated pipe is used, a non-perforated section some 6 to 8 feet in length is used to connect the trench to the catch basin or inlet.
 - e. A concrete slab is generally placed around the catch basin or inlet.
 - f. In the design of a trench system, any one of the above types, or a combination, may be used.
 - g. A positive overflow pipe or bypass is also required to allow for large storm events.
4. General Construction Recommendations (Exfiltration Trenches):
 - a. Before the entire development site is graded, the area planned for the trench should be roped off to prevent heavy equipment from compacting the underlying soils.
 - b. Diversion berms should be placed around the perimeter of the trench during all phases of construction.
 - c. Sediment and erosion control plans for the site should be oriented to keep sediment and runoff completely away from the trench area.
 - d. Otherwise, the actual construction of the trench should not begin until after the site is completely stabilized.
 - e. Trench should be excavated using a backhoe or trencher equipped with tracks or oversized tires. Normal rubber tires should be avoided, since they compact the subsoil and may reduce infiltration capability.
 - f. For the same reason, the use of bulldozers or front-end loaders should be avoided.
 - g. Sediment control is critical, and thus it is important that sediment and erosion controls be inspected following each storm to make sure they still work.

- h. If a vegetated buffer strip is planned for the pretreatment of runoff entering the facility, grass should be established immediately, preferably by sodding.
 - i. When hydroseeding is used, reinforced silt fences must be placed between the buffer and trench to prevent sediment entry before the buffer becomes fully established.
5. Perforated or Slotted Pipe:
- a. When perforated pipe is used for conveyance and distribution, a liberal number of holes should be provided to ensure free and rapid flow in and out of the walls of the pipe.
 - b. Large-diameter pipe adds to total storage volume in the trench. The use of a pipe in the trench system also allows for ease of maintenance.
 - c. The pipe serves as a catchment for sediment without reducing overall efficiency.
 - d. Pipes manufactured of plastic, steel, aluminum, concrete, or other materials are available for this application.
 - e. Perforated metal pipes usually have 3/8 inch diameter perforations uniformly spaced around the full periphery of the pipe.
 - f. Specifications stipulate not less than 30 perforations per square foot of pipe surface. Other perforations not less than 5/16 inch in diameter or slots are permitted if they provide a total opening area of not less than 3.31 square inches per square foot of pipe surface.
 - g. FDOT and industry have developed tentative specifications for slotted concrete pipe with cast slots, based on field performance and cooperative testing.
 - h. Concrete pipe with 3/8 inch wide slots is usually specified. The slots should be circumferential in direction, approximately 3/8 inch wide and not less than 4 inches long at the inside of the pipe.
 - i. Four rows of slots are generally specified for pipe 30 inches in diameter or less. Six rows are specified for pipe 36 inches in diameter and larger.
6. Pipe Backfill:
- a. Coarse aggregate backfill material supports the sides and top of an infiltration trench following construction.
 - b. Aggregates for this purpose must be sound and must comply with FDOT-established specifications for durability.
 - c. Aggregate material must provide sufficient void space to allow for the storage of the required volume of runoff.
 - d. Provide an allowance for the accumulation of the normally encountered fine sands, silts, silty clays, and other material in stormwater that will pass through the perforations or slots in the pipe conduit into the backfill during the expected life of the facility.
 - e. Clean, washed stone aggregate should be placed in the excavated trench in lifts, lightly compacted to form the base.
 - f. Unwashed stone has enough associated sediment to pose a clear risk of clogging at the soil/filter cloth interface.
 - g. Granite, washed pea gravel, or river rock is usually acceptable. Where possible, the use of crushed limestone aggregate shall not be used.
 - h. Pea Rock or gravel is often placed in a 6 inch layer over the top of the aggregate for the pipe backfill.
 - i. This layer serves as a granular filter below the filter fabric.
 - j. Gradation for this layer should consist of 100 percent material passing.
7. Synthetic Filter Fabrics:
- a. When fine native materials are encountered in the excavation, a filter cloth envelope or wrap should be placed around the coarse aggregate backfill. This practice prevents the migration of fine sediments from the surrounding soil that could clog the trench following reverse flow conditions resulting from high ground water.

- b. A number of plastic woven or nonwoven filter fabrics can be used for this purpose. Care should be taken to prevent tearing or puncturing the fabric.
 - c. Adjacent fabric sheets should be overlapped 12 to 18 inches and secured to prevent openings from developing.
 - d. To ensure good performance, synthetic fabrics, either woven or nonwoven, must be carefully selected, based on the properties required.
 - e. As with aggregate filters, fabric filters must provide two very important functions, as follows:
 - 1) They must be able to prevent clogging of the drain by the migration of erodible soil or other material from the substrate into the trench, which could also result in erosion, piping, or other problems.
 - 2) They must not inhibit the free flow of water.
 - f. Care should be taken in selecting the proper kind of filter fabric, as available brands differ significantly in their permeability and strength.
8. Observation Well:
- a. The installation of an observation well is recommended in every infiltration trench. It serves the following two primary functions:
 - 1) It indicates how quickly the trench dewater following a storm.
 - 2) It provides a method of observing how quickly the trench fills up with sediments.
 - b. Provide an observation well consisting of perforated polyvinyl chloride (PVC) pipe 4 to 6 inches in diameter located in the center of the facility and is constructed flush with the ground elevation of the trench.
 - c. Top of the well should be capped and locked to discourage vandalism and tampering.
 - d. Monitor the performance of the trench through observation well measurements.
 - e. Measure drain time by placing a graduated dipstick down the well immediately after a storm and again 24 and 48 hours later.
 - f. For the first year after the completion of construction, the well should be monitored quarterly and after every large storm. It is recommended that a logbook be maintained, indicating the rate at which the facility dewater after large storms and the depth of the well at each observation.
 - g. Once the performance characteristics of the structure have been verified, the monitoring schedule can be reduced to a semiannual basis, unless the performance data indicate that a more frequent schedule is required.
 - h. A monitoring well in the top foot of stone aggregate is required when the trench has a stone surface. Sediment buildup in the top foot of stone aggregate or the surface inlet should be monitored on the same schedule as the observation well.
 - i. The sediment deposited shall not be allowed to build up to the point where it significantly reduces the rate of infiltration into the trench.
9. Overflow:
- a. Unless the facility is designed to accommodate the total amount of anticipated runoff from a large design storm, some provisions should be made for overflow.
 - b. To provide the maximum benefit in reducing downstream flood peaks, these structures shall be designed to overflow before the total storage capacity is reached.
 - c. There are many ways to accomplish this. Pipes can be used, for instance, to connect a sequence of infiltration facilities, so that when the first one fills, it passes water through to the next one, and so on.
 - d. Generally, several smaller facilities are more effective than one large facility, though the latter may be necessary when there are space limitations.
 - e. The capacity and cost of overflow discharge systems can be reduced by allowing temporary storage space above the infiltration trenches.

- f. Because of the small drainage areas controlled by the exfiltration trench, an emergency spillway usually is not necessary.
 - g. In all cases, however, the overland flow path of any surface runoff exceeding the capacity of the trench should be evaluated to preclude the development of an uncontrolled, erosive watercourse.
10. Seepage Analysis and Control:
- a. An analysis shall be made to determine any possible adverse effects of seepage zones when there are nearby building foundations, roads, parking lots, or sloping sites.
 - b. Developments on sloping sites often require the use of extensive cut-and-fill operations.
 - c. The use of infiltration trenches on fill sites with steep slopes is not recommended.
 - d. Fill areas can be very susceptible to slope failure due to slippage along the interface of the undisturbed soil and the fill material.
 - e. This condition could be further aggravated if the fill material is allowed to become saturated using retention practices.
 - f. The methods for seepage analysis and the estimation of infiltration rates using Darcy's law and flow nets can be used to conduct the seepage analysis.
 - g. When exfiltration trenches are used in residential areas, special care must be taken to prevent seepage from causing unstable soil conditions near foundations.
 - h. Trenches 3 or more feet deep shall be located at least 10 feet downgradient from foundation walls.
 - i. Trenches should also be no closer than 100 feet from wells or septic tanks.

W. Underdrain and Filtration Systems:

- 1. All drains shall be laid to line and grade, surrounded by at least 3 inches of washed gravel, and wrapped in filter fabric.
- 2. Trench bottom must be uniformly smooth and made up of either undisturbed soil or properly compacted fill, especially if the trench is cut into rock.
- 3. Joints between sections of rigid pipe shall not exceed 1/4 inch.
- 4. The ends of pipes shall be capped, or preferably connected to cleanouts.
- 5. Backfill shall be as outlined in accordance with Section 31 23 17 – Site Excavation, Backfill and Compaction.

X. Swales:

- 1. Site Preparation:
 - a. Swale location should be staked for construction.
 - b. All trees, stumps, brush, and similar material should be removed from the site and disposed of, so as to not interfere with the proper functioning of the system.
 - c. Design and construction survey notes should be kept according to standard engineering practice.
- 2. Excavation:
 - a. Soil removed from the swale should be deposited where it will not interfere with the flow of water into the swale. It can be used to fill low spots or build diversions to keep runoff from the swale during vegetation establishment as approved by Engineer/Architect or Owner's Representative.
 - b. Topsoil should be saved and spread in the constructed swale if necessary to ensure the establishment of a good vegetative cover.
 - c. When this is done, the swale should be over-excavated to allow for the replacement of the topsoil without encroaching on the design cross-section.
- 3. Establishing Vegetation:
 - a. The method used to establish grass in a swale depends on the severity of the conditions encountered.

- b. Table below lists the four different alternatives for grass establishment and the conditions under which each method should be used.
- c. For each technique, if any one of the four sets of conditions is exceeded, the next technique below it must be used.

Establishment Technique Conditions

<u>Establishment Technique</u>	<u>Conditions</u>
1.a. - Hydroseeding	<ul style="list-style-type: none"> 1. Slopes less than 5%. 2. Velocity less than 3 feet per second.
1.b. Establishing Bermuda grass away from channel by sprigging	<ul style="list-style-type: none"> 1. Majority of drainage can be diverted during germination and establishment. 2. Erosion-resistant soil.
2. Seeding with straw mulch and jute mesh or erosion netting	<ul style="list-style-type: none"> 1. Slopes less than 5%. 2. Velocity less than 5 feet per second. 3. Majority of drainage cannot be diverted from channel during germination and establishment. 4. Moderately erodible soil.
3. Sodding	<ul style="list-style-type: none"> 1. Slopes greater than 5%. 2. Velocity between 5 and 6 feet per second. 3. Majority of drainage cannot be diverted away from channel during germination and establishment. 4. Highly erodible soil.

- 4. The details for each alternative are as follows:
 - a. (1a.) Hydroseeding.
 - 1) All seeding shall be done in accordance with Section 32 92 00 – Turf and Grasses.
 - 2) When mulching, use 2 tons per acre small grain straw with an acceptable tacking agent.
 - b. (1b.) Establishing Bermuda Grass by Sprigging.
 - 1) Irrigation water must be available during the first four weeks.
 - 2) Divert drainage away from the channel during the first three weeks of the establishment period by using temporary berms, silt fencing, or straw bale barriers.
 - c. (2.) Seeding with Straw Mulch and Jute Mesh or Erosion Netting.
 - 1) In addition to Item 1.a above, secure straw mulch with netting. If using jute mesh, use only 1 ton per acre small grain straw, evenly distributed.
 - 2) If using a light plastic or paper erosion netting, 1-1/2 to 2 tons per acre of straw is appropriate.
 - 3) Care should be taken to staple the mesh or netting.
 - d. (3.) Sodding.
 - 1) When using strip sod, sod shall be grown through a plastic mesh that offers additional strength and erosion resistance.

- 2) Swale and its outlet shall be protected against erosion by vegetative cover as soon after construction as practical and before diversions or other channels are connected to them.
5. Details of Swale Block Construction:
- a. Swale blocks may be constructed using a variety of materials, including wood, concrete, asphalt, metal, natural soil, or a mixture of each.
 - b. The most common application is the use of native, in-place soil shaped into the form of a low berm.
 - c. Regardless of the material or materials chosen to form the restriction, the designer should take proper precautions to ensure that the facility is not subject to undercutting and erosion, especially along its toe.
 - d. Swale block height should be limited to 1.5 feet for public safety and roadway subgrade protection.
 - e. It is also recommended that the following guidelines be applied to ensure good structural integrity and easy maintenance (mowing):
 - 1) The front and back slope of the structure shall not be steeper than 10 feet horizontal to 1 foot vertical, unless pavement or another equally stable material is used to protect the berm from erosion during overflow conditions.
 - 2) Berms should be constructed of clean, stable material suitable for the construction of embankments.
 - 3) Embankment material should be free from tree roots, construction debris, and other extraneous material. Inorganic silts, organic silts, and organic clays, as well as peat or other highly organic soil, should not be considered.
 - 4) Sod should be used to protect these embankments from erosion. Protection should be provided extending at least 2 feet from the toe of the berm along both the face and back slope of the structure.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Installation of all erosion control shall be in accordance with the Florida Stormwater Erosion and Sedimentation Control Inspector's Manual and State of Florida Department of Transportation Standard Specifications and manufacturer's written instructions.

3.2 MAINTENANCE

- A. Inspect erosion control devices within 24 hours after each rainfall or daily during periods of prolonged rainfall.
- B. Repair or replace damaged or defective materials or installation immediately.
- C. Remove sediment deposits within 24 hours after each storm event or when deposits reach one-half height of fence or barrier, whichever occurs first.
- D. Apply replacement bales or additional mulch, netting, or matting immediately to maintain suitable cover.
- E. Where vegetative cover has been placed, inspect until vegetative cover is established and functioning as intended.

3.3 REMOVAL OF EROSION CONTROL DEVICES

- A. Maintain erosion control measures disturbed earth has been paved or vegetated.
- B. Remove erosion control devices prior to final inspection and acceptance of Project site by Owner.
- C. Restore or replace areas disturbed or damaged by removal of erosion control devices to satisfaction of Engineer/Architect or Owner's Representative.

SECTION 32 17 14 - STEEL GUARDRAIL

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Steel channel guard and steel posts.
 - 2. Excavating for post bases.

1.2 REFERENCES

- A. American Society for Testing and Materials:
 - 1. ANSI/ASTM A 123 - Zinc (Hot Dip Galvanized) Coatings on Iron and Steel Products.
 - 2. ASTM A 36 - Structural Steel.
 - 3. ASTM A 500 - Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Round and Shapes.
 - 4. ASTM C 94 - Ready-mixed Concrete.
- B. SDHPT - 1982 Standard Specifications for Construction of Highways, Streets and Bridges.

1.3 SYSTEM DESCRIPTION

- A. Steel Channel: C9 x 15, unless otherwise indicated on drawings.
- B. Guardrail Height: Top of top-rail 1'-10," above finish grade, unless shown otherwise on drawings.
- C. Post: As indicated on drawings.
- D. Post Spacing: At intervals, as indicated on drawings, but not exceeding 8-feet, o.c.
- E. Post Foundation Depth: minimum 2-feet below finish grade.

1.4 SUBMITTALS

- A. Shop Drawings: Indicate plan layout, spacing of components, post foundation dimensions, anchorage, and schedule of components.

1.5 FIELD MEASUREMENTS

- A. Verify that field measurements are as instructed by manufacturer.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Guardrail Channel: ASTM A 36 hot rolled steel "C" channel.
- B. Steel Posts: ASTM A 500 hollow structural steel tubes.
- C. Concrete: ASTM C 94; Normal Portland Cement, 3,000 psi strength at 28 days.

2.2 FINISHES

- A. Channels and Posts: Galvanized to ANSI/ASTM A 123; 2.0 oz/sq.ft. coating.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install rails and posts in accordance with approved shop drawings.
- B. Weld channels to posts with fillet welds at top and bottom flanges of steel channel.

3.2 ERECTION TOLERANCES

- A. Posts - Maximum Variation from Plumb: 1/4".
- B. Rail - Maximum Offset from True Position: 1".
- C. Rail - Maximum Variation from True Height: 1/4".
- D. Components shall not infringe adjacent property lines.

END OF SECTION

SECTION 32 17 23 - PAVEMENT MARKINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Painted markings applied to asphalt and concrete pavement.

1.2 ACTION SUBMITTALS

- A. Product Data: Technical data for each type of product including tested physical and performance properties.
- B. Shop Drawings: Submit plans Indicating pavement markings, colors, lane separations, defined parking spaces, and dimensions to adjacent work.
 - 1. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.
- C. Samples: Submit For each exposed product and for each color and texture specified; on rigid backing, 8 inches (200 mm) square.

1.3 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of DOT FHWA's Manual on Uniform Traffic Control Devices for Streets and Highways, as adopted by the Florida Department of Transportation, for pavement markings.
 - 1. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.
- B. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of DOT FHWA's Manual on Uniform Traffic Control Devices for Streets and Highways, as adopted by the Florida Department of Transportation, for pavement markings.
 - 1. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.
- C. Preinstallation Conference: Conduct conference at project site.
 - 1. Review methods and procedures related to marking pavement including, but not limited to, the following:
 - a. Pavement aging period before application of pavement markings.
 - b. Review requirements for protecting pavement markings, including restriction of traffic during installation period.

1.4 FIELD CONDITIONS

- A. Environmental Limitations: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of 40 degrees F (4.4 degrees C) for alkyd materials and 55 degrees F (12.8 degrees C) for water-based materials, and not exceeding 95 degrees F (35 degrees C).

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Environmental Regulations: Comply with local laws, rules, and regulations of governmental authorities having jurisdiction.
- B. Accessibility Requirements: Comply with applicable requirements.
 - 1. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (2004 ADAAG) Standards for Accessible Design 2010.
 - 2. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
 - 3. Florida Accessibility Code for Building Construction.

2.2 MATERIALS

- A. Manufacturers: Subject to compliance with requirements, provide “Durable Paint products, approved by the Florida Department of Transportation, by one of the following:
 - 1. Ennis-Flint, Inc, (formerly Ennis Paint, Inc. dba Ennis-Flint)
 - 2. Pride Enterprises dba Baker Paint.
 - 3. Pride Enterprises dba Pride of Florida
 - 4. Sherwin-Williams Company, SW Highway
 - 5. Safety Coatings, Inc.
- B. Pavement Marking Paint: Water based alkyd resin type, lead and chromate free, ready mixed, industrial quality or better, complying with AASHTO M 248, Type F; colors complying with jurisdictional requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify pavement is dry and in suitable condition to begin pavement marking according to manufacturer's written instructions.
- B. Proceed with pavement marking only after unsatisfactory conditions have been corrected.

3.2 APPLICATION

- A. Do not apply pavement marking paint until layout, colors, and placement have been verified with Architect.
- B. Allow paving to age for a minimum of 30 days before starting pavement marking.
- C. Sweep and clean surface to eliminate loose material and dust.
- D. Striping: Provide straight edged uniform line width of 4 inches.
 - 1. Stall Divisions: Provide standard size parking stalls with white striping.
 - 2. Arrows and Pavement Signage: Apply directional markings and stencils in accordance with manufacturers written instructions.
 - 3. Fire Lane Markings: Comply with local Fire Marshal’s requirements. Use approve stencils for lettering and graphics.

- E. Apply graphic symbols and lettering with paint resistant, die cut stencils, firmly secured to pavement. Mask an extended area beyond edges of each stencil to prevent paint application beyond stencil. Apply paint so that it cannot run beneath stencil.

3.3 PROTECTING AND CLEANING

- A. Protect pavement markings from damage and wear during remainder of construction period.
- B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 32 31 13 - CHAIN LINK FENCES AND GATES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Chain link fences.
 - 2. Privacy slats.

1.2 ACTION SUBMITTALS

- A. Product Data: Technical data including construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:
 - 1. Fence and gate posts, rails, and fittings.
 - 2. Chain link fabric, reinforcements, and attachments.
 - 3. Accessories: Privacy slats.
 - 4. Hardware.
- B. Shop Drawings: Submit plans, elevations, sections, details, and attachments to other work.
 - 1. Include accessories, and hardware.
- C. Samples: When requested by Architect, submit for each type of component with factory applied finish:
 - 1. Polymer Coated Components: In 6 inch (150-mm) lengths for components and on full sized units for accessories.
- D. Delegated Design Submittal: Submit delegated design structural performance of chain link fence and gate frameworks, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Certificates: Submit certificates for each type of chain link fence.
- B. Product Test Reports: For framework strength according to ASTM F 1043, for tests performed by manufacturer and witnessed by a qualified testing agency.
- C. Field quality control reports.

1.4 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For testing fence grounding; member company of NETA or an NRTL.
 - 1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.
- B. Mockups: Build mockups to set quality standards for fabrication and installation.
 - 1. Build mockup for typical chain link fence, including accessories.
 - a. Size: 10 foot (3 m) length of fence.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

- C. Preinstallation Conference: Conduct conference at site.
 - 1. Inspect and discuss electrical roughing-in, equipment bases, and other preparatory work specified elsewhere.
 - 2. Review sequence of operation for each type of gate operator.
 - 3. Review coordination of interlocked equipment specified in this Section and elsewhere.
 - 4. Review required testing, inspecting, and certifying procedures.

1.5 FIELD CONDITIONS

- A. Field Measurements: Verify layout information for chain-link fences and gates shown on Drawings in relation to property survey and existing structures. Verify dimensions by field measurements.

1.6 WARRANTY

- A. Written warranty signed by manufacturer and Installer in which to repair or replace components of chain link fences and gates that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure to comply with performance requirements.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - c. Faulty operation of gate operators and controls.
 - 2. Warranty Period: 15 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer to design chain link fence and gate frameworks.
- B. Structural Performance: Chain link fence and gate frameworks shall withstand the design wind loads and stresses for fence height(s) and under exposure conditions indicated according to ASCE/SEI 7.
 - 1. Design Wind Load: Indicated on Drawings.
 - a. Minimum Post Size: Determine according to ASTM F 1043 for post spacing not to exceed 10 feet (3 m) for Material Group IA, ASTM F 1043, Schedule 40 steel pipe.
 - b. Minimum Post Size and Maximum Spacing: Determine according to CLFMI WLG 2445, based on mesh size and pattern specified.
- C. Lightning Protection System: Maximum resistance to ground value of 25 ohms at each grounding location along fence under normal dry conditions.
- D. UL Standard: Manufacture and label gate operators according to UL 325.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 CHAIN LINK FENCE FABRIC

- A. Provide fabric in single piece heights measured between top and bottom of outer edge of selvage knuckle or twist according to CLFMI Product Manual and requirements indicated:

1. Fabric Height: Indicated on Drawings.
2. Steel Wire for Fabric: Wire diameter of 0.192 inch (4.88 mm).
 - a. Mesh Size: 1-1/4 inch (30 mm).
 - b. Zinc Coated Fabric: ASTM A 392, Type II, Class 2, 2.0 oz./sq. ft. (610 g/sq. m) with zinc coating applied after weaving.
 - c. Coat selvage ends of metallic coated fabric before the weaving process with manufacturer's standard clear protective coating.
3. Selvage: Twisted top and knuckled bottom.

2.3 FENCE FRAMEWORK

- A. Posts and Rails: ASTM F 1043 for framework, including rails, braces, and line; terminal; and corner posts. Provide members with minimum dimensions and wall thickness according to ASTM F 1043 based on the following:
 1. Fence Height: As indicated on Drawings.
 2. Heavy Industrial Strength Material: Group IA, round steel pipe, Schedule 40.
 - a. Line Post: 4.0 inches (102 mm) in diameter.
 - b. End, Corner, and Pull Posts: 4.0 inches (102 mm) in diameter.
 3. Horizontal Framework Members: Intermediate, top and bottom rails according to ASTM F 1043.
 4. Brace Rails: ASTM F 1043.
 5. Metallic Coating for Steel Framework:
 - a. Type A: Not less than minimum 2.0-oz./sq. ft. (0.61-kg/sq. m) average zinc coating according to ASTM A 123/A 123M or 4.0-oz./sq. ft. (1.22-kg/sq. m) zinc coating according to ASTM A 653/A 653M.

2.4 TENSION WIRE

- A. Metallic Coated Steel Wire: 0.177-inch (4.5 mm) diameter, marcelled tension wire according to ASTM A 817 or ASTM A 824, with the following metallic coating:
 1. Type II: Zinc coated (galvanized) by hot dip process, with the following minimum coating weight:
 - a. Matching chain link fabric coating weight.

2.5 FITTINGS

- A. Provide fittings according to ASTM F 626.
- B. Post Caps: Provide for each post.
 1. Provide line post caps with loop to receive tension wire or top rail.
- C. Rail and Brace Ends: For each gate, corner, pull, and end post.
- D. Rail Fittings: Provide the following:
 1. Top Rail Sleeves: Pressed steel or round steel tubing not less than 6 inches (152 mm) long.
 2. Rail Clamps: Line and corner boulevard clamps for connecting intermediate and bottom rails to posts.
- E. Tension and Brace Bands: Pressed steel.
- F. Tension Bars: Steel, length not less than 2 inches (50 mm) shorter than full height of chain link fabric. Provide one bar for each gate and end post, and two for each corner and pull post, unless fabric is integrally woven into post.

- G. Truss Rod Assemblies: Steel, hot dip galvanized after threading rod and turnbuckle or other means of adjustment.

2.6 PRIVACY SLATS

- A. Fiber Glass Reinforced Plastic Slats: UV light stabilized fiber glass reinforced plastic, not less than 0.06 inch (1.5 mm) thick, sized to fit mesh specified for direction indicated, with vandal resistant fasteners and lock strips.
- B. Color: Selected by Architect.
- C. Nonshrink, Nonmetallic Grout: Factory packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout, recommended in writing by manufacturer, for exterior applications.

2.7 CONCRETE

- A. Concrete for post footings shall have a 28-day compressive strength as required by the delegated design engineering documents..

2.8 GROUNDING MATERIALS

- A. Connectors and Grounding Rods: Listed and labeled for complying with UL 467.
 - 1. Connectors for Below Grade Use: Exothermic welded type.
 - 2. Grounding Rods: Copper clad steel, 5/8 by 96 inches (16 by 2440 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for site clearing, earthwork, pavement work, and other conditions affecting performance of the Work.
 - 1. Do not begin installation before final grading is completed unless otherwise permitted by Architect.
- B. Proceed with installation after correcting unsatisfactory conditions.

3.2 PREPARATION

- A. Stake locations of fence lines and terminal posts. Do not exceed intervals of 20 feet (152 m) or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

3.3 CHAIN LINK FENCE INSTALLATION

- A. Install chain link fencing according to ASTM F 567 and more stringent requirements specified.
- B. Post Excavation: Drill or hand excavate holes for posts to diameters and spacings indicated, in firm, undisturbed soil.
- C. Post Setting: Set posts in concrete at indicated spacing into firm, undisturbed soil.
 - 1. Verify posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.

2. Concrete Fill: Place concrete around posts to dimensions indicated and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.
 - a. Exposed Concrete: Extend 2 inches (50 mm) above grade; shape and smooth to shed water.
 - b. Concealed Concrete: Place top of concrete 2 inches (50 mm) below grade to allow covering with surface material.
 - c. Posts Set into Sleeves in Concrete: Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts are inserted into sleeves, fill annular space between post and sleeve with nonshrink, nonmetallic grout, mixed and placed according to anchoring material manufacturer's written instructions. Finish anchorage joint to slope away from post to drain water.
 - d. Posts Set into Holes in Concrete: Form or core drill holes not less than 5 inches (127 mm) deep and 3/4 inch (20 mm) larger than OD of post. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink, nonmetallic grout, mixed and placed according to anchoring material manufacturer's written instructions. Finish anchorage joint to slope away from post to drain water.
- D. Terminal Posts: Install terminal end, corner, and gate posts according to ASTM F 567 and terminal pull posts at changes in horizontal or vertical alignment as indicated on Drawings. For runs exceeding 500 feet (152 m), space pull posts an equal distance between corner or end posts.
- E. Line Posts: Space line posts uniformly at 96 inches (2440 mm) o.c., maximum, see drawings for aesthetic considerations.
- F. Post Bracing and Intermediate Rails: Install according to ASTM F 567, maintaining plumb position and alignment of fence posts. Diagonally brace terminal posts to adjacent line posts with truss rods and turnbuckles. Install braces at end and gate posts and at both sides of corner and pull posts.
 1. Locate horizontal braces at midheight of fabric 72 inches (1830 mm) or higher, on fences with top rail, and at two-third fabric height on fences without top rail. Install so posts are plumb when diagonal rod is under proper tension.
- G. Tension Wire: Install according to ASTM F 567, maintaining plumb position and alignment of fence posts. Pull wire taut, without sags. Fasten fabric to tension wire with 0.120 inch (3.05 mm) diameter hog rings of same material and finish as fabric wire, spaced a maximum of 24 inches (610 mm) o.c. Install tension wire in locations indicated before stretching fabric. Provide horizontal tension wire at the following locations:
 1. Extended along top and bottom of fence fabric. Install top tension wire through post cap loops. Install bottom tension wire within 6 inches (152 mm) of bottom of fabric and tie to each post with not less than same diameter and type of wire.
- H. Top Rail: Install according to ASTM F 567, maintaining plumb position and alignment of fence posts. Run rail continuously through line post caps, bending to radius for curved runs and terminating into rail end attached to posts or post caps fabricated to receive rail at terminal posts. Provide expansion couplings as recommended in writing by fencing manufacturer.
- I. Intermediate and Bottom Rails: Secure to posts with fittings.
- J. Tension or Stretcher Bars: Thread through fabric and secure to end, corner, pull, and gate posts, with tension bands spaced not more than 15 inches (380 mm) o.c.
- K. Tie Wires: Use wire of proper length to firmly secure fabric to line posts and rails. Attach wire at one end to chain link fabric, wrap wire around post a minimum of 180 degrees, and attach other

end to chain link fabric according to ASTM F 626. Bend ends of wire to minimize hazard to individuals and clothing.

1. Maximum Spacing: Tie fabric to line posts at 12 inches (300 mm) o.c. and to braces at 24 inches (610 mm) o.c.

L. Fasteners: Install nuts for tension bands and carriage bolts on the side of fence opposite the fabric side. Peen ends of bolts or score threads to prevent removal of nuts.

M. Privacy Slats: Install slats in direction indicated, securely locked in place.

1. Diagonally for privacy factor of 80 to 85, and as indicated on Drawings.

N. Excavation: Hand excavate holes for posts, pedestals, and equipment bases/pads, in firm, undisturbed soil to dimensions and depths and at locations according to gate operator component manufacturer's written instructions and as indicated.

3.4 GROUNDING AND BONDING

A. Fence and Gate Grounding:

1. Ground for fence and fence posts shall be a separate system from.
2. Install ground rods and connections at maximum intervals of 1500 feet (450 m).
3. Fences within 100 Feet (30 m) of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of 750 feet (225 m).
 - a. Bond across openings, with and without gates, except openings indicated as intentional fence discontinuities. Use No. 2 AWG wire and bury it at least 18 inches (457 mm) below finished grade.

B. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a ground rod located a maximum distance of 150 feet (45 m) on each side of crossing.

C. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is 6 inches (152 mm) below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at grounding location.

1. Make grounding connections to each barbed wire strand with wire-to-wire connectors designed for this purpose.
2. Make grounding connections to each barbed tape coil with connectors designed for this purpose.
3. Bonding for Gates: Connect bonding jumper between gate post and gate frame.

D. Connections:

1. Make connections with clean, bare metal at points of contact.
2. Make aluminum to steel connections with stainless steel separators and mechanical clamps.
3. Make aluminum to galvanized steel connections with tin plated copper jumpers and mechanical clamps.
4. Make above grade ground connections with mechanical fasteners.
5. Make below grade ground connections with exothermic welds.
6. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

E. Bonding to Lightning Protection System: Ground fence and bond fence grounding conductor to lightning protection down conductor or lightning protection grounding conductor according to NFPA 780.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests.
- B. Grounding Resistance Tests: Subject completed grounding system to a megger test at each grounding location. Measure grounding resistance no fewer than two full days after last trace of precipitation, without soil having been moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural grounding resistance. Perform tests by two point method according to IEEE 81.
- C. Excessive Grounding Resistance: If resistance to grounding exceeds specified value, notify Architect promptly. Include recommendations for reducing grounding resistance and a proposal to accomplish recommended work.
- D. Report: Prepare test reports certified by a testing agency of grounding resistance at each test location. Include observations of weather and other phenomena that may affect test results.

3.6 DEMONSTRATION

- A. Engage a factory authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain chain link fences and gates.

END OF SECTION

SECTION 32 31 19 - DECORATIVE METAL FENCES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Decorative aluminum fences.

1.2 ACTION SUBMITTALS

- A. Product Data: Technical data including construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: Submit plans, elevations, sections, post spacing, mounting details , and grounding details.
- C. Samples: Provide sample 12 inches (300 mm) in length for linear materials.

1.3 INFORMATIONAL SUBMITTALS

- A. Field quality control reports.
- B. Product Test Reports: Submit reports for decorative metallic coated steel tubular picket fences, including finish, indicating compliance with referenced standard and specified requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Submit data for gate operators to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Installer having minimum 5 years documented experience who is the fabricator of decorative metal fences and gates.
- B. Preinstallation Conference: Conduct conference at site.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Wind Loading:
 - 1. Fence Height: To match existing.
 - 2. Wind Exposure Category: See Drawings.
 - 3. Design Wind Speed: See Drawings.
 - 4. Design Wind Pressure: See Drawings.
- B. Lightning Protection System: Maximum grounding-resistance value of 25 ohms under normal dry conditions.

2.2 DECORATIVE ALUMINUM FENCES

- A. Decorative Aluminum Fences: Fences made from aluminum extrusions.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Alumi-Guard, Inc.
 - b. Ameristar Fence Products; an ASSA ABLOY company.
 - c. Elite Fence Products, Inc.
 - d. Ideal Aluminum Products.
 - e. Iron Eagle Industries, Inc.
 - f. Merchants Metals.
 - g. Superior Aluminum Products, Inc.
 - h. Ultra Aluminum Mfg., Inc.
 - i. Virginia Railing and Gates, LLC.
- B. Posts: Square extruded tubes.
 - 1. Line Posts: Overall size and wall thicknesses to match existing.
 - 2. End and Corner Posts: Overall size and wall thicknesses to match existing.
- C. Post Caps: Aluminum castings that cover entire top of posts, project at least 1/4 inch (6 mm) beyond posts, to match existing.
- D. Rails: Extruded aluminum channels, Profile and dimensions to match existing..
- E. Pickets: Extruded aluminum tubes, square – sized to match existing fence, including wall thickness.
 - 1. Terminate tops of pickets at top rail for flush top appearance.
 - 2. Picket Spacing: estimated 4 inches (101.6 mm) clear, to match existing.
- F. Fasteners: Concealed fastening system.
- G. Fabrication: Assemble fences into sections by welding pickets to rails.
 - 1. Fabricate sections with clips welded to rails for field fastening to posts.
 - 2. Drill clips for fasteners before finishing.
- H. Finish exposed welds to comply with NOMMA Guideline 1, Finish #2 - completely sanded joint, some undercutting and pinholes okay.
- I. Finish: Baked enamel or powder coating, to match existing fencing.

2.3 MATERIALS

- A. Aluminum: Provide alloys and tempers with not less than the strength and durability properties of alloy and temper designated in paragraphs below for each aluminum form required.
 - 1. Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063-T5.
 - 2. Tubing: ASTM B 429/B 429M, Alloy 6063-T6.
 - 3. Plate and Sheet: ASTM B 209 (ASTM B 209M), Alloy 6061-T6.
 - 4. Die and Hand Forgings: ASTM B 247 (ASTM B 247M), Alloy 6061-T6.
 - 5. Castings: ASTM B 26/B 26M, Alloy A356.0-T6.

2.4 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
 - 1. For aluminum, provide type and alloy as recommended by producer of metal to be welded and as required for strength and compatibility in fabricated items.
- B. Concrete: Dry, packaged, normal weight concrete mix complying with ASTM C 387/C 387M mixed with potable water according to manufacturer's written instructions.
- C. Nonshrink Grout: Factory packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M and specifically recommended by manufacturer for exterior applications.

2.5 GROUNDING MATERIALS

- A. Grounding Conductors: Size as indicated on Drawings. Bare, solid wire for No. 6 AWG and smaller; stranded wire for No. 4 AWG and larger.
 - 1. Material above Finished Grade: Aluminum.
 - 2. Material on or below Finished Grade: Copper.
 - 3. Bonding Jumpers: Braided copper tape, 1-5/8 inch (41 mm) wide and 1/16 inch (1.6 mm) thick, woven of No. 30 AWG bare copper wire, terminated with copper ferrules.
- B. Grounding Connectors and Grounding Rods: Comply with UL 467.

2.6 FINISHES

- A. Aluminum:
 - 1. Baked Enamel or Powder Coat Finish: AAMA 2603 except with a minimum dry film thickness of 2 mils (0.05 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - a. Color and Gloss: Selected by Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and conditions affecting performance of the work.
- B. Do not begin installation before final grading is completed unless otherwise permitted by Architect.
- C. Proceed with installation after correcting unsatisfactory conditions.

3.2 PREPARATION

- A. Stake locations of fence lines, gates, and terminal posts. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

3.3 DECORATIVE FENCE INSTALLATION

- A. Install fences according to manufacturer's written instructions.
- B. Post Excavation: Drill or hand excavate holes for posts in firm, undisturbed soil. Excavate holes to a diameter of not less than 4 times post size and a depth of not less than 24 inches (600 mm) plus 3 inches (75 mm) for each foot (300 mm) or fraction of a foot (300 mm) that fence height exceeds 4 feet (1.2 m).
- C. Post Setting: Set posts in concrete at spacing, to match existing fencing, into firm, undisturbed soil.
 - 1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
 - 2. Concrete Fill: Place concrete around posts and sleeves and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.
 - a. Concealed Concrete: Top 2 inches (51 mm) below grade to allow covering with surface material. Slope top surface of concrete to drain water away from post.
 - 3. Posts Set in Concrete: Extend post to within 6 inches (150 mm) of specified excavation depth, but not closer than 3 inches (75 mm) to bottom of concrete.
 - 4. Space posts uniformly at spacing to match existing fence.

3.4 GROUNDING AND BONDING

- A. Fence Grounding: Install at maximum intervals of 1500 feet (450 m) except as follows:
 - 1. Fences within 100 Feet (30 m) of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of 750 feet (225 m).
- B. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is 6 inches (150 mm) below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at grounding location.
- C. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.
 - 1. Use electroplated or hot tin coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
 - 2. Make connections with clean, bare metal at points of contact.
 - 3. Make aluminum to steel connections with stainless steel separators and mechanical clamps.
 - 4. Make aluminum to galvanized-steel connections with tin plated copper jumpers and mechanical clamps.
 - 5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.
- D. Bonding to Lightning Protection System: If fence terminates at lightning protected building or structure, ground the fence, and bond the fence grounding conductor to lightning protection down conductor or lightning protection grounding conductor, complying with NFPA 780.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner may engage a qualified testing agency to perform tests and inspections.
 - 1. Grounding Resistance Tests: Subject completed grounding system to a megger test at each grounding location. Measure grounding resistance not less than two full days after last trace

- of precipitation, without soil having been moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural grounding resistance. Perform tests by two-point method according to IEEE 81.
2. Excessive Grounding Resistance: If resistance to grounding exceeds specified value, notify Architect promptly. Include recommendations for reducing grounding resistance and a proposal to accomplish recommended work.

END OF SECTION

SECTION 330501 - DUCTILE IRON PIPE AND FITTINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Ductile iron pipe and fittings, linings, and coatings for water main.
 - 2. Ductile iron pipe and fittings, linings, and coatings for gravity sewer and sanitary force main.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
 - 2. Section 31 23 17 - Site Excavation, Backfill, and Compaction.
 - 3. Section 33 10 13 – Water Main Installation.
 - 4. Section 33 12 13 – Water Service Laterals.
 - 5. Section 33 13 16 - Corrosion Control - Pipe and Fittings.

1.2 REFERENCES

- A. Okaloosa County, Florida – Water/Sewer District Utilities Standards Manual – Section 2: Technical Specifications.
- B. ASTM International (ASTM):
 - 1. ASTM D1248 – Specification for Polyethylene Plastics Extrusion Materials for Wire and Cable.
- C. American Water Works Association (AWWA):
 - 1. AWWA C104 - Cement-Mortar Lining for Ductile-Iron Pipe and Fittings for Water.
 - 2. AWWA C110 - Ductile Iron and Gray-Iron Fittings, 3 In. Through 48 In. for Water.
 - 3. AWWA C111 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
 - 4. AWWA C150 - Thickness Design of Ductile Iron Pipe.
 - 5. AWWA C151 - Ductile Iron Pipe, Centrifugally Cast, for Water and Other Liquids.
 - 6. AWWA C153 - Ductile Iron Compact Fittings, 3 In. Through 24 In. and 54 In. through 61 In., for Water Service.
- D. NSF International:
 - 1. NSF 61 - Drinking Water System Components - Health Effects.

1.3 SUBMITTALS

- A. Section 01 33 00 – Submittal Procedures, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Product Data: Submit data indicating pipe, joints, fittings, and pipe accessories.
- C. Manufacturer's Installation Instructions: Indicate special procedures required to install Products specified.

- D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

- A. Pipe shall be Thickness Class 52, 53, 54, 55 or 56, diameter as shown on Drawings, and shall conform to AWWA C150.
- B. Pipe shall be Pressure Class 250, 300 or 350, diameter as shown on Drawings, and shall conform to AWWA C151.
- C. Joints shall meet the requirements of AWWA C111.
- D. All pipe and fittings shall meet the requirements of Section 01 40 00 – Quality Requirements, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework of this Project Manual.
- E. Ductile iron pipe and fittings shall be products of a single manufacturer in the United States of America.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Identification: Pipe shall be readily identified and shall contain weight, Class, or nominal thickness, and casting period clearly painted on each piece.
- B. Load and unload pipe, fittings, and accessories by lifting with hoists or skidding to avoid shock or damage.
- C. Under no circumstances shall material be dropped.
- D. Do not roll or skid pipe handled on skidways against other pipes or ground.
- E. Pad hooks or pipe tongs and use to prevent damage to exterior surface of pipe.
- F. Keep stored pipe free of damage.
- G. Keep interiors of all pipe, fittings, and other appurtenances free from dirt or foreign matter.
- H. Use timbers to separate pipe stored on ground from ground and other pipes.
- I. Store gaskets for mechanical and push-on joints in cool location out of direct sunlight and out of contact with petroleum products.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Ductile iron pipe and fittings shall be manufactured in the United States of America.

- B. Acceptable Manufacturers:
1. American Cast Iron Pipe Company.
 2. Clow Water Systems Company.
 3. Griffin Pipe Products Company.
 4. McWane Cast Iron Pipe Company.
 5. United States Pipe and Foundry Company.
 6. Substitutions: In accordance with Section 01 25 00 – Substitution Procedures, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework Not Permitted.

2.2 PIPE

- A. Pipe shall be centrifugally cast in metal or sand-lined molds.
- B. Design pipe with bell and spigot, mechanical joint and flanged ends designed for rubber gasket joints.
- C. Manufacturer's mark, year of production, and "DI" or "DUCTILE" shall be cast or stamped on pipe.
- D. Pipe shall be cement mortar lined and have internal and external bituminous coats.

2.3 FITTINGS

- A. Fittings shall be centrifugally cast in metal or sand-lined molds.
- B. Use of compact fittings conforming to AWWA C153 shall be acceptable.
- C. Wherever mechanical joints are used, joint bolts and nuts shall be corrosion resistant steel, NSS Technologies Core-Blue or equal.
- D. In no case shall fitting grade rating less than adjoining pipe.
- E. Fittings shall be from same manufacturer as pipe.

2.4 JOINTS

- A. Pipe and fittings shall be joined by means of a compression type rubber gasket push-on or mechanical joint conforming to AWWA C111.
- B. Nuts and bolts shall be corrosion resistant steel, NSS Technologies, Inc. Cor-Blue or approved equal.
- C. Wherever it is necessary to deflect joint pipe from a straight line, deflection shall not exceed that shown on table below:

Size of Pipe (Inches)	Deflection (18-foot length) Push-On Joint (Inches)	Deflection (18-foot length) Mechanical Joint (Inches)
3 – 4	19	31
6	19	27
8 – 12	19	29
14 – 16	11	13.5
18 – 20	11	11
24	11	9
30	7.5	9
36	7.5	8
42 – 48	7.5	7.5

D. Supply joint with a heavy-duty gasket designed to form a pressure-tight seal.

N.T.S. – The following table of available push-on and mechanical joint gaskets should be used for selecting a specific gasket type for project. Maximum service temperatures are based on lowest temperature rated mechanical joint applications and will also be suitable for push-on joint applications. Consult a pipe manufacturer if gasket types for a specific project are in question. Typical gasket installation for water main and sewage is Plain Rubber – Styrene Butadiene (SBR) gaskets. Other gasket descriptions and usage for specialized applications are as follows:

Common Name Or Trade Name	Chemical Name	Temperature Capability	Common Uses
Plain Rubber	Styrene Butadiene (SBR)	120° F	Fresh Water, Salt Water, Sanitary Sewage
Neoprene	Polychloroprene (CR)	200° F	Fresh Water, Sewage, Outdoor Exposure
Fluoroelastomer	FKM	225° F	Aromatic Hydrocarbons, Gasoline, Refined Petroleum Products, most Chemicals and Solvents, High Temperature, Air
Nitrile	Acrylonitrile Butadiene	120° F	Non-Aromatic Hydrocarbons, Petroleum Oil, Hydraulic Fluids, Fuel Oil, Fats, Oil, Grease
EPDM	Ethylene Propylene Diene Monomer	225° F	Water, Sewage, Ketones, Dilute Acids and Alkalies, Vegetable Oil, Alcohols, Outdoor Exposures, Air

- E. Gaskets shall be [Styrene Butadiene (SBR) – Plain Rubber] [Polychloroprene (CR) - Neoprene] [FKM - Fluoroelastomer] [Acrylonitrile Butadiene - Nitrile] [Ethylene Propylene Diene Monomer - EPDM].
- F. Joint shall be boltless, freely deflecting, ball and socket of the push-on type. Joint restraint shall be provided by a ductile iron restraining ring.
- G. Allow a maximum joint deflection of 15 degrees.

2.5 CEMENT MORTAR LINING

- A. Pipe and fittings shall be cement lined in conformance with AWWA C104.
- B. Thickness of lining shall be:
 - 1. Pipe sizes 3 through 12 inches: 1/16-inch.
 - 2. Pipe sizes 14 through 24 inches: 3/32-inch.
 - 3. Pipe sizes 30 through 64 inches: 1/8-inch.

2.6 DISINFECTION

- A. Take precautions to protect interiors of pipes, fittings, and valves against contamination. Disinfection of water mains shall conform to requirements of Section 33 13 00 – Water Main Disinfection.

2.7 COATINGS

- A. Buried Ductile Iron Pipe
 - 1. Inside Coating:
 - a. Coat entire inside of socket, including gasket cavity, with a minimum of 8 mils of epoxy to prevent joint corrosion.
 - b. Pipe shall be seal coated over cement lining.
 - 2. Outside Coating:
 - a. Coat last 6 inches of spigot, including spigot face with 8 mils of epoxy to prevent joint corrosion.
 - b. Coat remainder of pipe with an asphaltic coating, minimum 1-mil thickness.
- B. Above Grade Ductile Iron Pipe
 - 1. Inside Coating:
 - a. Coat entire inside of socket, including gasket cavity, with a minimum of 8 mils of epoxy to prevent joint corrosion.
 - b. Pipe shall be seal coated over cement lining.
 - 2. Outside Coating:
 - a. Above Grade – Exterior: (Mild Exposure)
 - 1) Standard 1-mil asphaltic coating per AWWA C151.
 - 2) Asphaltic coating is not provided for and is not suitable with bonded topcoats.
 - b. Above Grade – Interior/Non-immersion: (Mild Exposure)
 - 1) NSF 61 certified for use in potable water systems.
 - 2) Shop coat thickness: 2.0-4.0 mils dry film thickness.
 - 3) Acceptable topcoats include alkyds, aluminums, epoxies including polyamide, polyamidoamine, water-borne and coal tar, and urethanes.
 - c. Interior, Exterior, or Immersion: (Aggressive Exposure)

- 1) NSF 61 certified for use in potable water systems.
- 2) Shop coat thickness: 3.0-8.0 mils dry film thickness.
- 3) Acceptable topcoats include epoxies (amine, polyamide, polyamidoamine, water-borne & coal tar) and urethanes.

2.8 POLYETHYLENE ENCASEMENT

- A. Encase pipe in polyethylene conforming to requirements of ASTM D1248 and Section 33 13 16 – Corrosion Control - Pipe and Fittings.

PART 3 - EXECUTION (Not Used)

END OF SECTION 330501

SECTION 330505 - POLYVINYL CHLORIDE (PVC) GRAVITY SEWER PIPE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Polyvinyl Chloride (PVC) Sewer Pipe and Fittings for gravity sanitary and storm sewer system piping.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
 - 2. Section 31 23 17 - Site Excavation, Backfill and Compaction.
 - 3. Section 33 40 13 – Storm Sewer Installation.

1.2 REFERENCES

- A. Okaloosa County, Florida – Water/Sewer District Utilities Standards Manual – Section 2: Technical Specifications.
- B. ASTM International (ASTM):
 - 1. ASTM D2321 - Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
 - 2. ASTM D3034 - Specification for Type PSM Polyvinyl Chloride (PVC) Sewer Pipe and Fittings. Nominal sizes 4-inch through 15-inch.
 - 3. ASTM D3212 - Specification for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.
 - 4. ASTM F477 - Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
 - 5. ASTM F679 - Specification for Polyvinyl Chloride (PVC) Large Diameter Plastic Gravity Sewer Pipe and Fittings.
 - 6. ASTM F794 - Specification for Polyvinyl Chloride (PVC) Profile Gravity Sewer Pipe and Fittings Based on Controlled Inside Diameter, Nominal sizes 4-inches through 48-inches.
 - 7. ASTM F913 - Specification for Thermoplastic Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

1.3 SUBMITTALS

- A. Section 01 33 00 – Submittal Procedures, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Product Data: Submit data indicating pipe, joints, fittings and pipe accessories.
- C. Manufacturer's Installation Instructions: Indicate special procedures required to install Products specified.
- D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

- A. Pipe, joints and fittings shall meet requirements of ASTM Standards.
- B. Products shall be marked and shall affirm that product was manufactured, inspected, sampled, and tested in accordance with ASTM Specification and has been found to meet requirements of specification.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Load and unload pipe, fittings, and accessories by lifting with hoists or skidding to avoid shock or damage.
- B. Under no circumstances shall material be dropped.
- C. Do not roll or skid pipe handled on skidways against pipe or ground.
- D. Pad hooks or pipe tongs and use to prevent damage to exterior surface of pipe.
- E. Keep stored pipe free of damage.
- F. Keep interiors of pipe, fittings, and other appurtenances free from dirt or foreign matter.
- G. Use timbers to separate pipe stored on ground from ground and other pipe.
- H. Store gaskets for push-on joints in cool location out of direct sunlight and out of contact with solvents and petroleum products.
- I. Clearly mark pipe at intervals of not less than five feet with the following information:
 - 1. Manufacturer's name or trademark and code.
 - 2. Nominal pipe size.
 - 3. PVC cell classification.
 - 4. Type of pipe material and ASTM Designation for pipe.
- J. Clearly mark fittings with following information:
 - 1. Manufacturer's name or trademark.
 - 2. Nominal size.
 - 3. Material designation.
 - 4. Type of material and ASTM designation.

PART 2 - PRODUCTS

2.1 GRAVITY [SANITARY SEWER] [AND] [STORM SEWER] PIPE

- A. PVC Pipe: ASTM D3034 SDR 26 and 35 Polyvinyl Chloride (PVC); Type PSM SDR 26 PVC Sewer Pipe and Type PSM SDR 35 PVC Sewer Pipe; Nominal diameter 4-inches through 15-inches as designated on Drawings; integral gasketed joint.

2.2 FITTINGS

- A. Pipe used in fabricated fittings shall meet quality and dimensional requirements listed in standard for that pipe. Fittings shall use same joint system as pipe.
- B. Pipe used in fabricated fittings shall have a wall thickness equal to or greater than wall thickness of pipes to which fitting, or that part of fitting, will be joined.
- C. No part of spur or branch shall protrude into waterway of fitting more than 0.070-inch.
- D. All edges and joints exposed to sewage shall be rounded and free from any rough parts that could catch solids.
- E. No fitting shall have an inside diameter dimension smaller than base inside diameter for that pipe size and DR.

2.3 JOINTS

- A. Flexible elastomeric seals shall comply with requirements of ASTM F477, natural or synthetic rubber, ASTM F913, thermoplastic elastomers, for joints that require no internal or external pressure to effect initial seal.
- B. Lubricant shall be of such composition that it will in no way damage gasket or pipe due to prolonged exposure and shall not affect sealing capability of gasket.

2.4 ACCESSORIES

- A. Pipe Couplings:
 - 1. Dresser, Inc, Addison, TX.
 - 2. Fernco, Inc., Davison MI.
 - 3. Or an approved equal.
- B. Identification Warning Tape: Aluminum underground warning tape, 2-inch width. Color-Bright Green, warning message "Caution Buried SANITARY, STORM or SEWER Below," to repeat every 30 inches.
- C. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Installed to enable electronic locating of underground utility.

PART 3 - EXECUTION (Not Used)

END OF SECTION 330505

This Page Intentionally Left Blank

SECTION 330506 - POLYVINYL CHLORIDE (PVC) PRESSURE PIPE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Polyvinyl Chloride (PVC) pressure pipe for water main.
 - 2. Polyvinyl Chloride (PVC) pressure pipe for sanitary force main.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
 - 2. Section 31 23 17 - Site Excavation, Backfill, and Compaction.
 - 3. Section 33 10 13 – Water Main Installation.

1.2 REFERENCES

- A. Okaloosa County, Florida – Water/Sewer District Utilities Standards Manual – Section 2: Technical Specifications.
- B. ASTM International (ASTM):
 - 1. ASTM D3139 – Specification for Joints for Plastic Pressure Pipes Using Flexible Elastomeric Seals.
 - 2. ASTM F477 - Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
- C. American Water Works Association (AWWA):
 - 1. AWWA C110 - Ductile-Iron and Gray-Iron Fittings, 3 Inches Through 48 Inches for Water.
 - 2. AWWA C153 - Ductile Iron Compact Fittings, 3 Inches Through 24 Inches and 54 Inches Through 64 Inches for Water Service.
 - 3. AWWA C900 - Polyvinyl Chloride (PVC) Pressure Pipe, 4 Inches Through 12 Inches for Water Distribution.
 - 4. AWWA C905 - Polyvinyl Chloride (PVC) Pressure Pipe and Fabricated Fittings, 14 Inches Through 48 Inches for Water Transmission and Distribution.

1.3 SUBMITTALS

- A. Section 01 33 00 – Submittal Procedures, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Product Data: Submit data indicating pipe, joints, fittings and pipe accessories.
- C. Manufacturer's Installation Instructions: Indicate special procedures required to install Products specified.
- D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

- A. Pipe, joints, and fittings shall meet requirements of ASTM and AWWA Standards.

- B. Products shall be marked and manufacturer shall affirm that product was manufactured, inspected, sampled, and tested in accordance with ASTM and AWWA Standards and have been found to meet requirements of Standards.

1.5 PRODUCT DELIVERY, HANDLING, AND STORAGE

- A. Load and unload pipe, fittings, and accessories by lifting with hoists or skidding to avoid shock or damage.
- B. Under no circumstances shall material be dropped.
- C. Do not roll or skid pipe handled on skidways against pipe or ground.
- D. Pad hooks or pipe tongs and use to prevent damage to exterior surface of pipe.
- E. Keep stored pipe free of damage.
- F. Keep interiors of pipe, fittings, and other appurtenances free from dirt or foreign matter.
- G. Use timbers to separate pipe stored on ground from ground and other pipe.
- H. Store gaskets for mechanical and push-on joints in cool location out of direct sunlight and out of contact with solvents and petroleum products.
- I. Clearly mark pipe at intervals of not less than five feet with the following information:
 - 1. Manufacturer's name or trademark and code.
 - 2. Nominal pipe size.
 - 3. PVC cell classification.
 - 4. Type of pipe material and ASTM Designation for pipe.
- J. Clearly mark fittings with following information:
 - 1. Manufacturer's name or trademark.
 - 2. Nominal size.
 - 3. Material designation.
 - 4. Type of material and ASTM designation.

PART 2 - PRODUCTS

2.1 WATER MAIN AND FORCE MAIN

- A. PVC Pipe: AWWA C900 Polyvinyl Chloride (PVC); nominal diameter 4-inch through 12-inch; DR-25, pressure class 100; DR-18, pressure class 150; DR-14, pressure class 200; as designated on Drawings; integral gasketed joint.

2.2 FITTINGS

- A. Fittings shall be fabricated from polyvinyl chloride and shall conform to AWWA C900; nominal diameter 4-inch to 12-inch. or C905; nominal diameter 14-inch to 48-inch.

- B. Ductile iron fittings shall be connected to PVC pipe with mechanical joint restraints as manufactured by EBAA Iron Sales, Inc., Eastland, TX, Ford Meter Box Company, Inc., Wabash, IN, or an approved equal.
- C. Pipe used in fabricated fittings shall meet quality and dimensional requirements listed in standard for that pipe.
- D. Pipe used in fabricated fittings shall have a wall thickness equal to or greater than wall thickness of pipes to which fitting, or that part of fitting, will be joined.
- E. No fitting shall have an inside diameter dimension smaller than base inside diameter for that pipe size and DR.

2.3 JOINTS

- A. Flexible elastomeric seals shall comply with requirements of ASTM F477 natural or synthetic rubber for push-on joints that require no internal or external pressure to affect initial seal.
- B. Lubricant, if used, shall be of such composition that it will in no way damage gasket or pipe due to prolonged exposure and shall not affect sealing capability of gasket.
- C. Joints shall be made in accordance with ASTM D3139.

2.4 ACCESSORIES

- A. Joint Restraints: Cast iron, circular or pair of semi-circles with wedges that grip ductile iron or PVC pipe.
 - 1. Manufacturers:
 - a. Megalug as manufactured by EBAA Iron, Inc., Eastland, Texas.
 - b. Uni-Flange as manufactured by Ford Meter Box Company, Inc., Wabash, Indiana.
 - c. Or an approved equal.
- B. Pipe Couplings:
 - 1. Manufacturers:
 - 2. Dresser, Inc., Addison, TX.
 - 3. Fernco, Inc., Davison, MI.
 - 4. Or Approved Equal.
- C. Identification Warning Tape: Aluminum underground warning tape, 2-inch width. Color-Bright Blue or Bright Green, warning message "Caution Buried WATER MAIN or SANITARY SEWER Below," to repeat every 30 inches, installed 30 inches above top of pipe.
- D. Tracer Wire: 45 mil solid copper, No. 12 HMW-PE yellow jacket coating. Installed to enable electronic locating of underground utility.

PART 3 - EXECUTION (Not Used)

END OF SECTION 330506

This Page Intentionally Left Blank

SECTION 330508 - HIGH-DENSITY POLYETHYLENE STORM WATER PIPE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. High-density polyethylene (HDPE) pipe for storm water drainage system.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements shall govern Work under this Section.
2. Section 31 23 17 – Site Excavation, Backfill, and Compaction.
3. Section 33 40 13 - Storm Sewer Installation.

1.2 REFERENCES

A. American Association of State Highway and Transportation Officials (AASHTO):

1. AASHTO Designation M294 – Standard Specification for Corrugated Polyethylene Pipe, 12-inch to 48-inch Diameter.

B. ASTM International (ASTM):

1. ASTM C923 – Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes, and Laterals.
2. ASTM D618 – Practice for Conditioning Plastics for Testing.
3. ASTM D883 – Terminology Relating to Plastics.
4. ASTM D1693 – Test Method for Environmental Stress-Cracking of Ethylene Plastics.
5. ASTM D2122 – Test Method for Determining Dimensions of Thermoplastic Pipe and Fittings.
6. ASTM D2321 – Practice for Underground Installation of Thermoplastic Pipe and Sewers and Other Gravity Flow Applications.
7. ASTM D2412 – Test Method for Determination of External Loading Characteristics of Plastic Pipe by Parallel-Plate Loading.
8. ASTM D2444 – Test Method for Determination of the Impact Resistance of Thermoplastic Pipe and Fittings by Means of a Tup (Falling Weight).
9. ASTM D3212 – Specification for Joints for Drain and Sewer Plastic Pipe Using Flexible Elastomeric Joints.
10. ASTM D3350 – Specification for Polyethylene Plastics Pipe and Fittings Material.
11. ASTM F412 – Terminology Relating to Plastic Piping Systems.
12. ASTM F477 – Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
13. ASTM F585 - Practice for Insertion of Flexible Polyethylene Pipe Into Existing Sewers.
14. ASTM F1668 - Guide for Construction Procedures for Buried Plastic Pipe.
15. ASTM F1962 - Guide for Use of Maxi-Horizontal Directional Drilling for Place.
16. ASTM F2306 - Specification for 12 to 60 in. [300 to 1500 mm] Annular Corrugated Profile-Wall Polyethylene (PE) Pipe and Fittings for Gravity-Flow Storm Sewer and Subsurface Drainage Applications.
17. ASTM F2510 - Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures and Corrugated High Density Polyethylene Drainage Pipes

18. ASTM F2648 - Specification for 2 to 60 inch [50 to 1500 mm] Annular Corrugated Profile Wall Polyethylene (PE) Pipe and Fittings for Land Drainage Applications.

- C. State of Florida Department of Transportation:
1. Standard Specifications for Road and Bridge Construction, Current Edition with latest supplements. (FDOT)

1.3 SUBMITTALS

- A. Section 01 33 00 – Submittal Procedures, Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Product Data: Submit data indicating pipe, joints, fittings and pipe accessories.
- C. Manufacturer's Installation Instructions: Indicate special procedures required to install Products specified.
- D. Manufacturer's Certificate: Certify that product meets or exceeds specified requirements.

1.4 QUALITY ASSURANCE

- A. Pipe, joints, and fittings shall meet requirements of listed ASTM and AASHTO Standards.
- B. Mark products and affirm that product was manufactured, inspected, sampled, and tested in accordance with ASTM and AASHTO Specifications and to meets specification requirements.

1.5 REGULATORY REQUIREMENTS

- A. Contractor shall comply with applicable rules and regulations of State of
1. Florida Department of Environmental Protection.
- B. Contractor shall also comply with requirements of other local, state, and federal agencies having jurisdiction related to Work of this Section.
- C. Contractor shall comply with and be solely responsible for compliance with U.S. Department of Labor OSHA Part 1926 Safety and Health Regulations for Construction for this Work.
- D. Contractor performing Work of this Section shall be solely responsible for identifying, furnishing, installing and maintaining equipment and materials required by state and federal regulations to establish safe working conditions during Work of this Section.

1.6 PRODUCT DELIVERY, HANDLING, AND STORAGE

- A. Load and unload pipe, fittings, and accessories by lifting with hoists or skidding to avoid shock or damage.
- B. Under no circumstances shall material be dropped.
- C. Do not roll or skid pipe handled on skidways against other pipe or ground.
- D. Pad hooks or pipe tongs and use to prevent damage to exterior surface of pipe.

- E. Keep stored pipe free of damage.
- F. Keep interiors of pipe, fittings, and other appurtenances free from dirt or foreign matter.
- G. Use timbers to separate pipe stored on ground from other pipe and ground.
- H. Clearly make pipe at intervals of not less than five feet with the following information:
 - 1. Manufacturer's name or trademark and production code.
 - 2. Nominal pipe outside diameter.
 - 3. HDPE cell classification.
 - 4. Type of pipe material, AASHTO or ASTM Designation for pipe.
 - 5. Dimensional ratio or pressure rating.
- I. Clearly mark fittings with the following information:
 - 1. Manufacturer's name or trademark.
 - 2. Nominal size.
 - 3. Material designation.
 - 4. AASHTO or ASTM Designation for pipe.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers:
 - 1. Advanced Drainage Systems, Inc. (ADS); Type N-12 Pipe and Fittings.
 - 2. Hancor, Inc.; N-12 HP Storm Sewer Pipe and Fittings.
 - 3. Prinsco, Inc.: Goldflo WT.
 - 4. Substitutions in accordance with [Section 01 25 00 – Substitution Procedures] [Division 01 – General Requirements] [Section 31 02 00 – General Requirements for Sitework].

2.2 STORM SEWER DRAINAGE PIPING

- A. HDPE Pipe: ASTM F2648 (AASHTO M294), Type S inner liner, corrugated outside liner, fabricated from ASTM D3350 polyethylene materials.

2.3 FITTINGS

- A. Fittings shall conform to ASTM F2306 and be manufactured by Pipe Manufacturer's identified above. Pipe and fittings shall be provided by same manufacturer. Fittings shall provide a:
 - 1. Silt-Tight Connection.
 - 2. Water-Tight Connection.
- B. Fitting shall be homogeneous throughout and free of visible cracks, holes, foreign inclusions, voids, or other injurious defects.
- C. Pipe used in fabricated fittings shall meet quality and dimensional requirements listed in standard for that pipe.
- D. Pipe used in fabricated fittings shall have wall thickness equal to or greater than wall thickness of pipe to which fitting or that part of fitting will be joined.

- E. No fitting shall have an inside diameter dimension smaller than base inside diameter for that pipe size and wall thickness.
- F. Fittings shall be provided by specified pipe manufacturer. Intermixing of pipe and fittings from different manufacturers is prohibited.

2.4 JOINTS

- A. Pipe: ASTM D3212 bell and spigot joints with ASTM F477 gasket; rated to handle same stresses and loads as piping.
- B. Joints shall sustain longitudinal pullout and trust forces caused by contraction or expansion of piping and external and internal loading.
- C. Non water-tight connections to manholes, catch basins, and inlets shall be made by using non-shrink grout.
- D. Pack grout from outside and inside of drainage structure at connection of pipe entrance into structure. Trowel grout smooth.
- E. Water-tight connections to manholes, catch basins and inlets shall be made by using smooth outside wall adaptor pipe section and ASTM C923 flexible boot connectors.
- F. Water-tight connections to manholes, catch basins and inlet, ASTM F2510 flexible boot connectors.
- G. Provide adaptor pipe section with smooth outside wall attached to corrugated pipe end. Connect smooth outside wall adaptor pipe to corrugated pipe as required by pipe manufacturer.
- H. Insert smooth adaptor pipe section into flexible boot and clamp watertight.

2.5 CURVED ALIGNMENT

- A. Pipe curvatures shall be made by using fittings, when pipe curvature exceeds limitations of bending listed below.
- B. Limitations for pipe bending is as follows:

Angular Joint Misalignment (Degrees)	Bending Radius			
	20 feet	13 feet	10 feet	5 feet
1	1146	745	573	286
2	573	346	286	143
3	382	248	191	96
4	287	186	143	72
5	229	149	115	57

PART 3 - EXECUTION

3.1 TRENCH METHOD

- A. Install pipe in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 - Site Excavation, Backfill, and Compaction, ASTM D2321, ASTM F1668, and pipe manufacturer’s written instructions.

3.2 FIELD CUTTING PIPE

- A. Cut pipe with sawing equipment that produces a flush tight-fitting connection.
- B. Cut pipe to be connected to a manhole, catch basin, or inlet without a flexible connector through corrugation valley of pipe.

3.3 TESTING

- A. Perform deflection tests for all high-density polyethylene (HDPE) pipe installations in accordance with ASTM D2122.
- B. Perform deflection test using a rigid ball or mandrel without a mechanical pulling device.
- C. Mandrel settings for testing shall be as follows:

<u>Nominal Pipe Diameter</u>	<u>Pipe Base Diameter</u>	<u>Mandrel Setting</u>
4-inch	3.87 inches	3.50 inches
6-inch	5.80 inches	5.36 inches
8-inch	7.73 inches	7.15 inches
10-inch	9.66 inches	8.94 inches
12-inch	11.60 inches	10.73 inches
15-inch	14.50 inches	13.41 inches
18-inch	17.40 inches	16.09 inches
21-inch	20.30 inches	18.78 inches
24-inch	23.20 inches	21.46 inches

- D. Testing for system water-tightness is required, refer to Section 33 37 00 – Sanitary Sewer and Manhole Testing.

END OF SECTION 330508

This Page Intentionally Left Blank

SECTION 331013 - WATER MAIN INSTALLATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Installation of AWWA C900 or C905 poly vinyl chloride (PVC) water main.
2. Installation of AWWA C600 ductile iron water main.
3. Installation of AWWA C901 or C906 polyethylene (PE) water main.
4. Installation of ductile iron or poly vinyl chloride or [polyethylene fittings.
5. Installation of system valves, and valve boxes.
6. Installation of system hydrants.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
2. Section 31 23 17 – Site Excavation, Backfill, and Compaction.
3. Section 33 05 01 – Ductile Iron Pipe and Fittings.
4. Section 33 05 06 – Polyvinyl Chloride (PVC) Pressure Pipe.
5. Section 33 12 13 - Water Service Laterals.
6. Section 33 13 16 – Corrosion Control - Pipe and Fittings.

1.2 REFERENCES

A. Okaloosa County, Florida – Water/Sewer District Utilities Standards Manual – Section 2: Technical Specifications.

B. American Water Works Association: (AWWA)

1. AWWA C110 - Standard for Ductile-Iron and Gray-Iron Fittings, 3-In. Through 48-In., for Water.
2. AWWA C111 - Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
3. AWWA C151 – Standard for Ductile-Iron Pipe, Centrifugally Cast for Water and Other Liquids.
4. AWWA C153 - Standard for Ductile-Iron Compact Fittings, 3-In. Through 24-In., and 54-In. Through 64-In., for Water Service.
5. AWWA C600 – Standard for Installation of Ductile-Iron Water Mains and Their Appurtenances.
6. AWWA C605 - Standard for Underground Installation of Polyvinyl Chloride (PVC) Pressure Pipe and Fittings for Water.
7. AWWA C651 - Standard for Disinfecting Water Mains.
8. AWWA C800 - Standard for Underground Service Line Valves and Fittings.
9. AWWA C900 - Standard for Polyvinyl Chloride (PVC) Pressure Pipe, 4-In. Through 12-In., for Water Distribution.
10. AWWA C901 - Standard for Polyethylene (PE) Pressure Pipe and Tubing, 1/2 In., for Water Service.
11. AWWA C905 - Standard for Polyvinyl Chloride (PVC) Water Transmission Pipe, Nominal Diameters 14-In. Through 48-In., for Water Transmission and Distribution.

12. AWWA C906 - Standard for Polyethylene (PE) Pressure Pipe and Fittings, 4 In. Through 63 In. for Water Distribution and Transmission.
13. AWWA C907 - Standard for Polyvinyl Chloride (PVC) Pressure Fittings for Water 4-In. Through 8-In., for Water Distribution.

1.3 SUBMITTALS

- A. Division 01 – General Requirements, Section 01 33 00 - Submittal Procedures, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Manufacturer's Installation Instructions: Submit special procedures required to install Products specified.
- C. Record horizontal location and vertical depth of pipe runs, fittings, connections, hydrants, valves, and valve vaults installed.

1.4 REGULATORY REQUIREMENTS

- A. Comply with applicable rules and regulations of:
 1. State of Florida Department of Environmental Protection (FDEP) and Department of Community Affairs (FDCA) and local code if more stringent for materials and installation of the Work of this section.
- B. Comply with and be solely responsible for compliance with U.S. Department of Labor OSHA Part 1926 Safety and Health Regulations for Construction for this Work.
- C. Contractor performing Work of this Section shall be solely responsible for identifying, furnishing, installing and maintaining equipment and materials required by state and federal regulations to establish safe working conditions during Work of this Section.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Load and unload pipe, fittings, valves, hydrants, and accessories in accordance with manufacturer's published recommendations.
- B. Adherence to pipe manufacturer's unloading requirements are stressed when temperatures are below 32 degrees F.
- C. Under no circumstances shall material be dropped.
- D. Pipe handled on skidways shall not be rolled or skidded against pipe on ground.
- E. Pad slings, hooks, or pipe tongs and use to prevent damage to exterior surface or internal lining of pipe.
- F. Keep stored material stored free of damage.
- G. Keep interior of pipe, fittings, and other appurtenances free from dirt or foreign matter.
- H. Drain valves and hydrants and store to protect them from damage by freezing.
- I. Use timbers to separate pipe stored on ground from ground and other pipe.

- J. Store gaskets for mechanical and push-on joints in cool location out of direct sunlight and contact with petroleum products.
- K. Distribute (string) pipe as close to trench as practical and on opposite side of trench from excavated earth stockpile.

1.6 ENVIRONMENTAL REQUIREMENTS

- A. Pipe shall not be laid in water.
- B. Pipe shall not be laid in trenches where, in opinion of Engineer/Architect, Owner's Representative or Construction Manager, conditions are unsuitable.
- C. Blocking shall not be used to change pipe grade or to intermittently support pipe across excavated sections.
- D. Remove ledge rock, boulders, cobbles, and large stones to provide 6-inch embedment cushion on each side of and below pipe and appurtenances.
- E. If trench passes over a previously excavation, compact trench bottom to provide support equal to that of adjacent undisturbed native soil or conform to specific regulatory requirements to prevent damage to existing installed facility.
- F. Separation of water main and sanitary and storm sewers shall be in accordance with State of Florida requirements.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

- A. Pipe and fittings, valves, and hydrants shall each be products of a single manufacturer and shall be fabricated in the United States of America. Intermixing of any material type from multiple manufacturers is prohibited.

2.2 WATER MAIN PIPE MATERIALS

- A. Ductile Iron Pipe: Shall meet requirements of Section 33 05 01 – Ductile Iron Pipe and Fittings.
- B. Polyvinyl Chloride (PVC) Pressure Pipe: Shall meet requirements of Section 33 05 06 – Poly Vinyl Chloride (PVC) Pressure Pipe.

2.3 FIELD EXAMINATION

- A. Contractor and Engineer/Architect, Owner's Representative or Construction Manager shall inspect and accept materials for construction of water mains prior to beginning construction.
- B. Examine pipe, fittings, valves, hydrants, and other appurtenances carefully for damage and other defects prior to installation.

- C. Mark defective material identified by Contractor and hold for inspection by Engineer/Architect, Owner's Representative or Construction Manager, who will prescribe corrective repairs or reject material.

2.4 PIPE LOCATION MATERIALS

- A. Mark all non-conductive lateral pipes with a locating wire system.
- B. Locating wire system consists of the following:
 - 1. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Install to enable electronic locating of underground utility.
 - 2. Tracer Wire Locating Box: 2-1/2-inch diameter, minimum, ABS pipe with 2-point terminal box and cast iron cover.
 - a. Manufacturer: Valco, Inc. Model C.P. Mini Box, or an approved equal.]
- C. Identification Warning Tape: Heavy plastic underground warning tape, 2-inch width. Color-Bright Blue] warning message "Caution Buried WATER Below" to repeat every 30 inches.
- D. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Install to enable electronic locating of underground utility.

PART 3 - EXECUTION

3.1 NOTIFICATION

- A. Contractor, prior to any excavation work, shall notify (1) a designated locating service; (2) utilities, governmental agencies, entities, known to, or which can reasonably be assumed to have above or below ground pipe, conduit cables, structures, or similar items within limits of project; to locate and mark location of such items.
- B. In accordance with Florida Statutes Chapter 556, "Underground Facility Damage Prevention and Safety Act," every "Person" as defined in 556.102(9) shall be solely responsible to provide advance notice to "Sunshine State One-Call of Florida, Inc." (800-432-4770) not more than five nor less than two working days prior to commencement of any Excavation or Demolition, as defined in the statute, required to perform work contained in this Project, and further said "Person" shall comply with all other requirements of this Statute relative to Excavator's Work.

3.2 PROTECTION

- A. Perform excavation, backfilling and compaction in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction for protection of public and private property.
- B. Exercise care during excavation to avoid damage to existing buildings, structures, roadways, sidewalks, utilities, and survey identification markings.

3.3 INSTALLATION OF PIPE

- A. Lay and maintain water mains to lines and grades established by Drawings with fittings, valves, tapped or bossed outlets, and hydrants at required locations.

- B. Trench preparation shall proceed in advance of pipe installation only as far as can be backfilled in same day.
- C. Contractor shall not deviate from types of excavation indicated on Drawings or in Project Manual without prior concurrence of Engineer/Architect, Owner's Representative or Construction Manager except in case of roadways, driveways, and obstructions requiring short tunnel sections that may be indicated on Drawings as open trench sections.
- D. Support tunnel sections exceeding 2 feet in length in accordance with applicable codes.
- E. Install water mains without use of wood blocking.
- F. Lower pipe, fittings, valves, and hydrants carefully into trench by means of a derrick, ropes, or other suitable tools or equipment, in a manner to prevent damage to water main materials and protect coatings and linings.
- G. Lay pipe with bell ends facing direction of laying. When grade exceeds 2 feet of rise per 100 feet of trench, bells shall face upgrade.
- H. Provide holes for bells at each joint but no larger than necessary for joint assembly and assurance that pipe barrel will lie flat on trench bottom. Push-on type joints require only minimum depressions for bell holes.
- I. Trench bottom shall be true and even in order to provide support for full length of pipe barrel, except a slight depression may be provided to allow withdrawal of pipe slings or other lifting tackle.
- J. Remove lumped subsoil, boulders, and rock up to 1/3 cubic yard, measured by volume. Larger material will be removed under Section 31 23 18 - Rock Removal.
- K. When rock is encountered, remove to provide a clearance of at least 6 inches below and on each side of pipe, valves, and fittings for pipe sizes 24 inches or smaller, and 9 inches for pipe sizes 30 inches and larger.
- L. When excavation is complete, place a layer of appropriate bedding material on bottom of trench to depths indicated, level, and compact. Take every precaution to prevent foreign material from entering pipe while it is being placed in line.
- M. If pipe laying crew cannot put pipe into trench and in place without getting earth into it, Engineer/Architect, Owner's Representative or Construction Manager may require that before lowering pipe into trench, a heavy, tightly woven, canvas bag of suitable size be placed over each end and left there until connection is made to adjacent pipe.
- N. Do not place debris, tools, clothing, or other materials in pipe during laying operations.
- O. Assemble joint and bring pipe to correct line and grade as each length of pipe is placed in trench.
- P. Take precautions to prevent foreign materials from entering joint space and carefully check joint recess for foreign material before installing gasket.
- Q. Secure pipe in place with bedding material, keeping bell end open.

- R. Upon daily and temporary completion of pipe installation, close open ends of pipe by a water-tight plug or other means approved by Engineer/Architect, Owner's Representative or Construction Manager. This provision applies during daytime inactivity as well as overnight and weekends.
- S. If water is in trench, maintain pipe seal in place until water level is lowered four inches below pipe invert.
- T. Whenever it becomes necessary to lay a main over, under, or around a known obstruction, furnish and install required fittings. Laying of such fittings will be paid for at unit price bid for each size of main. No additional compensation will be paid to Contractor for any expenses incurred because of such obstruction.
- U. When an unknown underground structure interferes with Work to such an extent that an alteration of Drawings is required and alteration results in a change in cost to Contractor, Engineer/Architect, Owner's Representative or Construction Manager will issue a written order for such altered work, specifying basis of payment or credit for such altered work.
- V. Keep interior and exterior of pipe clean and free from foreign material before installation. Provide necessary means to wipe, brush, swab, or air blast to remove any foreign material from interior of pipe as instructed by pipe manufacturer and as directed by Engineer/Architect, Owner's Representative or Construction Manager.
- W. Install colored marker tape continuous over top of pipe; coordinate with Section 31 23 16 - Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction.

3.4 WATER AND SEWER SEPARATION

- A. Install water main at minimum required distances away from adjacent sanitary and storm sewers and laterals as stipulated by:
 - 1. State of Florida Department of Environmental Protection (FDEP) and local code if more stringent for materials for the Work of this Section.

3.5 TRACER WIRE INSTALLATION

- A. Install tracer wire continuous over top of pipe. Secure tracer wire to top of pipe with industrial strength tape; coordinate with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction.
- B. Lateral tracer wire originates and terminates in tracer wire access box located at right-of-way line. Install conductor tracer wire in one continuous loop.
- C. Tape conductor tracer wire to top of pipe at minimum 10-foot intervals. Wrapping conductor tracer wire around pipe is prohibited.
- D. Field test each locating wire after installation is completed.

3.6 RUBBER GASKET JOINTS

- A. Join pipe and fittings by means of a compression type push-on rubber gasket unless another joint type is specified on Drawings or in Contract Documents.
 - 1. Gasketed bell joint integral with pipe or fitting, AWWA C900, C905 or C907.
 - 2. Gasketed Coupling-double-gasketed coupling AWWA C900, C905 or C907.
 - 3. Gasketed bell joint integral with pipe or fitting, AWWA C111 and AWWA C600.
 - 4. Mechanical Joint - Gaskets and bolts manufactured in accordance with AWWA C110, C111 or C153.
- B. Wipe bell and spigot of each pipe clean and dry. Gaskets and sealing surfaces shall be clean prior to lubrication and assembly.
- C. Apply lubricant, furnished by or approved by pipe manufacturer, in accordance with manufacturer's published instructions.
- D. Assemble joints under conditions that ensure clean mating and sealing surfaces by using equipment, materials, and procedures in accordance with manufacturer's written recommendations.
- E. Assemble integral bell gasketed joints and gasket coupling joints by positioning elastomeric gasket in groove of bell or coupling, if gasket is not preinstalled by manufacturer, and inserting spigot end of pipe into bell or coupling.
- F. Use only gaskets supplied by pipe and fitting manufacturer with their pipe and fittings.
- G. Apply a thin film of manufacturer recommended non-toxic lubricant to inside surface of portion of gasket in contact with entering pipe.
- H. Place entering pipe in approximate alignment with receiving bell and insert until pipe end is lined up with setting line indicated on pipe exterior.
- I. Apply sufficient pressure on entering pipe to socket/spigot end in bell. Use care to protect end of pipe from damage:
 - 1. Use a leverage bar or other approved method on pipe 12 inches in diameter or smaller.
 - 2. Use a jack and two choker-slings or other approved method on pipe larger than 12 inches in diameter.
- J. Assemble mechanical joint in accordance with fitting manufacturer's written recommendations. Pipe spigot bevels may require shortening for use with mechanical joints or fitting joints.
- K. Whenever necessary, PVC pressure pipe of 12-inch diameter and less may accommodate longitudinal bending with the following limitations.
 - 1. Contractor shall block or brace pipe joints to ensure that bending of PVC pressure pipe does not result in axial deflection in gasketed or mechanical joints that exceeds manufacturer's published limits.
 - 2. Embedment Types 1 and 2 contained in AWWA C605 shall not be permitted for longitudinal bent pipe segments.
 - 3. Longitudinal bending in PVC pipe barrel shall not result in a bending radius more than maximum limits established in the following table.

ALLOWABLE BENDING FOR PVC PRESSURE PIPE

Nominal Size (Inches)	Minimum Curve Radius (Feet)	Offset (Inches)
4	56	17
6	88	12
8	108	9
10	138	7
12	164	6

- L. Whenever it is necessary to deflect ductile iron pipe from a straight line, either in vertical or horizontal plane, amount of deflection shall not exceed that shown in the following table for appropriate pipe length.

MAXIMUM JOINT DEFLECTION
FULL LENGTH DUCTILE IRON PIPE WITH RUBBER GASKET JOINTS

Pipe Size (Inches)	Maximum Permissible Deflection per Length (Inches)		Approximate Radius of Curve (Feet)	
	18'	20'	18'	20'
3	19	21	205	230
4	19	21	205	230
6	19	21	205	230
8	19	21	205	230
10	19	21	205	230
12	19	21	205	230
14	11	12	340	380
16	11	12	340	380
18	11	12	340	380
20	11	12	340	380
24	11	12	340	380
30	11	12	340	380
36	11	12	340	380
42	11	12	340	380
48		12		380
54		12		380
60		12		380
64		12		380

3.7 WATER AND SEWER SEPARATION

- A. Install water main at minimum required distances away from adjacent sanitary and storm sewers and laterals as stipulated by:
1. State of Florida Department of Environmental Protection (FDEP) and local code if more stringent for materials for the Work of this Section.

3.8 TRACER WIRE INSTALLATION

- A. Install tracer wire continuous over top of pipe. Secure tracer wire to top of pipe with industrial strength tape; coordinate with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction and Section 31 23 17 – Site Excavation, Backfill, and Compaction.
- B. Lateral tracer wire originates and terminates in tracer wire access box located at right-of-way line. Install conductor tracer wire in one continuous loop.
- C. Tape conductor tracer wire to top of pipe at minimum 10-foot intervals. Wrapping conductor tracer wire around pipe is prohibited.
- D. Field test each locating wire after installation is completed.

3.9 MECHANICAL JOINTS

- A. Clean foreign matter and paint last 8 inches of outside of spigot and inside of bell with a soap solution.
- B. Slip cast iron gland on spigot end with lip extension toward socket bell end.
- C. Place rubber gasket in spigot end with thick edge toward gland.
- D. Nuts and bolts used in joint assembly shall be corrosion resistant steel.
- E. Push entire section of pipe forward to seat spigot end in bell. Take care to locate gasket evenly around entire joint.
- F. Tighten nuts with a suitable torque-limiting wrench. Torque for various sizes of bolts shall be as follows:

<u>Joint Size</u>	<u>Bolt Size (Inches)</u>	<u>Range of Torque</u>
3-inch	5/8	40-60
4-24 inches	3/4	75-90
30-36 inches	1	100-120
42-48 inches	1-1/4	120-150

- G. Tighten nuts alternately in order to produce an equal pressure on all parts of gland.
- H. After a joint is assembled and securely tightened, completely coat nuts and bolts with an approved bituminous protective coating, Koppers Company, Inc. Bitumastic Super Tank or an approved equal.
- I. Whenever it is necessary to deflect pipe from a straight line, either in vertical or horizontal plane, amount of deflection shall not exceed that shown in the following table.

MAXIMUM JOINT DEFLECTION
MECHANICAL JOINT DUCTILE IRON PIPE

Pipe Size (Inches)	Maximum Permissible Deflection per Length (Inches)		Approximate Radius of Curve (Feet)	
	18'	20'	18'	20'
	3	31	35	125
4	31	35	125	140
6	27	30	145	160
8	20	22	195	220
10	20	22	195	220
12	20	22	195	220
14	13.5	15	285	320
16	13.5	15	285	320
18	11	12	340	380
20	11	12	340	380
24	9	10	450	500

3.10 FUSION JOINTS

A. Butt Fusion:

1. Persons making heat fusion joints shall have received training in manufacturer's recommended procedure.
2. Heat fusion equipment shall meet manufacturer's requirements including 400 degree F temperature and 75 psi interfacial fusion pressure. Equipment shall be capable of logging temperature and fusion pressure and displaying graphic representation of fusion cycle.
3. Clamp pipes to be joined in place in above ground fusion machine. Face each pipe to provide smooth, flat joining surfaces.
4. Heat pipe ends for time and to temperature recommended by pipe manufacturer for pipe diameter.
5. At end of heating time, carefully remove heater so as not to displace melt and bring pipe ends together within 3 seconds. Join with sufficient pressure to roll melt swell beads over to pipe surface. Maintain pressure for time recommended by pipe manufacturer for pipe diameter.
6. Allow an additional 3 minutes of cooling before removing from fusion machine and an additional 10 to 60 minutes, depending on pipe diameter, before rough handling or testing.

B. Electrofusion:

1. Slide adapter over pipe, place second pipe, and locate adapter over joint.
2. Connect processor fusion leads to adapter or fitting.
3. Use processor barcode wand to scan barcode on adapter or fitting.
4. Enter ambient temperature into processor.
5. Using temperature and barcode information, processor will heat embedded coils to fuse pipes.
6. Disconnect processor leads and allow fused pipes to cool.

3.11 CUTTING OF PLASTIC PIPE

- A. Cut pipe at right angles to centerline of pipe.
- B. Perform cutting in a neat workmanlike manner without damage to pipe and leaving a smooth end.
- C. Pipes may be cut with a circular saw or hand saw.
- D. Pipe spigot ends shall be deburred and beveled and insertion line shall be re-marked.
- E. Length and angle of field bevels shall match factory bevels.

3.12 CUTTING OF DUCTILE IRON PIPE

- A. Cut pipe at right angles to centerline of pipe.
- B. Perform cutting in a neat, workmanlike manner without damage to pipe and leaving a smooth end.
- C. Cut pipes with an approved mechanical cutter.
- D. Taper cut end of pipe to be used with rubber gasket joints by grinding or filing about 1/8-inch back at an angle of approximately 30 degrees with centerline of pipe, and remove any sharp or rough edges.

3.13 FITTINGS AND VALVES

- A. Provide fittings and valves as specified.
- B. Place valves with operating stems vertical, except place butterfly valves with operating stems horizontal.
- C. Pipes shall not carry full weight of valves or fittings.
- D. Provide fittings, valves, and valve boxes with individual support using minimum 16 x 8 x 4-inch solid concrete block set on a compacted trench bottom.
- E. Anchor valves for thrust and torque. Provide thrust or torque restraint in accordance with Section 33 05 19 – Pressure Pipe Restraints.

3.14 HYDRANT SETTING

- A. Provide hydrants, hydrant lead valves, fittings, and branch T-connectors with independent support of minimum 16 x 8 x 4-inch solid concrete block or 3000 psi formed concrete pad.
- B. Place crushed clear stone, Type A5 as specified in Section 31 05 16 – Aggregates for Earthwork, below base of hydrant to 6 inches above drain holes in hydrant stem.
- C. Set hydrant plumb and centerline of hydrant vertical.
- D. Solidly buttress hydrant against trench wall.

- E. Set lowest hose connection to utility standard dimension above proposed finished grade or, in absence of standard, to a minimum of 18 inches.

3.15 WATER SERVICE LATERALS

- A. Water Service Laterals, including tapping of main, shall be in accordance with Section 33 12 13 – Water Service Laterals.

3.16 THRUST RESTRAINT

- A. Thrust restrain water main in accordance with Section 33 05 19 – Pressure Pipe Restraints.

END OF SECTION 331013

SECTION 331100 - SITE WATER SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Site Piping.
2. Pipe Fittings.
3. Valves.
4. Fire Hydrants.
5. Domestic Water Services.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
2. Section 31 05 16 - Aggregates for Earthwork.
3. Section 31 23 17 – Site Excavation, Backfill, and Compaction.
4. Division 22 – Plumbing.

1.3 SUBMITTALS

- A. Division 01 – General Requirements, Section 01 33 00 - Submittal Procedures, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Product Data: Provide data on pipe materials, pipe fittings, valves and accessories.
- C. Manufacturer's Instructions: Indicate special procedures required to install Products specified.
- D. Certificates: Certify that products meet or exceed specified requirements.

1.4 SUBMITTALS AT PROJECT CLOSEOUT

- A. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements Section 01 78 23 - Operation and Maintenance Data: Submit operation and maintenance data.
- C. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements Section 01 78 39 – Project Record Documents: Submit Project Record Documents.
 1. Record actual locations of piping mains, valves, connections, thrust restraints, and invert elevations.

2. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

1.5 REGULATORY REQUIREMENTS

- A. Perform Work in accordance with requirements of:
 1. State of Florida Administrative Code, Department of Community Affairs Chapter 9B and International Plumbing Code and local code if more stringent for materials and installation of the Work of this Section.

1.6 QUALITY ASSURANCE

- A. Perform work in accordance with requirements of Okaloosa County Water Utility for public connections and modifications where applicable.
- B. Valves and Hydrants: Mark manufacturer's name and pressure rating on body.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect, and handle products to site under provisions of Division 01 – General Requirements, Section 01 60 00 – Product Requirements, Section 31 02 00 – General Requirements for Sitework.
- B. Deliver and store valves and gaskets in shipping containers with labeling in place.

PART 2 - PRODUCTS

2.1 GENERAL

- A. An acceptable certifying organization shall evaluate, test, and certify products intended for contact with potable water for conformance with NSF 61 and health effects portion of NSF 14.
- B. Pipe, fittings, valves, hydrants, and valve boxes shall be manufactured in the United States of America.
- C. Provide materials in accordance with:
 1. State of Florida Administrative Code, Department of Community Affairs Chapter 9B and International Plumbing Code and local code if more stringent for materials for the Work of this Section.

2.2 WATER PIPE

- A. Ductile Iron Pipe: AWWA C151, Ductile Iron Pipe for water [with AWWA C104 Cement Lining. [Thickness Class 52 in accordance with AWWA C150].
 1. Fittings: Ductile iron, [AWWA C110 Standard] [or] [AWWA C153 Compact].
 2. Joints: AWWA C111, Rubber-Gasket Joints for Ductile Iron Pressure Pipe and Fittings Mechanical Joint or Push on Joint.
 3. Corrosion Protection: AWWA C105 polyethylene encasement double layer, half lapped, 8 mil polyethylene.
 4. Ductile Iron Pipe and Fitting Manufacturers:
 - a. American Cast Iron Pipe Company.

- b. Griffin Pipe Products Company.
 - c. McWane Cast Iron Pipe Company.
 - d. Tyler Pipe Company.
 - e. U.S. Pipe & Foundry Company Division of Mueller Water Products. Inc.
 - f. Substitutions: In accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.
- B. PVC Pipe: AWWA C900, Class 100, DR 25, 150, DR 18, 200, or DR 14, AWWA C905, DR-18, 235 psi pressure rating or DR-21, 200 psi pressure rating or DR-25, 165 psi pressure rating or DR-32.5, 125 psi pressure rating or DR-41, 100 psi pressure rating:
- 1. PVC Pipe and Fitting Manufacturers:
 - a. Diamond Plastics Corporation.
 - b. JM Eagle Company.
 - c. North American Pipe Corporation.
 - d. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.
 - 2. Fittings: Ductile iron, AWWA C110 Standard or AWWA C153 Compact or PVC, AWWA C907.
 - 3. Joints: In accordance with ASTM D3139 using ASTM F477 elastomeric gaskets.
- C. Polyethylene Tubing: AWWA C901.
- 1. Manufacturers:
 - a. A-D Technologies.
 - b. Everett J. Prescott, Inc.
 - c. JM Eagle.
 - d. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.
 - 2. AWWA C901, ASTM D3350 PE 3408 material, dimension ratio (DR) 17, PC 100, [13.5, PC 125, 11, PC 160, 9, PC 200.
 - 3. Joints: Butt fusion.
- D. Polyethylene (PE) Pressure Pipe: AWWA C906, Pressure Class PC100, PC125, PC160, PC200, ASTM D3350 PE3408 Material.
- 1. Manufacturers:
 - a. Charter Plastics, Inc.
 - b. Performance Pipe, Division of Chevron Phillips Chemical Company LLC.
 - c. PolyPipe, Inc.
 - d. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.
 - 2. Fittings: AWWA C906, molded or fabricated.
 - 3. Joints: Butt fusion or Electrofusion.
- E. Copper Tubing:
- 1. ASTM B88, Seamless Copper Water Tube, Type K, Form A Straight or B Coiled, annealed.
 - 2. Fittings: ASME B16.22, wrought copper pressure fitting.
 - 3. Joints: Compression connection or AWS A5.8, BCuP silver braze.

2.3 GATE VALVES

- A. Manufacturers:

1. American Flow Control.
2. Kennedy Valve Company, Division of McWane, Inc.
3. Mueller Company, Division of Mueller Water Products, Inc.
4. U.S. Pipe and Foundry Company, Division of Mueller Water Products, Inc.
5. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.

- B. AWWA C509, Iron body, bronze trim, non-rising stem with square nut, single resilient wedge, mechanical joint ends, control rod, post indicator, extension box and valve key.

2.4 SWING CHECK VALVES - 2 INCH TO 24 INCH

A. Manufacturers:

1. Kennedy Valve Company, Division of McWane, Inc.
2. Mueller Company, Division of Mueller Water Products, Inc.
3. Henry Pratt Company, Division of Mueller Water Products, Inc.
4. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.

- B. AWWA C508, iron body, bronze trim, 45 or 22 degree swing disc, renewable disc and seat, flanged ends.

2.5 BUTTERFLY VALVES - FROM 2 INCH TO 24 INCH

A. Manufacturers:

1. Mueller Company, Division of Mueller Water Products, Inc.
2. Clow Valve Company, Division of McWane, Inc.
3. Henry Pratt Company, Division of Mueller Water Products, Inc.
4. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.

- B. AWWA C504, iron body, bronze disc, resilient replaceable seat, water or lug ends, ten or infinite position lever handle.

2.6 CAST IRON VALVE BOXES

A. Manufacturers:

1. Bingham & Taylor Corporation.
2. Tyler Pipe Company.
3. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.

- B. Cast Iron Valve Box: 5-1/4 inch diameter shaft; round base; 5-1/4 inch drop lid marked "WATER"; length of assembly sized to span top of main to finished grade with a minimum adjustment remaining for an additional 3 inches.

2.7 VALVE BOX ADAPTERS

- A. Gate Valve Adaptor: Epoxy-coated, 1/4-inch steel with 1/2-inch rubber gasket, size to fit valve. Similar and equal to adaptors manufactured by Adaptor, Inc., West Allis, WI.

- B. Butterfly Valve Adaptor: Epoxy-coated, 1/4-inch steel, size to fit valve. Similar and equal to adaptors manufactured by Adaptor, Inc., West Allis, WI.

2.8 HYDRANTS

- A. Manufacturers:
 - 1. American Flow Control - Waterous Pacer WB-67-250.
 - 2. Clow, Division of McWane Corporation – Medallion.
 - 3. Kennedy Valve, Division of McWane, Inc. – Guardian K-81D.
 - 4. Mueller Company, Division of Mueller Water Products, Inc. – Super Centurion A423.
 - 5. U.S. Pipe and Foundry Company, Division of Mueller Water Products, Inc. – [Metropolitan/M-94] [Sentinel 250].
 - 6. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.
- B. Hydrant: Type as required by Municipal Utility.
- C. Hydrant: Hydrant materials and manufacture in accordance with AWWA C502; main valve shall be synthetic rubber reinforced with steel and shall close with water pressure; O-ring seal between upper and lower barrels; all operating parts including valve seat shall remove through barrel; one pumper connection sized to municipal standard; two 2-1/2 inch nozzles shall be 1/4 turn type with O-ring seals and stainless steel retaining screws; national standard fire hose screw threads; breakaway traffic flange; 1-inch bronze operating nut, opening left; 6-inch mechanical joint; minimum six foot cover.
- D. Hydrant Extensions: Fabricate in multiples of 6 inches with rod and coupling to increase barrel length. Maximum of one (1) extension per hydrant may be used. If additional extension is necessary on hydrant with existing extension, remove existing extension and replace with single, adequate extension.
- E. Hose and Streamer Connection: Match sizes with municipal utility, two hose nozzles, one pumper nozzle.
- F. Finish: Primer and two coats of enamel in color required by Municipal Utility.

2.9 SERVICE FITTINGS

- A. Manufacturers:
 - 1. Mueller Company.
 - 2. Ford Meter Box Company, Inc.
 - 3. A.Y. McDonald Mfg. Co.
 - 4. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.
- B. Components:
 - 1. Saddles:
 - a. Mueller Company, H-10500 Series.
 - b. The Ford Meter Box Company, Style F202.
 - c. A.Y. McDonald Mfg. Co, Model 3825.
 - d. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.

2. Corporation Stops:
 - a. Mueller Company, H-15000 Series.
 - b. The Ford Meter Box Company, FB-600.
 - c. A.Y. McDonald Mfg. Co. 4701B.
 - d. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.
3. Curb Stops:
 - a. Mueller Company, H-15154 Series.
 - b. The Ford Meter Box Company, B22M Series.
 - c. A.Y. McDonald Mfg. Co., 6104 Series.
 - d. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.
4. Curb Boxes (1-inch services):
 - a. Mueller Company, Series H-10302.
 - b. The Ford Meter Box Company, Series EM2-XX-56.
 - c. A. Y. McDonald Mfg., Co., Series 5614.
 - d. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.
5. Curb Boxes (1-1/4 inch and 1-1/2 inch services):
 - a. Mueller Company, Series H-10304.
 - b. The Ford Meter Box Company, Series EM2-XX-57.
 - c. A. Y. McDonald Mfg., Co., Series 5615.
 - d. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework

2.10 ACCESSORIES

- A. Thrust Restraint:
 1. Concrete: ASTM C150 Portland cement and ASTM C33 aggregates, air-entrained concrete with minimum compressive strength of 3000 psi.
 2. Wedge-Action Joint Restraints: Cast iron, circular or a pair of semi-circles with wedges that grip ductile iron or PVC pipe. Product shall be Megalug as manufactured by EBAA Iron Sales, Eastland, TX, Uni-Flange as manufactured by Ford Meter Box Company, Inc., Wabash, IN., or an approved equal.
 3. Rod Restraints: ASTM A575 carbon steel, threaded rods with bitumastic coating and ASTM A563 nuts or ASTM A276 stainless steel threaded rods with ASTM F594 nuts.
 4. Anchor Pipe: Ductile iron, thickness class 53, mechanical joint.
- B. Backflow Preventer:
 1. FEBCO, CMB Industries, Inc., Fresno, CA.
 2. Watts Regulator Company, North Andover, MA.
 3. Zurn/Wilkins Water Control Products, Paso Robles, CA.
 4. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.
- C. Meter:
 1. Badger Meter, Inc., Milwaukee, WI.
 2. ABB Water Meter, Inc., Ocala, FL.
 3. Sensus Technologies, Inc., Uniontown, PA.
 4. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.

D. Pipe Location Materials:

1. Identification Warning Tape: Aluminum underground warning tape, 2-inch width. Color-Bright Blue, warning message "Caution Buried WATER MAIN Below" to repeat every 30 inches.
2. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Installed to enable electronic locating of underground utility.

2.11 TRACER WIRE MATERIALS

A. Mark non-conductive lateral pipes with a locating wire system.

B. Locating wire system consists of the following:

1. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Install to enable electronic locating of underground utility.
2. Tracer Wire Locating Box: 2-1/2-inch diameter, minimum, ABS pipe with 2 point terminal box and cast iron cover.
 - a. Manufacturer: Valco, Inc., Model C.P. Mini Box, or an approved equal.]

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that building service connection and municipal utility water main size, location, and invert are as indicated.

3.2 PREPARATION

- A. Hand trim excavations to required elevations. Correct over excavation with Type A2 aggregate as specified in Section 31 05 16 – Aggregates for Earthwork.
- B. Remove large stones or other hard matter that could damage pipe or impede consistent backfilling or compaction.
- C. Cut pipe ends square, ream pipe and tube ends to full pipe diameter, remove burrs.
- D. Remove scale and dirt on inside and outside before assembly.
- E. Prepare pipe connections to equipment with flanges or unions.

3.3 BEDDING

- A. Excavate pipe trench in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction for work of this Section. Hand trim excavation for accurate placement of pipe to elevations indicated.
- B. Form and place concrete for pipe thrust restraints at any change of pipe direction. Place concrete to permit full access to pipe and pipe accessories. Provide [] square feet thrust restraint bearing on subsoil.
- C. Place bedding material in trench bottom, level fill materials in one continuous layer not exceeding 4 inches compacted depth; compact to 95 percent modified Proctor density.

- D. Backfill around sides and top of pipe with bedding material to a depth of 18 inches above pipe, and compact to 95 percent modified Proctor density.
- E. Maintain optimum moisture content of bedding material to attain required compaction density.

3.4 INSTALLATION - PIPE

- A. Maintain separation of water main from sewer piping in accordance with:
 - 1. State of Florida Administrative Code, Department of Community Affairs Chapter 9B and International Plumbing Code and local code if more stringent for installation of the Work of this Section.]
- B. Install pipe to indicated elevation to within tolerance of 5/8-inch.
- C. Install ductile iron piping and fittings in accordance with AWWA C600.
- D. Install PVC pipe in accordance with AWWA C605.
- E. Install [PVC] [polyethylene] pipe in accordance with ASTM D2774.
- F. Route pipe in straight line.
- G. Install pipe to allow for expansion and contraction without stressing pipe or joints.
- H. Install access fittings to permit disinfection of water system performed under Section 33 13 00 – Water Main Disinfection.
- I. Slope water pipe and position drains at low points.
- J. Form and place concrete for thrust restraints at each elbow or change of direction of pipe main.
- K. Establish elevations of buried piping to ensure not less than 3 foot of cover.
- L. Install tracer wire continuous over top of pipe. Secure tracer wire to top of pipe with industrial strength tape; coordinate with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction.
- M. Backfill trench in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction. Do not displace or damage pipe when compacting.

3.5 INSTALLATION - VALVES AND HYDRANTS

- A. Set valves on solid concrete block bearing.
- B. Center and plumb valve box over valve. Set box cover flush with finished grade.
- C. Set hydrants plumb; locate pumper nozzle perpendicular to and facing roadway.
- D. Set hydrants to grade, with nozzles a minimum of 20 inches above finished grade.
- E. Locate hydrant valve on hydrant lead a minimum of 24 inches from hydrant.

- F. Provide a drainage pit 36 inches square by 24 inches deep filled with [6] inches of Type A5 clear stone, as specified in Section 31 05 16 – Aggregates for Earthwork. Encase elbow of hydrant in clear stone to 6 inches above drain opening. Do not connect drain opening to sewer.

3.6 TRACER WIRE INSTALLATION

- A. Lateral tracer wire originates and terminates in tracer wire access box located at right-of-way line. Install conductor tracer wire in one continuous loop.
- B. Tape conductor tracer wire to top of pipe at minimum 10-foot intervals. Wrapping conductor tracer wire around pipe is prohibited.
- C. Field test each locating wire after installation is completed.

3.7 DISINFECTION OF POTABLE WATER SYSTEM PIPING

- A. Flush and disinfect system in accordance with Section 33 13 00 – Water Main Disinfection.

3.8 SERVICE CONNECTIONS

- A. Provide water service [to utility company requirements with reduced pressure backflow preventer and water meter yoke with by-pass valves and sand strainer.
- B. Provide sleeve in retaining wall for service main. Support with reinforced concrete bridge. Caulk enlarged sleeve watertight.
- C. Provide 18 gage galvanized sheet metal sleeve surrounding service main to 6 inches above floor and 6 feet minimum below grade. Size for minimum of 2 inches of foam insulation.

3.9 FIELD QUALITY CONTROL

- A. Division 01 – General Requirements, Section 01 40 00 - Quality Requirements, Section 31 02 00 – General Requirements for Sitework: Field inspection and testing.
- B. Request inspection prior to [and immediately after] placing bedding.
- C. Perform moisture content testing and compaction testing in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction.
- D. If tests indicate Work does not meet specified requirements, remove Work, replace and retest at no cost to Owner.
- E. Frequency of Tests: As determined by Engineer/Architect, Owner’s Representative, Construction Manager or Testing Agency.
- F. Pressure Test: Test in accordance with Section 33 17 00 – Water Main Testing, and
 - 1. State of Florida Administrative Code, Department of Community Affairs Chapter 9B and International Plumbing Code, and local code if more stringent for installation of the Work of this Section.

3.10 PROTECTION OF FINISHED WORK

- A. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements, Section 31 02 00 – General Requirements for Sitework: Protecting installed work.
- B. Protect pipe and aggregate cover from damage or displacement until backfilling operation is in progress.

END OF SECTION 331100

This Page Intentionally Left Blank

SECTION 331119 - FIRE SUPPRESSION WATER DISTRIBUTION PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fire Service Main Installation.
 - 2. Fittings.
 - 3. Hydrants.
 - 4. Fire Department Connections.
 - 5. Boxes.

- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
 - 2. Section 31 05 16 – Aggregates for Earthwork.
 - 3. Section 31 23 17 – Site Excavation, Backfill, and Compaction.
 - 4. Section 33 13 16 – Corrosion Control - Pipe and Fittings.

1.2 REFERENCES

- A. State of Florida Administrative Code, Department of Community Affairs Chapter 9B and International Plumbing Code, Current Edition.

- B. ASTM International: (ASTM)
 - 1. ASTM A276 – Standard Specification for Stainless Steel Bars.
 - 2. ASTM A563 – Standard Specification for Carbon and Alloy Steel Nuts.
 - 3. ASTM A575 – Standard Specification for Steel Bars, Carbon, Merchant Quality, M-Grades.
 - 4. ASTM C33 - Standard Specification for Concrete Aggregates.
 - 5. ASTM C150 – Standard Specification for Portland Cement.
 - 6. ASTM D3139 – Standard Specification for Joints for Plastic Pressure Pipes Using Flexible Elastomeric Seals.
 - 7. ASTM D4976 – Standard Specification for Polyethylene Plastics Molding and Extrusion Materials.
 - 8. ASTM F477 – Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
 - 9. ASTM F594 – Standard Specification for Stainless Steel Nuts.

- C. American Water Works Association: (AWWA)
 - 1. AWWA C104 - Cement-Mortar Lining for Ductile-Iron Pipe and Fittings for Water.
 - 2. AWWA C105 - Polyethylene Encasement for Ductile Iron Piping for Water and Other Liquids.
 - 3. AWWA C110 - Ductile Iron and Gray-Iron Fittings, 3 Inches Through 48 Inches (75 mm Through 1200 mm) for Water.
 - 4. AWWA C151 - Ductile-Iron Pipe, Centrifugally Cast, for Water and Other Liquids.
 - 5. AWWA C153 - Ductile Iron Compact Fittings, 3 Inches Through 24 Inches (76 mm Through 610 mm) and 54 Inches through 61 Inches (1,400 mm Through 1,600 mm), for Water Service.
 - 6. AWWA C500 - Metal-Seated Gate Valves for Water Supply Service.

7. AWWA C502 - Dry Barrel Fire Hydrants.
8. AWWA C504 - Rubber-Seated Butterfly Valves.
9. AWWA C509 - Resilient-Seated Gates Valves for Water Supply Service.
10. AWWA C550 - Protective Epoxy Interior Coatings for Valves and Hydrants.
11. AWWA C600 - Standard for Installation of Ductile-Iron Water Mains and Their Appurtenances.
12. AWWA C605 - Underground Installation of Polyvinyl Chloride (PVC) Pressure Pipe and Fittings.
13. AWWA C900 - Polyvinyl Chloride (PVC) Pressure Pipe, 4 In. Through 12 In. (100 mm Through 300 mm), for Water Distribution.
14. AWWA C905 - Polyvinyl Chloride (PVC) Pressure Pipe and Fabricated Fittings, 14 In. Through 48 In. (350 mm Through 1,200 mm), for Water Transmission and Distribution.

D. FM Global: (FM)

1. FM 1110 – Approval Standard for Indicator Posts.
2. FM 1120/1130 - Approval Standard for Fire Service Water Control Valves (OS&Y and NRS Type Gate Valves).

E. National Fire Protection Association: (NFPA)

1. NFPA-24 - Installation of Private Fire Service Mains and Their Appurtenances.

F. NSF International: (NSF)

1. NSF 14 - Plastics Piping System Components and Related Materials.
2. NSF 61 - Drinking Water System Components - Health Effects.

G. Underwriters Laboratories, Inc.: (UL).

1. UL-262 - Standard for Gate Valves for Fire-Protection Service.
2. UL 789 - Indicator Posts for Fire-Protection Service.

1.3 SUBMITTALS

- A. Division 01 – General Requirements, Section 01 33 00 - Submittal Procedures, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Product Data: Submit data indicating pipe, joints, fittings, and pipe accessories.
- C. Manufacturer's Installation Instructions: Indicate special procedures required to install Products specified.
- D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

1.4 REGULATORY REQUIREMENTS

- A. Perform Work in accordance with requirements of:
 1. State of Florida Administrative Code, Department of Community Affairs Chapter 9B and International Plumbing Code and local code if more stringent for materials and installation of the Work of this Section.
 2. Other local, state, and federal agencies having jurisdiction related to Work of this Section.
- B. Comply with NFPA 24 where requirements are more stringent.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Load and unload pipe, fittings, valves, hydrants, and accessories by lifting with hoists or skidding to avoid shock or damage.
- B. Under no circumstances shall material be dropped.
- C. Do not roll or skid pipe handled on skidways against other pipe or ground.
- D. Pad slings, hooks, or pipe tongs and use to prevent damage to exterior surface or internal lining of pipe.
- E. Keep stored material free of damage.
- F. Keep interior of pipe, fittings, and other appurtenances free from dirt or foreign matter.
- G. Valves and hydrants shall be drained and stored to protect them from damage by freezing.
- H. Use timbers to separate pipe stored on ground from ground and other pipe.
- I. Store gaskets for mechanical and push-on joints in cool location out of direct sunlight and contact with petroleum products.

1.6 ENVIRONMENTAL REQUIREMENTS

- A. Pipe shall not be laid in water.
- B. Pipe shall not be laid in trenches where, in opinion of Engineer/Architect, Owner's Representative or Construction Manager, conditions are unsuitable.

PART 2 - PRODUCTS

2.1 FIELD EXAMINATION

- A. Materials used in construction of water mains shall be field inspected and accepted prior to installation.
- B. Carefully examine pipe, fittings, valves, hydrants, and other appurtenances for damage and other defects immediately before installation.
- C. Mark defective materials and hold for inspection by of Engineer/Architect, Owner's Representative or Construction Manager, who may prescribe corrective repairs or reject materials.

2.2 DUCTILE IRON PIPE WATER MAIN

- A. Ductile Iron Pipe:
 - 1. Pipe shall be centrifugally cast in metal or sand-lined molds.
 - 2. Pipe shall be designed with bell and spigot ends designed for rubber gasket push-on joints.
 - 3. Pipe shall have a cement mortar lining and internal and external bituminous coats.
 - 4. Pipe shall conform to requirements of AWWA C151.

B. Fittings:

1. Fittings shall be centrifugally cast in metal or sand-lined molds.
2. Fittings shall be designed with bell and spigot ends designed for rubber gasket push-on joints.
3. Fittings shall have a cement mortar lining and internal and external bituminous coats.
4. Fittings shall conform to requirements of AWWA C110.
5. Compact fittings [conforming to AWWA C153] will [not] be acceptable.
6. Wherever mechanical joints are used, joint bolts and nuts shall be corrosion resistant steel, NSS Technologies, Inc. Core-Blue or approved equal.
7. In no case shall fitting grade be rated less than adjoining pipe.
8. Fittings shall be from same manufacturer as ductile iron pipe and shall be manufactured in the United States.

C. Joints:

1. Join pipe and fittings by means of compression type rubber gasket [push on] [flanged] [mechanical] [river crossing] joints.
2. Nuts and bolts shall be corrosion resistant steel, NSS Technologies, Inc. Core-Blue or approved equal.
3. Equip joint with a heavy-duty rubber gasket designed to form a pressure-tight seal.
4. Allow a maximum deflection of 15 degrees.

D. Cement Mortar Lining:

1. Pipe and fittings shall be cement lined.
2. Cement lining shall conform to AWWA C104.
3. Thickness of lining shall be a minimum of 0.0625-inch for 4-inch to 12-inch pipe, and 0.1875-inch for 14-inch to 24-inch pipe.

E. Disinfection:

1. Take precautions to protect interiors of pipes, fittings, and valves against contamination.
2. Perform disinfection in accordance with Section 33 13 00 – Water Main Disinfection.

F. Coatings:

1. Inside Coating:
 - a. Coat entire inside of socket, including gasket cavity, with a minimum of 8 mils of epoxy to prevent joint corrosion.
 - b. Seal coat pipe over cement lining.
2. Outside Coating:
 - a. Coat last 6 inches of spigot, including spigot face with 8 mils of epoxy to prevent joint corrosion.
 - b. Coating shall be an asphaltic coating a minimum of 1 mil thick.

G. Corrosion Control:

1. Encase pipe in polyethylene film in accordance with requirements of AWWA C105.
2. Polyethylene Film: Polyethylene film conforming to ASTM D4976, Type I, Class B, color black, Grade E-1, 1200 psi tensile strength, minimum thickness of 8 mil. Tube diameter or sheet width shall conform to AWWA C105.
3. Bolts and Nuts: Corrosion resistant alloyed nuts and bolts for mechanical joints.

2.3 POLY VINYL CHLORIDE WATER MAIN

A. Pipe:

1. PVC Pipe: AWWA C900 Poly (Vinyl Chloride) (PVC); nominal diameter 4-inch through 12-inch; DR-25, pressure class 100; DR-18, pressure class 150; DR-14, pressure class 200; as designated on Drawings; integral gasketed joint.
2. PVC Pipe: AWWA C905 Poly (Vinyl Chloride) (PVC); DR-18, 235 psi pressure rating, DR-21, 200 psi pressure rating, DR-25, 165 psi pressure rating, DR-32.5, 125 psi pressure rating, DR-41, 100 psi pressure rating; nominal diameter 14-inch through 48-inch with cast iron outside diameter, as designated on Drawings; integral bell gasketed joint.

B. Fittings:

1. Fabricate fittings shall be fabricated from polyvinyl chloride and conform to AWWA C900; nominal diameter 4-inch to 12-inch or C905; nominal diameter 14-inch to 48-inch.

C. Fittings:

1. Fabricate fittings from ductile iron, conform to AWWA C110 or AWWA C153, and provide mechanical joints.
2. Connect ductile iron fittings to PVC pipe with mechanical joint restraints similar and equal to those manufactured by EBAA Iron Sales, Inc., Ford Meter Box Company, Inc., or an approved equal.
3. Pipe used in fabricated fittings shall meet quality and dimensional requirements listed in standard for that pipe.
4. Pipe used in fabricated fittings shall have a wall thickness equal to or greater than wall thickness of pipes to which fitting (or that part of fitting) is joined.
5. No part of spur or branch shall protrude into waterway of fitting more than 0.070 inch.
6. No fitting shall have an inside diameter dimension smaller than base inside diameter for that pipe size and DR.

D. Joints:

1. Flexible elastomeric seals shall comply with requirements of ASTM F477 natural or synthetic rubber for push-on joints that require no internal or external pressure to effect initial seal.
2. Lubricant, if used, shall be of such composition that it will in no way damage gasket or pipe due to prolonged exposure and shall not affect sealing capability of gasket.
3. Make joints in accordance with ASTM D3139.

2.4 PIPE LOCATION MATERIALS

- A. Identification Warning Tape: Aluminum underground warning tape, 2-inch width. Color-Bright Blue, warning message "Caution Buried WATER MAIN Below" to repeat every 30 inches.
- B. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Installed to enable electronic locating of underground utility.

2.5 TRACER WIRE MATERIALS

- A. Mark non-conductive lateral pipes with a locating wire system.
- B. Locating wire system consists of the following:
 1. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Install to enable electronic locating of underground utility.
 2. Tracer Wire Locating Box: 2-1/2-inch diameter, minimum, ABS pipe with 2-point terminal box and cast iron cover.

- a. Manufacturer: Valco, Inc., Model C.P. Mini Box, or an approved equal.

2.6 VALVES AND BOXES

A. Manufacturers - Resilient-Seated Gate Valves:

1. Valve Division of McWane, Inc. - Kennedy Resilient Seat Gate Valve - Ken-Seal II.
2. American Flow Control – Resilient Wedge Gate Valve – Series 500.
3. Mueller Company - Resilient Wedge Gate Valve – 2360 Series.
4. Substitutions: In accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.

B. Materials - Resilient-Seated Gate Valves:

1. Resilient Seated Gate Valve: Conform to AWWA C509; non-rising bronze stem, 200 psi working pressure; internal parts accessible without removing main body from pressure line; internal cast iron surfaces to be coated with 2 coats of corrosion resistant coating; internal diameter of valve equal to or greater than connection pipe diameter; valve opens counter-clockwise[mechanical joint ends, push-on joint ends; furnished with 2 inch operating nut.

C. Manufacturers - Butterfly Valves:

1. DeZURIK, Division of Sartell Valves, Inc.
2. Henry Pratt Company.
3. Mueller Company.
4. Substitutions: In accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.

D. Material - Butterfly Valves:

1. Butterfly Valve: Conform to AWWA C504; cast iron body and disc; Type 304 stainless steel shaft; synthetic rubber seat simultaneously molded in, vulcanized and bonded to body; self-locking, manual operator with a 2-inch square traveling nut, closing with a counter-clockwise rotation, designed to hold valve in any intermediate position between full open and fully closed; pressure class 150B; internal cast iron surfaces to be coated with two coats of corrosion resistant coating; internal diameter of valve equal to or greater than connection pipe diameter; mechanical joint ends.

E. Post Indicator Valves:

1. Post Indicator: From same source as resilient wedge gate valve or compatible thereto; meeting UL 789 and FM Global approved; sized to fit valve with attachment hardware; post and rod extension assemblies based on location and grade; open and shut plate; supervisory switch; minimum dimension 38-inches finished grade to top of operator; exterior finished in accordance with AWWA C509.

F. Protective Finishes:

1. On valves 3 through 16 inches, apply standard AWWA coating, 2 coats asphalt varnish, in accordance with AWWA C509.
2. On valves 20 through 60 inches, apply standard AWWA coatings, 2 coats asphalt varnish, in accordance with AWWA C500 are acceptable for all but final exterior coat, after complete assembly.
3. Final exterior coat shall be an epoxy conforming to ASTM C550 applied to exposed ferrous elements, except for stainless steel.

G. Valve Box Adaptors:

1. Gate Valve Adaptor: Epoxy-coated, 1/4-inch steel with 1/2-inch rubber gasket, size to fit valve. Similar and equal to adaptors manufactured by Adaptor, Inc., West Allis, WI.
2. Butterfly Valve Adaptor: Epoxy-coated, 1/4-inch steel, size to fit valve. Similar and equal to adaptors manufactured by Adaptor, Inc., West Allis, WI.

H. Manufacturers - Cast Iron Valve Boxes:

1. Bingham & Taylor Corporation.
2. Tyler Pipe Company.
3. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.

I. Valve Box Materials:

1. Cast Iron Valve Box: 5-1/4 inch diameter shaft; round base; 5-1/4 inch drop lid marked "WATER"; length of assembly sized to span top of main to finished grade with a minimum adjustment remaining for an additional 3 inches. Valve boxes shall be manufactured in the United States.

2.7 HYDRANTS

A. Manufacturer:

1. Make and model of hydrant shall be standard used by Municipal Water Utility and/or local Fire Department.
2. American Flow Control - Waterous Pacer WB-67-250.
3. Clow, Division of McWane Corporation – Medallion.
4. Kennedy Valve, Division of McWane, Inc. – Guardian K-81D.
5. Mueller Company Division of Mueller Water Products, Inc. – Super Centurion A423.
6. U.S. Pipe and Foundry Company Division of Mueller Water Products, Inc. – [Metropolitan/ M-94] [Sentinel 250].
7. Substitutions in accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework.

B. Hydrant:

1. Hydrant materials and manufacture in accordance with AWWA C502;
2. Main valve shall be synthetic rubber reinforced with steel and shall close with water pressure;
3. O-ring seal between upper and lower barrels;
4. Operating parts including valve seat shall remove through barrel;
5. Nozzles shall be 1/4 turn type with O-ring seals and stainless steel retaining screws;
6. National standard fire hose screw threads; breakaway traffic flange;
7. One-inch bronze operating nut, opening left; 6-inch mechanical joint; minimum six-foot cover.

C. Hydrant Extensions:

1. Fabricate in multiples of 6 inches with rod and coupling to increase barrel length.
2. Maximum of one (1) extension per hydrant may be used.
3. If additional extension is necessary on hydrant with existing extension, remove existing extension and replace with single, adequate extension.

D. Hose and Streamer Connection: Match sizes with municipal utility, two hose nozzles, and one pumper connection.

- E. Finish: Primer and two coats of enamel in color required by Municipality.

2.8 PIPE RESTRAINT MATERIALS

- A. Buttress Concrete: ASTM C150 Portland cement and ASTM C33 aggregates, air-entrained concrete with minimum compressive strength of 3000 psi.
- B. Wedge-Action Joint Restraints: Cast iron, circular or a pair of semi-circles with wedges that grip ductile iron or PVC pipe. Product shall be similar and equal to Megalug as manufactured by EBAA Iron Sales, Uni-Flange as manufactured by Ford Meter Box Company, Inc., or an approved equal.
- C. Rod Restraints: ASTM A575 carbon steel, threaded rods with bitumastic coating and ASTM A563 nuts or ASTM A276 stainless steel threaded rods with ASTM F594 nuts.
- D. Anchor Pipe: Ductile iron, thickness class 53, mechanical joints.

PART 3 - EXECUTION

3.1 NOTIFICATION

- A. Contractor, prior to any excavation work, shall notify (1) a designated locating service; (2) utilities, governmental agencies, and entities, known to, or which can reasonably be assumed to have above or below ground pipe, conduit cables, structures, or similar items within limits of project; to locate and mark location of such items.
- B. In accordance with Florida Statutes Chapter 556, "Underground Facility Damage Prevention and Safety Act," every "Person" as defined in 556.102(9) shall be solely responsible to provide advance notice to "Sunshine State One-Call of Florida, Inc." (800-432-4770) not more than five nor less than two working days prior to commencement of any Excavation or Demolition, as defined in the statute, required to perform work contained in this Project, and further said "Person" shall comply with other requirements of this Statute relative to Excavator's Work.

3.2 VERIFICATION OF CONDITIONS

- A. Fire mains shall be laid and maintained to lines and grades established by Drawings with fittings, valves, tapped or bossed outlets and hydrants at required location.

3.3 PROTECTION

- A. Exercise care during excavation to avoid damage to existing structures.

3.4 INSTALLATION OF PIPE

- A. Trench preparation, in conformance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction, shall proceed in advance of pipe installation for only as far as stated.
- B. Contractor shall not deviate from type of excavation indicated on drawings or in Contract Documents without written approval of of Engineer/Architect, Owner's Representative or

Construction Manager, except in case of roadways, driveways, and obstructions requiring short tunnel sections that may have been indicated on Drawings as open trench sections.

- C. Support tunnel sections exceeding two feet in length in accordance with applicable codes.
- D. Install water mains without use of wood blocking.
- E. Carefully lower pipe, fittings, valves, and hydrants trench by means of a derrick, ropes, or other suitable tools or equipment, in such a manner as to prevent damage to water main materials and protect coatings and linings.
- F. Lay pipe with bell ends facing direction of laying. When grade exceeds 2 feet of rise per 100 feet of trench, bells shall face upgrade.
- G. Provide holes for bells at each joint but shall be no larger than necessary for joint assembly and assurance that pipe shall bear throughout its full length and not be supported by blocks or bell ends.
- H. When rock is encountered, remove rock to provide a clearance of at least 6 inches below and on each side of pipe, valves, and fittings for pipe sizes 24 inches or smaller, and 9 inches for pipe sizes 30 inches and larger.
- I. When excavation is completed, place a layer of appropriate backfill material, conforming to Section 31 23 16 - Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction, on bottom of trench to depths indicated, leveled, and tamped.
- J. Take every precaution to prevent foreign material from entering pipe while it is being placed in line.
- K. If pipe laying crew cannot put pipe into trench and in place without getting earth into it, of Engineer/Architect, Owner's Representative or Construction Manager may require that before lowering pipe into trench, a heavy, tightly woven canvas bag of suitable size be placed over each end and left there until connection is to be made to adjacent pipe.
- L. No debris, tools, clothing, or other materials shall be placed in pipe during laying operations.
- M. Assemble joint and bring pipe to correct line and grade as each length of pipe is placed in trench.
- N. Take precautions to prevent foreign materials from entering joint space and carefully check joint recess for foreign material before gasket is installed.
- O. Secure pipe in place with bedding material, keeping bell end open. Remove pipe and fittings which do not allow a sufficient and uniform space for joints and replace with pipe and fittings of proper dimensions to insure such uniform space.
- P. At times when pipe laying is not in progress, close open ends of pipe by a water tight plug or other means approved by of Engineer/Architect, Owner's Representative or Construction Manager. This provision shall apply during noon hour as well as overnight.
- Q. If water is in trench, seal shall remain in place until trench is pumped completely dry.

- R. Whenever it becomes necessary to lay a main over, under, or around a known obstruction, Contractor will furnish and install required fittings. Laying of such fittings will be paid for at unit price bid for each size of main. No additional compensation will be paid to Contractor of any expenses incurred because of such obstruction.
- S. When an unknown underground structure interferes with work to such an extent that an alteration of work plan is required, which alteration results in a change in cost to Contractor, of Engineer/Architect, Owner’s Representative or Construction Manager will issue a written order for such altered work, specifying basis of payment or credit for such altered work.
- T. Keep interior and exterior of pipe clean and free from foreign material before being installed. Provide necessary means to wipe, brush, swab, or air blast or remove any foreign material from interior of pipe as directed of Engineer/Architect, Owner’s Representative or Construction Manager.
- U. Restrain tees, plugs, caps, bends and hydrant branches against movement.

3.5 RUBBER GASKET JOINTS

- A. Join pipe and fittings by means of a compression type push-on rubber gasket unless another type joint is specified on Drawings or in Contract Documents.
- B. Wipe bell and spigot of each pipe clean and dry.
- C. Insert gasket, large round end first, into gasket seat inside of bell.
- D. Apply a thin film of non-toxic lubricant recommended by pipe manufacturer to inside surface of that portion of gasket that comes in contact with entering pipe.
- E. Place entering pipe in approximate alignment with receiving bell and insert until it just makes contact with gasket.
- F. Apply sufficient pressure on entering pipe until spigot end sockets in bell. This can be accomplished by one of following methods:
 - 1. Leverage bar or other approved method shall be used on pipe 12 inches in diameter or smaller.
 - 2. Jack and 2 choker-slings, or other approved method, may be used on pipe larger than 12 inches in diameter.
- G. Whenever it is necessary to deflect pipe from a straight line, either in vertical or horizontal plane, amount of deflection shall not exceed that shown in following table:

ALLOWABLE BENDING FOR PVC PRESSURE PIPE

Nominal Size (Inches)	Minimum Curve Radius (Feet)	Offset (Inches)
4	56	17
6	88	12
8	108	9
10	138	7
12	164	6

MAXIMUM JOINT DEFLECTION
 FOR DUCTILE IRON PIPE WITH RUBBER GASKET JOINTS

Size of Pipe (Inches)	Maximum Permissible Deflection per Length (Inches)		Approximate Radius of Curve	
	PIPE LENGTH		PIPE LENGTH	
	<u>18'</u>	<u>20'</u>	<u>18'</u>	<u>20'</u>
3	19	21	205	230
4	19	21	205	230
6	19	21	205	230
8	19	21	205	230
10	19	21	205	230
12	19	21	205	230
14	11	12	340	380
16	11	12	340	380
18	11	12	340	380
20	11	12	340	380
24	11	12	340	380
30	11	12	340	380
36	11	12	340	380

48		12		380
54		12		380
60		12		380
64		12		380

3.6 MECHANICAL JOINTS

- A. Clean foreign matter and paint with a soap solution last 8 inches of outside of spigot and inside of bell.
- B. Slip cast iron gland on spigot end with lip extension toward socket or bell end.
- C. Paint rubber gasket with soap solution and place in spigot end with thick edge toward gland.
- D. Nuts and bolts used in joint assembly shall be corrosion resistant steel.
- E. Push entire section of pipe forward to seat spigot end in bell. Take care to locate gasket evenly around entire joint.
- F. Nuts may be tightened with a suitable torque-limiting wrench. Torque for various sizes of bolts shall be as follows:

<u>Joint Size</u>	<u>Bolt Size (Inches)</u>	<u>Range of Torque</u>
3-inch	5/8	40-60
4-24 inches	3/4	75-90
30-36 inches	1	100-120
42-48 inches	1-1/4	120-150

- G. Tighten nuts alternately in order to produce an equal pressure on all parts of gland.
- H. After a joint is assembled and securely tightened, completely coat nuts and bolts with an approved bituminous protective coating, Koppers 50, 505, or an approved equal.
- I. Whenever it is necessary to deflect pipe from a straight line, either in vertical or horizontal plane, amount of deflection shall not exceed that shown in following table:

MAXIMUM JOINT DEFLECTION FOR MECHANICAL JOINT DUCTILE IRON PIPE

<u>Pipe Size (Inches)</u>	<u>Maximum Permissible Deflection per Length (Inches)</u>		<u>Approximate Radius of Curve (Feet)</u>	
	<u>Pipe Length 18'</u>	<u>Pipe Length 20'</u>	<u>Pipe Length 18'</u>	<u>Pipe Length 20'</u>
3	31	35	125	140
4	31	35	125	140

16	13.5	15	285	320
18	11	12	340	380
20	11	12	340	380
24	9	10	450	500

3.7 CUTTING OF PVC PIPE

- A. Cut pipe at right angles to centerline of pipe.
- B. Perform cutting in a neat workmanlike manner without damage to pipe and leave a smooth end.
- C. Pipes may be cut with a circular saw or hand saw.
- D. Pipe spigot ends shall be deburred, beveled, and re-marked with insertion line.
- E. Length and angle of field bevels shall match factory bevels.

3.8 CUTTING OF DUCTILE IRON PIPE

- A. Cut pipe at right angles to centerline of pipe.

- B. Perform cutting in a neat, workmanlike manner without damage to pipe and leaving a smooth end.
- C. Cut pipes with an approved mechanical cutter.
- D. Taper cut end of pipe to be used with rubber gasket joints by grinding or filing about 1/8-inch back at an angle of approximately 30 degrees with centerline of pipe and remove any sharp or rough edges.

END OF SECTION 331119

SECTION 331213 - WATER SERVICE LATERALS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Tapping new water mains for lateral services.
2. New lateral service extension.
3. Existing building lateral service connections.
4. Service piping.
5. Tracer wire.
6. Saddles.
7. Corporation stops.
8. Curb stops.
9. Curb boxes.
10. Insulation.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements shall govern Work under this Section.
2. Section 31 23 17 – Site Excavation, Backfill, and Compaction.
3. Section 33 05 01 – Ductile Iron Pipe and Fittings.
4. Section 33 05 06 – Polyvinyl Chloride (PVC) Pressure Pipe.
5. Section 33 10 13 - Water Main Installation.
6. Section 33 13 16 – Corrosion Control - Pipe and Fittings.

1.2 REFERENCES

A. Okaloosa County, Florida – Water/Sewer District Utilities Standards Manual – Section 2: Technical Specifications.

B. ASTM International: (ASTM)

1. ASTM B62 – Specification for Composition Bronze or Ounce Metal Castings.
2. ASTM B88 – Specification for Seamless Copper Water Tube.
3. ASTM C518 - Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
4. ASTM C578 – Specification for Rigid, Cellular Polystyrene Thermal Insulation.
5. ASTM D1621 - Test Method for Compressive Properties Of Rigid Cellular Plastics.
6. ASTM D2842 - Test Method for Water Absorption of Rigid Cellular Plastics.

C. American Water Works Association: (AWWA)

1. AWWA C150 – Thickness Design of Ductile Iron Pipe.
2. AWWA C151 – Ductile-Iron Pipe, Centrifugally Cast, For Water.
3. AWWA C800 - Underground Service Line Valves and Fittings.
4. AWWA C900 - Polyvinyl Chloride (PVC) Pressure Pipe, 4 Inches Through 12 Inches for Water Distribution.
5. AWWA C901 - Polyethylene (PE) Pressure Pipe and Tubing, 1/2 In. Through 3 In., for Water Service.

6. AWWA C906 - Polyethylene (PE) Pressure Pipe and Fittings, 4 In. Through 63 In., for Water Distribution and Transmission.

1.3 SUBMITTALS

- A. Division 01 – General Requirements, Section 01 33 00 - Submittal Procedures, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Division 01 – General Requirements, Section 01 70 00 – Execution and Closeout Requirements, Section 01 78 23 – Operation and Maintenance Data, Section 31 02 00 – General Requirements for Sitework: Submit operation and maintenance information

1.4 REGULATORY REQUIREMENTS

- A. Contractor shall comply with applicable rules of:
 1. State of Florida Department of Environmental Protection and Department of Community Affairs and local code if more stringent for materials and installation of the Work of this section.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Load and unload pipe, fittings, valves, and accessories by lifting with hoists to avoid shock or damage.
- B. Under no circumstances shall material be dropped.
- C. Keep stored material free of damage.
- D. Keep interior of pipe, fittings, and other appurtenances free from dirt or foreign matter.
- E. Use timbers to separate pipe stored on ground from ground and other pipe.

1.6 ENVIRONMENTAL REQUIREMENTS

- A. Pipe shall not be laid in water.
- B. Pipe shall not be laid in trenches where, in opinion of Engineer/Architect, Owner's Representative or Construction Manager, conditions are unsuitable.

PART 2 - PRODUCTS

2.1 WATER SERVICE PIPING – 2 INCH AND UNDER

- A. Piping for water laterals shall be ASTM B88, Type K, soft annealed seamless copper tubing.
- B. Permanently and plainly mark name or trademark of manufacturer and a mark indicating type on tubing at intervals not greater than 18 inches.
- C. Fittings for copper tubing shall conform to AWWA C800 and be of cast brass having an alloy of 85 percent copper, 5 percent tin, 5 percent zinc and 5 percent lead (copper alloy C83600 also known as "red brass") in accordance with ASTM B62.

- D. Fittings shall have uniformity in wall thickness and strength, and free of any defect that may affect their serviceability. Fittings shall be of [flared] [compression] type only. Unions shall be extra heavy 3-part union only.
- E. Copper tubing shall be single piece, without joints, from corporation stop to curb stop.
- F. Encase copper tubing in polyethylene sheeting and tape secure, in accordance with Section 33 13 16 – Corrosion Control - Pipe and Fittings.
- G. Piping for water laterals shall be polyethylene tubing conforming to AWWA C901, Pressure Class 200.
- H. Make pipe connections with pack joint connections including a Buna-N beveled gasket for sealing to outside diameter of pipe.
- I. Integrate a split clamp locking device with stainless steel hardware into connection fittings to securely restrain the pipe from hydraulic pressure and external loading caused by shifting and settling.
- J. Provide stainless steel insert stiffeners for pack joint connection fittings used with polyethylene tubing.
- K. Fittings for polyethylene tubing shall conform to AWWA C800 and be of cast brass having an alloy of 85 percent copper, 5 percent tin, 5 percent zinc and 5 percent lead (copper alloy C83600 also known as "red brass") in accordance with ASTM B62.
- L. Fittings shall have uniformity in wall thickness and strength, and free of any defect that may affect their serviceability.
- M. Polyethylene tubing shall be single piece, without joints, from corporation stop to curb stop.

2.2 WATER SERVICE PIPING - 3 INCH AND OVER

- A. Piping for water laterals shall be ductile iron pipe conforming to requirements of Section 33 05 01 – Ductile Iron Pipe and Fittings and AWWA C150 and C151.
- B. Encase ductile iron pipe in polyethylene in accordance with Section 33 13 16 – Corrosion Control - Pipe and Fittings.
- C. Piping for water lateral shall be polyvinyl chloride pipe conforming to requirements of Section 33 05 06 – Polyvinyl Chloride (PVC) Pressure Pipe and AWWA C900.

2.3 TRACER WIRE MATERIALS

- A. Mark all non-conductive lateral pipes with a locating wire system.
- B. Locating wire system consists of the following:
 - 1. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Install to enable electronic locating of underground utility.
 - 2. Tracer Wire Locating Box: 2-1/2-inch diameter, minimum, ABS pipe with 2 point terminal box and cast iron cover.
 - a. Manufacturer: Valco, Inc. Model C.P. Mini Box, or an approved equal.

2.4 SERVICE FITTINGS

A. Manufacturers:

1. Mueller Company, Decatur, IL
2. The Ford Meter Box Company, Inc., Wabash, IN
3. A.Y. McDonald Mfg. Co., Dubuque, IA
4. Substitutions: In accordance with Division 01 – General Requirements.

B. Saddles:

1. Mueller Company, H-10500 Series.
2. The Ford Meter Box Company, Style F202.
3. A.Y. McDonald Mfg., Model 3825.
4. Substitutions: In accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework Not permitted.

C. Corporation Stops:

1. Mueller Company, H-15000 Series.
2. The Ford Meter Box Company, FB-600.
3. A.Y. McDonald Mfg., 4701B.
4. Substitutions: In accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework Not permitted.

D. Curb Stops:

1. Mueller Company, H-15154 Series.
2. The Ford Meter Box Company, B22M Series.
3. A.Y. McDonald Mfg., 6104 Series.
4. Substitutions: In accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework Not permitted.

E. Curb Boxes - 1-inch Services:

1. Mueller Company; Series H-10302.
2. The Ford Meter Box Company; Series EM2-XX-56.
3. A. Y. McDonald Mfg., Series 5614.
4. Substitutions: In accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework Not permitted.

F. Curb Boxes - 1-1/4 inch and 1-1/2 inch Services:

1. Mueller Company; Series H-10304.
2. The Ford Meter Box Company, Series EM2-XX-57.
3. A. Y. McDonald Mfg., Series 5615.
4. Substitutions: In accordance with Division 01 – General Requirements, Section 01 25 00 – Substitution Procedures, Section 31 02 00 – General Requirements for Sitework Not permitted

G. Curb boxes shall have a minimum 1-1/2-inch inside diameter.

- H. Service boxes shall have a minimum length of 7 feet when extended without use of extension sections.

PART 3 - EXECUTION

3.1 WATER AND SEWER SEPARATION

- A. Water services 2-1/2 inches or larger shall be installed at least 8 feet horizontally from any sanitary sewer.
- B. Water services 2 inches and smaller shall be installed at least 30 inches horizontally from any sanitary sewer.
- C. No water service may be installed within 6 inches of a storm sewer.
- D. Where water main crosses above a sanitary sewer, bottom of water main must be at least 12 inches above top of sewer within 10 feet of point of crossing.
- E. Where water main crosses below a sanitary sewer, top of water main must be at least 18 inches below bottom of sewer within 10 feet of point of crossing.
- F. Locate water services at least ten feet horizontally from any existing or proposed sewer line.
- G. Building water service and building drain or sewer may be installed in the same trench provided that water service is placed on a solid shelf a minimum of 18 inches above building drain or sewer.
- H. Whenever a water service crosses above a sewer, following conditions must be met.
 - 1. Bottom of water line is 18 inches above the top of sewer for a distance of 10 feet either side of crossing measured perpendicular to water line.
 - 2. Sewer shall be constructed with water main materials such as cast ductile iron pipe, Type K copper pipe, or Schedule 40 plastic pipe.
- I. Water services shall not cross below a sanitary sewer.
- J. Provide horizontal separation of least 6 feet, and preferably 10 feet, from outside wall of water service to outside wall of existing sanitary sewer.
- K. Provide horizontal separation of least 3 feet from outside wall of water service to outside wall of existing storm sewer.
- L. Locate outside wall of water service at least 6 inches, and preferably 12 inches, above or 12 inches below outside wall of existing storm or sanitary sewer.
- M. Where pipes cross, separate water main and sanitary sewer joints by at least 6 feet and water main and storm sewer joints by at least 3 feet.
- N. Where pipes have less than required horizontal separation or less than required joint separation, meet one of the following:
 - 1. Use of AWWA pressure rated pipe for pressure or gravity, storm or sanitary sewer.
 - 2. Use of welded, fused, or otherwise restrained joints on either water main or other pipe.

3. Use of watertight casing or 4 inch concrete encasement on either water main or other pipe.
- O. Where there is less than 3 feet horizontal separation or less than minimum vertical separation:
 1. Use pipe or casing pipe with impact strength of 0.25 inch ductile iron pipe or 4 inch concrete encasement for water main; or
 2. Use pipe or casing pipe with impact strength of 0.25 inch ductile iron pipe or 4 inch concrete encasement for other pipe.

3.2 NOTIFICATION

- A. Contractor, prior to any excavation work, shall notify (1) a designated locating service; (2) utilities, governmental agencies, entities, known to, or which can reasonably be assumed to have above or below ground pipe, conduit cables, structures, or similar items within limits of project; to locate and mark location of such items.
- B. In accordance with Florida Statutes Chapter 556, "Underground Facility Damage Prevention and Safety Act," every "Person" as defined in 556.102(9) shall be solely responsible to provide advance notice to "Sunshine State One-Call of Florida, Inc." (800-432-4770) not more than five nor less than two working days prior to commencement of any Excavation or Demolition, as defined in the statute, required to perform work contained in this Project, and further said "Person" shall comply with all other requirements of this Statute relative to Excavator's Work.

3.3 PROTECTION

- A. Perform excavation, backfilling and compaction in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction for protection of public and private property.
- B. Exercise care during excavation to avoid damage to existing buildings, structures, roadways, sidewalks, utilities, and survey identification markings.

3.4 INSTALLATION OF LATERAL

- A. Lay and maintain water laterals to lines and grades established by Drawings with fittings and valves at required locations.
- B. Trench preparation shall proceed in advance of lateral installation only as far as can be backfilled in same day.
- C. Contractor shall not deviate from types of excavation indicated on Drawings or in Project Manual without prior concurrence of Engineer/Architect, Owner's Representative, Construction Manager except in case of roadways, driveways, and obstructions requiring short tunnel sections that may be indicated on Drawings as open trench sections.
- D. Support tunnel sections exceeding 2 feet in length in accordance with applicable codes.
- E. Install water laterals without use of wood blocking.
- F. Lower tubing or pipe, fittings, and valves carefully into trench by means of a derrick, ropes, or other suitable tools or equipment, in a manner to prevent damage to water main materials and protect coatings and linings.

- G. Trench bottom shall be true and even in order to provide support for full length of lateral, except a slight depression may be provided to allow withdrawal of pipe slings or other lifting tackle.
- H. Remove lumped subsoil, boulders, and rock up to 1/3 cubic yard, measured by volume. Larger material will be removed under Section 31 23 18 - Rock Removal. When rock is encountered, remove to provide a clearance of at least 6 inches below and on each side of pipe, valves, and fittings for pipe sizes 24 inches or smaller, and 9 inches for pipe sizes 30 inches and larger.
- I. When excavation is complete, place a layer of appropriate bedding material on bottom of trench to depths indicated, level, and compact. Take every precaution to prevent foreign material from entering pipe while it is being placed in line.
- J. If pipe laying crew cannot put lateral into trench and in place without getting earth into it, Engineer/Architect, Owner's Representative, Construction Manager may require that before lowering pipe into trench, a heavy, tightly woven, canvas bag of suitable size be placed over each end and left there until connection is made to adjacent pipe.
- K. Take precautions to prevent foreign materials from entering joint space and carefully check joint recess for foreign material before installing gasket.
- L. Secure lateral in place with bedding material, placed by hand or equally careful means, keeping bell end open. Remove pipe and fittings that do not allow sufficient and uniform space for joints and replace with pipe and fittings of proper dimensions to insure such uniform space.
- M. Upon daily and temporary completion of lateral installation, close open ends of pipe by a water-tight plug or other means approved by Engineer/Architect, Owner's Representative, Construction Manager. This provision applies during daytime inactivity as well as overnight.
- N. If water is in trench, maintain seal in place until water level is lowered four inches below lateral invert.
- O. Whenever it becomes necessary to lay a lateral over, under, or around a known obstruction, furnish and install required fittings. Cost of such fittings will be paid for in lump sum or unit price bid for each size of lateral. No additional compensation will be paid to Contractor for any expenses incurred because of such obstruction.
- P. When an unknown underground structure interferes with Work to such an extent that an alteration of Drawings is required and alteration results in a change in cost to Contractor, Engineer/Architect, Owner's Representative, Construction Manager will issue a written order for such altered work, specifying basis of payment or credit for such altered work.
- Q. Keep interior and exterior of lateral clean and free from foreign material before installation. Provide necessary means to wipe, brush, swab, or air blast to remove any foreign material from interior of tubing or pipe as instructed by manufacturer and as directed by Engineer/Architect, Owner's Representative, Construction Manager.

3.5 TRACER WIRE INSTALLATION

- A. Lateral tracer wire originates and terminates in tracer wire access box located at right-of-way line. Install conductor tracer wire in one continuous loop.

- B. Tape conductor tracer wire to top of pipe at minimum 10-foot intervals. Wrapping conductor tracer wire around pipe is prohibited.
- C. Field test each locating wire after installation is completed.

END OF SECTION 331213

SECTION 331316 - CORROSION CONTROL – PIPE AND FITTINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Polyethylene Sheeting.
 - 2. Polyethylene Installation – Tube Method.
 - 3. Polyethylene Installation – Sheet Method.
 - 4. Polyethylene Installation – Fitting and Appurtenances.
- B. Related Sections:
 - 1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
 - 2. Section 33 05 01 – Ductile Iron Pipe and Fittings.
 - 3. Section 33 10 13 – Water Main Installation.
 - 4. Section 33 12 13 - Water Service Laterals.

1.2 REFERENCES

- A. Okaloosa County, Florida – Water/Sewer District Utilities Standards Manual – Section 2: Technical Specifications.
- B. American Water Works Association: (AWWA)
 - 1. AWWA C105 - Polyethylene Encasement for Ductile Iron Piping for Water and Other Liquids.
- C. ASTM International: (ASTM)
 - 1. ASTM D4976 – Specification for Polyethylene Plastics Molding and Extrusion Materials.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Due to deterioration from sunlight, minimize exposure of polyvinyl chloride and polyethylene materials prior to backfilling.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Polyethylene Sheeting: Polyethylene sheeting conforming to ASTM D4976, Type I, Class B, color black, Grade E-1, 1200 psi tensile strength, minimum thickness of 8 mil. Tube diameter or sheet width shall conform to AWWA C105. Double layer.
 - 1. Tape: 2-inch wide, black tape with rubber adhesive and minimum 9 mil polyethylene backing. Tape shall be 3M™ Preservation Sealing Tape 481 or an approved equal.
- B. Use corrosion resistant steel nuts and bolts for buried joints, fittings, and specials. Nuts and bolts shall be NSS Technologies, Inc. Cor-Blue or an approved equal.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Polyethylene encasement shall seal and prevent contact between pipe and surrounding backfill and bedding material.
- B. Remove all lumps of clay, mud, cinders, and similar materials that may have accumulated on surface of pipe during storage.

3.2 INSTALLATION - TUBE METHOD

- A. Cut polyethylene tube to a length approximately two feet longer than that of pipe section. Slip tube around pipe, centering it to provide a one-foot overlap on each adjacent pipe section, and bunching it accordion fashion lengthwise until it clears pipe ends.
- B. Lower pipe into trench and make up pipe joint with preceding section of pipe. Provide shallow bell hole at joints to facilitate installation of polyethylene tube.
- C. After assembling pipe joint, overlap pipe joint with polyethylene tube.
- D. Pull bunched polyethylene from preceding length of pipe, slip over end of new length of pipe, and secure in place.
- E. Slip end of polyethylene from new pipe section over end of first wrap until it overlaps joint at end of preceding length of pipe.
- F. Secure overlap in place. Overlaps shall be secured by use of adhesive tape capable of holding polyethylene encasement in place until backfilling operations are completed.
- G. Take up slack width to make a snug, but not tight fit along barrel of pipe, securing fold at quarter points.
- H. Repair any rips, punctures, or other damage to polyethylene with adhesive tape or with a short length of polyethylene tube cut open, wrapped around pipe, and secured in place.
- I. Proceed with installation of next section of pipe in same manner.

3.3 INSTALLATION - SHEET METHOD

- A. Cut polyethylene sheet to length approximately two feet longer than that of pipe section.
- B. Center cut length to provide one-foot overlap on each adjacent pipe section, bunching it until it clears pipe ends.
- C. Wrap polyethylene around pipe so that it circumferentially overlaps top quadrant of pipe and both portions of adjoining pipe. Tape securely.
- D. Secure cut edge of polyethylene sheet at intervals of approximately three feet.
- E. Lower wrapped pipe into trench and make up pipe joint with preceding section of pipe.

- F. Take up slack width to make snug, but not tight, fit along barrel of pipe, securing fold at quarter points.
- G. Repair any rips, punctures, or other damage to polyethylene with adhesive tape or with a short length of polyethylene tube cut open, wrapped around pipe, and secured in place. Proceed with installation of next section of pipe in same manner.

3.4 INSTALLATION - FITTING AND APPURTENANCES

- A. Cover bends, reducers, offsets, and other pipe-shaped appurtenances with polyethylene in same manner as pipe.
- B. When valves, tees, crosses, and other odd-shaped pieces cannot be wrapped practically in a tube, wrap with flat sheet or split length of polyethylene tube by passing sheet under appurtenance. Seal laps with adhesive tape.

END OF SECTION 331316

SECTION 334013 - STORM SEWER INSTALLATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Bedding.
2. Pipe Installation.
3. Preparation for Structures.
4. Structure Installation.
5. Precast Concrete Manhole and Drainage Structure Installation.
6. Frame and Grate Installation.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
2. Section 31 05 16 – Aggregates for Earthwork.
3. Section 31 23 17 – Site Excavation, Backfill, and Compaction: Excavating for sewer system piping and structures [and detention basin.
4. Section 33 05 05 - Polyvinyl Chloride (PVC) Gravity Sewer Pipe.
5. Section 33 05 08 – High Density Polyethylene Storm Water Pipe.
6. Section 33 40 16 – Storm Sewer Laterals.
7. Section 33 42 13 - Pipe Culverts: Corrugated metal drainage pipes.

B. Okaloosa County, Florida – Water/Sewer District Utilities Standards Manual – Section 2: Technical Specifications.

C. Florida Department of Transportation

1. Standard Specifications for Road and Bridge Construction, Current Edition with latest supplements. (FDOT)

D. ASTM International (ASTM):

1. ASTM A798 – Standard Practice for Installing Factory-Made Corrugated Steel Pipe for Sewers and Other Applications.
2. ASTM B788 - Standard Practice for Installing Factory-Made Corrugated Aluminum Culverts and Storm Sewer Pipe.
3. ASTM C12 - Standard Practice for Installing Vitrified Clay Pipe Lines.
4. ASTM C270 – Standard Specification for Mortar for Unit Masonry.
5. ASTM C425 - Standard Specification for Compression Joints for Vitrified Clay Pipe and Fittings.
6. ASTM C443 - Standard Specification for Joints for Concrete Sewer and Manholes Using Rubber Gaskets.

7. ASTM C564 - Standard Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings.
8. ASTM C1479 – Standard Practice for Installation of Precast Concrete Sewer, Storm Drain, and Culvert Pipe Using Standard Installations.
9. ASTM D2122 - Standard Test Method for Determining Dimensions of Thermoplastic Pipe and Fittings.
10. ASTM D2321 - Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
11. ASTM F477 - Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
12. ASTM F1668 - Guide for Construction Procedures for Buried Plastic Pipe.

1.3 SUBMITTALS

- A. Division 01 – General Requirements, Section 01 33 00 - Submittal Procedures, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Manufacturer's Installation Instructions: Submit special procedures required to install Products specified.
- C. Record horizontal location and vertical depth of pipe runs, fittings, connections, and utility structures installed.

1.4 CLOSEOUT SUBMITTALS

- A. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements, Section 31 02 00 – General Requirements for Sitework: Closeout procedures.
- B. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements, Section 01 78 23 - Operation and Maintenance Data, Section 31 02 00 – General Requirements for Sitework: Submit operation and maintenance data.
- C. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements, Section 01 78 39 - Project Record Documents, Section 31 02 00 – General Requirements for Sitework]: Submit Project Record Documents.
 1. Accurately record actual locations of pipe runs, connections, structures, and invert elevations.
 2. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

1.5 COORDINATION

- A. Division 01 – General Requirements, Section 01 30 00 - Administrative Requirements, Section 31 02 00 – General Requirements for Sitework: Coordination and project conditions.
- B. Coordinate the Work with termination of storm sewer connection outside building, trenching, connection to foundation drainage system, and municipal storm sewer system.

PART 2 - PRODUCTS

2.1 STORM SEWER PIPE MATERIALS

- A. Polyvinyl Chloride (PVC) Sewer Pipe: Shall meet requirements of Section 33 05 05 – Poly Vinyl Chloride (PVC) Gravity Sewer Pipe.
- B. Polyethylene Pipe: Shall meet requirements of Section 33 05 08 – High Density Polyethylene Storm Water Pipe.
- C. Corrugated Metal Pipe: Shall meet requirements of Section 33 42 13 – Pipe Culverts.

2.2 PIPE LOCATION MATERIALS

- A. Identification Warning Tape: Heavy plastic underground warning tape, 2-inch width. Color - Bright Green, warning message "Caution Buried STORM SEWER Below" to repeat every 30 inches.
- B. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Installed to enable electronic locating of underground utility.

2.3 TRACER WIRE MATERIALS

- A. Mark non-conductive lateral pipes with a locating wire system.
- B. Locating wire system consists of the following:
 - 1. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Install to enable electronic locating of underground utility.
 - 2. Tracer Wire Locating Box: 2-1/2-inch diameter, minimum, ABS pipe with 2 point terminal box and cast iron cover.
 - a. Manufacturer: Valco, Inc., Model C.P. Mini Box, or an approved equal.]

PART 3 - EXECUTION

3.1 NOTIFICATION

- A. Contractor, prior to any excavation work, shall notify (1) a designated locating service; (2) utilities, governmental agencies, entities, known to, or which can reasonably be assumed to have above or below ground pipe, conduit cables, structures, or similar items within limits of project; to locate and mark location of such items.
- B. In accordance with Florida Statute Chapter 556, "Underground Facility Damage Prevention and Safety Act," every "Person" as defined in 556.102(9) shall be solely responsible to provide advance notice to "Sunshine State One-Call of Florida, Inc. (800-432-4770) not more than five nor less than two working days prior to commencement of any excavation or demolition required to perform work contained in this Project, and further said "Person" shall comply with all other requirements of this Statute relative to Excavator's Work.

3.2 EXAMINATION

- A. Division 01 – General Requirements, Section 01 30 00 - Administrative Requirements, Section 31 02 00 – General Requirements for Sitework: Coordination and project conditions.
- B. Verify trench cut and excavation base are ready to receive work and excavations, dimensions, and elevations are as indicated on Drawings.

3.3 PREPARATION

- A. Hand trim excavations to required elevations. Correct over excavation with Type A2 aggregate as specified in Section 31 05 16 – Aggregates for Earthwork.
- B. Remove large stones or other hard matter that could damage piping or impede consistent backfilling or compaction.

3.4 BEDDING AND COVER REQUIREMENTS

- A. Excavate pipe trench in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction] for work of this Section. Hand trim excavation for accurate placement of pipe to elevations indicated.
- B. Place Type A5, A6 or A7, depending on pipe size, bedding material, as specified in Section 31 05 16 – Aggregates for Earthwork, at trench bottom.
- C. Place and shape bedding material to pipe, to a minimum depth of three inches under bell and four inches under spigot and compact to 95 percent modified Proctor density.
- D. Backfill around sides and top of pipe with bedding material to a loose lift depth of 24 inches above pipe and compact to 95 percent modified Proctor density.
- E. Maintain optimum moisture content of bedding and cover material to attain required compaction density.

3.5 PIPE INSTALLATION

- A. Install pipe, fittings, and accessories in accordance with ASTM A798, ASTM B788, ASTM C12, ASTM C1479, ASTM D2321 and ASTM F1668. Seal joints watertight.
- B. Lay pipe to slope gradients noted on drawings with maximum variation from indicated slope of 1/8-inch in 10 feet.
- C. Reference Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction] for backfilling and compacting requirements. Do not displace or damage pipe when compacting.
- D. Reference Section 33 49 00 – Storm Sewer Manholes, Catch Basins, and Inlets for manhole, [catch basin,] [and] [inlet] requirements.
- E. Connect to building collection pits, building sewer outlet through installed sleeves.

3.6 PIPE LOCATION MATERIAL INSTALLATION

- A. Install tape continuous buried 12 inches below finish grade, above pipe line; and coordinate with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction.

3.7 TRACER WIRE INSTALLATION

- A. Lateral tracer wire originates and terminates in tracer wire access box located at right-of-way line. Install conductor tracer wire in one continuous loop.
- B. Tape conductor tracer wire to top of pipe at minimum 10-foot intervals. Wrapping conductor tracer wire around pipe is prohibited.
- C. Field test each locating wire after installation is completed.

3.8 PREPARATION FOR STRUCTURES

- A. Coordinate placement of inlet and outlet pipe or duct sleeves required by other sections.
- B. Do not install structures where site conditions induce loads exceeding structural capacity of structures.
- C. Inspect precast concrete structures immediately prior to placement in excavation to verify structures are internally clean and free from damage. Remove and replace damaged units.

3.9 STRUCTURE INSTALLATION

- A. Excavation and Backfill:
 - 1. Excavate for manholes and drainage structures in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction in location and to depth shown.
 - 2. Provide clearance around sidewalls of structure for construction operations.
 - 3. When groundwater is encountered, prevent accumulation of water in excavations. Place manholes or drainage structures in dry trench.
 - 4. Where possibility exists of watertight structure becoming buoyant in flooded excavation, anchor structure to avoid flotation.
 - 5. Backfill excavations for manholes and drainage structures in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction.
- B. Coordinate with other sections of Work to provide correct size, shape, and location.
- C. Lift precast structures at lifting points designated by manufacturer.
- D. When lowering manholes and drainage structures into excavations and joining pipe to units, take precautions to ensure interior of pipeline and structure remains clean.
- E. Set precast structures bearing firmly and fully on crushed stone bedding, compacted in accordance with provisions of Section 31 23 16 – Utility Trench Excavation, Backfill, and

Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction or on other support system shown on Drawings.

- F. Assemble multi-section structures by lowering each section into excavation. Lower, set level, and firmly position base section before placing additional sections.
- G. Remove foreign materials from joint surfaces and verify sealing materials are placed properly. Maintain alignment between sections by using guide devices affixed to lower section.
- H. Joint sealing materials may be installed on site or at manufacturer's plant.
- I. Verify manholes and drainage structures installed satisfy required alignment and grade.
- J. Remove knockouts or cut structure to receive piping without creating openings larger than required to receive pipe. Fill annular space with mortar.
- K. Cut pipe to finish flush with interior of structure.
- L. Shape inverts through manhole as shown on Drawings.

3.10 FRAME AND GRATE INSTALLATION

- A. Set frames using mortar and masonry. Install precast concrete adjustment rings or radially laid concrete brick with 1/4-inch thick vertical joints at inside perimeter.
- B. Lay precast concrete adjustment rings or concrete brick in full bed of mortar and completely fill joints. Where more than one course of concrete brick is required, stagger vertical joints.
- C. Set frame and cover 2 inches above finished grade for manholes and other structures with covers located within unpaved areas to allow area to be graded away from cover beginning 1 inch below top surface of frame.
- D. Place grate into frame after mortar has cured.
- E. Provide drainage fabric screen, under grate, to protect infiltration of debris and silt.

3.11 FIELD QUALITY CONTROL

- A. Division 01 – General Requirements, Section 01 40 00 - Quality Requirements, Section 31 02 00 – General Requirements for Sitework: Testing and inspection services.
- B. Request inspection prior to and immediately after placing aggregate cover over pipe.
- C. Compaction and Moisture Testing: In accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction.
- D. When tests indicate Work does not meet specified requirements, remove Work, replace and retest.
- E. Frequency of Tests: As determined by Engineer/Architect, Testing Agency, Owner's Representative or Construction Manager.

F. Deflection Test (PVC and Polyethylene Piping):

1. Perform deflection tests for polyvinyl chloride (PVC) [and] polyethylene (PE) pipe installations per ASTM D2122.
2. Perform deflection test using a rigid ball or mandrel without a mechanical pulling device.
3. If deflection testing occurs within 30 days of placement of final backfill, deflection shall not exceed 5 percent.
4. When deflection testing occurs more than 30 days after placement of final backfill, maximum deflection shall not exceed 7.5 percent.

3.12 PROTECTION OF FINISHED WORK

A. Division 01 – General Requirements, Section 01 70 00 - Execution Requirements, Section 31 02 00 – General Requirements for Sitework: Protecting finished Work.

B. Protect pipe and aggregate cover from damage or displacement until backfilling operation is completed.

1. Take care not to damage or displace installed pipe and joints during construction of pipe supports, backfilling, testing, and other operations.
2. Repair or replace pipe that is damaged or displaced from construction operations.

END OF SECTION 334013

This Page Intentionally Left Blank

SECTION 334016 - STORM SEWER LATERALS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Tapping storm sewers for laterals.
2. New lateral extension.
3. Existing building lateral connection.
4. Service piping.
5. Tracer wire.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
2. Section 31 23 17 – Site Excavation, Backfill, and Compaction.
3. Section 33 40 13 – Storm Sewer Installation.

1.2 REFERENCES

A. Public Works Industry Improvement Program

B. Okaloosa County, Florida – Water/Sewer District Utilities Standards Manual – Section 2: Technical Specifications.

C. ASTM International: (ASTM)

1. ASTM D2321 - Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
2. ASTM D3034 – Standard Specification for Type PSM Poly(VinylChloride) (PVC) Sewer Pipe and Fittings.
3. ASTM D3212 - Standard Specification for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.
4. ASTM F477 – Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
5. ASTM F1668 - Guide for Construction Procedures for Buried Plastic Pipe.

1.3 SUBMITTALS

A. Division 01 – General Requirements, Section 01 33 00 - Submittal Procedures, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.

B. Submit operation and maintenance information.

1.4 REGULATORY REQUIREMENTS

A. Contractor shall comply with applicable rules and regulations of:

1. State of Florida Department of Environmental Protection (FDEP) and local code if more stringent for materials and installation of the Work of this Section.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Load and unload pipe, fittings, and accessories by lifting with hoists to avoid shock or damage.
- B. Under no circumstances shall material be dropped.
- C. Keep stored material free of damage.
- D. Keep interior of pipe, fittings, and other appurtenances free from dirt or foreign matter.
- E. Use timbers to separate pipe stored on ground from ground and other pipe.

1.6 ENVIRONMENTAL REQUIREMENTS

- A. Pipe shall not be laid in trenches where, in opinion of Engineer/Architect, Owner's Representative or Construction Manager, conditions are unsuitable.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Pipes, fittings, and structures shall be manufactured in the United States of America.
- B. Supply materials in accordance with:
 1. State of Florida Department of Environmental Protection (FDEP) and local code if more stringent for materials for the Work of this Section.

2.2 STORM SEWER LATERAL PIPING

- A. Poly Vinyl Chloride (PVC) Pipe: ASTM D3034, SDR 26 or 35 Polyvinyl Chloride (PVC); nominal diameter 4-inches through 15-inches, as designated on Drawings; integral gasketed joint.

2.3 FITTINGS

- A. Pipe used in fabricated fittings shall meet quality and dimensional requirements listed in standard for that pipe. Fittings shall use same joint system as pipe.
- B. Pipe used in fabricated fittings shall have a wall thickness equal to or greater than wall thickness of pipes to which fitting (or that part of fitting) will be joined.
- C. No part of spur or branch shall protrude into waterway of fitting more than 0.070-inch.
- D. Edges and joints exposed to sewage shall be rounded and free from any rough parts that could catch solids.
- E. No fitting shall have an inside diameter dimension smaller than base inside diameter for that pipe size and SDR.

2.4 JOINTS

- A. Make joints in accordance with ASTM D3212 using ASTM F477 natural or synthetic rubber gaskets or C425 for push-on joints that require no internal or external pressure to effect initial seal.
- B. Lubricant shall have composition that will in no way damage gasket or pipe due to prolonged exposure and shall not affect sealing capability of gasket.

2.5 PIPE LOCATION MATERIALS

- A. Identification Warning Tape: Heavy plastic underground warning tape, 2-inch width. Color-Bright Green, warning message "Caution Buried STORM SEWER Below" to repeat every 30 inches.
- B. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Installed to enable electronic locating of underground utility.

2.6 TRACER WIRE MATERIALS

- A. Mark all non-conductive lateral pipes with a locating wire system.
- B. Locating wire system consists of the following:
 - 1. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Install to enable electronic locating of underground utility.
 - 2. Tracer Wire Locating Box: 2-1/2-inch diameter, minimum, ABS pipe with 2 point terminal box and cast iron cover.
 - a. Manufacturer: Valco, Inc., Model C.P. Mini Box, or an approved equal.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install storm sewer lateral in accordance with ASTM D2321 and ASTM F1668, ASTM C12 and specified in Section 33 40 13 – Storm Sewer Installation.

3.2 WATER AND SEWER SEPARATION

- A. Install sanitary sewers at minimum required distances away from adjacent water mains and services as stipulated by:
 - 1. State of Florida Department of Environmental Protection (FDEP) and local code if more stringent for installation of the Work of this Section.

3.3 TRACER WIRE INSTALLATION

- A. Lateral tracer wire originates and terminates in tracer wire access box located at right-of-way line. Install conductor tracer wire in one continuous loop.
- B. Tape conductor tracer wire to top of pipe at minimum 10-foot intervals. Wrapping conductor tracer wire around pipe is prohibited.

- C. Field test each locating wire after installation is completed.

END OF SECTION 334016

SECTION 334100 - SITE STORM SEWER SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Sewer Pipe Materials.
2. Pipe Fittings and Accessories.
3. Storm Sewer Manholes, including Frames and Covers.
4. Catch Basins and Plant Area Drains, including Frames and Grates.
5. Inlets, including Frames and Grates.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
2. Section 31 23 17 – Site Excavation, Backfill, and Compaction: Excavating for storm sewer system piping.
3. Division 22 - Plumbing: Sump pump connection.

1.2 REFERENCES

A. State of Florida Administrative Code, Department of Community Affairs Chapter 9B and International Plumbing Code, Current Edition.

B. American Association of State Highway and Transportation Officials: (AASHTO)

1. AASHTO M36 - Corrugated Steel Pipe, Metallic-Coated, for Sewers and Drains.
2. AASHTO M294 – Corrugated Polyethylene Pipe, 300- to 1200-mm Diameter.
3. AASHTO Standard Specifications for Highway Bridges.

C. American Concrete Institute: (ACI)

1. ACI 318 - Building Code Requirements for Structural Concrete and Commentary.

D. ASTM International: (ASTM)

1. ASTM A48 – Specification for Gray Iron Castings.
2. ASTM A536 - Specification for Ductile Iron Castings.
3. ASTM A615 - Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
4. ASTM C12 - Practice for Installing Vitrified Clay Pipe Lines.
5. ASTM C14 - Specification for Concrete Sewer, Storm Drain, and Culvert Pipe.
6. ASTM C76 - Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
7. ASTM C270 - Specification for Mortar for Unit Masonry.
8. ASTM C425 - Specification for Compression Joints for Vitrified Clay Pipe and Fittings.
9. ASTM C443 - Specification for Joints for Circular Pipe and Manholes, Using Rubber Gaskets.
10. ASTM C478 – Specification for Precast Reinforced Concrete Manhole Sections.
11. ASTM C506 – Specification for Reinforced Concrete Arch Culvert, Storm Drain, and Sewer Pipe.

12. ASTM C507 – Specification for Reinforced Concrete Elliptical Culvert, Storm Drain, and Sewer Pipe.
13. ASTM C700 - Specification for Vitrified Clay Pipe, Extra Strength, Standard Strength and Perforated.
14. ASTM C1479 – Practice for Installation of Precast Concrete Sewer, Storm Drain, and Culvert Pipe Using Standard Installations.
15. ASTM D2235 – Specification for Solvent Cement for Acrylonitrile-Butadiene-Styrene (ABS) Plastic Pipe and Fittings.
16. ASTM D2321 – Practice for Underground Installation of Flexible Thermoplastic Sewer Pipe.
17. ASTM D2564 - Specification for Solvent Cements for Poly(Vinyl Chloride) (PVC) Plastic Piping Systems.
18. ASTM D2661 - Specification for Acrylonitrile-Butadiene-Styrene (ABS) Schedule 40 Plastic Drain, Waste, and Vent Pipe and Fittings.
19. ASTM D2665 - Specification for Poly(Vinyl Chloride) (PVC) Plastic Drain, Waste and Vent and Vent Pipe and Fittings.
20. ASTM D3034 - Specification for Type PSM Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
21. ASTM D3212 - Specification for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.
22. ASTM D3350 – Specification for Polyethylene Plastics Pipe and Fitting Materials.
23. ASTM D3965 - Specification for Rigid Acrylonitrile-Butadiene-Styrene (ABS) Materials for Pipe and Fittings.
24. ASTM D4101 - Specifications for Propylene Plastic Injection and Extrusion Materials.
25. ASTM F477 – Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
26. ASTM F628 - Specification for Acrylonitrile-Butadiene-Styrene (ABS) Schedule 40 Plastic Drain, Waste, and Vent Pipe With a Cellular Core.
27. ASTM F679 - Specification for Poly(VinylChloride) (PVC) Large Diameter Plastic Gravity Sewer Pipe and Fittings.
28. ASTM F1668 - Guide for Construction Procedures for Buried Plastic Pipe.
29. ASTM F2306 - Specification for 12 to 60 in. [300 to 1500 mm] Annular Corrugated Profile-Wall Polyethylene (PE) Pipe and Fittings for Gravity-Flow Storm Sewer and Subsurface Drainage Applications.
30. ASTM F2648 - Specification for 2 to 60 inch [50 to 1500 mm] Annular Corrugated Profile Wall Polyethylene (PE) Pipe and Fittings for Land Drainage Applications.

E. Code of Federal Regulations: (CFR)

1. Title 29, Part 1926 Safety and Health Regulations for Construction, Occupational Safety and Health Administration (OSHA), U.S. Department of Labor.

1.3 SUBMITTALS

- A. Division 01 – General Requirements, Section 01 33 00 - Submittal Procedures, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Product Data: Provide data indicating pipe materials, pipe fittings, and precast structures.
- C. Submit Structural Design Calculations and detailed Shop Drawings for flattop and special precast concrete manhole structures prepared and sealed by a Professional Structural Engineer licensed in the State of Florida.

- D. Design of flattop and special precast structures shall be in accordance with ACI 318 and ASTM C478.
- E. Submit concrete mix data and test reports from an approved testing laboratory certifying that concrete used in precast structures conforms to specified requirements.
- F. Manufacturer's Instructions: Indicate special procedures required to install Products specified.
- G. Certificate: Certify that Products meet or exceed specified requirements.
- H. Division 01 – General Requirements, Section 01 70 00 – Execution and Closeout Requirements, Section 01 78 39 – Project Record Documents: Project Record Drawings.
 - 1. Record actual locations of pipe runs, connections, structures, control points, and invert elevations.
 - 2. Identify, indicate, and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

1.4 REGULATORY REQUIREMENTS

- A. Contractor shall comply with applicable rules and regulations of
 - 1. State of Florida Department of Environmental Protection (FDEP), Department of Community Affairs (FACE), and local code if more stringent for materials and installation of the Work of this Section.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect and handle products to site under provisions of Division 01 – General Requirements, Section 01 60 00 – Product Requirements, Section 31 02 00 – General Requirements for Sitework.
- B. Deliver and store castings and gaskets in shipping containers with labeling in place.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Pipes, fittings, and structures shall be manufactured in the United States of America.
- B. Materials supplied are to be in accordance with:
 - 1. State of Florida Administrative Code, Department of Community Affairs, Fla. Admin. Code Chapter 9B and International Plumbing Code, and local code if more stringent for materials for the Work of this Section.

2.2 PIPE MATERIALS

- A. Vitrified Clay Pipe:
 - 1. Pipe: ASTM C700, extra strength, un-perforated; inside nominal diameter as shown on Drawings.
 - 2. Joint Device: Bell and spigot joint, ASTM C425, compression gasket joint.

- B. Concrete Pipe:
1. Pipe: ASTM C14, Class 1, 2 and 3; non-reinforced; inside nominal diameter as shown on Drawings.
 2. Joint Devices: Bell and spigot joint, ASTM C443, rubber compression gasket joint.
- C. Reinforced Concrete Pipe:
1. Pipe: ASTM C76, Class I, II, III, IV and V with Wall Type A, B and C; bar reinforcement; inside nominal diameter as shown on Drawings.
 2. Pipe: ASTM C506 Reinforced Concrete Arch Pipe: Pipe shall meet all requirements contained in ASTM C506.
 3. Pipe: ASTM C507 Reinforced Concrete Elliptical Pipe: Pipe shall meet all requirements contained in ASTM C507
 4. Joint Device: Bell and spigot joint, ASTM C443, rubber compression gasket joint.
- D. Polyvinyl Chloride (PVC) Pipe:
1. Pipe: ASTM D2665, polyvinyl chloride (PVC) material; inside nominal diameter as shown on Drawings.
 2. Joint Device: Bell and spigot with ASTM D2564 solvent sealed joint.
- E. Polyvinyl Chloride (PVC) Pipe:
1. Pipe: ASTM D3034, Type PSM, polyvinyl chloride (PVC) material; inside nominal diameter as shown on Drawings.
 2. Pipe: ASTM F679, polyvinyl chloride (PVC) material, PS [46] [115], nominal inside diameter as shown on Drawings.
 3. Joint Device: Bell and spigot style with ASTM F477 rubber ring sealed gasket. Joint shall conform to ASTM D3212 and ASTM D2564 solvent seal.
- F. Polyethylene Pipe:
1. Pipe: ASTM F2648 (AASHTO M294), Type S, Polyethylene Pipe, ASTM D3350 polyethylene material, inside nominal diameter as shown on Drawings.
 2. Fittings: ASTM F2306.
 3. Joint Device: ASTM D3212 bell and spigot style, with ASTM F477 gasket joint.
- G. Acrylonitrile-Butadiene-Styrene (ABS) Pipe:
1. Pipe: ASTM F628, ASTM D3965 acrylonitrile-butadiene-styrene (ABS) material; inside nominal diameter as shown on Drawings.
 2. Fittings: ASTM D2661.
 3. Joint Device: Bell and spigot style sealed joint end with solvent conforming to ASTM D2235.
- H. Corrugated Steel Pipe:
1. Pipe: AASHTO M36 Type I, II and III] nominal diameter as shown on Drawings, end joints; helical lock seam; coated inside and out with [0.050] inch thick bituminous coating.
 2. Joint Device: Galvanized steel coupling bands, 0.052 inches thick x 10 inches wide; connected with two neoprene "O" ring gaskets and two galvanized steel bolts.

2.3 PIPE FITTINGS AND ACCESSORIES

- A. Fittings and fitting joints shall be in accordance with:
 - 1. State of Florida Administrative Code, Department of Community Affairs Chapter 9B and International Plumbing Code, and local code if more stringent for materials for the Work of this Section.
- B. Fittings: Same material as pipe, molded or formed to suit pipe size and end design, in required tee, bends, elbows, cleanouts, reducers, traps and other configurations required.
- C. Mortar: ASTM C270, Type S.
- D. Filter Fabric: Non-biodegradable, nonwoven:
 - 1. Carthage Mills, HS series.
 - 2. TenCate North American Mirafi N series.
 - 3. Propex, Geotex Nonwoven series.
 - 4. US Fabrics, Medium Weight NW series.

2.4 PIPE LOCATION MATERIALS

- A. Identification Warning Tape: Heavy plastic underground warning tape, 2-inch width. Color-[Bright Green], warning message "Caution Buried STORM SEWER Below" to repeat every 30 inches.
- B. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Installed to enable electronic locating of underground utility.

2.5 TRACER WIRE MATERIALS

- A. Mark all non-conductive lateral pipes with a locating wire system.
- B. Locating wire system consists of the following:
 - 1. Tracer Wire: 45-mil solid copper, No. 12 HMW-PE yellow jacket coating. Install to enable electronic locating of underground utility.
 - 2. Tracer Wire Locating Box: 2-1/2-inch diameter, minimum, ABS pipe with 2 point terminal box and cast iron cover.
 - a. Manufacturer: Valco, Inc., Model C.P. Mini Box, or an approved equal.]

2.6 PRECAST CONCRETE STRUCTURES INCLUDING FRAMES AND COVERS

- A. Precast Concrete Risers and Cone Sections for Manholes, Catch Basins, and Inlets: In accordance with ASTM C478, minimum wall thickness, one twelfth of internal diameter of riser or largest cone diameter plus 1 inch.
- B. Precast Concrete Base Section with Integral Floor: In accordance with ASTM C478, minimum floor thickness 6 inches for risers up to 48-inches in diameter, and 8 inches for larger diameters; bench minimum slope 1/2-inch per foot from channel to wall; cast in place pipe sleeves.
- C. Concrete Flat Slab Top: In accordance with ASTM C478 and approved Shop Drawings; Minimum thickness 6 inches for 48-inch diameter, 8 inches for larger diameters; equipped with lifting hooks.

- D. Minimum access opening in cone or top section: 24-inch diameter.
- E. Minimum compressive strength of concrete: 4000 psi.
- F. Section shall support own weight and live load equivalent to AASHTO HS-20 Highway Loading unless otherwise indicated on Drawings.
- G. Design exterior wall for a minimum equivalent fluid pressure of 90 pounds per square foot and consider additional lateral pressure from approaching truck wheels.
- H. Form and cast openings with wall sleeves in base sections as required by Drawings.
- I. Horizontal wall joints shall not be located within 18 inches of centerline of wall penetration.
- J. Section joints: Reinforced concrete base and riser sections excepting grade rings, designed and formed with tongue and groove ends to produce a continuous, uniform manhole.
- K. Identification Markings: Clearly mark on inside of each precast section indicating date of manufacture, name or trademark of manufacturer. Clearly mark on outside of each section vault identification number from Drawings.
- L. Precast concrete grade rings shall conform to ASTM C478.
- M. Mortar: ASTM C270, Type S.
- N. Reinforcement: Formed steel wire, galvanized finish.
- O. Manhole Steps:
 - 1. Steel reinforced copolymer polypropylene plastic ASTM D4101 PP0344B33534Z02; ASTM A615, Grade 60 steel reinforced 1/2 inch diameter formed; size, placement and embedment shall conform to OSHA 29 CFR 1926.1053 Ladders and ASTM C478; ends of legs tapered with fins for embedment.
 - 2. Rungs and Steps in Risers and Conical Sections: Aligned in each section to form continuous ladder with rungs equally spaced vertically in assembled manhole. Steps shall be 12 inches wide, 16 inches on center vertically, set into manhole wall as indicated on Drawings.

2.7 STRUCTURE FRAMES, COVERS, AND GRATES

2.8 MANHOLE FRAME AND COVER

- A. Manufacturers:
 - 1. Neenah Foundry Company, Neenah, WI.
 - 2. East Jordan Iron Works Inc., East Jordan, MI.
 - 3. U.S. Foundry & Manufacturing Corporation, Miami, FL.
 - 4. Substitutions: In accordance with Division 01 – General Requirements.
- B. Manhole Frame and Covers:
 - 1. Gray iron castings; ASTM A48, Class 35B or Ductile iron castings, ASTM A536, Grade 80-55-06, machined horizontal bearing surface, with concealed pickhole, gasketed, solid lid.
 - a. Neenah R-1661 or Neenah R-2502 Manhole Frame with Type A, C or D lid or grate.
- C. Catch Basin and Inlet Frame and Grate:

1. Gray iron castings; ASTM A48, Class 35B or Ductile iron castings, ASTM A536, Grade 80-55-06] machined horizontal bearing surface, with concealed pickhole, gasketed, solid lid.
 - a. Pavement: Neenah R-3210-L] or equal, with Type L vane grate.
 - b. Curb and Gutter: Neenah R-3220-L or equal, with Type L vane grate.
 - c. Lawn: Neenah R-2533 with R-1710 frame or Neenah R-2560 beehive grate, with frame.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that trench cut and excavation base are ready to receive work and excavations, dimensions, and elevations are as indicated on Drawings.

3.2 PREPARATION

- A. Hand trim excavations to required elevations. Correct over excavation with Type A2 aggregate as specified in Section 31 05 16 – Aggregates for Earthwork.
- B. Remove large stones or other hard matter that could damage pipe or impede consistent backfilling or compaction.
- C. Cut pipe ends square, ream pipe and tube ends to full pipe diameter, remove burrs.
- D. Remove scale and dirt on inside and outside before assembly.
- E. Prepare pipe connections to equipment with flanges or unions.

3.3 BEDDING

- A. Excavate pipe trench in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction for Work of this section. Hand trim excavation for accurate placement of pipe to elevations indicated.
- B. Place and shape bedding material to pipe, to a minimum depth of three inches under bell and four inches under spigot and compact to 95 percent modified Proctor density.
- C. Backfill around sides and top of pipe with bedding material to a loose lift depth of 15 inches above pipe and compact to 95 percent modified Proctor density.
- D. Maintain optimum moisture content of bedding material to attain required compaction density.

3.4 INSTALLATION - PIPE

- A. Install pipe, fittings, and accessories in accordance with manufacturer's instructions and
 1. State of Florida Administrative Code, Department of Community Affairs, Fla. Admin. Code Chapter 9B and International Plumbing Code and local code if more stringent for installation of the Work of this Section.
- B. Install concrete pipe and fittings in accordance with ASTM C1479.
- C. Install ductile iron pipe and fittings in accordance with AWWA C600.

- D. Install PVC, polyethylene and ABS pipe in accordance with ASTM D2321 and ASTM F1668.
- E. Install pipe, fittings, and accessories in accordance with manufacturer's instructions.
- F. Lay pipe to slope gradients noted on Drawings; with maximum variation from true slope of 1:1000.
- G. Backfill trench in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 - Site Excavation, Backfill, and Compaction. Do not displace or damage pipe when compacting.
- H. Connect to building storm sewer outlet and municipal sewer system, through installed sleeves.
- I. Coordinate the Work with termination of storm sewer connection outside building, connection to municipal sewer utility service, and trenching.
- J. Install colored marker tape continuous over top of pipe buried 18 inches below finish grade, above pipe line; coordinate with Section 31 23 16 - Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction.

3.5 PREPARATION FOR STRUCTURES

- A. Coordinate placement of inlet and outlet pipe sleeves required by other sections.
- B. Do not install structures where site conditions induce loads exceeding structural capacity of structures.
- C. Inspect precast concrete structures immediately prior to placement in excavation to verify structures are internally clean and free from damage. Remove and replace damaged units.

3.6 INSTALLATION - STRUCTURES

- A. Excavation and Backfill:
 - 1. Excavate for manholes and drainage structures in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction, in locations and to depth shown. Provide clearance around sidewalls of structure for construction operations.
 - 2. When groundwater is encountered, prevent accumulation of water in excavations. Place manholes or drainage structures in dry trench.
 - 3. Where possibility exists of watertight structure becoming buoyant in flooded excavation, anchor structure to avoid flotation.
 - 4. Backfill excavations for manholes and drainage structures in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 - Site Excavation, Backfill, and Compaction.
- B. Install manholes and drainage structures supported at proper grade and alignment on Type A2, A5, A6 or A7 aggregate bedding, as specified in Section 31 05 16 – Aggregates for Earthwork, to a minimum compacted thickness of 6 inches as shown on Drawings.
- C. Set base section, align pipe sleeve openings to provide straight alignment of pipe through manhole base, level and plumb sections.

- D. Set manhole at a grade to assure that no more than 8 inches of precast concrete rings would be required to bring manhole frame and cover to final grade.
- E. Lift precast structures at lifting points designated by manufacturer.
- F. When lowering manholes and drainage structures into excavations and joining pipe to units, take precautions to ensure interior of structure remains clean.
- G. Place preformed flexible joint sealant on either side of tongue portion of joint in base section to assure filling of entire joint when assembled.
- H. Set riser section on base, aligning joint prior to setting, lower riser section level and uniformly on to base to squeeze joint compound throughout tongue and groove joint, visible for inspection both interior and exterior for water tight fit.
- I. Trowel excess joint compound material flush at interior and exterior surface after placement.
- J. Repeat process for remaining riser sections and top, exercising care to align manhole ladder rungs to form uniform vertical ladder.
- K. Section shall be vertical and in true alignment with a maximum 1/4-inch tolerance per section allowed.
- L. Allow joints to set for a minimum 24-hour period before backfilling.
- M. Plug holes in section required for handling or other purposes with non-shrink grout, finished flush on inside.
- N. Remove knockouts or cut structure to receive piping without creating openings larger than required to receive pipe. Fill annular space with mortar.
- O. Cut pipe to finish flush with interior of structure.
- P. Provide concrete flowline at bottom of lowest structure section to achieve sloped drainage from entering pipe to exiting pipe. Trowel smooth. Perform backfilling carefully, bringing fill up evenly on all sides.
- Q. Compact fill around vault with a mechanical hand operated wacker.

3.7 INSTALLATION - FRAME AND COVER

- A. Set frames using mortar and precast concrete adjustment rings as required.
- B. Place precast concrete rings in full bed of mortar with completely fill joints. Verify maximum height of adjustment rings allowed by code prior to installing.
- C. Plaster adjustment rings on both inside and outside of ring cylinder with mortar.
- D. Place flexible joint sealant on centerline circumference of slab top or concrete ring with mortar bed placed on interior and exterior of sealant to full width of frame or ring area.

- E. In non-pavement areas set frame and cover two inches above finished grade for manholes and other structures with covers to allow area to be graded away from cover beginning 1-inch below top surface of frame.

3.8 TRACER WIRE INSTALLATION

- A. Originate and terminate lateral tracer wire in wire access box located at right-of-way line. Install conductor tracer wire in one continuous loop.
- B. Tape conductor tracer wire to top of pipe at minimum 10-foot intervals. Wrapping conductor tracer wire around pipe is prohibited.
- C. Field test each locating wire after completing installation.

3.9 FIELD QUALITY CONTROL

- A. Division 01 – General Requirements, Section 01 40 00 - Quality Requirements, Section 31 02 00 – General Requirements for Sitework: Field inspection and testing.
- B. Perform compaction and moisture content testing in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 - Site Excavation, Backfill, and Compaction.
- C. If tests indicate Work does not meet specified requirements, remove Work, replace and retest.
- D. Frequency of Tests: As determined Engineer/Architect, Owner’s Representative, Construction Manager or Testing Agency.
- E. Deflection Test: Deflection tests shall be performed for all polyvinyl chloride (PVC) and polyethylene pipe installations.
 - 1. Deflection test shall be performed using a rigid ball or mandrel without a mechanical pulling device.
 - 2. If deflection testing occurs within 30 days of placement of final backfill, deflection shall not exceed 5 percent.
 - 3. When deflection testing occurs more than 30 days after placement of final backfill, maximum deflection shall not exceed 7.5 percent.

3.10 PROTECTION OF FINISHED WORK

- A. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements, Section 31 02 00 – General Requirements for Sitework: Protecting installed work.
- B. Protect pipe and aggregate cover from damage or displacement until backfilling operation is completed.

END OF SECTION 334100

This Page Intentionally Left Blank

SECTION 334213 - PIPE CULVERTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Corrugated Steel Pipe Culvert.
2. Concrete Pipe Culvert.
3. Polyethylene Pipe Culvert.
4. Pipe Culvert Joints.
5. Flared End Sections.
6. Accessories.

B. Related Sections:

1. Applicable provisions of Division 01 – General Requirements, Section 31 02 00 – General Requirements for Sitework shall govern Work under this Section.
2. Section 31 05 16 – Aggregates for Earthwork.
3. Section 31 23 17 - Site Excavation, Backfill, and Compaction: Excavating and backfilling for culvert piping.

1.2 REFERENCES

A. Florida Department of Transportation:

1. Standard Specifications for Road and Bridge Construction, Current Edition with latest supplements. (FDOT)

B. American Association of State Highway and Transportation Officials: (AASHTO)

1. AASHTO M36 - Corrugated Steel Pipe, Metallic-Coated, for Sewers and Drains.
2. AASHTO M170 - Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
3. AASHTO M294 - Specification for Corrugated Polyethylene Pipe, (12 - Inch to 36 - Inch Diameter).

C. ASTM International: (ASTM)

1. ASTM A760 – Specification for Corrugated Steel Pipe, Metallic-Coated for Sewers and Drains.
2. ASTM A798 - Practice for Installing Factory-Made Corrugated Steel Pipe for Sewers and Other Applications.
3. ASTM A929 - Specification for Steel Sheet, Metallic-Coated by the Hot-Dip Process for Corrugated Steel Pipe.
4. ASTM B745 – Specification for Corrugated Aluminum Pipe for Sewers and Drains.
5. ASTM B788 – Practice for Installing Factory-Made Corrugated Aluminum Culverts and Storm Sewer Pipe.
6. ASTM C14 - Specification for Concrete Sewer, Storm Drain, and Culvert Pipe.
7. ASTM C33 - Specification for Concrete Aggregates.
8. ASTM C76 - Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
9. ASTM C150 - Specification for Portland Cement.
10. ASTM C443 - Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.

11. ASTM C506 - Specification for Reinforced Concrete Arch Culvert, Storm Drain, and Sewer Pipe.
12. ASTM C507 - Specification for Reinforced Concrete Elliptical Culvert, Storm Drain, and Sewer Pipe.
13. ASTM C655 - Specification for Reinforced Concrete D-Load Culvert, Storm Drain, and Sewer Pipe.
14. ASTM C985 - Specification for Nonreinforced Concrete Specified Strength Culvert, Storm Drain, and Sewer Pipe.
15. ASTM C1479 - Practice for Installation of Precast Concrete Sewer, Storm Drain, and Culvert Pipe Using Standard Installations.
16. ASTM D2321 – Practice for Underground Installation of Flexible Thermoplastic Sewer Pipe.
17. ASTM F677 - Specification for Large Diameter Corrugated Polyethylene Pipe and Fittings.
18. ASTM F1668 - Guide for Construction Procedures for Buried Plastic Pipe.

1.3 SUBMITTALS

- A. Division 01 – General Requirements, Section 01 33 00 - Submittal Procedures, Section 31 02 00 – General Requirements for Sitework: Requirements for submittals.
- B. Product Data: Submit data on pipe, fittings and accessories.
- C. Manufacturer's Installation Instructions: Submit procedures required to install Products specified.

1.4 CLOSEOUT SUBMITTALS

- A. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements Section 31 02 00 – General Requirements for Sitework: Closeout procedures.
- B. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements Section 01 78 39 – Project Record Documents, Section 31 02 00 – General Requirements for Sitework: Project Record Documents:
 1. Accurately record actual locations of pipe runs, connections, and invert elevations.
 2. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.
- C. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements, Section 01 78 23 – Operation and Maintenance Data, Section 31 02 00 – General Requirements for Sitework: Operation and maintenance Data.

1.5 PRE-INSTALLATION MEETING

- A. Division 01 – General Requirements, Section 01 30 00 - Administrative Requirements, Section 31 02 00 – General Requirements for Sitework: Pre-installation meeting.
- B. Convene one week prior to commencing Work of this section.

PART 2 - PRODUCTS

2.1 CONCRETE CULVERT PIPE

- A. Concrete Pipe: ASTM C14, Class 1, 2, or 3; non-reinforced:
 - 1. Bell and spigot or plain end joints.
 - 2. Shape: Circular with nominal diameter as shown on Drawings.
- B. Reinforced Circular Concrete Pipe: ASTM C76, Class I, II, III, IV, V with Wall Type A, B, or C; bar] reinforcement [AASHTO M170, Class I, II, III, IV, V; Type R-4[bell and spigot end joints:
 - 1. Shape: Circular with nominal diameter as shown on Drawings.
- C. Arched and Elliptical Pipe
 - 1. Reinforced Arch Pipe: ASTM C506, Class A-II, A-III, A-IV.
 - 2. Reinforced Horizontal Elliptical Pipe: ASTM C507, Class HE-A, HE-I, HE-II, HE-III, HE-IV.
 - 3. Reinforced Vertical Elliptical Pipe: ASTM C507, Class VE-II, VE-III, VE-IV, VE-V, VE-VI.
- D. Reinforced Concrete Pipe Joint Device: ASTM C443, rubber compression gasket joint. Use Bureau of Reclamation Type R-4 joint.
- E. Flared Ends: Same material and joints as pipe
- F. Reinforced Circular Concrete Pipe: FDOT Section 449.
- G. Reinforced Arched and Elliptical Concrete Pipe:
 - 1. Reinforced Horizontal Elliptical Pipe: FDOT Section 449.

2.2 POLYETHYLENE CULVERT PIPE

- A. Polyethylene Culvert Pipe: AASHTO M294, Type S.
 - 1. Shape: Circular with nominal diameter as shown on Drawings.
 - 2. Joints: AASHTO M294, corrugated to match pipe.
 - 3. Joints: Polyethylene sleeve with gasket.
- B. Polyethylene Culvert Pipe: DOT Section 948.

2.3 BEDDING AND COVER MATERIALS

- A. Bedding: Fill Type A6 or A7 specified in Section 31 05 16 – Aggregates for Earthwork.
- B. Cover: Fill Type A6 or A7, as specified in Section 31 05 16 – Aggregates for Earthwork loose lift to 24 inches above top of pipe.

2.4 ACCESSORIES

- A. Filter Fabric: Non-biodegradable, woven manufactured by Mirafi division of TenCate Geosynthetics North America.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Division 01 – General Requirements, Section 01 30 00 - Administrative Requirements, Section 31 02 00 – General Requirements for Sitework: Coordination and project conditions.
- B. Verify trench cut or excavation base is ready to receive work and excavations, dimensions, and elevations are as indicated on Drawings.

3.2 PREPARATION

- A. Remove large stones or other hard matter that could damage piping or impede consistent backfilling or compaction.

3.3 EXCAVATION AND BEDDING.

- A. Excavate culvert trench to 12 inches below pipe invert, in accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction] for work of this Section. Hand trim excavation for accurate placement of pipe to elevations indicated.
- B. Place bedding material at trench bottom, level fill materials in one continuous 4-inch compacted depth layer, compact to 95 percent Modified Proctor density.
- C. Place filter fabric over compacted fill.
- D. Backfill around sides and to 12-inch compacted depth over top of pipe with cover material, tamped in place and compacted to 95 percent Modified Proctor density.
- E. Maintain optimum moisture content of bedding material to attain required compaction density.
- F. Place fabric over compacted bedding.
- G. Conform to FDOT Section 430.

3.4 INSTALLATION - PIPE

- A. Install concrete pipe in accordance with ASTM C1479.
- B. Install polyethylene pipe in accordance with ASTM D2321 and ASTM F1668.
- C. Lift or roll pipe into position. Do not drop or drag pipe over prepared bedding.
- D. Shore pipe to required position; retain in place until after compaction of adjacent fills. Ensure pipe remains in correct position and to required slope.
- E. Repair surface damage to pipe protective coating with two coats of compatible bituminous paint coating.
- F. Install aggregate at sides and over top of pipe. Install top cover to minimum compacted thickness of 12 inches.

- G. Place filter fabric over compacted fill.
- H. Install culvert end gratings.
- I. Refer to Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction for backfilling and compacting requirements. Do not displace or damage pipe when compacting.
- J. Conform to FDOT Section 430.

3.5 PIPE ENDS

- A. Conform to FDOT Section 430.
- B. Place fill at pipe ends, at embankment slopes, at concrete aprons, [to adjacent construction, as indicated on Drawings.

3.6 ERECTION TOLERANCES

- A. Division 01 – General Requirements, Section 01 40 00 - Quality Requirements, Section 31 02 00 – General Requirements for Sitework: Tolerances.
- B. Lay pipe to alignment and slope gradients noted on Drawings; with maximum variation from indicated slope of 1/8-inch in 10 feet.
- C. Maximum Variation from Intended Elevation of Culvert Invert: 1/2-inch.
- D. Maximum Offset of Pipe from Indicated Alignment: 1-inch.
- E. Maximum Variation in Profile of Structure from Intended Position: 1 percent.

3.7 FIELD QUALITY CONTROL

- A. Division 01 – General Requirements, Section 01 40 00 - Quality Requirements, Section 31 02 00 – General Requirements for Sitework: Testing and inspection services.
- B. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements, Section 31 02 00 – General Requirements for Sitework: Testing, adjusting, and balancing.
- C. Request inspection prior to and immediately after placing aggregate cover over pipe.
- D. Compaction Testing: In accordance with Section 31 23 16 – Utility Trench Excavation, Backfill, and Compaction, Section 31 23 17 – Site Excavation, Backfill, and Compaction.
- E. When tests indicate Work does not meet specified requirements, remove Work, replace, and retest.
- F. Frequency of Tests: As determined by Engineer/Architect, Owner’s Representative, Construction Manager or Testing Agency.

3.8 PROTECTION OF INSTALLED CONSTRUCTION

- A. Division 01 – General Requirements, Section 01 70 00 - Execution and Closeout Requirements, Section 31 02 00 – General Requirements for Sitework: Protecting installed construction.
- B. Protect pipe and bedding from damage or displacement until backfilling operation is completed.

1.02 ABBREVIATIONS & DEFINITIONS

A. Abbreviations

The following abbreviations and acronyms may be used throughout this document. Not all abbreviations may apply to this specification.

AHJ	Authority Having Jurisdiction
AL	Alarm Line
ALCL	Alarm Line Cleared Line
AOA	Air Operations Area
ATO	Airline Ticketing Offices
ATR	Automatic Tag Reader
AWG	American Wire Gauge
BAIT	Baggage Auto-ID Transfer
BDR	Baggage Data Register
BHS	Baggage Handling System
BHSC	Baggage Handling System Contractor
BHSO	Baggage Handling System Oversized Baggage
BIT	Baggage Inspection Table
BMA	Baggage Measuring Array
BPH	Bags per Hour

BPM	Bags per Minute
BRP	Baggage Removal Point
BSM	Baggage Source Message
BSM	Baggage System Management
BVS	Baggage Viewing Station
CBIS	Checked Baggage Inspection System
CBRA	Checked Baggage Resolution Area
CCTV	Closed Circuit Television
CL	Clear Line
CM(AR)	Construction Manager (at Risk)
CPU	Computer Processing Unit
CS	Control Station
CTX	Computed Tomography X-ray
CUSS	Common Use Self Service
CUTE	Common Use Terminal Equipment
dBA	Decibel "A" Weighted
DHS	Department of Homeland Security
EDS	Explosives Detection System
EMC	Electromagnetic Compatibility
EMT	Electrical Metallic Tubing
ETD	Explosives Trace Detection
FAT	Factory Acceptance Test
FF&E	Furniture, Fixtures, and Equipment
FIDS	Flight Information Display System
FIO	For Information Only
FIS	Federal Inspection Station
FLA	Full Load Amps
FPM	Feet per Minute
FR	Fire Resistant
GC	General Contractor
GFI	Ground Fault Interrupter
HMI	Human Machine Interface
HMWPE	High Molecular Weight Polyethylene
HOA	Hand/Off/Auto
HP	Horse Power
HSD	High Speed Diverter
Hz	Hertz
I/O	Input/output
IATA	International Air Transport Association
ID	Identification
IMC	Intermediate Metal Conduit
IRD	Interface Requirements Document
ISAT	Integrated Site Acceptance Test
ISO	International Organization for Standardization
KPI	Key Performance Indicator
KVM	Kernel-based Virtual Machine
LAN	Local Area Network
LBS	Pounds
LCD	Liquid Crystal Display

LED	Light Emitting Diode
LEO	Law Enforcement Officer
MCC	Motor Control Center
MCP	Motor Control Panel
MDP	Main Power Distribution Panel
MDS	Maintenance Diagnostic System
MES	Manual Encoding Station
MICE	Mechanical, Ingress, Climatic/Chemical and Electromagnetic
MS	Millisecond
MSP	Motor Starter Panel
NP	Node Panel
NSA	National Security Agency
NTP	Notice to Proceed
O&M	Operations & Maintenance
OEM	Original Equipment Manufacturer
OG or OOG	Out-of-Gauge
OS	Oversize
OSR	On-Screen Resolution
OSRCL	On-Screen Resolution Cleared Line
OSRL	On-Screen Resolution Line
OTK	Operation Test Kit
P/PB	Push/Pull Button
PB	Push Button
PC	Personal Computer
PDP	Power Distribution Panel
PE	Photoeye
PFD	Power Face Diverter
PLC	Programmable Logic Controller
PVC	Polyvinyl Chloride
QC	Quality Control
QCR	Quality Control Report
QD	Quick Disconnect
QLR	Quick Look Report
RCDD	Registered Communications Distribution Designer
RFD	Request for Deviation
RFI	Request for Information
RFID	Radio Frequency Identification
RFP	Request for Proposal
RFS	Request for Substitution
RL	Re-Induction Line
RPI	Requested Package Interval
RPM	Revolutions per Minute
SAC	Sort Allocation Controller
SAE	Society of Automotive Engineers
SAT	Site Acceptance Test
SCCR	Short Circuit Current Rating
SE	Shaft Encoder
SPB	Start/Reset Pushbutton
SS	Security Shunt (shunt exit)

SSI	Sensitive Security Information
SSTP	Site Specific Test Plan
SVGA	Super Video Graphics Display
SVS	Secondary Viewing Station
TEFC	Totally Enclosed Fan-cooled Motor
THHN	Thermoplastic Insulated Cable, Heat Resistant and Can Withstand Higher Temperatures, Nylon Coating
THHW	Thermoplastic Insulated Cable, Heat Resistant and Can Withstand Higher Temperatures, Approved for Use in Damp and Wet Locations
TIR	Total Indicated Runout
TOB	Top of Bed
TRR	Test Readiness Review
TSO	Transportation Security Officer
TSR	Test Summary Report
UPS	Uninterrupted Power Supply
USB	Universal Serial Bus
VAC	Volts Alternating Current
VDC	Volts Direct Current
VFD	Variable Frequency Drive
VLAN	Virtual Local Area Network
VPN	Virtual Private Network
VSU	Vertical Sortation Unit
VTC	Vic Thompson Company

B. Definitions

1. Baggage Handling System (BHS): All project content, including equipment, installation materials, interfaces, components, hardware, software, installation, coordination, and construction supervision of computers, PLC, controls, and control hardware and software, management and support services required to implement the work and supply a fully functioning system as described by the Contract Documents.
2. BHS Contractor (BHSC): Equipment Contractor, Equipment Supplier, Baggage Contractor, Baggage Handling System Contractor Supplier, and Contractor, and will mean the firm or company that is responsible for the design, engineering, manufacture, modification, installation, testing, warranty and technical support of the conveyor equipment and systems required to implement the work and supply a fully functional system as described by the Contract Documents.
3. Contract Plans: The Proposal Plans referred to in these written Specifications or the Contract. The Owner may, from time to time, supply modifications or revisions of such plans and other plans to the Contractor for the purposes of the Contract.
4. Request for Proposal (RFP): A formal written request from the Owner to qualified bidders or the BHSC for a proposal on the BHS defined by the Specifications and plans.
5. Request for Information (RFI): A formal written request to Owner from a bidder or BHSC requesting additional information or clarifications to the Specifications or plans.
6. Request for Substitution (RFS): A formal written request to the Owner from a bidder or BHSC requesting permission to substitute an approved equal product, component, service or action from one called out in the Specifications.
7. Notice to Proceed (NTP): A written notice given by the Owner to the BHSC setting the date on which the contract time will commence, and upon which the BHSC's obligations under the contract documents begins.

8. **Substantial Completion:** Substantial Completion is the stage in the progress of the Work when the Work or designated portion thereof is sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the Work for its intended use. Only minor corrective work will be allowed to be considered as punch list work. Upon receipt of written notice of substantial completion from the BHSC, the Owner, VTC, and BHSC will create a list of items to be completed or corrected (punch list) before Final Acceptance and Final Payment. The BHSC must provide the level of effort and resources necessary to complete the defects or deficiencies (punch list) within thirty (30) days of issuance of such list. For phased projects, each phase may have a unique Substantial Completion date agreed upon by the Owner and BHSC.
9. **Final Completion:** The date of Final Completion of the Project or portion thereof will be the date of issuance of the Certificate of Final Completion. The certificate will be issued when all project-related start-up, commissioning, testing, training, etc. has been completed and accepted by the Owner; close-out documentation has been reviewed by VTC and accepted by Owner to include, but not limited to: as-built documentation, O&M manuals, warranty information, spare parts list, notice of system compliance, all test results, PLC documentation, and software source code files; all changes orders have been processed; the AHJ has issued Certificate of Occupancy (if required); final release of Lien has been submitted; and final request for payment to BHSC has been submitted.
10. **As-Built:** A comprehensive set of documents identifying the complete and final condition of the system.

C. Project Team Definitions

1. Owner: Okaloosa County
2. BHS Designer: VTC
3. Design Team: VTC, Corgan, Graef
4. BHS Contractor (BHSC): Refers to the BHS contractor
5. General Contractor (GC) or Construction Manager (CM): Refers to the building and facility contractor
6. TSA: Refers to the TSA or the firms that are contracted to perform services by and on behalf of the TSA

1.03 DOCUMENT PRECEDENCE AND CONTROL

A. Document Precedence

The Specifications, Plans, Addendum, and contract all constitute the Contract Documents for the Project. If there are any discrepancies between any related documents, including specifications, plans, codes and regulations that conflict with each other, the BHS Contractor (BHSC) must notify VTC of the discrepancy in writing. VTC will consult with the Owner, and will then advise the BHSC as to which document will govern. Until the conflict is resolved, the most stringent resolution must be followed.

B. Document Control

Certain information relating to the CBIS performance and operations are considered Security Sensitive Information (SSI). Such information shall be controlled, managed and marked in accordance with 49 CFR Parts 15 and 1520, including but not limited to the following:

1. System detection and decision logic and associated software.
2. Methodology of CBIS use, bag screening/clearing procedures and alarm resolution.
3. Technical specifications of screening equipment and system equipment parameters.

4. Threat images and descriptions.
5. Performance data from screening systems, including the testing of the screening systems.

C. Project Plans

Refer to Index Sheet for list of all applicable plans.

D. Project Coordination

BHSC must coordinate the work with work by others as identified by the Owner.

1.04 REFERENCES

A. Reference Codes

Comply with the requirements of the reference standards stated herein, except where more stringent requirements are required by the Authority Having Jurisdiction (AHJ). Reference to the codes and standards form part of this specification to the same extent as if bound herein.

1. All work must be in accordance with the latest applicable national, state and municipal building codes.

1.05 PERMITS

BHSC is responsible for securing and paying for all permits pertaining to the BHS installation, and to provide copies of such permits and inspections to the related designers and Owner for their records.

1.06 WORK HOURS

Work hours to be “determined” every day of the week, while the CBIS is in operation. Working hours and access when temporary screening solutions allow access to non-operational CBIS must be coordinated with Owner.

1.07 SYSTEM OVERVIEW

A. Existing Outbound Checked Baggage Inspection System/BHS (if applicable)

The existing baggage screening system at VPS consists of 2 (two) L3 6700 units integrated into two separate mini-inline systems. The two systems are connected by a pair of diverters placed in tandem on the TC1 and TC2 lines. Each of the 2 (Two) ticket counter lines feed 1 (one) of the L3 6700 EDS machine. Clear bags are placed back onto the conveyor after processing and sent to a dedicated flat plate make up carousel for that system.

B. New Outbound Checked Baggage Inspection System/BHS

VPS will have a single, fully automated CBIS with two integrated L3 6700 ES EDS machines. A Third shunt line will be installed as an OOG line and can be used for future expansion and addition of a third L3 6700 ES EDS machine. Additionally, the t-merges at the security boundary on the existing ticket counter lines will be replaced with standard power turns. New OSR and CBRA rooms will be added and clear bags will be sent to one of two slope plate make up devices located within a new structure to be built to the west of the existing terminal building.

C. Project Overview

The extent of the work shown on the plans and as specified herein is defined to include all labor, materials, equipment, and supervision required for the design, fabrication, installation, and testing of the particular baggage handling system. Descriptions and requirements indicated by the Contract Documents establish basic arrangements, visual concepts, dimensions and modules of units, profiles and sightlines of members, performance, function and operation. Within these limitations, the BHSC must construct the Work to meet arrangements, visual concepts, design criteria and like requirements indicated by the Contract Documents and include components not indicated but necessary for performance, function, operation and to be considered a permanent and safe operating system.

D. Mechanical, Electrical, and Controls Field Survey

1. BHSC must perform a complete mechanical and electrical field survey prior to preparation of Shop Drawings and must identify all conflicts created by or resulting from existing conditions or work by others. BHSC must propose adjustments to horizontal and vertical conveyor dimensions as needed to accommodate such conflicts and/or to meet the requirements of the Contract Documents.
2. BHSC must perform a complete inspection and evaluation of all existing conveyors and controls and notify VTC and Owner of any operating discrepancies. BHSC must supply a completely integrated and operable CBIS/BHS. All existing conveyor control systems must be incorporated into the new CBIS/BHS control system.

E. Installation

BHSC must furnish and install all necessary equipment to provide a complete, operable and maintainable system including but not limited to: conveyor bed sections, drives, take-ups, sideguards, shrouding, floor supports, ceiling hangers and headers, stainless steel panels and

conveyor trim, fire/security doors, draft curtains, catwalks, platforms, access ladders, guard rails, control panels, conduit and wiring, all controls including interface with all baggage-related equipment and screening equipment and any other materials or equipment required to provide a complete, operable and maintainable system in complete compliance with this specification.

F. Standardization

When multiple manufacturers are listed for a specific component within this specification, the BHSC must use one specified manufacturer for a specific component throughout the project.

G. Demolition of Existing Conveyors

1. BHSC must demolish all required existing conveyors as identified within the plans and all temporary conveyors, including; all conveyor bed sections, drives, take-ups, sideguards, shrouding, floor supports, ceiling hangers and headers, stainless steel panels and conveyor trim, fire/security doors, draft curtains, catwalks, platforms, access ladders, guard rails, control panels, conduit and wiring, all controls (back to source) to return the facility back to its original condition.
2. The Owner will have first right of refusal on all existing conveyor equipment to be removed. Any removed conveyor equipment remaining will become property of the BHSC and must be removed from the site in a timely manner. At no time will conveyor equipment to be removed remain on site in excess of 48 hours without written approval from the Owner.

H. Coordination

1. BHSC must coordinate with the TSA’s designated suppliers for the installation, integration, and commissioning of all TSA-furnished equipment integrated into the BHS. BHSC is responsible for coordinating the work for all wiring, conduit and communication between the TSA-furnished equipment and the BHS as outlined below to provide an operable system as described herein.
2. The table below identifies coordination items and the responsible party for completing the work and providing a complete and operable BHS.

Item	Description	Contractor	TSA
1.0	EDS Equipment		
1.0.a	EDS shipment from warehouse		√
1.0.b	EDS rigging unload and place on site		√
1.0.c	EDS communication voice and data raceway/conduit from network room to EDS	√	
1.0.d	EDS test receptacle adjacent to each or each pair of EDSs	√	
1.0.e	EDS spare parts storage area	√	
1.0.f	EDS area CCTV monitors power and cable	√	
1.0.g	EDS Site Acceptance Test (SAT)		√
1.0.h	EDS maintenance		√
1.1	UPS Equipment		
1.1.a	UPS unload and place on site		√
1.1.b	Building power to power panel for UPS	√	
1.1.c	Power panel for UPS and power to UPS	√	
1.1.d	UPS raceway/conduit from UPS to EDS with disconnect	√	
1.1.e	UPS electrical connection (conductor) to EDS		√
1.2	OSR Room		
1.2.a	OSR workstations (PVS), monitors, keyboard, printer		√

Item	Description	Contractor	TSA
1.2.b	OSR FF&E		√
1.2.c	OSR communication voice and data raceway/conduit and cabling from network room to PVS	√	
1.2.d	OSR – BHS passive display, BHS workstation	√	
1.3	EDS – Multiplexing		
1.3.a	CPU, server, rack, router, monitor and other equipment, including terminations and testing		√
1.3.b	EDS patch panel	√	
1.3.c	Network cabling from network room to PVS, SVS, , UPS, EDS	√	
1.3.d	EDS control station , CPU, monitor, keyboard		√
1.4	CBRA		
1.4.a	Furnish and install ETD equipment		√
1.4.b	ETD electrical power at each ETD table	√	
1.4.c	Furnish and install ETD tables	√	
1.4.d	Furnish and install search workstations (SVS)		√
1.4.f	BHS Bag ID displays (BSD)/printer/reader	√	
1.4.g	Passive EDS displays	√	
1.4.h	Handheld barcode reader for manual encode	√	
1.4.i	EDS image/report printer		√
1.4.j	Furnish and install CBRA CCTV		√
1.4.i	ETD maintenance		√
1.5	TCU/Passenger Viewing Area		
1.5.a	TCU equipment		√
1.5.b	Passenger Viewing Area	√	
1.6	TSA Support Areas		
1.6.a	TSA Supervisor area	√	
1.6.b	TSA Supervisor area FF&E		√
1.6.c	TSA Break Room	√	
1.6.d	TSA Break Room FF&E		√
1.7	BHS		
1.7.a	BHS Control Room telephone, power and communications	√	
1.7.b	CBIS/BHS design, fabrication, installation, testing	√	
1.7.c	BHS integration with EDS	√	
1.7.d	CBIS/BHS training	√	
1.7.e	BHS maintenance	√	

Table 1: Responsibility Matrix

1.08 REQUESTS FOR INFORMATION (RFIS)

A. Requests for Information

1. If the BHSC needs clarification on items relating to the Contract Documents, the BHSC must submit a RFI for each item to VTC and the Owner in writing.
2. The RFI must reference an activity on the Progress Schedule and must note time criticality of the RFI, indicating time within which a response is required and priority when more than one RFI is submitted at the same time.
3. If the BHSC is satisfied with the clarification and does not request a change in Contract Sum or Contract Time, then the clarification will be executed without a change.

4. If the BHSC believes that the clarification results in a change in Contract Sum or Contract Time, then the BHSC must notify VTC and the Owner who may then deny the request for change or issue a RFP.
5. The BHSC must not contract, purchase, or cause to be delivered any articles, devices, or material relating to the RFI prior to obtaining the written response from the Owner.
6. RFIs are not to be used to request deviations or substitutions.

1.09 SUBSTITUTIONS AND DESIGN DEVIATIONS

A. Substitutions

1. Whenever an article or any class of articles, devices or materials is specified by the trade name or by the name of any particular patentee, manufacturer, dealer, or by reference to the catalog of any such patentee, manufacturer or dealer, it will be understood to mean the articles, devices, or materials specified and none other.
2. If BHSC desires to use any articles or materials that it believes are equal in quality, finish and durability and equally suitable for the purpose intended as the particular articles, devices, or materials specified, BHSC must submit a written Request for Substitution (RFS) for each item to VTC and the Owner for approval.
3. RFS will be received and considered only when extensive revisions to the Contract Documents are not required, changes are in keeping with general intent of the Contract Documents, when timely, fully documented and properly submitted, and when one or more of the following conditions are satisfied, all as judged by the Owner:
 - a. Where required product, material, or method cannot be provided within Contract Time, but not as a result of Contractor's failure to pursue the work promptly or coordinate various activities properly.
 - b. Where required product, material, or method cannot be provided in a manner which is compatible with other materials of the work, or cannot be properly coordinated therewith.
 - c. Where required product cannot be used without adversely affecting the Owner's insurance coverage on completed work.
 - d. Where required product, material, or method cannot receive required approval by a governing authority, and requested substitution can be so approved.
 - e. Where substantial advantage is offered to the Owner, in terms of cost and/or time, or other valuable considerations. This includes the cost of future maintenance and spare parts if different than what is specified.
4. The RFS must include product identification, manufacturer's literature, samples (as applicable), information of similar projects on which product has been used, including date of installation, contact information of manufacturer's representative, detailed description of proposed method, and drawings illustrating methods.
5. Include accurate cost data comparing proposed substitution with product and amount of net change in Contract price, including design fees and other related costs under the contract.
6. All variations of the proposed substitute from that specified must be identified in the RFS and available maintenance, repair, and replacement service must be indicated.
7. The articles, devices and materials specified must not be changed except with the recommendation of VTC and the written consent of the Owner.
8. BHSC must not contract, purchase, or cause to be delivered any substitute articles, devices, or materials prior to obtaining such written approval from the Owner.
9. BHSC waives claims for additional costs caused by substitution which may subsequently become apparent.

10. BHSC must submit a statement of how substitution will affect schedule of work and Contract Time. If specified material cannot be furnished by specified manufacturer, documentation from the manufacturer that the specified material cannot be manufactured, supplied, and/or accelerated to meet the work days must be submitted with the BHSC's schedule.
11. Certification by BHSC to the effect that, in its opinion and after its thorough evaluation, proposed substitution will result in total work which is equal to or better than the work originally required by Contract Documents, in every respect of significance except as specifically stated in certification. Certify that substitution will perform adequately in application indicated, regardless of equality and exceptions thereto.
12. BHSC to include in certification BHSC's waiver of rights to additional payment and time which may subsequently be necessitated by failure of substitution to perform adequately, and for required work to make corrections thereof.
13. After execution of Contract, substitutions will not be considered for acceptance when:
 - a. They are indicated or implied on shop drawings or product data submittals without a formal request from BHSC.
 - b. They are requested directly by a subcontractor or supplier.
14. All accepted substitutions will be added to the Contract Documents by Change Order.

B. Design Deviations

1. If BHSC desires to deviate from the design, BHSC must submit a Request for Deviation (RFD) for each item to VTC in writing for review and approval from the Owner.
2. The RFD must include all information relevant to the reason for the deviation to the design.
3. Changes to the design as specified must not be made except with the written consent of VTC and the Owner.
4. BHSC must not contract, purchase, or cause to be delivered any substitute articles, devices, or materials relating to the deviation to the design prior to obtaining such written approval from the Owner.

C. Non-Compliance of Substitutions and Design Deviations

1. If at any time the approved substitution or deviation does not perform to the standards and publications submitted for the item in question, the BHSC will bear sole responsibility of the replacement, and any associated costs with the implementation of the replacement, of the item as originally designed per this Specification.
2. The BHSC must also be responsible for any liquidated damages that may occur due to scheduling delays associated with the substitution or deviation.

1.10 SUBMITTALS

A. General

1. The BHSC must submit a Schedule to VTC for review and Owner approval, 15 days from NTP. BHSC shall maintain accurate schedule updates and provide current schedule each week as required herein.
2. Each submittal must have a transmittal form that identifies the project, the BHSC, subcontractor, major supplier, pertinent drawing sheet and detail number, submittal number and specification section number as appropriate.
3. Upon Owner's approval, certain Submittals may be delivered electronically.
4. The BHSC must stamp the submittal attesting the contents of the submittal have been coordinated with the field conditions, trades, and disciplines and meets the contract requirements. Submittals without the BHSC's stamp of approval will be rejected without

- review. If the BHSC is a subcontractor, the submittal must be reviewed, commented, and stamped by the General Contractor (GC) or Construction Manager (CM). If GC or CM stamp is missing, the submittal will be rejected without review.
5. All drawings submitted must have the appropriate title, date of the original drawing and revision number and date.
 6. VTC will review, comment and transmit all comments in writing on each required submittal within 10 business days upon receipt of the complete submittal.
 7. Partial submittals are not acceptable and will be rejected without review.
 8. Attend Electrical/Controls review meetings to ascertain that the project specifications and requirements are properly reflected in the BHSC submittal documents. The review meetings consist of the following sessions. Frequency of the meetings may vary depending on the project size and complexity. Required attendees are representatives from BHSC, Owner, and VTC.
 - a. Meeting 1 – Date and location to be determined

The main focus of this meeting is to gain a clear understanding of the project specifications and requirements. Attendees will discuss the following items. This will be held after NTP and BHSC Site Survey and prior to BHSC initiating design.

 - 1) Design considerations in technical specifications and requirements (Electrical and Controls)
 - 2) Project phasing
 - 3) Project process and coordination
 - 4) Findings and concerns from BHSC Site Survey
 - b. Meeting 2 - Date and location to be determined

This meeting is to review the critical components of the primary submittals from the BHSC. BHSC must submit the following materials a week prior to this meeting. The discussion items are shown below.

 - 1) PLC/MCP Breakout
 - 2) Lower Level and Upper Level Network Architecture
 - 3) Electrical/Controls Phasing Plan
 - 4) BHS Control Room or/and Server Room Requirements
 - 5) Power Requirements including UPS and MCP size
 - 6) Redundancy Requirements for Servers, PLCs, and Network
 - 7) Device Layout and E-stop Zones
 - c. Meeting 3 – date and location to be determined

This meeting is to review the BHSC submittals mostly related to the system functionalities and operations. BHSC must provide review materials a week prior to this meeting. The discussion items are shown below.

 - 1) Update to previous meeting
 - 2) System Functionalities for Lower Level such as start-up, e-stop, doors, faults, etc.
 - 3) System Functionalities for Upper Level such as reporting, MDS, sortation, etc.
 - 4) PGDS Requirements including Report, Tracking, and Failsafe
 - 5) BHS Interface Requirements
 - 6) EDS Requirements including Phasing, Cabling, and Interfaces
 - 7) Sortation Requirements such as BSM/BPM interfaces

B. Required Submittals

BHSC shall make the following Submittals, and any others required to provide confirmation of compliance with the requirements of the Contract Documents.

1. Detailed Project Schedule

Submit a detailed project schedule that includes start dates and durations of each task and includes milestone dates. The schedule should be able to indicate percent complete on tasks. The detailed project schedule must be in .pdf format and updated monthly. The detailed project schedule must be in CPM format and include, at a minimum, the following tasks:

- a. Notice to Proceed (NTP)
- b. Detailed Submittal Schedule
- c. Mechanical and Electrical Site Survey
- d. Mechanical Design
- e. Electrical Design
- f. Mechanical Fabrication
- g. Electrical Fabrication
- h. Mechanical Shipments
- i. Electrical Shipments
- j. Demolition Activities
- k. Mechanical Installation
- l. Electrical Installation
- m. Factory Acceptance Test (FAT)
- n. Controls Installation/Programming
- o. EDS Equipment Installation and Testing
- p. System Tie-ins
- q. BHSC Testing
- r. Spare Parts Delivery
- s. Owner Pre-Integrated Site Acceptance Test (P-ISAT)
- t. Test Readiness Review (TRR)
- u. Integrated Site Acceptance Test (ISAT)
- v. Punch List
- w. Run-In Period/Beneficial Use of System
- x. Operation and Maintenance Training
- y. Final Acceptance

2. Mechanical, Electrical, and Controls Field Survey Report

- a. BHSC must submit a report detailing the results of the field survey identifying areas of conflict or concern which may impact construction and installation, and any issues regarding operating discrepancies. Items not identified on the field survey report are assumed to be resolved or coordinated by the Contractor to meet the intent of the Contract Documents.

3. System Layout Drawings

- a. Show the overall mechanical system layout including dimensioned plans, elevations, sections, building structure and interferences, building penetrations or modifications, motor locations, catwalks, crossovers and clearances. Clearly identify any building interferences and design deviations.
- b. All drawings submitted must have the appropriate title, date of the original drawing, revision number and date, and submitted in .pdf format

4. System Installation Phasing Plan

Submit a detailed installation phasing plan that coordinates with the project phasing plans in .pdf format which identifies operational impacts.

- a. Provide the least amount of operational impact and utilize an overnight tie-in during non-operational hours wherever and whenever possible.
- b. In the event an overnight tie-in cannot be accomplished, include temporary measures, including bag porters, that will diminish impacts or be completed in an overnight tie-in.
- c. Show any potential impacts to the Owner, BHS O&M Staff, TSA, and airlines.

5. Tie-in Plans

- a. Provide a tie-in plan in .pdf format a minimum of five business days prior to each tie-in.
- b. The tie-in plan must consist of the scope of the tie-in, detailed hour-by-hour schedule for the tie-in, mechanical drawings, electrical drawings, manpower list, test plan, and contingency plan.
- c. Include provisions in the tie-in plan for meetings. Each tie-in plan must include a meeting, held two business days prior to the tie-in. The attendees will include the BHSC, VTC, the Owner, and all parties affected by the tie-in.

6. Motor and Equipment Schedule

Submit a detailed motor schedule in .pdf format for both the new and the modified conveyor systems. The motor schedule must include the equipment ID, equipment type (i.e. transport conveyor, HSU, power turn, etc.), conveyor centerline length (if applicable), conveyor width, conveyor speed, motor horsepower, motor type, VFD/Brake (if applicable), voltage, nameplate amperage, source of power feed, circuit breaker size, wire and/or cable size selected to be used.

7. Structural Details

Submit structural and seismic attachment and support detail drawings and related design calculations of all structural supports and structural attachments for the new and modified portions of the BHS and associated catwalks and platforms. A Professional Structural Engineer registered in the state of Florida must sign and seal the submittal.

- a. Include the design and location of all structural attachment points and types, including the equipment load of where the equipment is to be supported by the building structure.
- b. Include a vibration isolation drawing package that shows the isolation type, method of installation, and where used.
- c. Structural attachment details must be submitted in ACAD (.dwg) and .pdf format.

8. Mechanical Shop Drawings

- a. A Professional Mechanical Engineer registered in the state of Florida must sign and seal the submittals for mechanical drawings, and calculations.
- b. Use approved mechanical shop drawings for application and approval of any required permits for mechanical installation work.
- c. Mechanical shop drawings must include, but not necessarily be limited to: system layout drawing, details and dimensions of all equipment (plan, elevation, and sections), clearances both horizontal and vertical as related to the building structure, interferences, dimensions and details of any required building preparations or modifications, and location and dimensions of conveyor drives. Also include cut sheets of all mechanical components used in the BHS.
- d. Mounting details must include, but not necessarily be limited to: photo eyes, debris pans, drip pans, shaft encoders, VFDs, HOAs, etc.

- e. Mechanical shop drawings must be submitted in ACAD (.dwg) and .pdf format, and one hard-copy.
9. Conveyor and Related Structure Paint Chips
- Submit to VTC for review and Owner approval.
10. Electrical and Controls Shop Drawings
- a. A Professional Electrical Engineer registered in the state of Florida must sign and seal the submittals for new or modified BHS motor control panel (MCP) load calculations.
 - b. Use approved electrical and controls shop drawings for application and approval of any required permits for electrical and controls installation work.
 - c. Electrical and controls shop drawings must include, but not necessarily be limited to:
 - 1) PLC and MCP/NP (if applicable) Breakout
 - 2) Electrical panel layouts showing size and field location.
 - 3) Schematics showing master power panel and power distribution panels, field wiring and power consumption requirements, conduit diagrams showing location of all controls and power conduit, conduit sizes, and wire sizes and numbers.
 - 4) Controls Network Topology drawings for both upper and lower levels.
 - 5) Controls upper level hardware configuration and network cabinet layouts.
 - 6) Hardware and software design configuration of Maintenance Diagnostic System (MDS).
 - 7) Control Room hardware configuration and cabinet layouts.
 - 8) Interior and front panel layout of control panels, conveyor layouts with device locations (PEs, Control Stations, Shaft Encoders, VFDs, etc.). Layouts must be identified by either designated control panel, or by individual conveyor subsystem.
 - 9) Where applicable, locations of all existing MCPs to be re-controlled or modified.
 - 10) Color-coded drawings showing the conveyors and their associated E-Stop zones and E-Stop pushbutton locations.
 - d. Electrical and controls shop drawings must be submitted in ACAD (.dwg) and .pdf format, and one hard copy.
11. Mechanical, Electrical, and Controls Product Data and Cut Sheets
- Submit catalog and manufacturer cut sheet for all components to be installed. Cut sheets must be legible, reproducible, and directly relevant to the specific items as used in the system. Each individual item must be clearly identified by the inclusion of a highlighted/shaded arrow immediately adjacent to the item. Product data and cut sheets must be categorized, identified, and separated for clarity.
12. Spare Parts List
- Submit a Spare Parts List as outlined in Exhibit D and described in Section 1.11 Spare Parts.
13. Description of Operations
- a. The System Description of Operations
 - b. Sequence of Operations
 - c. Functional Specifications
 - d. Screens/Menus of all Human Machine Interfaces (HMI)
 - e. Sortation Rules Methodology
14. Two Week Look-Ahead Report
- Submit a two week look-ahead schedule each week in .pdf format. The two week look-ahead schedule must include, but not necessarily be limited to, the following information:

- a. Submittal Schedule update
- b. Mechanical activities by day
- c. Electrical activities by day
- d. Controls and programming activities by day
- e. Testing activities by day
- f. Dates and times of all tie-in/cut-over meetings
- g. Dates and times of all shift change coordination meetings

15. Monthly Status Report

Submit a Monthly Status Report in .pdf format that reports work progress during the calendar month just completed. The monthly status report will be the basis for evaluating job progress, payment requests, and time extension requests. The monthly status report must include, but not necessarily be limited to, the following information:

- a. Status of major project components (percent complete, amount of time ahead or behind schedule) and an explanation of how project will be brought back on schedule if delays have occurred. Major project components include, but are not necessarily limited to:
 - 1) Mechanical, electrical, and controls software engineering
 - 2) Fabrication
 - 3) Mechanical, electrical, and controls installation
 - 4) Testing completed
- b. Progress made on critical activities indicated on each schedule, including inspections
- c. Explanations for any lack of work on critical path activities planned to be performed during the month
- d. Explanations for any schedule changes, including changes to logic, activity durations, and manpower loading
- e. Status of major material and equipment delivery
- f. System design and coordination issues
- g. List of critical activities scheduled for the upcoming month
- h. Status of proposed and accepted change orders

16. Welding Reports

Submit copies of all welding reports for structural welds as observed by a certified welding inspector as per Section 3.01B.

17. Safety Signs and Graphics

Submit examples of all graphic signs as per Section 3.01R.

18. System Reports & Format

Refer to Section 4.05.

19. TSA Coordination Documents

Submit TSA Coordination Documents including the following:

- a. Full-size plans to include Conveyor IDs
- b. Description of Operations
- c. Completed SSTP checklist and reference documentation

20. Factory Acceptance Test (FAT) Agenda

The FAT Agenda must provide enough detail to adequately describe what the BHSC will be demonstrating during the FAT.

The following is a representative list of the items that are to be validated, at a minimum:

- a. Security testing in accordance with the PGDS
 - b. Controls logic
 - c. System graphics
 - d. System reports
 - e. Bag tracking
 - f. System faults
 - g. Sortation
 - h. Upper level architecture
 - i. Lower level architecture
 - j. Redundancy (hot-backup) for the upper level servers
 - k. Redundancy (warm-backup) for PLCs
21. Static, Dynamic, Functional, and Load Test Plan and Test Results
- a. BHSC must meet all the requirements of the contract documents.
 - b. The test plan must be submitted to the Owner and VTC for review and approval at least 45 days prior to the operation start-up date for the BHS(s). Testing must include static and dynamic electric, static and dynamic mechanical, functional testing and load test and related procedures.
 - c. The test plans must identify and demonstrate all system performance criteria.
 - d. Submit reports for VTC and Owner approval detailing the results of the successful testing as outlined in the approved Test Plan no later than five business days prior to the start of Owner's testing. These reports shall be certified as to accuracy and compliance with the Test Plan.
22. Security Testing Plan and Test Results
- a. BHSC must meet all the requirements of the CBIS SSTP, TSA PGDS, and contract documents.
 - b. The test plan for each test performed must include all required personnel, test luggage counts and types (how many Clear, Alarm, and Out-Of-Gauge bags inducted), induction points, induction rate, additional materials or tools, reports used for documentation of the test, and pass/fail criteria of each test.
 - c. Submit testing reports detailing the results of the security testing as outlined in the approved SSTP, noting any deficiencies and the remedies of such.
23. Notice of System Compliance
- BHSC must submit written Notice of System Compliance detailing dates of testing and completion to VTC and the Owner.
24. Training Plan
- BHSC must provide a Detailed Training Plan to include, but not limited to, the following:
- a. Course Outline(s)
 - b. Course Material(s)
 - c. Course Proposed Schedule(s)
 - d. Course Intended Audience
25. Draft and Final Operation and Maintenance (O&M) Manuals
- a. Submit one hard copy DRAFT O&M Manual to VTC and the Owner for review and approval at least 15 days prior to BHSC conducted training.
 - b. O&M Manuals to include, but not limited to, the following subjects:

- 1) System description and operation
 - 2) Operating instructions
 - 3) Preventative maintenance
 - 4) Troubleshooting
 - 5) Removal and installation procedures
 - 6) Parts list
 - 7) Manufacturer's literature
 - 8) Warranty procedure
 - 9) List of provided applicable software and licenses
- c. Upon approval, provide final O&M Manuals in electronic format and in hard copy bound in three-ring binders in a number requested by the Owner.

26. As-Built Documentation

- a. Submit four sets of full size mechanical and electrical drawings showing the "As-Built" condition of the system(s) to VTC and the Owner for review and approval. Submit bound drawings with all reference files in ACAD (.dwg) format on medium as specified by the Owner.
- b. Upon correction of any deficiencies noted, BHSC must provide four hard copies of full size drawings and in ACAD (.dwg) format. Provide one copy on medium as specified by the Owner.
- c. Submit six sets of approved as-built plans on bond paper of the same drawings reduced to 11" x 17" size to be bound in 3-ring binders of the Final O&M Manuals.
- d. Submit support documents in .pdf format.
- e. Support documents must include 3D AutoCAD model in ".dwg" format.
- f. Submit PLC documentation and software source code files in editable format.
- g. Provide application software and its licenses to the Owner such that the maintenance personnel can monitor source codes for trouble shooting purposes after the system is handed over to the Owner. The application software and its licenses include, but are not limited to: PLC software source codes (programming, network communication, etc.), and HMIs (BIT, BRP, IQT, system status displays, etc.). This applies to both lower level and upper level systems.

27. Punch List Completion Notice

BHSC must provide completed, signed punch list to VTC and the Owner.

28. Notice of Final Completion

Submit written notice to VTC for review and to Owner for acceptance that BHSC has inspected work for compliance with the Contract Documents, that deficiencies listed with the Certificate of Substantial Completion (punch list) have been corrected, and that all equipment and systems have been tested in accordance with the Contract Documents.

1.11 SPARE PARTS

A. General

1. The BHSC must include in their price, as a separate line item, an allowance as listed in the Bid Documents.
2. Spare parts will subsequently be procured against the Final Spare Parts List prepared in conjunction with the Draft Operations and Maintenance Manuals (reference Exhibit A) and as modified and accepted by the Owner.

3. The pricing for spare parts shall be based on actual vendor invoices furnished by the BHSC, plus overhead and profit markup allowed by the Contract.
4. Shipping cost must be included in the pricing and invoices furnished to the Owner.
5. The BHSC's handling and coordination cost must be included in the overhead markup allowed by the Contract.
6. All spares must be new and identical to the parts furnished on the original equipment.
7. All spare parts must be packed and cushioned to prevent damage during transport and long-term storage.
8. The spare parts must be preserved and packed in such a manner to prevent corrosion and any other kind of degradation during transport and long-term storage.

B. Classification

1. BHSC must perform a complete mechanical and electrical field survey of the existing BHS conveyor equipment and maintain consistency, in terms of supplier, with the existing components. This requirement applies to items such as motors, gearboxes, bearings, belting, field control components, MCP controls components, and PLCs, to simplify spare parts inventory and maintenance familiarity of system components.
2. BHSC must perform a comprehensive analysis of installed products as the basis for evaluating the actual requirements of a reliable and cost-saving supply of spare parts.
3. BHSC will classify the spare parts based on the following characteristics:

a. Capital Spares

Capital Spares are vital spares for critical equipment that may have substantial impact on operations, and are dependent upon how long the products will still be available; which products are no longer available; and if the item is obsolete or likely to be obsolete in 6 months' time.

b. Insurance Spares

An insurance item is a spare part that will be used to replace a failed identical part in operating equipment whose penalty cost for downtime is very high. Hence, by definition, it is an insurance against such failures for which the down time costs are very high, and parts which have long lead times. They do not become obsolete until the parent equipment is retired from service no matter if they do not move for many years.

c. Overhaul Spares

Spare parts which must be replaced every time the equipment is disassembled and re-assembled, and are dependent upon how long the products will still be available; which products are no longer available; and if the item is obsolete or likely to be obsolete in 6 months' time.

d. Wear and Tear Spares

Spare parts which have regular wear and tear in the course of operation of the equipment and need to be replaced after definite number of hours of equipment operation or deteriorating condition; how long the current delivery times are; can the asset in service be repaired in an acceptable lead time (repair rather than replace); and when required, can the item be delivered by a vendor in an acceptable lead time (quick/local delivery).

e. Consumable Spares and Commercial Off the Shelf (COTS)

These are regularly used items such as lubrication, fasteners, seals, bearings, etc. and can be purchased locally.

C. Quantities

1. BHSC will quantify the spare parts based on the following characteristics:
 - a. The quantity of Capital, Insurance, and Overhaul Spares must be a minimum of two per type of equipment (i.e. two merge belts or power turn belts per each size of merge or power turn unit, two gear boxes or motors for each drive train), up to 10% of the total quantity.
 - b. The quantity of Wear and Tear Spares must be 5% of the total quantity of equipment.
 - c. The quantity of Consumable Spares and COTS must be 1% of the total quantity of equipment.

1.12 SAFETY

A. System

BHSC shall affirm that their system(s) and related components satisfy all legal safety requirements required by all governing codes.

B. Life Safety

The BHSC is responsible for the coordination of egress routes with VTC and the responsible authorities. The BHSC must supply all necessary crossovers, catwalks, etc. to satisfy all life safety requirements.

C. Personnel

1. All safety measures must protect the working staff of the BHS from injuries. This includes work platforms and tug & dolly ram protection as well as all other areas of the BHS where only the maintenance staff has access and is working.
2. Provide foam padding, safety tape, or threaded rod end caps at all points of the conveying system and support structure subject to maintenance or personnel access which can be classified as a "head knocker", or impose injury.
3. All safety measures must be in accordance with and follow federal as well as local OSHA and other safety regulations. BHSC must investigate and incorporate into their design any additional safety features and requirements which may be required.

1.13 WARRANTIES

BHSC represents and warrants that it is and will be at all times fully qualified and capable of performing the work and to complete the work in accordance with the terms of the Contract Documents. BHSC warrants that all work is/was performed in accordance with generally accepted professional standards of good and sound practices and all requirements of the Contract Documents. BHSC warrants that the work, including but not limited to, each item of materials and equipment provided by BHSC incorporated therein, must be new, must be of suitable grade of its respective kind for its intended use unless such grade is specified in the Contract Documents, must be free from defects in design, engineering, materials, construction, and workmanship, and must conform in all respects with all applicable requirements of federal, state, and local laws, licenses, and permits, the Contract Documents and all descriptions set forth therein, applicable construction codes and standards, functionality and technical requirements specified, and all other requirements of the Contract Documents.

In the event that these warranty provisions conflict with other required warranties within the overall project documents and specifications, the more stringent, as determined by the Owner, must apply.

Warranties are effective from the Substantial Completion date for each phase as agreed upon by the Owner and BHSC.

A. Warranty Items

1. BHSC must warrant the BHS equipment for one year against defective parts and labor.
2. BHSC must warrant all BHS equipment for five years against defective design.
3. BHSC must transfer all warranties for materials and equipment received from subcontractors and suppliers.
4. BHSC must warrant against defective parts and labor for all relocated/reused and refurbished BHS equipment for one year.
5. The design warranty must guarantee that the design application and overall system integration of the BHS components, sub-components, assemblies, sub-assemblies and parts utilized are free from faults, patent infringements and defects in design, application and/or integration.
6. Excessive wear will be considered a defect within these provisions.
7. If, within the warranty period described in the general warranty terms, from the effective date of the warranty, the work or the system or any equipment or material is found in any respect to not conform to the warranty set forth herein, Owner or designee will notify BHSC. The BHSC shall acknowledge and propose timely corrective action within one business day of notification of non-conformance.
8. Parts for warranty work must be shipped freight pre-paid to the location specified by the Owner. If requested by the BHSC, failed/malfunctioning parts may be returned to the BHSC. FOB, within 10 days of notification of detection of such failed/malfunctioning parts.
9. Parts taken from spare parts inventory to complete warranty service work must be replaced by the BHSC within two weeks of removal notification.
10. Owner may choose to perform the normal warranty labor repair work with its maintenance staff at the BHSC's expense. BHSC must provide labor for work related to design deficiencies.

B. Technical Support

BHSC must provide on-site mechanical and electrical, and on-call technical, PLC and software support (with the ability to remotely connect to and monitor the system), during normal operational hours for a period of 60 days starting on the date of live operations, and on-call technical support for a period of 30 days thereafter.

1.14 GENERAL MECHANICAL

A. Baggage Characteristics

The types of baggage which the systems may encounter are classified as follows:

1. Normal

Normal baggage is defined as items which can be transported by the Baggage Handling System (BHS) and processed by the project-specific EDS equipment without special handling as indicated in Table 2.

BHS	Length (Inches)	Width (Inches)	Height (Inches)	Weight (pounds)
Minimum	12	12	3	5
Maximum	54	31	36	120
BMA Settings	60	29.5	23.8	n/a

Table 2: Normal Baggage Characteristics

The BHS must handle items safely and securely while traveling through the system without causing interruption to the systems' operation. The system must be able to process tubbed articles such as: car seats, garment bags, soft-sided bags, as well as items with loose straps, strings, ropes, or hooks.

2. Out-Of-Gauge (OOG)

OOG baggage is defined as items which can be transported by the BHS but are too large to be processed by the project-specific EDS.

3. Oversize (OS)

Items that do not fall within the normal characteristics described above, or are of a nature that cannot be handled properly by the system (animal cages, skis, fishing poles, etc.) are considered oversize and will be handled according to the system-specific operating policy.

B. Clearances

1. The BHSC must conduct a field survey of all conveyor paths prior to the submission of installation drawings.

2. Bag Clearances

- a. A minimum of 36" of vertical clearance for normal bags from the conveying surface to the underside of any building members or utilities must be maintained.
- b. If conditions exist where this clearance cannot be maintained, BHSC must notify VTC and the Owner in writing as soon as possible for any clearance deviations.

3. Conveyor Clearances

- a. Where conveyors must cross over baggage cart ways or work stations, a minimum clearance of 8'-0" must be maintained to the lowest portion of the conveyor or its support structure, unless otherwise noted in the drawing package.
- b. A minimum of 12" clearance must be maintained from motors, drive units and bearing to fixed obstructions such as walls, beams and columns.
- c. A minimum of 24" clearance between conveyor guards for adjacent conveyors.

4. EDS Maintenance Access Clearance

- a. BHSC must maintain the manufacturer's recommended clearance for access and maintenance for the machine as outlined in their respective integration guidelines.

C. Baggage Transport

1. The BHSC must provide a system to transport the baggage smoothly and effectively through the system.

2. Consideration and care must be used, particularly in the fabrication of all projections, welds, surfaces, and transfer points between conveyors to eliminate damage to various types of bundles, handbags, suitcases, and trunks encountered.
3. Bottom glides on cases, strings, tags, straps, bag handles, destination tags, etc. must be protected against damage from sideguards, transfer points and all other surfaces against which baggage may come into contact during baggage handling.
4. Maximum Incline/Decline Angles
 - a. The maximum angle on inclines and declines must not exceed 18° from the horizontal; 15° or less must be maintained as a design objective for non-tracked conveyor lines.
 - b. Incline and decline angles must be 12° or less in tracked zones.
 - c. The BHSC must promptly notify VTC and the Owner if conditions exist that exceeds these requirements.

D. Equipment Loads

1. Input Load conveyors must be sized for a live load of 60 lbs/ft.
2. All other conveyors must be sized for live loads based on the following formula and Table 3.

$$Live\ Load = 40 \frac{lbs}{ft} \times \left(\frac{90\ fpm}{actual\ fpm} \right) \times \left(\frac{Throughput\ (BPM)}{20\ BPM} \right)$$

Subsystem	Maximum (BPM)
Input Conveyor Lines (Ticket Counters and Curbside)	20
Main Transport Conveyor Lines (delivering to or receiving bags from the screening matrix)	40
Each EDS Line (receiving from or delivering to individual EDSs)	OEM specified
Make-Up Feed Conveyor Lines	20

Table 3: System Throughput Rates

3. All conveyor drives must be sized so that multiple (0.5 second) time intervals between start and stop can be made under full design load conditions for a minimum duration of 30 seconds.
4. The system must be optimized to deliver bags to the EDSs with a minimum 12” gap between bags.

E. Conveyor Design Speed

1. Individual component speeds with and without VFDs
 - a. Any component with a VFD must operate within 2 percent of design speed.
 - b. Any component without a VFD must operate within 5 percent of design speed.
 - c. If conditions exist where this design speed cannot be obtained, BHSC must notify VTC and the Owner in writing as soon as possible for any design deviations.

F. Performance and Dependability

1. General Requirements

- a. The BHS must be capable of continuous operation, 20 hours per day, 365 days per year during normal operating hours, with provisions for routine preventive maintenance as specified in the maintenance manual.
 - b. The system must operate reliably and be reasonably free of breakdowns.
 - c. Major components of the system must be pre-tested so that life expectancy under the design operating conditions is known prior to installation.
 - d. Design of the components comprising the system must provide for ease of maintenance, replacement accessibility, and service requirements.
2. Breakdowns

The system breakdowns must be limited to the following repair times:

Breakdowns	Repair Time (Minutes)
90.00%	< 15
5.00%	< 30
4.90%	< 120
0.10%	< 24 Hours

Table 4: Repair Time Requirements

3. Availability

The weekly system availability as a whole (excluding EDSs) must be 99%. The system availability must be calculated as follows:

$$SA = \frac{OH - RT}{OH}$$

Where: SA = System Availability

OH = Operational Hours

RT = Repair Time

G. Operating Conditions

1. Normal operations will be considered to be 20 hours per day, 365 days per year.
2. All mechanical components must operate satisfactorily within a temperature range of 20°F to +140°F, with a relative humidity of 0 to 100 percent (non-condensing on optical surfaces).

H. Accessibility

1. Equipment components requiring inspection and servicing must be readily accessible.
2. Suitable doors or removable enclosures must be provided.
3. Access holes in frames or guards are acceptable but must be held to a minimum number and size, and must not create protrusions or discontinuities detrimental to the baggage being conveyed.
4. All components and assemblies must be easily disconnected and removed from the equipment without requiring extensive disassembly.

I. Vibration Control

1. All parts of the conveyor system, including catwalk, supported from structural elements or hangers must be on vibration isolators to eliminate such vibrations from being transmitted to the building. Vibration must not be noticeable in public or office spaces.
2. Surface-mounted conveyors and other associated components, including catwalk, using header steel connected to building elements and mezzanines must not transmit any vibration to these structures and must be fitted with vibration isolators.

J. Seismic Bracing

1. The BHSC must comply with all applicable codes regarding seismic bracing for the project.

K. Noise Levels

1. Noise measurements will be made under free field conditions according to DIN 45635/ISO 3744, no closer than three feet from the sound source. The dBA values do not include the noise due to baggage.
2. BHSC must measure noise levels with a calibrated A-weighted sound level meter at slow response or a calibrated 1/3 band octave analyzer and converted to A-weighted sound pressure levels.
3. BHSC must conduct baseline noise level readings during peak and non-peak operating hours prior to any work done on the system. The BHSC must record the time, location and the noise level for each reading.
4. BHSC must conduct noise level readings after work is complete on the system at the same locations for the same peak operating period.
5. Noise must be limited throughout the system to the following levels:

	Public Areas	Equipment Areas
Maximum	70 dBA	80 dBA

Table 5: Noise Level Requirements

L. Materials

1. General

- a. Steel used in the fabrication of the equipment must be free from rust, rust pits, kinks, and sharp bends.
- b. Methods used to form the material must not fracture or otherwise damage the metal.
- c. Burrs, sharp edges, and sharp corners must be removed. All parts must be formed and cut properly to assure uniformity.
- d. All joints must be smooth and all corners rounded.
- e. Holes for photoeye beams must be punched into metal sideguards and tapered from the inside (wide) to the outside (narrow). Burning will not be allowed.
- f. Joints between sections of conveyor bed must be chamfered to ensure that there is no step-up condition between bed sections.

2. Plate

- a. Structural steel plates and shapes must conform to ASTM A36/A36M-12, Standard Specification for Carbon Structural Steel.
- b. Hot-rolled sheets and coils must conform to ASTM A-569.
- c. General procedure and qualification of welders must be in accordance with AWS D.1.1/D1.1M:2006, Structural Welding Code - Steel.

- d. All welding electrodes must conform to AWS A.5.1/A5.1M:2012, Specification for Carbon Steel Electrodes for Shielded Metal Arc Welding.
3. Fasteners
 - a. All fasteners at a minimum must conform to ASTM A325, Type 1, or SAE Grade 5, Class 2A thread fit for bolts and Class 2B thread fit for nuts.
 - b. All fasteners must be zinc-plated, cadmium plated or stainless steel.
 - c. Jam nuts must not be used for structural connections.

1.15 GENERAL ELECTRICAL

All equipment must be the current version of manufacture at time of bid. When any product has available factory upgrades or modifications, such upgrades and modifications must be fully implemented at the factory and receive full factory testing and certification.

A. Electrical Clearances

1. Electrical clearance for safety and maintenance must meet the requirements of NFPA 70 National Electric Code (NEC) article 110.26 , state, and local Electrical Codes for Personnel and Other Protective Equipment.
2. If conditions exist where this clearance cannot be maintained, BHSC must notify VTC and the Owner in writing as soon as possible for any clearance deviations.

B. Radio Frequency Interference

1. The equipment provided must not cause interference with communications within the airport or between the airport and aircraft or ground vehicles.
2. All electrical and electronic equipment, including interconnecting wires and cables, must be designed to operate without malfunction in the presence of normal electromagnetic emissions generated by other equipment installed or used at the airport.
 - a. The normal airport environment includes the aircraft communications bands and high power radar systems. It also includes various electrical motors and controls, power tools (including welders), automotive vehicles, etc.

C. System Power Provisions

1. Source for Systems
 - a. Airport or building power originates from main switchgear and is distributed to areas within the building using building panel boards or Main Distribution Panels (MDPs). Building panel boards or MDPs feed Power Distribution Panels (PDPs), or Motor Control Panels (MCPs).
 - b. Distributed drives contain motor starters, Variable Frequency Drives (VFDs) and controls within a single drive package mounted on the conveying system adjacent to the drive motor and powered from PDPs.
 - c. 480 Volts Alternating Current (VAC), three-phase, 60 Hz power will be furnished by the General Contractor (GC) or Construction Manager (CM) to a disconnect located near the PDP.
 - d. Building MDP must function as the main power source panel for the BHS. The panel is the distribution point for service to each PDP.
 - e. The PDP must function as the distributed power source for the motors in the system. The PDP must be the distribution point (14 three pole circuit breaker) of 30A service to groups of motors within the system.

2. EDS Power
 - a. The GC or CM will be responsible for providing power from the building source disconnect to the UPS serving the EDS machines.
 - b. The BHSC is responsible for secondary power distribution to each EDS machine. This includes terminating wires at the appropriate locations, EDS and UPS, as well as providing a power disconnect near each EDS.
3. Distribution for Systems
 - a. BHSC must provide all power distribution equipment from the building MDP to all BHS/BHS equipment. This includes the following:
 - 1) Furnish and install all services, feeder, and fused disconnects for branch circuits from the MDP each disconnect to each PDP as specified.
 - 2) Approximate Locations of the PDP power panels are as shown on the plans. The BHSC is responsible for coordinating the final location of the PDP panels with VTC and the Owner.
 - 3) Coordinate the location and distance between the MDPs, PDPs or MCPs and the field devices so that the voltage drop does not exceed two percent.
 - 4) Furnish and install all panel boxes, wire ways, conduits, conductors, transformers, fuses, equipment and materials required to complete the electrical power distribution for the operation of the system.
 - 5) Indicate the full load amperage of each PDP fuse or breaker size on shop drawings.
 - 6) Furnish and install transformer for all 120 VAC, single-phase power required for the system controls equipment (PLC cabinet) and power for the control room equipment.
 - b. Motor and control power for parallel conveyor lines must not be on a single circuit. The loss of either 480V or 120V power on a single circuit must not stop parallel conveyor lines.
 - c. BHSC must show on its shop drawings the electrical power requirements (amperage) of each MCP main circuit breaker.
 - d. BHSC must validate harmonic distortion induced by the BHS and correct if it does not meet the acceptable limits. The acceptable limits on total harmonic distortion (THD) is at 5% and any single harmonic is at 3% as recommended by IEEE std 519.

1.16 GENERAL CONTROLS

A. General Controls Requirements

1. A complete BHS control system must be supplied as part of the work required under this contract. The control system must interface and/or control, at a minimum, the following equipment and all functionalities relevant to the equipment:
 - a. Automatic Tag Reader (ATR)
 - b. Baggage Measuring Array (BMA)
 - c. Horizontal Sorters
 - d. EDS Machines
 - e. Operator Displays
 - f. Operator Interfaces
 - g. Merges/Reverse Merge
 - h. Queue/Gapping Conveyor Belts
 - i. Vertical Sorters
2. BHSC must program each system to function as specified herein.

3. During startup and testing, the functionality of the conveying system, devices, control, and reporting must be demonstrated through the integrated BHS system.
4. Erroneous code must be removed prior to commissioning and final testing.
5. The BHSC is responsible for providing Controls system which is compatible with the existing system.
6. The BHS control system must interface with the fire/security system.
7. The hardware, software, and firmware must comply with state of the art technologies and represent current industrial standards. The components must be compatible and tested product families to provide continuity. The components must be readily available.
8. All field components used within the system must be suitable for use under harsh environmental conditions (e.g. temperature, soiling, electrically contaminated environments, vibrations, shocks, high humidity, and various climate temperatures). Refer also to section 1.14G, Operating Conditions.
9. All field network components must meet the environment class specified in the MICE table (ISO/IEC/TR 29106).
10. The system components must permit easy and rapid servicing and replacement.
11. Proprietary hardware, software, or firmware is prohibited within this project. Software must be off-the-shelf or open source, and be the most recent version
12. The computer system hardware must be comprised of standard, off-the-shelf components. No custom built hardware or interface devices are to be used.
13. The computers used must be open-standard non-proprietary computers and the latest technology at the time of bid submittal.
14. All new industrial computer equipment must be available for two years.
15. All new PLC components must be available for three years.
16. The system controls must be capable of functioning for 10 years.
17. If the BHSC cannot comply with the availabilities of equipment, they must indicate alternative source(s) of supply.
18. The functionality and compatibility of spare parts from alternative source(s) of supply must be identified by the BHSC.
19. The control equipment for the system must be designed to control and monitor the baggage from the time the bag is inducted into the system until it reaches its destination.
20. The control system must be designed to meet the specific functional requirements of the BHS.
21. The control system must include the ability for an operator to take any diverter out of automatic, and manually control diverters for desired routing scheme from the Control Room.
22. The loss of a single power circuit or controls must not disable more than one conveyor line.

B. BHS Network

1. Network Standard Compliance
 - a. The network system must be based on the IEEE 802.3 Ethernet standards. A modification of Ethernet protocol that creates incompatibility with commercial off-the-shelf Ethernet products is prohibited.
 - b. The network system must use standard unmodified TCP, UDP and IP protocols for Ethernet frame encapsulation and transport across the network per Internet Engineering Task Force (IETF) Requests for Comments (RFC) documents.
 - c. The network system must communicate with the enterprise network equipment using open-standard non-proprietary protocols.
 - d. The network system must be able to integrate into other parts of the airport network, if required.

2. Network Segmentation

- a. Controls system consists of defined zones and segmentation in order to place applications and devices in the logical framework based on the requirements.

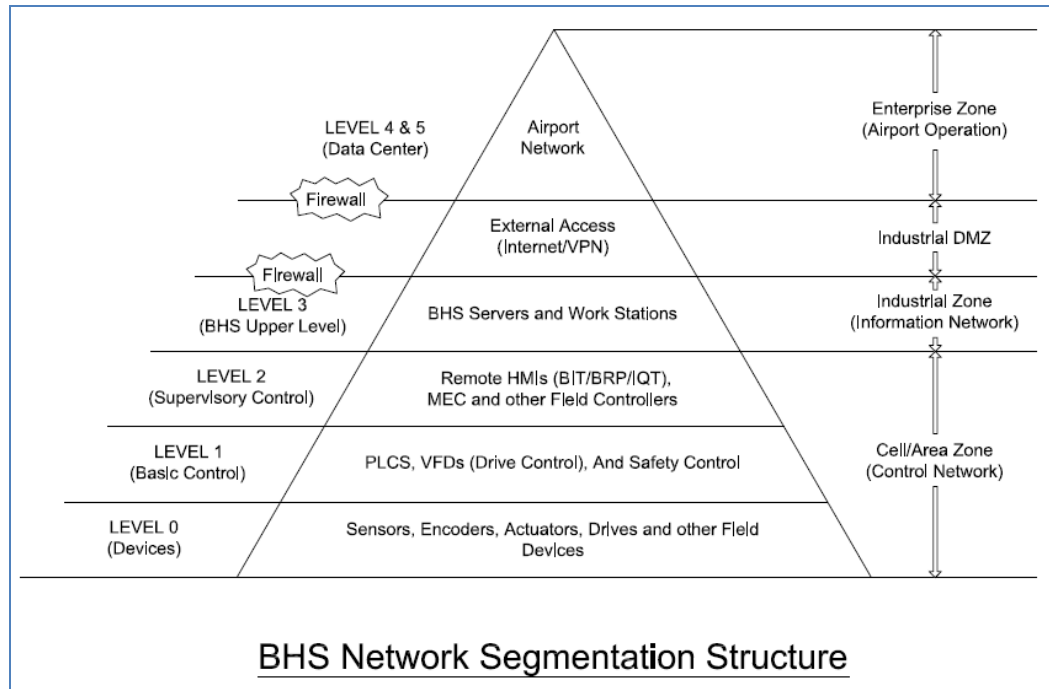

Figure 1: Typical Network Segmentation

b. Lower Level Network

- 1) EtherNet/IP must be used as a primary network between the PLC and field devices.
- 2) The lower level network must consist of the layer-2 network with multiple VLAN.
- 3) The PLCs must interface with field devices via EtherNet/IP network.
- 4) The system field devices must be incorporated into the EtherNet/IP network. Any field devices not specified as EtherNet/IP product must be connected via gateway, point I/Os, or I/O blocks that are compatible to EtherNet/IP.
- 5) BHSC must finalize optimal PLC breakout and network topologies with consideration of equipment availabilities, ease of maintenance, and avoiding a single point of failure.

c. Upper Level Network

- 1) Upper Level Network must utilize Ethernet TCP/IP to connect PLCs as well as external access.
- 2) Coordinate with the airport and the airline Information Technology (IT) personnel to ascertain that BHS interface to the airport network (if any) satisfies IT infrastructure.
- 3) Upper Level Equipment must synchronize time with the Network Time Protocol server. BHSC must coordinate with the Owner to define the clock source.

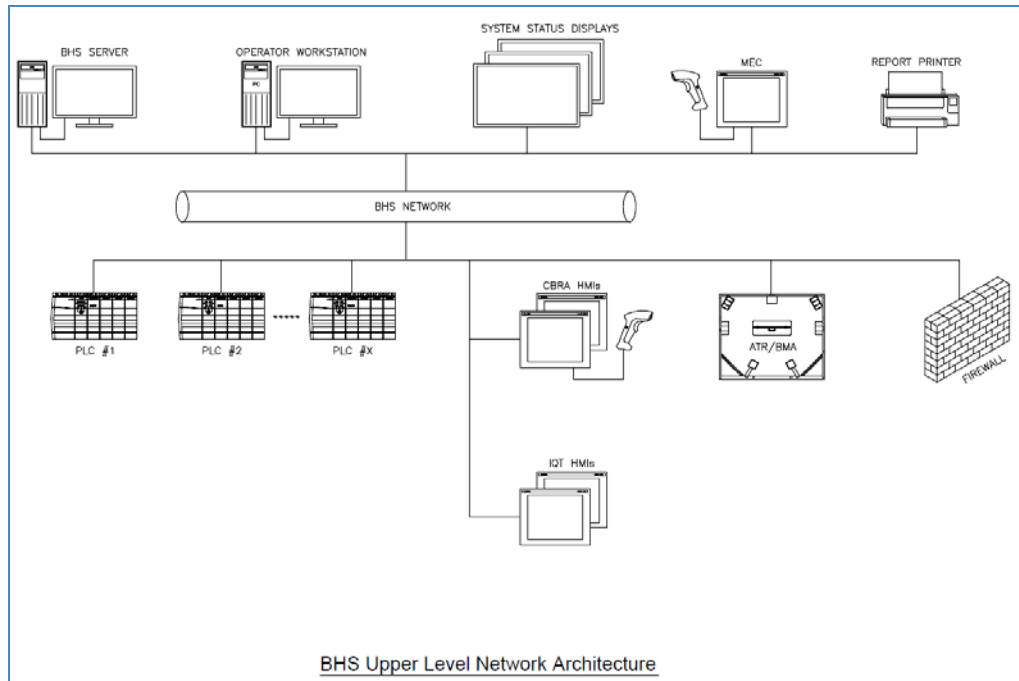

Figure 2: Typical Upper Level Network

3. Network Architecture

- a. The different topologies and network redundancy must be applied with the consideration of the physical conveyor layout and level of equipment accessibility.
- b. Linear/Star Topology
 - 1) This topology is applicable where a single point of network failure has minimum impact on the bag flow (for example, the physical conveyor layout allows having an alternative route(s) to transfer baggage to the destination).
- c. Device Level Ring (DLR)
 - 1) This topology must be used for the critical areas where a single point of network failure affects bag flow.
 - 2) DLR must have two supervisors, if possible.
 - 3) The supervisors must be either Ethernet modules (e.g., EN2TR) or E-Taps.
- d. VLAN must be zoned properly per each cell zone or each PLC control zone. An example of the IP Address breakout is:

Cell/PLC Zone	IP Address
Cell/PLC 1	192.168.1.yy
Cell/PLC 2	192.168.2.yy
Cell/PLC x	192.168.x.yy
PLCs to Upper Level System	192.168.9.yy

Table 6: Example of IP Address

1.17 SYSTEM

A. System Description of Operations

- 1. The BHS is divided into three areas with multiple zones based upon the functionality of the conveyors. The three areas are:

- a. Area 1 – Input Conveyors
 - b. Area 2 – BHS Matrix
 - c. Area 3 – Cleared Baggage Conveyors
- B. Area 1, Zone 1 – Input Conveyor Subsystem
1. The Input Conveyor Subsystem consists of ticket counter conveyors.
 2. The bags are placed onto one of these load conveyors with the carrier’s bag tag. The bags are merged onto a main transport line which transports the bags to the EDS Matrix for screening.
 3. Reinsertion Conveyors
 - a. Baggage that arrives at the Checked Bag Resolution Area (CBRA) with an ‘Error/Unknown’ status, or cannot be resolved from the image database, may be transported to the Reinsertion Conveyor via carts provided by the airport.
- C. Area 1, Zone 2 – BHS Oversize Subsystem (BHSO)
1. Baggage that is classified as oversize must be manually transported to the manual screening areas located at the west end of the ticket lobby.
- D. Area 2 – BHS Matrix
1. This area must maintain security tracking and system performance required by PGDS.
- E. Area 2, Zone 1 – Baggage Identification Subsystem
1. Bag Measuring Array (BMA)
 - a. All bags pass through the BMA.
 - b. Each bag will be measured for height, width, and length to detect EDS OOG bags.
 - c. The BMA must be set to the most restrictive height, width, and length of the EDS capability being employed for this project (see Table 2).
 2. The BMA must have a combination Automatic Tag Reader (ATR).
 3. Once a bag enters this zone, a BHS Tracking ID must be assigned and logged into the BDR. It must be tracked through all zones in this area, utilizing time and shaft encoders, until the bag is diverted to a clear baggage conveyor line (Area 3). The 10-digit IATA Tag ID numbers must be passed to EDSs. In case of a lost bag, Pseudo IDs must be used as alternative.
- F. Area 2, Zone 2 –Out-Of-Gauge Subsystem
1. OOG bags must be diverted to the OOG line.
 2. Bags without dimension information or bags lost in track between the BMA and OOG divert point must be diverted to the first EDS shunt line.
 3. OOG bags diverted onto the OOG bypass line must be tracked and logged into the BDR as ‘Out-Of-Gauge’ bags.
 4. When the bag reaches the CBRA, it must be staged inline until released by the TSO. As TSO releases the bag, the BDR must be updated, to include the workstation ID. The non-EDS screened inspection protocol must be used for OOG baggage.
 - a. After screening the bag, the TSO will “Alarm” or “Clear” the bag.
 - b. Alarmed bags will be processed in accordance with the local Law Enforcement Officer (LEO) protocol.
 - c. Once the bag is cleared, it will be placed on the clear baggage conveyor for transport to the bag make-up unit.

G. Area 2, Zone 3 – EDS Delivery Subsystem

1. Matrix bag distribution
 - a. To utilize even machine run time, a Round Robin method will be applied to distribute bags to the EDS machines.
2. BHSC must provide the option to select the primary EDS. This option must consist of both a manual selection and an automatic selection that will automatically rotate the primary EDS per a planned daily, weekly, or monthly sequence.
3. Stop feeding bags to the machine when any fault condition occurs at area 2, zones 4 and 5 as well as associated OSR/CL lines..
4. Staggered static deflectors on the queues prior to the gapping queues must be used to position the bags for entrance into the EDS.
5. Static guides on both sides of the EDS entrance queue conveyors must be used to prevent bags from jamming at the transition from the BHS entrance queue to the EDS entrance tunnel.
6. The first queue prior to the EDS must be installed with casters and quick disconnects for EDS repair, or replacement.

H. Area 2, Zone 4 – EDSs

1. Level 1 – Screening (EDSs) – All EDS In-Gauge bags must continue to the EDSs for screening. Each bag must be tracked through each specific area and recorded in the BDR.
 - a. The BHS PLC must transfer the unique bag tracking number to each EDS. The ID must follow the format required by IRD and PGDS.
 - b. Bags that become ‘Lost-In-Track’ in this zone must be assigned a new BHS Tracking ID when acquired at the next tracking photoeye.
 - c. Communication between the EDS and the BHS must be per the IRD, as required for the EDS interface.
 - d. The EDS provides Level 1 ‘Bag Disposition’ to the BHS PLC of a bag exiting the exit tunnel of the machine, and be logged as such in the BDR:
 - 1) ‘Machine Cleared’ – Indicates the bag was cleared by the EDS.
 - 2) ‘Machine Alarmed’ – Indicates a suspect bag.
 - 3) ‘Error’ – Indicates an error in the EDS.
 - e. If the EDS does not give the BHS PLC a signal within the time period specified, or the machine decision is still pending, then the bag must be given an ‘Error’ status and be handed off for Level 2 – Screening (OSR).
 - f. EDS Cleared bags must have the bag tracking ID number and the EDS ID reconciled in the BDR as a ‘Machine Cleared’ bag.
 - g. EDS Errored bags and the EDS ID must be logged in the BDR as an ‘Error’ bag.

I. Area 2, Zone 5 – Level 1 Decision Subsystem

1. The Level 1 decision conveyors are defined from the exit tunnel of the EDS to the Level 1 divert point where the BHS must either divert the bag to the Clear Line or to On Screen Resolution Line (OSR)Level 2 – Screening.
 - a. Bags identified by the EDS as ‘Machine Cleared’ must be diverted to the Clear Line and transported directly to the baggage make-up area.
 - b. Bags identified by the EDS as ‘Machine Alarmed’ bag must be diverted to the Level 2 – Screening (OSR) line and tracked into the CBRA.

- c. Bags identified by the EDS as 'Error/Unknown' must be diverted to the Level 2 – Screening (OSR) line, diverted to the Alarm Line, and tracked into the CBRA.
 - d. Bags that become 'Lost-In-Track' in this zone must be assigned a new BHS Tracking ID when acquired at the next tracking photoeye, logged in the BDR as a 'Lost-In-Track' bag, and diverted to the Level 2 – Screening OSR line, diverted to the Alarm Line, and tracked into the CBRA for resolution.
2. Fail-safe functionality must be programmed at all Level 1 decision points to prevent non-cleared bags from being diverted to a clear line.
 3. In the event of fail-safe or a fault condition on the Level 1 Clear Line subsystem conveyors, past the Vertical Sortation Unit (VSU), and the VSU is either in or can be cycled to the OSR line, all bags prior to the Level 1 decision point, regardless of status, must be directed to the OSR line to allow for those bags that are either Machine or OSR Cleared to be directed to the clear line at the Level 2 decision point.
 4. The first Level 1 decision conveyor must be installed with casters and quick disconnects for repair or replacement of the EDSs.
- J. Area 2, Zone 6 – On Screen Resolution (OSR)
1. Level 2 – OSR Screening: The time for OSR must be no less than 45 seconds, as defined as the travel time from the exit tunnel of the EDS to the decision point at which the BHS either diverts the bag to the clear line or to Level 3 – Screening.
 2. The BHS must receive bag disposition from the EDS per IRD requirements. Until the OSR resolution has been made, the bag disposition must be tracked and logged in the BDR as 'Decision Pending'. The bag status can be transmitted any time after the bag data is handed off from the EDS to the OSR Operators until the bag reaches the photoeye prior to the Level 2 - OSR decision point for diverting clear bags. The bag's status will then be updated in the BDR as:
 - a. Operator Cleared
 - b. Operator Alarmed
 - c. Timed Out
 3. Bags cleared by Level 2 – OSR Screening must be diverted to the OSR Clear Line and transported directly to the baggage make-up area.
 4. Once cleared, the bag identification number, status, and OSR station ID must be reconciled in the BDR as an 'Operator Cleared' bag.
 5. Bags Alarmed by Level 2 – OSR Screening must be reconciled in the BDR as an 'Operator Alarmed' bag, along with the OSR Station ID, and continue to Level 3 – ETD Screening for resolution.
 6. Bags that reach the Level 2 decision point without resolution from the OSR Operator, and after the defined OSR Time, must be logged in the BDR as a 'Timed Out' bag, along with the OSR Station ID, and continue to Level 3 – ETD Screening for resolution.
 7. Bags that become 'Lost-In-Track' in this zone must be assigned a new BHS Tracking ID when acquired at the next tracking photoeye, logged in the BDR as a 'Lost-In-Track' bag, along with the PE ID associated to where the bag was reacquired, and diverted to the CBRA for resolution.
 8. A fail-safe feature must be programmed at all Level 2 decision points to prevent non-cleared bags from being diverted to a clear line.
 9. Fail-safe activations must be less than 0.5% of the total daily bag volume, measured by the number of individual bags tripping the fail-safe.

K. Area 2, Zone 7 – CBRA

1. Level 3 – Explosive Trace Detection (ETD) Screening: All Alarmed, Error, Lost-In-Track, missed divers, OOG bags, and unresolved OSR bags, must be transported to the CBRA.
2. Bags must be delivered to the CBRA utilizing queues. CBRA queuing method must follow functionalities described in PGDS.
3. Bags must be tracked on the alarm line queues arriving at the designated search work stations. Bags arriving on the queue may display an “unknown” status on the Bag Removal Point (BRP) HMI.
4. Bags with “unknown” status will be carted to transport baggage from CBRA to reinsert belt.
5. Sequence of CBRA operation must meet procedures described in PGDS.
6. After screening the bag, the TSO will either “Alarm” or “Clear” the bag.
 - a. Alarmed Bags must be processed in accordance with the local Law Enforcement Officer (LEO) procedures.
 - b. Cleared Bags must be placed on the ALCL conveyor for transport to the baggage make-up area. The bag must be logged in the BDR as an “ETD Cleared” bag, along with the Workstation ID.

L. Area 3 – Cleared Baggage Subsystem

1. The Cleared Baggage Subsystem consists of:
 - a. Level 1 (EDS) Clear Decision Point to Make-up Area
 - b. Level 2 (OSR) Clear Decision Point to Make-up Area
 - c. Level 3 (ETD) Clear Lines to Make-up Area
2. Primary sortation ATR through secondary sortation to individual make-up or sort pier devices.
 - a. The primary sortation system consists of an ATR identifying the sort destination via the IATA bar code utilized on the bag tag.
 - b. Cleared bags which read correctly are directed to a divert point to be transported to the appropriate make-up device or sort pier.
 - c. In the event of a no-read by the ATR, the bag must be identified as no-read in the BDR, and sent to the manual encode station, the default make-up device, or the sort pier.

PART 2 - PRODUCTS

2.01 MECHANICAL

A. Drives

1. Motors
 - a. All motors as manufactured by:
Lenze 8400 Motec
 - b. General
 - 1) The conveyors must be driven by AC induction motors that conform to NEMA standards.
 - 2) Conveyors designed to be utilized as queues or in high cycle applications must have high efficiency motors.
 - 3) All other conveyors must have premium efficiency motors.

- 4) Motors must be sized for maximum load and belt speed requirements under continuous operation (minimum of 2 Horse Power (HP)) and, where applicable, must be capable of withstanding shock caused by frequent starting and stopping under load conditions.
- 5) Motors must also be of the constant speed (nominal 1800 Revolutions Per Minute (RPM)), continuous service, and ball-bearing type with a minimum of class "F" insulation.
- 6) All motors must be copper-wound, Totally Enclosed Fan Cooled (TEFC) construction, with a NEMA T-frame, and must be provided with overload protection in the control panel.
- 7) The service factor for motors must be a minimum of 1.15.
- 8) On inclines and declines 10 degrees or greater, motors must be equipped with automatically applied mechanical brakes to prevent overrun after the motors are de-energized.

2. Reducers

- a. All reducers as manufactured by:
 - 1) Lenze, G500 gearbox
- b. Reducers must be right-angle helical bevel, shaft mounted, and with integral or C-Faced motors. All reducers must be mounted with concentric taper-lock type hub or manufacturer's approved concentric locking device.
- c. All reducers must be sized for Class II application.
- d. All shaft mounted reducers must be capable of being installed in the A and B position (left hand/right hand).
- e. All reducers must be equipped with drip pans that are constructed as:
 - 1) A minimum 14 gauge sheet metal with a minimum depth of $\frac{3}{4}$ ".
 - 2) Drip pan must be fitted with a non-leaking drain plug.
 - 3) Drip pan must be painted to match conveyor color.
 - 4) Drip pan must be sized to match drive and catch all dripping fluids.

B. Pulley Assemblies

1. General

- a. All pulleys must be equipped with taper lock type hubs, and 1-7/16" minimum diameter AISI 1045 TG&P shafts mounted in precision and ground flange type ball bearing units.
- b. All pulleys must be single piece steel construction and have steel end discs attached to the rim by continuous welding. Welding of shafts to end discs is not permitted.
- c. All pulley and shaft assemblies must have a maximum concentricity tolerance of 0.060".
- d. The shaft run out of each assembly must not exceed 0.004" TIR (Total Indicated Runout)/inch of shaft length measured from the pulley hub.
- e. All pulleys must be dynamically balanced for a minimum speed of 400 fpm.
- f. All exposed rotating shafts must be covered with caps or collars.

2. Head and Tail Pulleys

- a. All non-powered head and tail pulleys must be trapezoidal crown faced, with 1-7/16" minimum diameter shafts.
- b. All head and tail pulleys must be minimum 6" diameter x 10-gauge wall.
- c. Slider bed must be arranged to keep the gap between the bed section and the end pulley to a nominal dimension of 1" +/- 3/8".

- d. All belt tracking must be accomplished through adjustments to snub rollers. If snub rollers cannot be installed, head and tail pulleys must be equipped with jacking bolts and lock nuts to facilitate tracking adjustment.
 - e. All other head and tail pulleys for units not covered above must be the same as described under drive pulleys, specified below.
3. Drive Pulleys
 - a. General
 - 1) All drive pulleys must be lagged with a minimum 3/8" thick vulcanized lagging per belting manufacturers' recommendation.
 - 2) Provide a minimum 210° belt wrap around the drive pulley.
 - 3) Drive pulleys for intermediate/center type drives must be flat faced.
 - 4) Drive pulleys must not be driven by chain.
 - b. Non-Motorized Pulleys
 - 1) Drive pulley and shaft sizes are determined by maximum belt pull as follows:
 - a) Light Duty (250 pounds maximum belt pull) must be 6-3/4" minimum diameter, trapezoidal crown faced or a V-guide groove, with a 1-7/16" minimum diameter shafts.
 - b) Normal duty (500 pounds maximum belt pull) consists of an 8-3/4" minimum diameter drive pulley with a 1-11/16" minimum diameter shaft.
 - c) Intermediate duty (1,000 pounds maximum belt pull) consists of a 10-3/4" minimum diameter drive pulley with a 1-15/16" minimum diameter shaft.
 - d) Heavy duty (1,500 pounds maximum belt pull) consists of a 12-3/4" minimum diameter drive pulley with a 2-3/16" minimum diameter shaft.
 - c. Motorized Pulleys
 - 1) All motorized pulleys as manufactured by:
 - a) Sparks
 - b) Van Der Graaf
 - 2) Motorized pulleys may only be used in applications such as ticket counter conveyors or queue conveyors where physical space is limited, or wherever space precludes a shaft mounted reducer, inline helical bevel gear reducers with integral or C-faced motors.
 4. Snub Pulleys
 - a. All snub pulleys must be a minimum of 4" in diameter and flat faced.
 - b. All snub pulleys must be used for belt tracking and equipped with jacking bolts to facilitate adjustment.
 5. Take-Up Pulleys
 - a. All take-up pulleys must be a minimum of 4" in diameter and flat faced.
 - b. Take-Up Pulleys must be mounted on threaded take-up devices with steel guides for the bearings. The devices must be linked together so that when adjusted, both sides travel together.
- C. Return Idler Rollers
1. The return idler rollers must be a minimum of 2-1/2" diameter, 12-gauge steel equipped with an 11/16" hex axle for belt speeds less than 150 fpm and a minimum of 3-1/2" diameter with an 11/16" hex axle for belt speeds from 150 to 300 fpm.

2. All hex shaft return idler rollers must be equipped with sealed, permanently lubricated, caged, precision type ball bearings.

D. Bearings

1. All bearings as manufactured by:
 - a. Link-Belt Series – FC3
 - b. Dodge GT or SXR Series
 - c. Sealmaster MH-T Series
2. All bearings must be pre-lubricated, plugged instead of grease fitting, self-aligning, anti-friction, and sealed.
3. All bearings must have a minimum L-10 life of 30,000 hours based on service and loading of conveyors and on the manufacturer's published data showing load rating of each bearing used.

E. Slider Bed Sections

1. Conveyor bed sections must be a minimum of 12-gauge hot-rolled steel, formed in one piece and reinforced to be strong and well braced with 1-1/4" x 1-1/4" x 3/16" angle stiffeners on a maximum of 3'-4" centers on transport conveyors and 2'-6" centers on load conveyors.
2. Butt coupling joints must be provided. Conveyor beds must be provided with the following between-guard width dimensions:

Conveyor Type	BG (Inches)
Ticket Counter Load	39
Transport (Standard)	39
Transport (Oversize)	45

Table 7: Conveyor between Guard Dimensions

F. Radius Break Overs

1. For transitions from incline to horizontal or horizontal to decline, the radius break over must be constructed in the same manner as the slider bed construction.
2. The bed must have a 10'-0" radius break over slider bed as a design objective, unless otherwise noted.
3. For return belt idling, vertical bends must be equipped with a snub pulley.

G. Shrouding

1. The shrouding in public areas must be formed stainless steel, minimum 12-gauge, Type 304 with No. 4 brushed finish. All other shrouding must be minimum 12-gauge Hot Rolled Steel with finish to match conveyor color.
2. The shrouding in CBRA must be formed A36 steel, minimum 12-gauge, powder coated finish.
3. Skirts must be 14-gauge or heavier sheet metal approximately 6" deep with toe space.

H. Sideguards

1. Sideguards must be a minimum of 12-gauge hot-rolled steel with a formed 90° edge turned away from the conveyor and a formed 90° edge turned down to eliminate sharp edges.
2. Sideguards must be reinforced with 1-1/4" x 1-1/4" x 3/16" vertical angle stiffeners on not more than 3'-4" centers on transport conveyors and not more than 2'-6" centers on load conveyors. The OTK sideguard must be equipped with a 45-degree transition to blend OTK sideguard height with adjacent conveyor sideguard height on both sides of OTK sideguard.
3. Stainless steel shrouding is considered to be a sideguard and thus requires stiffeners.
4. Unless otherwise noted, sideguard height in inches must be as follows:

Function	Front Guard	Back Guard
Ticket Counter/Curbside	0"	21"
OTK Queues	4"	12"
Transport	12"	12"
Roller Top	0"	0"

Table 8: Sideguard Heights

I. Spill Plates

1. Spill plates must be constructed of 12-gauge stainless steel Type 304 with a #4 brush finish.

J. Protective Guarding

1. Guarding must be provided on the underside of belt conveyors where the underside flange/lip is greater than 1'-6" but less than 7'-6" above finished floor elevation.
2. All conveyor end pulleys, drives, take-ups, return rollers and snub pulleys where the belt changes direction 7'-6" or less from the floor or working level must be so guarded so that their entire sides and bottom are covered.
3. The guard must extend such a distance that a person cannot reach behind it and become caught in the nip point between the belt and pulley (at least 36").
4. Acceptable guarding is:
 - a. Quick release or hinged metal guarding
 - b. Quick release expanded metal guarding
 - c. Quick release nylon mesh
5. Provide quick release hinged solid metal guarding along the underside of the conveyor over personnel work areas.

K. Gap Debris Pans

1. Provide protection from falling objects in work areas, aisles or personal access areas located beneath overhead portions of the system with gap debris pans between conveyor sections.
 - a. Gap debris pans must be provided and installed on all conveyor-to-conveyor junction points or transfer locations, where there is a likelihood of small objects falling.
 - b. Gap debris pans must be 12-gauge minimum sheet metal and painted to match conveyor color with 2" minimum raised sides and be the width of the conveyor and minimum 8" long.

L. Floor Supports and Ceiling Attachments

1. All floor supports must be of a Standard "H" type design with vertical adjustment. Floor support vertical members must be, at a minimum, constructed of 10-gauge hot-rolled formed steel channel with 10-gauge, hot-rolled universal foot and head plates with height adjustability.
2. Ceiling attachments must be 3/4" diameter threaded rod vertical hangers with not less than 2" x 2" x 1/4" angle horizontal members.
3. Hanger configuration must be failsafe.
4. Where bridge-type supporting structures are required in lieu of vertical hanger rods, such structures must be provided by the BHSC.
5. Vibration isolators for ceiling attachments as manufactured by:
 - a. Mason industries (Series 30N)
 - b. VMC (HRSA Series)
6. All vibration isolators must be supplied by the same manufacturer.
7. Vibration isolators must be selected in accordance with the weight distribution, so as to produce reasonably uniform deflections.

M. Belting

1. All belting as manufactured by:
 - a. Ammeraal
 - b. Siegling

Belting must be applied as follows:

Application	Forbo Siegling	Ammeraal Beltech
Transport Conveyors, up to 9°	E12/2 0/V1 M FR TXGD6 (Green) [907193]	EX 10/2 0+00 BLK AS FR IR [576610] EX 10/2 0+00 BLK AS FR (514065)
Case 1: Standard Queues (does not include Case 2 Queues)	E8/2 UO/V15 LG FR Black [906434]	EX 10/2 0+A32 BLK AS FR (A578812)
Case 2: ETD Queues and 54" Queues with Static Deflectors	E12/2 UO/V/VO SE BLK [999903]	EX 10/2 0+00 BLK AS FR (514065)
Case 3: Pre-EDS/EDS Gapping and Entrance Queues (Case 3 takes precedence over Case 2)	E8/2 UO/V15 LG FR Black [906434]	EX 10/2 0+A32 BLK AS FR (A578812)
Inclines/Declines > 9°	E12/2 V1/V10 LG FR Black [907143] E12/2 0/V10 LG FR TXGD6 (Green) [907194]	EX 10/2 0+A32 BLK AS FR IR (576652) EX 10/2 0+A32 BLK AS FR (A578812)
Conveyors at Plow-Type Merges & HSUs	PHR3-200 TW BBXBB FR [908209]	Fabric X/EP 19/3 0+0 (SBR) BLK AS FR (560100)

Belting in Public Areas	E12/2 0/V1 M FR TXGD6 (Black) [907182]	EX 10/2 0+00 BLK AS FR (514065) EX 10/2 0+05 BLK M2 AS FR IR (576601)
-------------------------	---	--

Note: Value in brackets [] is manufacturer's article number

Table 9: Belting Application Types

2. The width of all belts must be equal to the between guard dimension of the respective conveyor minus three inches maximum, except for edge V-guided belts.
3. Belts for the following equipment must be as furnished by the approved, original equipment manufacturer:
 - a. Merges (Induction, Take-Away/Reverse)
 - b. Power Turns
 - c. Vertical Merge Units
 - d. Vertical Sortation Units
4. V-guides must be hot vulcanized to the belt. Cold bonded V-guides are not acceptable.
5. All conveyors less than 10 feet and all queues must have belting equipped with V-guides.

N. Vertical Sortation Unit (VSU)/Vertical Merge Unit (VMU)

1. Vertical Sorter Units as manufactured by:
 - a. G & S Airport Conveyor
 - b. Glidepath
 - c. Jervis B. Webb
 - d. Siemens
 - e. Vanderlande Industries, Inc.
2. The vertical sorter must be capable of diverting a minimum of 28 BPM. This is defined as one complete cycle per bag.
3. All motors in VSU/VMU must be controlled by VFDs.
4. VSU/VMU must have a panel with the following features, if panel does not contain features BHSC to provide auxiliary controls station to provide that functionality:
 - a. E-Stop
 - b. HOA
 - c. Lockable disconnect
 - d. A selector switch to operate the diverter in the maintenance mode
 - e. Safety cage around VSU/VMU, equipped with switches and sensors wired in series with unit E-Stop circuit
 - f. All VSU/VMU Faults must be reported to BHS PLC control system

O. Horizontal Sortation Unit (HSU)

1. Horizontal Sortation Units as manufactured by:
 - a. Siemens
2. Each HSU must be of proven standard 40 BPM throughput design with demonstrated expansion capability to 60 BPM. Throughput is calculated on diverting every other bag. The diverter must be designed to minimize the potential for baggage jams and damage.
3. For parallel and 45 degree takeaway divert arrangements, the vertical belt speed (paddle belt) must be set to 1.41 times faster than the mainline belt speed.

4. For a 90 degree take-away, the belt speed of the HSU vertical paddle speed and the take-away belt speed must be set at 1.15 times the speed of the mainline belt speed.
5. The diverter unit must consist of a rigid structural steel support frame to reduce vibration and beam deflection. The surface contacting the bag must be smooth and continuous to transport the bag across the mainline/transport conveyor and onto the take-away conveyor or device. In the extended position, the full face of the paddle must extend sufficiently to push baggage off the mainline/transport conveyor. When retracted, the face must completely clear the belt path. The diverter drive must have a smooth, controlled acceleration and deceleration at each end of the stroke.
6. For safety, the diverter's sensing controls and diverter drive mechanism must be disarmed whenever the mainline has stopped for any reason.
7. All motors in HSU must be controlled by VFDs.
8. HSUs must have a panel with the following features, if panel does not contain features BHSC to provide auxiliary controls station to provide that functionality:
 - a. E-Stop
 - b. HOA
 - c. Lockable disconnect
 - d. A selector switch to operate the diverter in the maintenance mode
 - e. All HSU Faults must be reported to BHS PLC control system

P. Horizontal and Spiral Conveyor Turns (Power Turns)

1. Power turns as manufactured by:
 - a. Flow-Turn
 - b. Portec, Inc.
 - c. Transnorm System, Inc.
2. Standard transport power turns must have an outside radius of 87" (Model Type "C"), power turns at the ticket counters must have an outside radius of 59" (Model Type "B"), and oversize power turns must have a 60" inside radius, unless otherwise noted.
3. The maximum angle of any single powered turn must be 180°.
4. Drives for power turns must meet the requirements listed in section 2.01A "Drives" of this specification.
5. To facilitate parts procurement, a copy of the packing list which accompanies each power turn must be included in the spare parts section of the Operations and Maintenance Manual.
6. Power turn belt speeds must be adjusted so as to not cause bag skewing when receiving and delivering bags from adjacent conveyors.
7. All power turns in tracked zones must be equipped with VFDs.

Q. Queue Conveyors

1. General
 - a. All queue conveyors must be supplied with V-Guided belts for belt tracking.
 - b. All queue conveyors must be equipped with VFDs.
 - c. Belting for all queue conveyors must be based on the specific queue functionality identified in Section 2.01M Belting.
 - d. All queue conveyors must be a minimum of 54' in length except where noted otherwise on the plans.
2. OTK Queue Conveyors

- a. The first 54" queue conveyor upstream of the three 36" pre-EDS queue conveyors, and the first conveyor downstream of the EDS must incorporate an OTK sideguard for TSA IQ Testing.
- R. 45° Merge
1. 45° merges as manufactured by:
 - a. Portec, Inc.
 - b. Transnorm System, Inc.
 2. Where a 45° merge is used, its construction must be typical slider bed construction as described in Section 2.01E "Slider Bed Sections" with the drive/take-up unit at 90° to the flow of baggage.
 3. All merges must have a centerline length of 5', unless otherwise noted.
 4. All merges must have a filler brush located at the discharge end.
 5. All merges must be equipped with VFDs with dynamic braking.
- S. Static Deflectors and Static Guides
1. Static deflectors as manufactured by:
 - a. Globe Composite Solutions, LTD.
 2. The static deflector must be installed ½" above the photoeye's field of view so that the gap created below the static deflector is self-clearing.
 3. Static deflectors must be molded composite
 4. The static deflector must be snag-free.
 5. The static deflectors must be installed staggered whereas the start of each taper must be offset by the length of the queue.
 6. Welding of the static deflector/frame to the sideguard is not permitted.
- T. Make up Devices
1. Slope Plate Devices
 - a. Slope Plate Devices as manufactured by:
 - 1) G & S Airport Conveyor
 - 2) Glidepath
 - 3) Horsley
 - 4) Jervis B. Webb
 - 5) Siemens
 - 6) Vanderlande
 - b. General
 - 1) Slope plate devices must be constructed of articulating contoured pallets or flights forming a continuous, rotating, sloped surface.
 - 2) Slope plate units must be provided with a deck guard made of formed angle, 12-gauge hot rolled steel.
 - 3) The deck guard must be nominally 7" by 2" and located at the top of the make-up unit.
 - 4) Overall outside device dimensions must be as shown on the plans.
 - c. Design Data
 - 1) Load Rating

- a) The device must be rated at 50 pounds per square foot or 125 pounds per peripheral foot live load.
- 2) Frame and Track
 - a) The frame must consist of standard modular assemblies bolted together to form a support structure and guide for the flight assemblies.
 - b) The track must be of rolled or formed structural steel. Structural supports for the tracks are to be spaced on a maximum of 4' centers.
- 3) Flight Assemblies
 - a) Each flight assembly must consist of a steel support assembly with upper support wheel, a flight (cover pan) and a segmented, molded rubber bumper at the lower end.
 - b) Each module must be connected at its lower end to a continuous drive linkage which incorporates the lower support wheels.
 - c) Upper and lower support wheels must have polyurethane treads for quiet operation of the device.
 - d) Flights must be 14-gauge stainless steel with Teflon tape rub stripping applied to the underside of each flight at the trailing edge.
2. Drive
 - a. The drive must consist of a heavy-duty, double-pitch roller chain with hardened drive blocks driven by a motor through a helical gear reducer and drive sprocket sized for AGMA Class II.
 - b. The unit must be must be operated continuously at 90 fpm.
 - c. The roller chain must engage at least two modular flight assemblies at all times.
 - d. Each unit must have overload protection and be provided with mechanical soft start device (s) or VFD(s).
 - e. A redundant drive must be installed on make-up units that only require a single drive. The redundant drive is to run simultaneously with the primary drive to allow continuous operation in the case primary drive failure.
 - f. All drives must be synchronized.
 - g. The drive must be designed for operation at 480 VAC, 3-phase, 60 Hz power source.
 - h. The drive must be sized to permit start-up under full load conditions.
3. Electrical Maintenance Outlet
 - a. One 120 VAC, single-phase 60 Hz duplex outlet must be provided in the general vicinity of each drive assembly by BHSC.
 - b. Outlet must be GFI protected and enclosed in a weather-proof enclosure.

U. Sliding Top Inspection Tables

1. Sliding Top Inspection Tables as manufactured by:
 - a. Lucasey
 - b. Or approved equal
2. Tables using a sliding configuration must have a 48" of slide movement with +/- one inch extension adjustable and stops at both ends. Slide portion of table to automatically retract.
3. Inspection table with full 48" movable top constructed of 18gauge brushed #304 stainless steel. Base plates for anchoring must not extend outside of the table leg supports. Table is 60" long by 30" wide with a stainless steel back guard. Top of sliding table must be no more than 30" above finished floor.

4. Table top to have 48" full extension slide capable of supporting a baggage load of 100 lbs. minimum in addition to the table top weight. Installed and pitched one degree +/- to allow table top to automatically retract. Stop underneath table must allow top to slide and provide a positive stop above the frame. Pinch points between the alarm line conveyor and table top must be protected with padding. Extension length of table must be adjustable +/- one inch with stops at both ends.
5. Table top to have release mechanism providing positive stop at normal (non-extended) position. The BHSC may provide an electric release solenoid in lieu of the mechanical handle release. The electric release must not restrict the table from returning to the normal locked position.
6. Tables to have two drawers (large and small) adjacent to the alarm line, an open area for storage, and a paper towel dispenser.
7. Tables must be constructed in mirror form for back-to-back application between a pre-wired center console backsplash.
8. Provide a center console backsplash 42" tall by 6" wide minimum between the two moveable table tops where tables are back-to-back.
9. Table configuration and center console backsplash/knee wall must have the EDS-specific components for integrated mounting of the ETD machine, HMI panel and Search Viewing Station (SVS) monitor.
10. Backsplash to be 18-gauge brushed #304 stainless steel on 3/4" FR plywood or a 5" x 3" x 1/4" steel tube frame support. Anchor to floor. Stainless steel to wrap all exposed surfaces, weld, and grind smooth.
11. Backsplash to include openings in the stainless steel and frame with 2-1/2" diameter grommets and cable sleeve to provide the power, data, and fiber connections to the equipment mounted above the backsplash.
12. Provide one flush mounted quad outlet along the vertical face of the backsplash and provide a second quad outlet inside the backsplash for connecting the ETD, BVS, and HMI. Provide a data quad box for data and fiber connections inside the backsplash. Provide access panels under the table top in the backsplash for access to the data and power connections.

V. Baggage Tubs

1. Baggage Tubs as manufactured by:
 - a. Geo Tex, Inc.
2. Provide 500 low profile plastic tubs 36"x24"x5" HMWPE with ASL bottom, ASL insert and drain hole.

W. Curbing and Guard Rails

1. Unless otherwise agreed to, protection for baggage handling system equipment and master control panels must be in the form of concrete and core drilled, concrete filled bollards, which must be provided by the General Contractor.
2. As a minimum, flange-mounted steel tube guardrail posts for protection of such equipment must be 4" X 4" square with 1/4" wall thickness with steel channel cross members.

X. Catwalks and Platforms

1. BHSC is responsible for design, fabrication, and installation of all catwalks, crossovers and platforms, associated access ladders / stairs and railings for the baggage systems where shown on the drawings, and as additionally required for the operation and maintenance of the system. These locations include, at a minimum, all potential jam locations (such as merges, diverts, power turns), locations where maintenance cannot be performed in a safe manner,

- and Fail-Safe locations. BHS Contractor to coordinate with the Owner, the Owner's representative, and the Architect to confirm the final location and quantities for catwalks, crossovers, platforms, and their associated equipment.
2. Specifications for suspending the catwalks will be the same as that for conveyors as described in Section 2.01L, "Floor Supports and Ceiling Attachments". The catwalk uniform working live load must be 40 pounds per square foot or a concentrated load at a location producing the maximum load effects of 300 pounds in 6.25 square feet (2.5 feet x 2.5 feet), whichever produces the greater effect. The maintenance platform uniform working live load must be 60 pounds per square foot with structural member deflection no greater than L/360. Supports must be located so that there is no unsupported ends, such as where two catwalk sections meet or catwalk terminates.
 3. Catwalks, and crossovers (step-overs and bridges) must be constructed with a walking surface of minimum 10 gauge formed steel. Toe boards and walking surface must be a one piece, continuous u-shape (4" high toe board). Walking surfaces must be reinforced to limit deflections to under 1/4".
 4. The minimum walking surface width must be nominally 36" with a 7" gap between the outside surface of the toe kick and the conveyor. Widths may be increased to meet NEC 110.26 working clearances.
 5. Handrails must be installed on all catwalks, crossovers, and platforms except where adjacent to conveyors.
 6. Nosing required for exposed ends of grating at elevation changes and at the top of ladders /stairs.
 7. Personnel protection must be included for all catwalk, crossovers, and platforms to minimize potential injuries. This includes removing all sharp edges, corners, and welds, deburring surfaces, padding and safety tape, and any other measures as necessary.
 8. Openings at the top of ladders/stairs must be protected by a self-closing gate.

Y. Fire/Security Doors/Shutters

1. Fire/Security doors/shutters as manufactured by:
 - a. Airport Equipment Specialists, Inc.
 - b. Vigneaux
2. Fire doors/shutters must be rolling shutter, slat-type, interior-face-mounted doors with electric operators, UL-labeled for three hour rating with Class A firewalls, and supplied with a fusible link or thermocouple.
3. Fire/security doors/shutters must be designed for continuous operation with a Life Cycle Expectancy of 22,000 cycles, at a maximum 4 cycles per 20 minute period.
4. No intermittent type doors allowed.
5. Fire/Security doors/shutters must be supplied with self-closing coils which will cause the door to close in the event of system power loss.
6. Fire door to fit between 2" conveyor-to-conveyor transfer gap.
7. Fire/security doors must provide a set of dry contacts for external monitoring of door status to be used by the Owner's security system, and faults for maintenance use

Z. Draft Curtains

1. Draft curtains as manufactured by:
 - a. Chase Economax
 - b. NECOR Corporation

2. Draft curtains must be two staggered layers of black or color specified by Owner, 8" wide x 1/16" thick strips.

2.02 ELECTRICAL

A. Power Panels

1. Furnish and install appropriately sized circuit breakers for all branch motor circuits and control power circuits within the baggage handling system.
2. All power panels must be minimum 14KAIC rated.

B. Relays

1. Relays as manufactured by:
 - a. Allen-Bradley 700 Type N or P
 - b. Siemens, SIRIUS series
2. E-Stop Relays as manufactured by:
 - a. Allen-Bradley 440R-N23132
 - b. Allen-Bradley Minotaur MSR127T
 - c. Allen-Bradley 700S-P or 700S-CF
 - d. Wieland, Configurable Safety Controller, samos PRO

C. Control Transformers

1. Control Transformers as manufactured by:
 - a. ACME, T series
 - b. Eaton, NEMA Premium
 - c. Sola Corporation, CVS series (conditioned power)
 - d. Sola Corporation, HS series (non-conditioned power)
2. Programmable controllers or sortation controllers must be equipped with the appropriate number and size of power regulators to ensure that the power is properly conditioned.
3. Power supplies for remote I/Os must be conditioned.

D. Circuit Breakers

1. Circuit breakers as manufactured by:
 - a. Eaton
 - b. General Electric (GE)
 - c. Siemens
 - d. Allen Bradley

E. DC24V Power Supply

1. DC24V Power Supplies as manufactured by:
 - a. Allen-Bradley
 - b. PULS
 - c. SOLA
 - d. Balluff
2. DC24V Power Supplies must be din-rail mounted.
3. DC24V Power Supplies must be operational within the temperature range of 14F to 140F.

4. DC24V Power Supplies must meet efficiency of 89% or higher.
5. If DC24V power supply is used for remote Ethernet switches, it must be DC-UPS, a battery, or a combination.

F. Conduits, Wireways, and Cable Trays

1. Rigid Metal Conduit (RMC)
 - a. The minimum size of RMC must be ¾”.
 - b. All fittings must be electro-galvanized.
 - c. All fittings must be of malleable steel threaded; and include gasket and covers.
2. Electrical Metal Tubing (EMT)
 - a. The minimum size of EMT must be ¾”.
 - b. Connectors of EMT must be with insulated throats with steel lock nuts or rings.
3. Liquid-tight Flexible Metal Conduit (LFMC)
 - a. Liquid-tight flexible conduit as manufactured by:
 - 1) Anaconda
 - 2) EF liquid-tight
 - 3) Sealtite
 - b. The minimum size of LFMC must be ½”.
4. Intermediate Metal Conduit (IMC) is not acceptable.
5. All fittings must be the water tight type.
6. Wireways
 - a. Wireways must be 4” x 4” divided metal and the minimum size is 18-gauge.
 - b. Wireways must have hinged covers and insulating pads on the inside radius of internal bends at all elevation and horizontal changes.
 - c. The design and installation of wireways must be of the “lay-in” type to avoid the need to thread wires through wireway end and transition connectors.
7. Cable Trays
 - a. Cable Trays must be U shaped wire mesh metal with equal height sidewalls.

G. Conductors

1. Power conductors must be a minimum of No. 12 AWG, 600 volt; Type THHW/THWN insulated stranded copper wire.
2. All control wires from terminal blocks to the field devices except for wires in quick disconnect cables must be a minimum of No. 14 AWG, type THHW/THHN stranded copper conductor, rated at 600 volts, and not less than 194F.
3. All control wires from terminal blocks to PLC input/output modules (inside panels) must be a minimum of No. 16 AWG.
4. Electronic circuit wiring must have a minimum of No. 22 AWG.

H. Enclosures

1. Industrial enclosures as manufactured by:
 - a. Hoffman
 - b. Rittal
 - c. Saginaw Control & Engineering (SCE)

2. Industrial enclosures must be NEMA Type 12.
3. Enclosures exposed to direct rain must be NEMA Type 4 weatherproof.
4. The PLC cabinet must be free-standing ventilated UL Type 12 with see-through front door.
 - a. OTK Enclosure
 - 1) Must be slanted top enclosures
 - b. CBRA BSD Enclosure
 - 1) Must be no greater than 4.5" deep
 - 2) CBRA BSD Enclosure to be no greater than 20" wide x 14" high

I. Pull Boxes, J-boxes

1. Junction boxes must conform to NEMA code requirements.

J. Motor Starters (Distributed Controls)

1. Motor starters as manufactured by:
 - a. Non-reversing
 - 1) Allen-Bradley 190 Series (IEC type)
 - b. Reversing
 - 1) Allen-Bradley 190 Series (IEC type)
2. Starters must incorporate thermal overload protection in all phases.
3. Minimum starter size must be NEMA size "O" (or IEC equivalent).
4. Motor starters must be equipped with an integral or separate HOA switch. The hand mode must bypass the control circuit and provide local power to the motor for maintenance operation.
5. Non-reversing motor starters must consist of three-pole, single-throw, magnetic across-the-line contactors, each with a holding contact and auxiliary contacts as required.
6. Non-reversing motor starters must have three manual reset, thermal overload relays.
7. Reversing motor starters must have electrical and mechanical interlocks.

K. Variable Frequency Drives (VFDs)

1. VFDs/VFD components as manufactured by:
 - a. Lenze
2. Power separation for VFDs is required to facilitate the installation of harmonic filters, if the filters are required.
3. VFDs must have the dynamic braking option and dynamic braking resistors.
4. VFDs must be EtherNet/IP compatible and must incorporate diagnostic and reporting functions over the EtherNet/IP network.
5. VFDs must have compatibility and connectivity to fulfill required network topology by itself or with an additional device such as an E-Taps.

L. Motor Safety Disconnects

1. If available, utilize VFD manufacture's built-in MSD
2. Motor safety disconnects as manufactured by:
 - a. Allen-Bradley, 194E
 - b. Square D, MD series
 - c. Turck, A9669

3. Motor safety disconnects must be 3-pole OFF/ON rotary switch type.
4. Motor safety disconnects must come with at least one auxiliary contact (N.O.) to monitor OFF/ON condition on Graphics and Report.
5. Enclosures must be IP65 rated or higher.
6. Motor safety disconnect must be lockable on Off position.
7. Motor safety disconnects must meet the requirements specified by the drive manufacturer.

M. Line Reactors

1. Line reactors as manufactured by:
 - a. MTE Corporation
2. VFDs that are located over 50 feet from their respective motor must have 5% line reactors installed on the output side of the VFD.

N. Power Cable

1. Power cables consist of the cables from the conduits/wireways to VFDs/motor starters/motors.
2. VFD cables if used must meet VFD manufacturers' requirements.
3. Power cables must be shielded and 600V rated.

O. Electrical Surge Protector Device

1. Electrical Surge Protector Devices (SPD) are required for the following areas.
 - a. On the line side of all 480VAC 3-phase power in PDPs, MCPs, and NPs
 - b. On the line side of 120VAC 1-phase power in NPs and Control Panels,
 - c. 120VAC 1-phase power feeding to UPSs installed for PLCs and servers
2. SPD as manufactured by:
 - a. Eaton
 - b. Surge Suppression Inc., CTM series or S-SP series
3. SPD for 480VAC must meet the following requirements:
 - a. Include discrete protection in all available modes as recommended by ANSI/IEEE Std. 1100-2005
 - b. Demonstrate frequency attenuation relative to ANSI/IEEE C62.41 Category A testing in all available modes
 - c. Be listed UL-1449 4th Edition
 - d. Include circuit board integrated current fusing and component integrated thermal fusing for maximum safety and protection
 - e. Include thermal stress reducing encapsulation for maximum durability and longevity
 - f. SPD for panel board mounted must have a Short Circuit Current Rating (SCCR) of 200k AIC
4. SPD for 120VAC must meet the following requirements:
 - a. Include only solid-state clamping components consisting of a multi-stage hybrid design
 - b. Bi-directional and encapsulated in a UL listed/recognized high dielectric compound
 - c. Have frequency responsive circuitry (Sine wave tracking) for each mode of protection
 - d. Designed to protect all dedicated circuits for PLC and field control panels
5. SPD must have LED to show the status of power.

P. Quick Disconnect Cable for non-EtherNet/IP Devices

1. Field devices such as photoeyes and control stations must be connected to an I/O block through a quick disconnect cord set.
2. All cord sets as manufactured by:
 - a. Belden/Lumberg
 - b. IFM
 - c. Turck
3. The cord set must have the temperature range of 14°F to 140°F .
4. All cord sets must be equipped with 90 degree connectors except for the connections orientated vertically down position.

Q. Photoeyes (PE)

1. Photoeyes as manufactured by:
 - a. Allen-Bradley Photoswitch 9000 series
 - b. Banner World-Beam Q45 series
 - c. IFM 06 series
 - d. Pepperl+Fuchs, OBR7500
2. Photoeyes used for jam detection, over height bag detection, change in length, etc., must be retro-reflective type devices.
3. Photoeyes must have quick-disconnect cabling.
4. Photoeyes must be unaffected by reflective bags.
5. Status indicator lights on the device must be Light Emitting Diode (LED) type.

R. Light Curtain Assemblies

1. Light curtain assemblies as manufactured by:
 - a. Banner – EZ-Array series
 - b. SICK MLG series
2. The light curtain assemblies must have quick disconnect cables.
3. The light curtain assemblies must be able to detect a height of 0.5” to 24”.

S. Push Button Control Stations

1. Push button(PB) Control Stations(CS) as manufactured by:
 - a. Allen-Bradley Type 800T/30.5mm operators
 - b. Eaton Cutler Hammer
 - c. Schneider Electric
2. Control station enclosures must be NEMA 12 and yellow in color.
3. Control stations in public view, at ticket counters, and at claim areas must have stainless steel plate covers.
 - a. All E-Stop push button applications must be of the maintained-contact, push-to-stop, red illuminated mushroom-head type.
 - b. Other push button switches must be momentary-contact type.
4. Illuminated push buttons lights must be LED type.
5. Control and E-Stop wiring connections to push button stations must be quick disconnecting type.

6. Control Types and descriptions of push button functionality are as follows (see detailed drawings):
 - a. Type 1A - Primary CS at input conveyors with security system integration
 - b. Type 1B - Primary CS at input conveyors for reversible sub-system
 - c. Type 2 - Inbound /Transfer CS
 - d. Type 3 - Secondary CS at input conveyors/secondary CS at make-up units/manual input.
 - e. Type 4 - Maintenance CS at make-up units
 - f. Type 5 - Fire/Security Door Maintenance Interface
 - g. Type 6 - No-Read Station
 - h. Type 7 - Horizontal Sortation Unit Interface
 - i. Type 8 - Hand/Off/Auto (HOA)
 - j. Type 9 - E-Stop/Jam/Start Reset
 - k. Type 10 - Vertical Sorter Interface
 - l. Type 11 – MCP Door Interface
 - m. Type 12A - Master Emergency Stop
 - n. Type 12B - Emergency Stop
 - o. Type 13 - Emergency Stop Lanyard
 - p. Type 14 - Reserved
 - q. Type 15 - Reserved
7. Control Station Components
 - a. EMERGENCY STOP (E-Stop)
 - 1) Must be a lockable, two-position, maintained contact, red illuminated, push to stop, mushroom head type, non-plastic, push-pull button.
 - b. START/RESET Push button (SPB)
 - 1) Ticket Counter CSSPB
 - a) Must be green, extended head, illuminated with guard, momentary contact push button.
 - 2) Other CS SPB
 - a) Must be green, flush-head, non-illuminated, momentary contact push button.
 - c. Conveyor or Device STOP Push Button
 - 1) Must be red, flush-head, non-illuminated, momentary contact push button.
 - d. Jam Indicator
 - 1) Must be amber, extended head, illuminated, pilot.
 - e. Start-Up Warning
 - 1) Must be an audible alarm that sounds as a warning whenever the subsystem is starting.
 - f. RESET Push Button
 - 1) Must be black, flush-head, non-illuminated, momentary contact push button.
 - g. ENABLE/DISABLE Keyed Switch
 - 1) Must be a two-position, maintained contact keyed switch.
 - h. ADVANCE Push Button
 - 1) Must be yellow, flush-head, non-illuminated, momentary contact push button.
 - i. AUTO/MAINTENANCE Keyed Switch
 - 1) Must be a two-position, maintained contact keyed switch.
 - 2) The key must be removable in both the MAINTENANCE and AUTO positions.

- j. HAND/OFF/AUTO (HOA) Selector Switch
 - 1) Must be a three-position, maintained contact selector switch.
 - k. JOG Push Button
 - 1) Must be yellow, flush-head, non-illuminated, momentary contact push button.
 - l. REVERSE Push Button
 - 1) Must be white, extended-head, illuminated, momentary contact push button
 - m. Door OPEN Push Button
 - 1) Must be black, flush-head, non-illuminated, momentary contact push button.
 - n. Door CLOSE Push Button
 - 1) Must be black, flush-head, non-illuminated, momentary contact push button.
 - o. System Ready Indicator (LTG)
 - 1) Must be green, flush-head, illuminated
 - p. Lamp Test Push Button (TPB)
 - 1) Must be gray, flush-head, non-illuminated, momentary contact push button
 - q. Alarm Silence Push Button (APB)
 - 1) Must be yellow, flush-head, non-illuminated, momentary contact push button
 - r. Motor Fault Indicator (LTB)
 - 1) Must be blue, extended-head, illuminated
 - s. System Fault Indicator (LTA)
 - 1) Must be amber, extended-head, illuminated
- T. Emergency Stop Lanyards
- 1. Emergency Stop lanyard assemblies as manufactured by:
 - a. Allen Bradley (Lifeline 4 series)
 - 2. Lanyard cables must be red.
- U. Selector Switches
- 1. Selector switches as manufactured by:
 - a. Allen Bradley 800T
 - b. Eaton Cutler Hammer
 - c. Schneider Electric
 - 2. Selector switches must be of the multiple, rotary, heavy duty industrial type generally known as instrument, control auxiliary, or transfer.
- V. Audible Warning System
- 1. Audible Warning System as manufactured by:
 - a. Allen-Bradley 800T
 - b. Mallory Company Sonalert
 - 2. System must be tower light devices with audible alarms.
 - 3. System must have audible devices producing 15 to 20 dBA above ambient noise level.

W. Stack Light or Rotating Beacon

1. Stack lights as manufactured by:
 - a. Allen-Bradley 855T tower lights
 - b. Banner TL70 modular tower light
2. Rotating beacons as manufactured by:
 - a. Eaton Cutler Hammer
 - b. Edwards Signaling Company horn/beacon Cat. #105XBR
 - c. Schneider Electric
3. Illuminated indicators, warning, and stack lights must be supplied with LED bulbs.
4. Stack lights and rotating beacons must have quick disconnect cables.
5. Stack Light Types
 - a. Type SL-1
 - 1) Must be Clear, Green, Red indication without horn.
 - b. Type SL-2
 - 1) Must be Red, Amber indication with horn.
 - c. Type SL-3
 - 1) Must be Blue indication with horn.
 - d. Type SL-4
 - 1) Must be Red indication with horn
 - e. Type SL-5
 - 1) Must be Amber indication with horn.

X. Shaft Encoders (SE)

1. Shaft encoders as manufactured by:
 - a. Allen-Bradley
 - b. SICK AFM60/AFS60
 - c. Turck RM-94SA1R
2. Shaft encoders must be EtherNet/IP absolute encoders.
3. The shaft encoders must be absolute type to minimize baggage tracking loss due to communication failure/delay.
4. The shaft encoders must be set to have a pulse-per-revolution that equates to a resolution of 2" or less of travel per pulse (or less) on the conveyor bed for effective baggage tracking.
5. Shaft encoders must incorporate all diagnostic and reporting functions over the EtherNet/IP network.
6. Status indicator lights on the device must be LED type.

Y. I/O Block

1. I/O blocks as manufactured by:
 - a. Allen-Bradley
 - b. Belden/Hirschmann
 - c. Pepperl+Fuchs
 - d. Turck
 - e. Weidmuller

2. I/O blocks must be EtherNet/IP compatible.
3. I/O block must have compatibility and connectivity to fulfill required network topology (for example DLR) by itself.
4. Digital output must have galvanic isolation.
5. I/O block must be rugged modules with M12 D code LAN connector.
6. Operation temperature must be 14°F to 140°F.
7. I/O block must have LED as diagnostic indicators.

Z. EtherNet/IP Taps (E-Taps)

1. E-Taps as manufactured by:
 - a. Allen-Bradley
2. E-Taps must be used for devices to be compatible with a require network topology, or a maintenance port (if applicable).

2.03 CONTROLS

A. Programmable Logic Controller (PLC)

1. PLCs as manufactured by:
 - a. Allen-Bradley
2. PLCs must be hot-backup with ControlLogix L7x series or equal. The firmware for the redundancy modules must be version 19 or later.
3. Communication modules must consist with the fastest speed and the most connections (TCP/IP or/and other network connections) available on the market.

B. Uninterruptible Power Supply (UPS) for BHS System

1. UPS(s) as manufactured by:
 - a. American Power Conversion (APC)
 - b. Eaton 9130 Series
2. UPS(s) to provide a minimum of 30 minutes of power at 100% capacity to PLCs and to all redundant server computers, monitors, and Ethernet switches during a power outage, prior to emergency power activation.
3. Minimum of 1500 VA must be sized for up to 4 PLC racks.
4. UPS must be true on-line double conversion.
5. Unit must have a network connection for supervision of the UPSs on-line health, including any fault conditions.
6. Inbound or stand-alone PLCs do not require UPS.

C. Automatic Tag Reader (Optical ATR)

1. ATR as manufactured by:
 - a. Cognex
2. The optical scanners shall be capable of determining the bag's sort code at a rate of not less than 2100 bags per hour for tags as herein defined.
3. The optical scanner array should be designed to automatically scan airline bar-coded baggage tags attached to a wide variety of checked baggage.

The optical scanner array must consist of a minimum of 12 camera scanners (scanner heads) physically arranged to provide baggage tag reading on all 6 sides of a bag. One IP camera overhead upstream for image capture only.

4. Environmental

- a. ATR must operate without malfunction within a temperature range of 32° F to 122° F (0-50°C) with a relative humidity of 0 to 99% non-condensing.
- b. If the scanner array or components cannot operate within this range, enclosures must be provided with the proper environmental control devices such as but not limited to: heating, cooling, ventilation, and filtering of airborne contaminants, to provide an operating environment that will conform to the manufacturer's electrical and mechanical requirements.

5. Scanner Array Controller (Redundant Operation)

- a. Each scanner array controller must have an independent link to the baggage sortation system.
- b. Connectivity to the baggage sortation system must be serial RS232, RS422, or RS485 interface, or Ethernet Network interface with TCP/IP protocol or EtherNet/IP.
- c. Each scanner array controller shall provide a network connection to the laser scanner array. Each independent network interface from each laser scanner head is networked together and connected to its appropriate scanner array controller.
- d. Each scanner array controller shall provide field connections for an independent photoelectric scanning zone sensor and direct-coupled tachometers.
- e. Each scanner array controller shall send only one message for each bag detected in the scanning zone.
- f. The scanner array controller will detect when a scanner head, network interface, power supply, photoelectric scanning zone sensor or direct-coupled tachometer failure occurs. The primary scanner array controller will enunciate the fault condition at the scanner array by means of its light tree indicator pole as well as a status message to the diagnostic software system located remotely in the control room.
- g. Upon any failure affecting the primary scanner array controller or those components interfaced to the primary scanner array controller, the secondary scanner array controller will automatically take over laser scanner array operation.
- h. Each scanner array controller shall have a 4-color light tree indicator pole. The lights are designated as follows:
 - 1) Green: Controller/Scanner Array Active
 - 2) Red: Controller/Scanner Array Failure
 - 3) Yellow: Controller in Stand-By Mode
 - 4) Blue: Good Read
- i. Provide an access point to monitor each scanner controller.

6. Read Rates

- a. The minimum monthly read rate for the laser scanner array for originating baggage must be at least 97% during normal operation for all IATA 10-digit license plate baggage tags, IATA 10-digit fallback tags, and 4-digit city code tags. This percentage does not apply to handwritten tags or noncompliant tags that will negatively impact actual read rates.
- b. Each camera scanner array shall achieve a minimum read rate of 99% during controlled testing.
- c. Each scanner array shall not exceed an error rate (misread rate) of 0.1%.

7. Diagnostic Software System

- a. The diagnostic software system running on a PC and located in the control room is Web-based and designed to provide maintenance data and statistical information about the scanner array's performance.
 - b. Each scanner array controller will interface to the diagnostic software system by means of an Ethernet interface with TCP/IP protocol.
 - c. For remote maintenance servicing, the diagnostic software system can be accessed remotely by means of a PC modem connection enabling a qualified service technician to help evaluate and diagnose laser scanner array problems down to the individual scanning head.
 - d. The diagnostic software system enables the remote monitoring and download of log files. The diagnostic software system includes the following:
 - 1) System List: Screen displays the System ID, System Name and IP address (array designation), Device ID, and current day read rates.
 - 2) Long Term Read Rate Data: Screen displays of Long Term Read Rate Overview (total log period by array) and Long Term Read Rate Detail (by day, by array).
 - 3) Daily Statistics: Screen displays daily statistics (by day, by array, by scanner head) and daily statistics by selected scanner head groups (by day, by array, by group).
 - 4) Exclusive Scanner Read Rate: Screen display of the frequency of when only ONE scanner head read the baggage tag during the scanning zone (by array, by head).
 - 5) Daily Course: Screen displays hourly read rates (by hour, by array).
 - 6) Histograms: Screen displays of object length, object gap, multiple read occurrences, and X/Y/Z positions of the baggage tags read.
 - 7) System Info: System documentation screens.
 - 8) Download Page: Screen containing raw data files (by day, by array).
 - 9) Alarm Settings: Specific screens enabling the maintenance group user programmability to preset alarm conditions for laser scanner array failures or declining scanner head performance.
 - e. Employing the diagnostic software system in the airport design must enable the implementation of optional Web-based touch-screen displays for viewing the diagnostic software system screens locally at the scanner arrays.
8. Scanner Requirements: Installation of the scanners must be compatible with BHSC's control system. The optical tag reader must meet the following requirements:
- a. Scanners meeting the requirements of this Specification are anticipated to have effective reading capability (depth of field), as follows provided the tag is oriented within the limits described below.
 - b. Each optical scanner shall have an imaging capability of a minimum of 3 MP with an image capture rate of up to 40 Hz.
 - c. Depth-of-field (measured from the front surface of the scanner's exit window) shall be nominally 46 inches or less.
 - d. Full reading capability shall be provided within the ranges shown above.
 - e. Each scanner shall be equipped with advanced recognition technology (OCR) software for partial scan reconstruction, and for automatic detection and recognition of printed symbols, machine print and handwriting.
 - f. Modularly designed so scanner replacement is "plug and play" with no optical alignment regardless of its location within the array.
 - g. The scanner array shall be physically arranged to provide baggage tag reading on all 6 sides of a bag.
 - h. The arrangement of the scanner cameras within the optical scanner array will be positioned as follows:

- 1) The scanner array shall be designed for 100% redundant operation.
 - 2) No single point of failure will cause a total scanner array shut down.
 - i. Each scanner array will contain 2 scanner array controllers, 2 photoelectric scanning zone sensors, and 2 direct-coupled tachometers for redundant operation.
 - j. Scanner array shall be capable of decoding a minimum of 2100 baggage tags per hour being conveyed at speeds of up to 400 fpm with a minimum bag separation of 6" between bags.
- D. Baggage Measuring Array (BMA)
1. BMA as manufactured by:
 - a. SICK, Model Number BDS200 dimensioning system
 2. The BMA must include the following (at a minimum):
 - a. Two Dimensioning Heads
 - b. One Controller Unit with Dimension Software
 - c. One installed tachometer (shaft-driven)
 - d. BDS Local Web Browser Diagnostic Display One Display Assembly with Serial Cable
 - e. Required Frames for installation
 3. The BMA must measure each bag for height, width and length to detect EDS Out-Of-Gauge bags.
 4. The BMA must be set to the most restrictive height, width and length of the EDS being employed.
 5. The BMA must not hinder the continuous flow and transport of baggage.
 6. The BMA must communicate with the BHS PLC(s) as to the "Go/No-Go" size of the bag.
- E. BHS Servers
1. Servers as manufactured by:
 - a. HP Proliant DL series
 2. The servers must consist of redundant architecture with fault tolerant redundancy (hot-backup) and data recovery. Redundancy must be achieved without compromising performance.
 3. The servers must support the use of virtualization.
 4. BHSC must install levels of security access, firewalls, and antivirus protection on all servers.
 5. Minimum one year storage capacity must be available within the computer, for all data collected and used in generating system reports and system events.
- F. Operator Workstation
1. Operator Workstation as manufactured by:
 - a. HPz200 series
 2. The operator workstation must consist of a tower PC with multiple monitors attached to a multiport video adapter.
 3. The monitors must be standard SVGA LCD monitors and meet the following requirements (at a minimum):
 - a. Minimum size of 24" and 16:9 ratio 1920 x 1080 pixels resolution.
 - b. Designed to operate satisfactorily within the temperature range of 32 degrees to 120 degrees F (0-50 degrees C) with a relative humidity (non-condensing) of 5% to 95%.

- c. Scanning frequencies must be compatible with the output signals from the video adapter used.
- d. A minimum of two monitors per workstation must be provided. The quantity of monitors depends on the final size and configuration of the baggage handling control system.

G. Printers

1. Printers as manufactured by:
 - a. HP CP2025 series
2. A minimum of two color printers must be provided.

H. Ethernet Switches

1. Upper Level System

- a. The Ethernet Switch for the Upper Level System as manufactured by:
 - 1) Allen Bradley, Stratix 8300
 - 2) Belden/Hirschmann
 - 3) Cisco, Catalyst
- b. The Ethernet Switch for the Upper Level System must be a managed Layer 3 switch.
- c. The Layer 3 switch must perform all VLAN routing for the BHS system and must be capable of the following:
 - 1) Up to 256 VLANs to manage per switch
 - 2) IEEE 802.1q VLAN tagging
 - 3) Internet Group Management Protocol (IGMP) snooping and querying
 - 4) Simple Network Management Protocol (SNMP) V2/V3 along with robust port statistics and configuration
 - 5) Support for standard IT convergence protocols such as Resilient Ethernet Protocol (REP), Multiple instances of Rapid Spanning Tree Protocol (RSTP), Multiple Spanning Tree Protocol (MSTP), and Media Redundancy Protocol (MRP)
- d. The Ethernet Switch must be configured to avoid a single point of failure with either redundancy or stacking.

2. Lower Level System

- a. The Ethernet Switch for the Lower Level System as manufactured by:
 - 1) Allen Bradley, Stratix 5700
 - 2) Belden/Hirschmann, RS20 series
- b. The Ethernet Switch for the Lower Level System must be a managed Layer 2 switch.
- c. The power source for the Ethernet Switch for the Lower Level System must be either a UPS or a battery in order to mitigate switch recovery time.
- d. The Layer 2 switch must act as the edge device connection points and must be capable of the following:
 - 1) VLAN capable if isolation is desired at the edge
 - 2) Extended temperature ranges
 - 3) No moving parts
 - 4) A fault contact to be able to monitor via PLC
 - 5) Powered from 24VDC
 - 6) External backup media to be able to store configuration of the switch
 - 7) IGMP snooping

- 8) Diagnostics such as LEDs, log file, remote monitoring, port mirroring, topology discovery, address conflict detection, network error detection, duplex mismatch detection, and trap for configuration saving and changing
 - 9) Port control and security such as port security with multiple addresses, SNMP V3, authentication, multi-client authentication, guest VLAN and unauthenticated VLAN, port based radius VLAN assignment, Access Control List (ACL), and login banner.
 - 10) Quality of Service (QoS) support
 - 11) Differentiated Services Code Point (DSCP) support
 - 12) VLAN support
 - 13) Support for standard IT convergence protocols (REP, RSTP, MSTP, MRP) and standard industrial convergence protocols
 - 14) MAC filtering and address notification
3. Ethernet hubs must not be used within the BHS network.
 4. BHSC must configure and optimize the Ethernet Switches within the BHS network.
 5. The Ethernet Switches must be configured to be all “auto-negotiate” or all “full-duplex” and to be full switching fabric.
 6. BHSC must optimize the Ethernet Switches for industrial multi-ports automation products or automation products.
 7. BHSC must provide any additional switch configurations required by the selected network protocols such as REP, STP.
 8. Ethernet Switches must maintain at least 20% of the spare ports for future expansion.
 9. Patch panels must be used to maintain system, to accommodate network changes, and the ease of maintenance.

I. Ethernet Network Cable

1. Ethernet Cable as manufactured by:
 - a. Belden/Hirschmann
 - b. Turck
2. Cord sets must be pre-assembled by manufacturers and used to connect the field devices.
3. The cord set must be:
 - a. Right angled to maintain low profile
 - b. IP68 rated against moisture and temperature range must be -40°F to 167°F
 - c. Meet ODVA EtherNet/IP standards
4. Cable segments must be as short as possible. The service loop must not exceed 12 inches in the open environment and 4 inches inside a cabinet/enclosure. Do not exceed the manufacturer’s requirements for bend radius and pull strength.
5. The type and the length of cables must be determined based from the location of field devices, distance of each segment, and environment. The Ethernet cables must be selected with consideration of the environment defined in the MICE table. Refer to the ODVA and IEEE guidelines. The categories for the cable justification are:
 - a. The Channel bandwidth requirements such as channel class or category
 - b. Cable type (copper/fiber)
 - c. Connector type (RJ45, M12, ST, SC, LC)
 - d. Electrical attributes and noise types and levels described per MICE table
 - e. Two-pair/four-pair cabling
 - f. MICE severity levels where the cables will be installed
 - g. Additional attributes such as IP67 or/and high flex

6. Bulkhead feed-throughs must be used when connectivity through an enclosure is required.
7. Shielded, bonded twisted-pair (STP/ScTP) cables and IP65/67 rated connectors must be used within the environment per MICE table.
8. RJ45 connectors must be used in the closed environment such as the server room, the control room, and inside the enclosure.
9. M12 connectors must be used in an exposed environment.
10. The use of additional field device(s) such as E-Taps and I/O block are allowed in order to exceed segmentation if approved by the Owner.

J. Network

1. Ethernet network must be able to handle multicast traffic.
2. Ethernet network must be configured for optimal traffic communication.
3. BHS Network must NOT connect all EDSs to a single network segment.

K. Firewall/VPN and Network Security

1. The network security must utilize several layers of protection so that failure of any layer does not allow the BHS system to be breached.
2. The network security must be monitored 24/7/365, and must report unusual or unauthorized activity to the network administrator.
3. Network security equipment as manufactured by:
 - a. Belden/Hirschmann, Eagle series or Tofino
 - b. Cisco
4. The network security system must meet Defense In-Depth requirements and meet current guidelines for critical infrastructure installations as defined by DHS, TSA, and NSA. The requirements include, but are not necessarily limited to:
 - a. Design and employ layered security methods in BHS system to restrict physical and electronic access to the automation products and networks.
 - b. The access to the BHS system must be authorized to those who are in contact with control system equipment.
 - c. Employ firewalls with ingress/egress filtering, intrusion detection/prevention systems, and validate all configurations.
 - d. Evaluate firewall configurations to block unnecessary traffic.
 - e. Provide up to date end-point protection software and hardware firmware such as antivirus software.
 - f. Where applicable, set the PLC key-switch/mode-switch to RUN mode and remove the key.
 - g. Where applicable, lock enclosures/PLC cabinet.
5. The network security system must protect network communication without interruption of BHS system operation as well as the network communication time.
6. The security system must be capable of alerting security issues to network administrators and maintenance personnel via e-mail, text, or alert broadcast.
7. BHSC must coordinate with the airport IT personnel for VPN connectivity to BHS.

L. Network Management and Diagnostics

1. Network diagnostic software as manufactured by:
 - a. Belden/Hirschmann, HiVision

2. Provide network diagnostic software and configuring for all necessary parameters/setting that monitor all network devices.
3. The Ethernet network (LAN/VLAN) health must be monitored via off-the-shelf network diagnostic software installed in the work station.
4. The network management tool must discover, map, and monitor all Ethernet networks and devices within the BHS network.
5. The network management tool must display the network hierarchy and visually represent device identification as well as current actual performance data and communication status.

M. Handheld Scanners

1. Handheld Scanners as manufactured by:
 - a. Motorola LS4208
 - b. SICK IDM26x
2. Scanners must be corded with either RS-232C or USB standard 108" cable and on a retractable reel.
3. Scanners must be supplied with adjustable stands.

N. System Status Displays

1. System Status Display (SSD) as manufactured by:
 - a. LG
 - b. NEC
 - c. Planar
 - d. Samsung
2. System Status Display must be minimum 42" flat panel LCD commercial grade monitors. The quantity of monitors depends on the final size and configuration of the BHS.
3. Minimum resolution of 1920 x 1080
4. Minimum contrast ratio of 4000:1
5. Minimum viewing angle of 89°
6. Minimum input connections RS232, HDMI and DVI

O. User Interface Stations/Human Machine Interface (HMIs)

1. HMIs as manufactured by:
 - a. Allen Bradley, Panel View Plus 7
 - b. Embedded PC assembly, Contec BX-956-DC6311 attached to a touch monitor
 - c. Dell Wyse D90D7 Thin Client attached to a touch monitor
2. Each of the following must be supplied in the quantities shown in the drawings:
 - a. HMI-1 (OTK): 10" to 15"
 - b. HMI-2 (CBRA BSD): 8" to 12"

P. Laptop Computer for Troubleshooting

1. BHSC must provide a laptop computer for the use of troubleshooting performed by the maintenance personnel.
2. Laptop computer as manufactured by:
 - a. HP ProBook 640

3. The laptop computer must include all application software and its licenses required to monitor/troubleshoot PLC programs, HMI programs, BHS network, and field devices.

PART 3 – EXECUTION

3.01 MECHANICAL INSTALLATION

A. General

1. Gaps between end rollers must not exceed 1” with ½” being a design objective. Gaps at power turn transitions and fire doors must be per manufacturer’s recommendation.
2. Uneven joints to top of sideguard must be equipped with a 45-degree transition to prevent bag jams from straps, etc.
3. All joints between conveyor bed sections must be smooth to provide a non-snagging surface.
4. Guards adjacent to power turns must be in alignment with the effective belt width of the turn to prevent interference with baggage movement.
5. Sideguards must provide a continuous, uninterrupted surface.
6. Butt joints must be smooth and snag-free, without the use of epoxy fillers. Where a joint cannot be otherwise economically corrected, BHSC must submit a request to use epoxy to the Owner for approval.
7. Removable sideguards must be fastened with quick disconnect fasteners for easy removal and replacement, and the joints must be smooth and snag-free.

B. Welding

1. Provide welded connections for fabrication and installation of work wherever bolted connections are not required for subsequent removal, or for normal operation, adjustment, inspection, maintenance and replacement of worn parts. Comply with AWS standards for workmanship and for qualifications of welding technicians.
2. All welded surfaces must be ground to create a smooth surface then thoroughly cleaned with a solvent to remove rust, scale, oil, grease, grit, and welding flash.
3. The welded surface must be primed with rust-preventive primer and painted with an alkyd paint to match the shop coat.
4. Weld Certifications are required for all structural welds.

C. Drives

1. Gear boxes and reducers must be mounted with vibration reduction bushings.
2. Gear boxes and reducers must be installed on the conveyor drive shaft so that the compression ring is seated correctly to reduce the amount of wobble of the drive system.
3. Gear boxes and reducers must be installed with a minimum of a ½” of the drive shaft protruding through the gear box or reducer to allow for the proper seating of the drive.
4. All motor reducer packages must be mounted with the motor up in the vertical position regardless of the degree of incline.
5. Reducers must be supplied with a breather vent positioned per the manufacturer’s recommendation based on orientation.
6. Reducers must be supplied with oil and verified after installation. Each reducer must be filled with oil to the proper level per the manufacturer’s recommendation based on orientation.
7. Drip pan mount and location must not affect maintenance.
8. Drip pan must be mounted in a horizontal attitude regardless of motor position.

D. Pulley Assemblies

1. Take-Up Pulleys

- a. All conveyors must be provided with take-ups for field adjustment of at least 4" or 2 percent of the conveyor bed length, whichever is greater.
- b. Take-ups must be an integral part of the drive frames on all intermediate/center drive conveyors.
- c. Adjust the position of all take-up pulley devices after system testing and prior to substantial completion of the system so that no more than 50% of the take-up device adjustment has been used.

E. Return Idler Rollers

1. Return idler rollers must be located on centers not to exceed ten feet, with spacing being reduced in areas where belting may drag against the floor or conveyor structure.
2. The shafts must be mounted to the conveyor bed with adjustable retainers for proper belt tracking.

F. Bearings

1. All exposed bearings in workstation areas must have bearing covers or otherwise meet minimum OSHA enclosure requirements for employee safety.
2. All bearings must be surface mounted flange bearings (or piloted flange bearings mounted internal to the conveyor pulley) attached to the outside of the conveyor bed, unless otherwise specified herein.

G. Slider Bed Sections

1. Return belt must be routed and supported so that it does not contact any stiffening members.

H. Hardware Installation

1. All hardware must be installed in a uniform manner.
2. All fasteners must be locked with a minimum of three threads showing after the nut.

I. Gap Debris Pans

1. Mount gap debris pans with steel chain to permit easy lowering and removal for cleaning and free from interferences from conveyor legs or hanger rods.

J. Floor Supports

1. Floor supports must follow the installation as shown in the approved installation drawings.
2. Floor supports must not interfere with egress.
3. Floor supports cannot block access to other equipment, devices, or control boxes.
4. All floor supports for transportation conveyors must be located on a maximum of 10'-0" centers.
5. Load conveyors must be supported on 5'-0" centers.
6. Support and hanger connections must be made on each end of drive sections, and within 12" of each conveyor bed section joint. Load conveyors must be supported at conveyor bed section joints.
7. Floor supported conveyor units must be braced as required by code for stability.

K. Ceiling Attachments

1. Ceiling attachments must be designed to avoid the transmission of excessive conveyor periodic or transitory loads into the structure. Spring isolators must be provided for all connections.
2. Vibration isolators must be installed in strict accordance with the manufacturer's instructions.
3. Attachments to steel beams must be clamped. Attachments to concrete slabs must be with drilled expansion anchors sized for the load with adequate safety factors. Attachments to concrete beams must be with drilled expansion anchors into the sides of beams only and placed a minimum of 6" up from the bottom of the beam. All attachments must be submitted for approval.
4. Locate hangers as near to the overhead support structure as possible.
5. Replace fireproofing materials to an equal depth as the existing fireproofing at attachment locations. Fireproofing must be of the same type and brand as existing.
6. All thread hanger rods must be continuous with no splices or couplings allowed. An exception is allowed if the all thread length exceeds 12'.
7. All thread hanger rods must be installed so as not to block access to the equipment, or the maintenance thereof.
8. Header steel, steel beams and seals must be installed so as not to block access to the equipment, or the maintenance thereof.
9. All header steel must be continuous with no splices or couplings allowed.
10. All thread hanger rods must be installed not to create vibration deterioration of the all thread hanger rod, equipment or installed devices.
11. Ceiling attachment configurations, including all thread hanger rods and spring isolators must be installed vertical and do not rub against conduit, pipe, duct, beams, or other interferences.
12. All thread hanger rods must have a minimum of 3 threads and a maximum of 6 threads showing after connection hardware. Threaded hanger rods to be square cut.
13. All threaded hanger rod ends in personnel and maintenance areas must have protective caps.
14. All ceiling supported equipment must not interfere with egress.
15. All ceiling supports for transportation conveyors must be located on a maximum of 10'-0" centers.
16. Load conveyors must be supported on 5'-0" centers.
17. Support and hanger connections must be made on each end of drive sections, and within 12" of each conveyor bed section joint. Load conveyors must be supported at conveyor bed section joints.
18. Ceiling supported conveyor units must be braced as required for stability.

L. Belting

1. All belt lacing must be Clipper type, No. 2 or No. 1 sized based upon belt manufacturer's specifications.
2. Belt lacing must be installed to prevent damage.
3. Belting material and the related lacing must be trimmed to provide a 45 degree 3/4" deep V-notch at the corners.

M. Conveyors

1. The queue conveyors that are identified to be removable to facilitate EDS removal/replacement, must be made so by including quick disconnects for the electrical and controls wiring, as well as being equipped with lockable casters, for movement away from the EDSs.

2. Flared side guards must be installed on all the conveyors downstream of conveyor breaks which requires a gap in the side guards (fire/security doors, ATRs, EDS exit queues, etc.)

N. Static Deflectors and Static Guides

1. Post Merge Static Deflectors
 - a. A static deflector must be installed on the merge side of the take-away conveyor sideguard just after the merge point.
2. Pre-BMA or ATR Static Deflectors
 - a. Static deflectors must be installed on alternating sides of the conveyor sideguards of the queues prior to the BMA or ATR.
3. Pre-EDS Static Deflectors
 - a. Static deflectors must be installed on alternating sides of the conveyor sideguards of the queues prior to the gapping and EDS entrance conveyors.
4. Pre-EDS Static Guides
 - a. The entrance conveyor prior to each EDS must have static guides mounted to the sideguards to prevent bags jamming at the transition into the EDS tunnel.
 - b. A closure strip must be provided from the static guide of the queue prior to the EDS and the entrance tunnel of the EDS. Blend the closure strip to form a smooth transition from side wall to the entrance tunnel.

O. Shrouding

1. Pulleys at the tail ends of load belts and at the head end of terminating belts must be covered with a removable metal shroud located just above, but not in contact with, the conveyor-belt surface. These pulley shrouds must match the style and quality of the shrouding on their respective conveyors.
2. Shrouding must be provided for conveyor equipment located in areas where the conveyors are exposed for loading or unloading (CBRA, ticket counters, claim units, transportation conveyors, etc.).
3. All connections must be smooth and flush without openings or projections on which bags or tags may catch.
4. Fasteners and access doors must be hidden from public view whenever practical to do so.
5. The visible side of the ticket counter conveyor must be equipped with removable stainless steel kick plate and back guard.
6. Back guard must contain no gaps between edge and wall.
7. These parts must be provided for the overall length of the conveyor with removable sections for maintenance and repair of components.
8. Removable sections on all conveyors must not exceed 10 feet in length.
9. Removable sections must be designed for ease of maintenance and repair of conveyor components and electrical controls.
10. Skirts must be bolted to the top of the frame rails on the loading side(s) of the conveyor.

P. Inspection Table

1. Provide a physical mock-up of the CBRA inspection and center console backplash to confirm equipment mounting requirements and interface with SVS, HMI, and ETD.

Q. Finishes

1. The belt side of the slider bed must be unpainted for the width equal to the approximate belt width.
2. All structural parts must be powder coated or painted with one shop-coat of phenolic-modified alkyd or acrylic emulsion paint applied to a thickness of 0.0010 -0.0012 inch. Exceptions are galvanized or zinc-plated surfaces, and those normally unpainted (such as rollers, shafts, sprockets, bearings, chains, nameplates, etc.).
3. Painted surfaces must be thoroughly cleaned of rust, scale, oil, grease, grit, welding flash, and all other forms of dirt detrimental to good painting practices.
4. Conveyors in fail safe zones must be identified with red paint on top of side guard.
5. All scuffed or otherwise marred surfaces are to be cleaned, primed with a rust preventative and a touch-up coating of alkyd paint applied to match the shop coat.

R. Graphics

1. Provide and mount all safety signs and graphics for the existing and new BHS equipment. Provide pre-printed phenolic, vinyl or metal signs permanently mounted to the equipment, walls, or structure for which they are intended. Warning and caution signs must be visible to personnel accessing and working within the conveyor areas.
2. Submit examples of all graphic signs to be used within the project. The Owner reserves the right to request additional signage and graphics for personnel protection.
3. As a minimum, graphic and warning signs must include:
 - a. Pinch Points
 - b. Conveyors Start Automatically
 - c. Equipment May Start Without Warning
 - d. Do Not Operate with Guards
 - e. Gate or Door Open
 - f. Do Not Walk Under Conveyor
 - g. Keep Off Conveyor
 - h. Caution Overhead Conveyor
 - i. Do Not Walk on Conveyors
 - j. Caution Low Overhead Clearance
 - k. Turn Off Power Before Opening
 - l. Danger High Voltage
 - m. Turn Off Power Before Working on Conveyor
4. General cautions signs must be located at the entrances to the matrices and include such items as: Do Not Start conveyor without audible or visual "all clear"; Do not operate conveyor with guards or protective equipment removed; Do not remove jammed baggage with conveyor running or power on; Only authorized personnel should operate conveyor; Know location and function of emergency stops; Turn Off all power before working on conveyor; Keep areas around conveyors clear of obstructions and debris; Report all unsafe conditions and practices to your supervisor; Do not walk, ride, sit or climb on conveyor without turning off all power supplies.

S. Conveyor Identification

1. Each conveyor section must be marked on both sides with its respective number.
2. Each conveyor number must be vinyl or carefully and neatly painted or stenciled in a contrasting color, nominally 4" high, in a conspicuous location adjacent to the conveyor drive.

3. In public areas, such identification must be 2" high characters in an inconspicuous location on the conveyor drive.
4. Temporary markings on the conveyors or other equipment must be made with a medium which is readily removable with water or a readily available commercial solvent, such that they may be removed without requiring any refinishing of the surface on which they appear.

T. Equipment Identification

1. Each piece of equipment such as a Vertical Sortation Unit or Horizontal Sortation Unit must be permanently and indelibly marked with its respective number.
2. Each piece of equipment number must be carefully and neatly painted or stenciled in a contrasting color, nominally 4" high, in a conspicuous location adjacent to the drive or disconnect.
3. Consumable equipment such as PE, SE, VFD, stack light, rotating beacon, motor, comm cards will have phenolic tags affixed to the conveyor or mounting plate in close proximity.

U. Draft Curtains

1. Draft curtains must be provided at all conveyor wall penetrations.

V. Fire/Security Doors

1. The installation of fire/security doors must follow manufacturer's instructions.

3.02 ELECTRICAL INSTALLATION

A. General

1. BHSC must provide power and control wiring to all BHS electrical equipment.
2. All electrical installation must meet the requirements of the national, state and local code
3. All electrical installation must follow the manufacturer's installation manuals.
4. All electrical installation must not interfere with operational and maintenance access of conveyors as well as the access of vehicular traffic.
5. All electrical components mounted to the removable BHS equipment must be installed via cannon plugs or equivalent quick-disconnect methods.
6. Double sided tape, glue, and sheet metal screws are not acceptable for installing Control Stations, VFDs, I/O blocks, Motor disconnects, and Motor Starter enclosures.
7. A service loop for all cables including power cables, control cables, and communication cables shall not exceed 12".

B. Conduit, Wireways, and Cable Trays

1. General

- a. Conduit or cable trays must not be installed underground or in floor slabs unless it is provided by GC and approved by the owner.
- b. Conduit or cable trays must not run on the floor.
- c. Conduits must be securely mounted and supported per NEC requirements.
- d. Conduits and cable trays must be installed to prevent rubbing or vibration deterioration against other structures.
- e. Conduits and cable trays must be routed to avoid removable equipment, any sideguards, safeguards, and power turns.
- f. Conduit and cable trays drops must not be supported or secured to the ceiling-supported equipment.

- g. A proper bushing must be provided where a conduit enters junction boxes, pull boxes, enclosures, etc. in order to prevent damage to wire insulation.
 - h. All conduits and cable trays must be concealed from public or finished areas.
 - i. All cut ends of conduits and cable trays must be reamed or finished to remove rough edges.
 - j. 120V/480V electrical wiring must be enclosed in conduit with threaded fittings and couplings
 - k. Control wiring must be routed separately from the power wiring regardless of any voltage.
2. Rigid Metal Conduit (RMC)
- a. RMC installation must meet NEC articles 300 and 344.
 - b. RMC is used in all areas below.
 - 1) At elevations 10' or less above the finished floor
 - 2) Exposed to vehicular traffic
 - 3) Possible damage by operations and maintenance personnel
3. Electrical Metal Tubing (EMT)
- a. EMT installation must meet NEC articles 300 and 358.
 - b. EMT must be used in the areas satisfying all conditions below.
 - 1) At elevations greater than 10' above the finished floor.
 - 2) No risk of damaging by operations and maintenance personnel.
4. Liquid-tight Flexible Metal Conduit (LFMC)
- a. LFMC installation must meet NEC articles 300 and 350; and NEMA RV 3.
 - b. LFMC must not be used where subject to physical damage.
 - c. LFMC must not exceed 12".
 - d. LFMC must be used from Motor Disconnect to Motor connection box.
 - e. LFMC may only be used in the areas below
 - 1) Power cable from disconnect to motor
 - 2) Transition from building supported conduit to conduit mounted from hanging conveyor
5. Wireways
- a. Wireways installation must meet NEC articles 376 and 378.
 - b. Wireways must not be used in any areas subjected to vehicular traffic.
 - c. High voltage power (greater than 150 volts), low voltage (less than 150 and greater than 90 volts), and low voltage (less than 90 volts) must all be separated by metal divider if run in the same wireway.
 - d. Wireways must be accessible from conveyor catwalks.
6. Cable Trays
- a. Cable Tray installation must meet NEC article 392 and NEMA VE 2
 - b. Cable Trays are acceptable to use for low voltage control wiring, data, or communication cables.
 - c. Ethernet cables must be segregated if combined with other low voltage wiring and cables.
 - d. Cable trays must be installed under the conveyors.
 - e. Cables in trays must be marked, easily identified, and removable.
 - f. Loading of cable trays must meet the following criteria.
 - 1) Vender specified weight restrictions

- 2) Cable fill must not exceed 50% of the inside area of the tray or the tray's maximum weight.
- 3) Conductor spacing requirements

C. Conductors

1. General

- a. Installation of conductors must meet NEC Chapter 3.
- b. Wiring must be run continuously from one piece of apparatus to another without splices in conduit.
- c. All wires must not contact the ground or floor.

2. Splicing

- a. Splicing control power, neutral and ground wiring is acceptable only at junction boxes by using terminal blocks.
- b. Splicing signal wires and motor power wires is not acceptable.
- c. Conduit type fittings, control stations, and MCP or PDP raceways must not be used for wire splicing.
- d. Splicing is not permitted in control panels and power panels.

3. Spare Conductors

- a. 5% spare conductors must be provided in all conduit home runs.

D. Pull Boxes, J-boxes

1. Control boxes, access boxes, etc. mounted on equipment or equipment- related material in the field, must be securely mounted to unistrut with minimal horizontal or vertical play.
2. Boxes must be installed for ease of maintenance. Boxes must be mounted on the catwalk side of the equipment.
3. Boxes installed that can be considered a "Head Knocker" must be clearly marked with yellow and black caution tape.
4. Boxes must be installed in a manner to not block access to the equipment.
5. All junction box covers must be permanently identified with the system served, circuits, and destination.
6. All unused openings in junction boxes, pull boxes and MCPs must be sealed with NEMA 12 watertight conduit knockout closers.

E. Motor Starters (Distributed Controls)

1. Motor starters must be mounted at their respective drive locations and within the Motor Starter Panel (MSP), along with their associated controls, overloads, fuses, etc.
2. Motor starters and overload relays must be wired to a Point I/O or an I/O block, and all signals are transmitted via EtherNet/IP.

F. VFDs

1. All conveyor sections with VFDs must utilize dynamic braking.
2. All belts with frequent start/stop operations, such as indexing belts, queue conveyors and merges must be controlled by VFDs and utilize dynamic braking via VFD.
3. VFDs must be mounted at their respective motors.
4. All conveyors in tracking zones to be controlled by a VFD.
5. All queue conveyors must be controlled by a VFD.
6. All merge conveyors must be controlled by a VFD.

G. Motor Safety Disconnects

1. Installation of motor safety disconnects must meet NEC articles 430.102.
2. Motor safety disconnects must be integral to the motor drive package if the drive package is adjacent to the motor.
3. Concealed motors or motor driven pulleys must have separate safety disconnects.
4. Motor safety disconnects must be installed in sight from the motor location.

H. Power Cable

1. Power cables must not exceed six feet in length.

I. Quick Disconnect Cables

1. Quick disconnect cables must be secured per manufacturer's recommendation.
2. Plastic tie-wrap for cable support is not acceptable.

J. Field Devices

1. General

- a. Field Devices such as but not limited to: control stations, photoeyes, control boxes, Motor disconnect switches and shaft encoders must be mounted on equipment or equipment-related material.
- b. All excess power cable, control cable etc. must be neatly rolled and placed inside the device J-box when possible. In all other cases, the excess cord must be neatly rolled and strapped to the backside of the conveyor leg.
- c. All field devices must be mounted for ease of maintenance. Where catwalk is installed, all field devices must be mounted on the catwalk side of the equipment.
- d. All field devices must be mounted as to prevent damage to the device.
- e. All field devices must be mounted on the equipment for which the device controls.
- f. All devices must be installed in a manner not to block access to the equipment.
- g. All devices must be mounted such a way that diagnostic LEDs are visible to the maintenance personnel.
- h. When a device is mounted horizontally, 90 degree connectors must be used.

2. Photoeyes

a. General

- 1) All conveyors must be supplied with head end photoeyes
- 2) Photoeyes must be mounted on structural members attached to the machinery structure so that minimal vibration is transmitted to these units.
- 3) No more than two penetrations per sensor (one each for the photoeye and the reflector) must be allowed in conveyor sideguards.
- 4) Each penetration must not exceed 1-1/2" in diameter.
- 5) Hex Head 1/4"-20 bolts of appropriate length and related 1/4"-20 hardware (flat washers, lock washers and nuts) must be used for the mounting of the photoeyes. Round head bolts are not acceptable.
- 6) On level transitions from conveyor to conveyor, photoeye holes must be punched 1-1/2" above the conveyor bed.
- 7) On incline/decline transitions from conveyor to conveyor, the head end photoeye hole must be punched no more than 2-1/2" above the conveyor bed.

- 8) Photoeye holes punched on power turn and spiral power turns must be 1-1/2" above bed on the inside of the turn, and mounted no higher than 2-1/2" on the outside of the power turn.
- 9) Head End photoeye holes must be punched based on the following table:

Conveyor Type	PE Location from Head End
36" queues	6"
Conveyors 180 fpm or less	12"
Conveyors 180 fpm to 240 fpm	18"
Conveyors greater than 240 fpm	24"

Table 10: PE Locations

- 10) Last Bag photoeye must be located just downstream of the fire/security door.
 - 11) Over Length photoeye located just downstream of the fire/security door must not be triggered by the draft curtains when normal baggage passes through the fire/security door. The Over Length photoeye can also be used as the Last Bag photoeye.
 - 12) Over Height photoeye located just downstream of the fire/security door must not be triggered by the draft curtains when normal baggage passes through the fire/security door.
- b. Mainline/Transport Conveyors
 - 1) In addition to merge and diverting photoeye, mainline and transport conveyors must be supplied with head end photoeye.
 - c. Pre EDS Queue Conveyors
 - 1) The pre EDS queue conveyors must supplied with a head end photoeye.
 - d. Post EDS Queue Conveyor
 - 1) The exit queue conveyor must be supplied with a head end photoeye.
 - e. Reverse Merge Photoeyes
 - 1) All 45 degree reverse merges must have two photoeyes installed.
 - a) The first photoeye must be installed at the head end of the conveyor.
 - b) The second photoeye must be located six inches from the tail end of the reverse merge.
 - 2) The head end photoeye must be used for jam detection and tracking.
 - 3) The tail end photoeye must be used for jam detection and divert confirmation.
3. Light Curtain Assemblies
 - a. Provide a light curtain assembly on the second queue upstream of each EDS machine.
 - b. The light curtain assemblies must be installed 3" from the head end of the queue conveyor.
 - c. The bottom sensor on the light curtain assemblies must be installed at 0.5" from Top of Bed (TOB).
 - d. Each light curtain must have a deflector installed upstream at the same queue of the light curtain assembly.
 4. Push Button Control Stations

- a. General
 - 1) Push button stations in public view, at ticket counters, and at claim areas must be flush-mounted with stainless steel cover plates.
 - 2) Load conveyor control stations in non-public areas must be surface-mounted.
 - 3) Maintenance access must be provided at all control stations.
 - b. Locations
 - 1) Type 1A - Primary CS at input conveyors with security system integration must be mounted near input load conveyors and adjacent to security swipe card reader
 - 2) Type 1B - Primary CS at input conveyors must be mounted near input load conveyors of reversible sub-system such as an oversize line
 - 3) Type 2- Inbound/Transfer CS mounted input load conveyors
 - 4) Type 3- Secondary CS at input conveyors/secondary CS at make-up units/manual input must be field mounted at load conveyors
 - 5) Type 4- maintenance CS at make-up units must be field mounted and located at make-up drive units
 - 6) Type 5 - Fire/Security Door Maintenance Interface must be located adjacent to each Fire/Security Door control panel
 - 7) Type 7 –Horizontal Sortation Unit Interface must be located adjacent to the HSU control panel
 - 8) Type 8 (HOA) - CS must be located adjacent to each drive that is controlled. (Must be field mounted and located at each drive, not required if VFD has integral HOA).
 - 9) Type 9 E-Stop/ Jam Reset- must be field mounted and located within each E-Stop zone.
 - 10) Type 10 - Vertical Sorter Interface must be mounted adjacent to the VSU control panel
 - 11) Type 11 - MCP Door Interface must be located on the MCP door
 - 12) Type 12A - Master Emergency Stop must be located as shown per drawings
 - 13) Type 12B - Emergency Stop must be located adjacent to each BRP in CBRA
 - 14) Type 13 - Emergency Stop Lanyard. Refer to 3.02J.5.
 - 15) Type 14 – Reserved
 - 16) Type 15 - Reserved
 - c. Ticket Counter/Curbside Input Conveyors

Each ticket counter/curbside input conveyor must be supplied with the following controls and equipment with corresponding functions:

 - 1) One Type 1A control station located within 8'-0" of the fire/security door, with an integrated security card reader.
 - 2) One Type 3 control station located no further than every 25'-0", beyond the Type 1B control station, along the ticket counter conveyors.
 - 3) A fire/security door with a draft curtain and a Type 5 control station for maintenance operation of the fire/security door.
5. Emergency Stop Lanyards
 - a. Emergency Stop lanyards must be installed per OEM recommendation at the locations shown on drawings.
 6. Shaft Encoders
 - a. Shaft encoders must be mounted on the tail end pulley shaft.
 - b. Shaft encoders must be located on all conveyors, except vertical sortation units, within the tracked zones of the BHS to provide positive feedback regarding belt speed and

distance traveled. The encoders must be monitored to verify that they are operating correctly.

7. Stack Lights

- a. Type SL-1 to be mounted at exit of each EDS.
- b. Type SL-2 to be mounted at several locations within non-public areas to indicate start-up of conveyors or a fault occurrence. The locations include makeup units, CBIS sub-systems, CBRA, and sortation sub-systems.
- c. Type SL-3 to be mounted at each divert point with a failsafe function.
- d. Type SL-4 to be mounted at each public claim unit; public side of conveyors such as curbside and oversized conveyors, and locations specified on the drawings.
- e. Type SL-5 to be mounted on the top of MCP to indicate a faulted or jammed conveyor(s) powered by the MCP.

8. EtherNet/IP Taps (E-Taps)

- a. Each E-Tap required for the field device must be mounted inside an enclosure and located near the device requiring the E-Taps.
- b. E-Taps required for the Ethernet switch must be mounted inside an Ethernet switch enclosure or an enclosure along with other Controls equipment.

K. Wire and Cable Identification

1. Labeling

- a. BHSC must label all conduits and raceways using DuraLabel™ Pipe Markers on the exterior as to what type of wiring/cabling is contained within.
- b. Dymo-type labels are not acceptable.
- c. Labels must include the following information at a minimum: 480VAC Power, 240VAC Power, 120VAC Power, 120VAC Power & Control, 24Volt Direct Current (VDC) Power, 24VDC Power & Control, Data and Communication.
- d. Labeling must occur on 20 foot intervals
- e. Field electric wire and cable must be color-coded and must have the wire numbers as shown on the electrical drawings affixed to both ends of each wire. Coding is defined below.
- f. Text height must be between the diameter and a half of the diameter of the wire size.

2. Control wires

- a. Labeled a minimum eight digit alpha/numeric designation such as 12345678.
- b. The first two numbers (1,2) represent the Panel number, the next two numbers (3,4) represent the rack, the next two numbers (5,6) represent the slot number, and the last two numbers (7,8) represent the actual input/output that the wire derives from.

3. Network Node Cables (Industrial Ethernet)

- a. Each cable must be labeled with a unique identifier:
- b. A – BB/CCCC.D (e.g., C-SE/SS1-01.1, F-SW/PLC1.5)
- c. “A” references cable type (C: copper, F: fiber).
- d. “BB” references device identifier (an example is: “SE” as shaft encoder, “IOB” as I/O block).
- e. “CCCC” references conveyor name or device name (an example is: SS1-01, PLC1).
- f. “D” represents port number.

4. Safety Relay E-Stop Cabling

- a. Each cable must be labeled with a unique identifier NP(XX)-S(Y)
 - b. XX references the associated Node Panel source, i.e. 01 to 27.
 - c. Y references the trunk line number coming from the panel (1,2,3,4)
5. Power wiring numbers must be labeled with the PDP name, conveyor name, and T1, T2, or T3 depending on the phasing of the wire.
 6. Power Wiring – Line Side: This code applies to all field power wiring from source to the line side of the circuit breaker in the PDP and MDP. The neutral, if applicable, must terminate at the terminal board.

Voltage	<u>120 / 208</u>	<u>277 / 480</u>
Phase "A"	Black	Brown
Phase "B"	Red	Orange
Phase "C"	Blue	Yellow
Neutral	White	Gray
Mech. Ground	Green	Green

Table 11: Power Wiring Colors

7. Control Power Wiring – Load Side: The color code for field power and control wiring from the load side of the fuses and/or circuit breakers in the PDP and NP to all other devices must be as follows:

Wire Type	Color
A.C. Control Power	Black
A.C. Control Signal	Red
A.C. Control Neutral	White
D.C. Control Positive	Blue
D.C. Control Negative	Blue/White Stripe
Mech. Ground	Green

Table 12: Control Power Wiring Colors

L. Electrical Equipment Identification

1. General
 - a. Each Panel/Station/Device must be supplied with a laminated name plate permanently attached, corrosion proof, etched, engraved, or stamped identification laminated plates.
 - b. Lettering must be a minimum of 1/8” characters using contrasting colors (i.e. white on black background).
 - c. Dymo-type labels are not acceptable.
2. Motor Control Panel
 - a. Must be permanently labeled or marked with the name of the conveyors controlled by the panel.
3. Power Distribution Panels (PDPs)

- Each PDP must be supplied with a name plate identifying, as a minimum, following information:
- a. PDP Number
 - b. Voltage
 - c. Hertz
 - d. Phase
 - e. Full Load Amps (FLA)
 - f. Associated Conveyors
 - g. Location/name of breaker that the power fed from
 - h. SCCR Rating
 - i. All Warning, Caution, and Safety Signs
4. Panel boards
 - a. Panel boards must follow the existing nomenclature used by the Airport or Airport authority to identify high and low voltage panels.
 - b. The main and all branch circuit breakers must be labeled identifying the equipment they serve.
 5. Field Devices
 - a. Each device must be identified by a unique number in a minimum of 1/8" font character using contrasting colors (white on black name plates). The name plate must read the device type and the conveyor ID. When multiple devices of similar nature are located on the same equipment, a unique identifier must follow each device.
 6. Motor Safety Disconnects
 - a. Motor safety disconnects must be identified by a unique number in a minimum of 1/8" characters using contrasting colors (white on black name plates).
 - b. Motor safety disconnect numbers must be as follows; MSD-(Conveyor ID)-(Unique Identifier) and must be mounted 1" above the motor safety disconnect switch.
 7. Control Stations
 - a. Each control station must be identified by a unique number.
 - b. The control station number must be as follows; CS-(Conveyor ID)-(Unique Identifier).
 8. Safety Disconnects
 - a. Each motor safety disconnect must be identified by a unique number.
 - b. The motor safety disconnect number must be as follows; MSD-(Conveyor ID)-(Unique Identifier) and must be mounted 1" above the motor safety disconnect switch.
 9. Photoeyes
 - a. Each photoeye must be identified by a unique number.
 - b. The photoeye number must be as follows; PE-(Conveyor ID)-(Unique Identifier) and must be mounted on the conveyor within 2" of the photoeye location.
 10. Shaft Encoders
 - a. Each shaft encoder must be identified by a unique number.
 - b. The shaft encoder number must be as follows; SE-(Conveyor ID)-(Unique Identifier) and must be mounted on the conveyor within 2" of the shaft encoder location.
 11. All panels that contain PLC I/O must have a laminated I/O cross reference chart attached to the inside of the left-most panel door. This chart must include, at a minimum, the I/O point

identification number along with the wire number and device description to which it is connected.

12. Stack Lights

- a. Each stack light must be identified by a unique number.
- b. The stack light number must be as follows; SL-(Conveyor ID)-(Unique Identifier) and must be mounted on the conveyor within 2” of the stack light location.

M. Control Device Identification

1. Node Panel (NP) component identification must be provided so that all relays, timers, starters, overloads, fuses, circuit breakers, etc., can be readily identified when the NP door is opened.
2. Items mounted to the door must be identified on the inside of the door.
3. In addition to all prime manufacturers' nameplates, all electrical and mechanical control items mounted in or on panels or push button stations must be further identified in the system by permanently attached corrosion-proof, etched, engraved, or stamped identification plates.
4. Dymo-type labels are not acceptable.

3.03 CONTROLS INSTALLATION

A. Programmable Logic Controller (PLC)

1. PLCs must be located in the PLC Cabinet(s) specified on the plans, unless otherwise noted.
2. Requested Packet Interval (RPI) must be set approximately at half of PLC scan time for the critical I/O. The BHSC must optimize RPI so that the PLC logic does not miss I/O signals.
3. The capacity of each network must not exceed 80% of its total capacity.
4. The scan time of the tracking PLC must not exceed 40 ms. BHSC is responsible for programming PLC logic properly so that the scan time does not interfere with positive tracking.
5. Zone Faults
 - a. Provide at minimum a 16-point dry contact output module for the purpose of zone faults.
 - b. Zone faults must be coordinated with the Owner.
 - c. Owner will be responsible for all connections from this point to their maintenance system.

B. Uninterruptible Power Supply (UPS) for BHS System

1. UPS for PLCs must be mounted in the PLC cabinet.
2. UPS for the servers must be located in the server rack.

C. BHS Server

1. BHS servers must be mounted in a rack located in the BHS Control Room. The rack must include a rack-mounted keyboard, monitor, and mouse with a KVM switch.

D. Operator Workstation

1. A computer(s) and monitors must be contained in an operator console located in the BHS Control Room
2. The operator console must have a built-in writing tabletop below all the monitors.
3. The writing top must be at a standard desk height, and have space available for the keyboard and mouse.

4. An alarm and reset button must be mounted in this workstation rack system to provide an audible alarm for system faults.
5. Provide a workstation in OSR for TSA to be able to print their SSI reports.

E. Printers

1. A printer(s) must be installed in the BHS Control Room and OSR.
2. The printer(s) must be networked with the Diagnostic Computer, the BHS server and workstation PCs.

F. Ethernet Switch

1. The Ethernet Switch for the Upper Level System must be located in the server rack in the BHS Control Room.
2. The Ethernet Switch for the Lower Level system must be mounted in the Ethernet Switch Enclosure, and located on-site, unless noted otherwise.

G. Network Cables

1. The Ethernet cable must be installed by BIC IS (Building Industry Consulting Service International) installer certified personnel or RCDD (Registered Communications Distribution Designer) certified personnel.
2. Provide proper grounding and bonding of the shielded cables.
3. Cables and wires must be segregated per EMC categories.
4. Bend radius must meet manufacturer's specifications.
5. Network Cable Installer must follow the communication wiring prepared by BHSC.
6. Fiber optic installation must be per manufacturers' methods.
7. Network Cable Installer must verify proper connection of each cable segment installed in the BHS system.
8. One redundant cable is required per segment between PLC and Ethernet switches as well as among Ethernet switches.

H. Handheld Scanners

1. A handheld scanner must be mounted at each BSD.

I. System Status Displays

1. System Status Display (SSD) must be installed in the following locations.
 - a. BHS Control Room
 - b. CBRA
 - c. OSR Room

J. User Interface Stations/Human Machine Interface (HMIs)

1. HMI-1 (OTK)
 - a. Each OTK HMI must be located adjacent to the OTK bag removal point for each SS line.
 - b. Location must not obstruct the EDS removal path and baggage removal/induction points.
2. HMI-2 Bag Status Display (BSD)
 - a. Each CBRA BSD HMI must be located at the location required by PGDS.

PART 4 SUB-SYSTEM FUNCTIONALITY

4.01 SEQUENCE OF OPERATIONS

A. Pre-Start Conditions

In order to start the system the following conditions must be met:

1. PDP, MDP, NP and PLC enclosure power disconnects must be in the 'ON' position.
2. No E-Stops in the zone are depressed.
3. No motor overload faults in the zone are present.
4. No jam faults in the zone are present.
5. No Motor Disconnects in the zone are in the 'OFF' position.
6. No active building Fire/Alarm Signal.
7. Ticket Counter Operator Key switch is in the 'ENABLE' position (where applicable).
8. Security card swipe permissive signal/interlock is in the 'ENABLE' position (where applicable).

B. System Start-Up Procedure

1. Prior to initiating any conveyor motion, the following start-up procedure must occur. The pre-start conditions described above must be met prior to beginning this system start-up procedure.
2. Normal system start must be initiated from any 'START/RESET' push button (SPB) provided along each load belt. Depressing any of the enabled load belt SPB must initiate the start alarm sequence and open the associated fire/security door. When the alarm times out, the associated subsystem, all downstream conveyors, and make-up devices must start.
3. In public areas, a security card swipe or a keyed switch enables the authorized use of the SPB on the associated control station.
 - a. An authorized operator will have a preset time period (adjustable by timer in the PLC) to use the SPB.
 - b. If the associated control station (Type 1B) is not activated within the preset time period, the controls must become inactive and require a security card swipe to reactivate.
4. Each make-up unit must have a group of control stations with a SPB. Each of the make-up units must have one of these control stations that incorporates a two-position maintained contact key locked selector switch which must enable/disable all make-up SPBs. Depressing any of the make-up SPBs must initiate the start alarm sequence and start the make-up unit only.
5. Activating the SPB on the Re-Induction Line (RL) conveyor will initiate the start alarm sequence to start the RL conveyors and all associated downstream conveyors.

C. Start Alarm Sequence

1. The Start Alarm sequence must be initiated by depressing any SPB to start or restart from a system fault (motor overload, jam, E-Stop, etc.).
2. This must activate the start alarm devices for a predetermined amount of time (adjustable by timer in the PLC).
3. Depressing the SPB at the "Public" load belts must open the associated fire/security doors.
4. When the start alarm times out and no faults exist, the associated conveyor system(s) must start.

D. Start Alarm/Fault Beacon

1. The remotely mounted start-up alarm beacon, categorized as type SL-2, must serve as a start and fault beacon. Faults that require both visual and audible indications are any faults associated with field devices and field equipment. Motor disconnect-off does not require this annunciations as it is not a fault; rather, is a maintenance feature.
2. When a fault occurs, the beacon closest to the affecting fault must produce an audible alarm.
3. Functionalities of beacon color and sound for start-up and faults are described in 4.02G
4. Fail-safe alarm must use type SL-3 and functionalities are specified in 4.02G

E. Cascade Starting

1. The conveyor system must start in a cascading fashion from the most downstream conveyor backwards.
2. The motor start logic for each conveyor must be linked to the conveyor that is directly downstream.
3. In all areas, the start-up delay between two motors starting must be programmed to maintain all merge and divert windows to meet all specified processing rates.

F. Cascade Stopping

1. In the event downstream conveyors cannot accept bags for some reason such as a jam, motor overload, etc., the upstream conveyors equipped with a head end photoeye must enter cascade stopping mode.
2. In cascade stopping mode, the conveyors must continue to run as long as their head end photoeye is clear. When a bag arrives at the head end photoeye, the associated conveyor must be stopped along with all upstream conveyors up to the next head end photoeye. This feature allows the system to keep running and accumulate as many bags as possible during a fault condition. Cascaded conveyors must display as cascaded on the system status displays.
3. For safety purposes, the cascade stop condition must be latched in the PLC logic so that the cascade stopped conveyor will remain stopped even if its photoeye is cleared, and the conveyor downstream is not running. This condition must become unlatched when downstream conveyors become available and are running.

G. Normal System Stop

1. Normal system stop occurs by one of two methods: Auto-Stop/Time Out or push button/key switch.
2. Auto-Stop/Time Out
 - a. In order to conserve energy and limit wear on the system, each subsystem or zone must be equipped with an auto-stop sensor that will shut down the subsystem/zone if there has been no bag traffic detected for 10 minutes.
 - b. OOG line and sortation piers/makeup units must consider bags' destination to enable auto-stop/time out.
 - c. The mainline sub-system with a merging line(s) must have multiple auto-stop zones such that a specific section of mainline conveyors can time out when a baggage flow is not detected from a merging line(s).
 - d. This auto-stop timer must be adjustable in the PLC and must be adjustable for system functionality. Any downstream auto-stop times must be inhibited as long as any upstream subsystem is running.
 - e. Each zone must continue to run until the auto-stop timer for each zone is complete.
 - f. As each zone times out and stops, it must start the next downstream zone auto-stop timer. This must continue until the entire system times out and stops.

- g. Auto-stop timers must be inhibited whenever any conveyor in the subsystem/zone is not running due to a fault condition.
 - h. When the ticket counter load belt auto-stop timer runs a predetermined amount of time, if not reset by bag traffic, it must stop the load belts prior to the fire/security door and close the door. The remainder of the subsystems/zones must “time out” as described above.
3. Push Button/Key Switch
- a. When the push button is depressed or the key switch is turned to the off position, it must initiate the normal stop sequence.
 - b. The associated ticket counter load belts prior to the fire/security door must stop immediately and the associated door must close.
 - c. The remainder of the subsystems/zones must “time out” as described above.

4.02 FUNCTIONAL DESIGN DESCRIPTIONS

A. Emergency Stop (E-Stop)

When an E-Stop is activated, the following sequence must occur:

1. All conveyors in the E-Stop zone must stop until reset.
2. The ‘E-STOP’ push button pressed must illuminate and flash.
3. Other ‘E-STOP’ push buttons within the same zone must illuminate.
4. When an ‘E-STOP’ is activated, the beacon closest to the affected control station must produce an audible alarm and the red light must flash until the ‘E-STOP’ is released.
5. All stopped conveyors within that E-Stop zone must show RED on the system status displays (Graphics). The Graphics also indicates the approximate location of the affected control station.
6. An alarm message with the name of affected control station and E-Stop zone must appear on the fault displays in RED.
7. All fire/security doors in normal operation in the affected zone must be disabled until reset.
8. Life safety functionality must not be compromised.

B. Emergency Stop (E-Stop) Reset

The following sequence must be required to reset the E-Stop:

1. Pull out the ‘E-STOP’ push button.
2. The ‘E-STOP’ push button must illuminate solid.
3. All other ‘E-STOP’ push buttons within the same zone must extinguish.
4. All conveyors within the E-Stop zone must display Red on the graphic display.
5. Press the SPB and the following must occur:
 - a. The associated emergency stop latch must be reset.
 - b. Start alarm and beacon(s) on the associated conveyor lines must sound and illuminate for no less than eight seconds.
 - c. Conveyors in the zone must cascade start.
 - d. The system status displays must update and show the affected E-Stop zone has been reset and is operating under normal conditions.
 - e. The alarm message must be cleared from the fault displays.

C. Fault Detections

1. General

- a. The conveyor(s) with the fault must stop and the upstream conveyors will cascade stop.

- b. A fault indicator beacon light and audible alarm that are nearest to the fault location must indicate the fault.
 - c. The affected conveyor(s) must be displayed on the system status displays and an alarm message with the name of the fault must be shown on the fault displays.
 - d. The status indication must remain active until the fault has been resolved.
2. Bag Jam
- a. All photoeyes except over-height photoeyes must have jam functionality.
 - b. A bag jam is detected when a bag blocks the photoeye for an interval of time exceeding the set point of the associated jam timer equal to the amount of time, based on belt speed, that it takes three bags to accumulate.
 - c. The conveyor with the jam photoeye and the adjacent downstream conveyor must stop.
 - d. A control station, a fault indicator beacon light, and audible alarm that are nearest to the jam photoeye must indicate the jam and SPB to reset the jam.
 - e. The jam indicator light illuminates when the jam photoeye is blocked. It flashes when the jam photoeye is cleared yet the jam condition is not reset.
 - f. The photoeye and the associated conveyor must be indicated on the system status displays.
 - g. Once the jam has been cleared, actuation of the associated SPB must clear the jam indication and restart the stopped conveyors.
 - h. A single jam indicator beacon light and audible alarm must be utilized where there are multiple jam photoeye locations within a 25 foot diameter.
 - i. Jam detection circuitry must only function when the respective conveyor is running. If a conveyor stops running and as a result, a bag blocks a jam photoeye; no false jam indication must be generated. No more than three bags, real or virtual, must be involved in any given jam event.
 - j. The bag jam event rate must not exceed 1.0% in a 24-hour period.
3. Missing Bag Jam
- a. Missing bag jam is detected when three bags in succession are detected as missing from the same tracking photoeye.
 - b. The conveyor on which the missing bag photoeye is located and the next upstream conveyor must stop.
 - c. A control station, a fault indicator beacon light, and audible alarm that are nearest to the missing bag jam photoeye must indicate the missing bag jam and SPB to reset the missing bag jam.
 - d. The jam indicator light flashes until the missing bag jam is reset.
 - e. Once the missing bag jam has been resolved, actuation of the associated SPB must clear the jam indication and the start-up procedure begins followed by restarting the conveyor.
 - f. A single jam indicator beacon light and audible alarm must be utilized where there are multiple missing bag jam photoeye locations within a 25 foot diameter.
4. Motor Overload Trip/VFD Fault
- a. Once the fault is resolved, depressing any SPB along the associated subsystem must reset the fault. This action also initiates the start-up alarm sequence and then the affected conveyor restarts.
5. Position Failures
- a. Position failures must be generated when BHS equipment fails to change position. Such equipment includes (but not limited to) doors, VSU, HSU, VMU and VLU.

- b. The equipment that has a dedicated control panel assembly must follow the OEM reset procedure.
 - c. Once the fault is resolved, depressing a SPB of the associated sub-system must reset the fault. This action also initiates the start-up alarm sequence and then the affected conveyor restarts.
6. Shaft Encoder Fault
- a. Shaft encoder fault must be generated when one of the following events occur:
 - 1) The total encoder counts/steps for a specific period of time are not within the anticipated encoder counts while the associated conveyor is running.
 - 2) No feedback from the encoder while the associated conveyor is running.
 - b. The encoder fault resets by itself when the above events are resolved.
 - c. Shaft encoder fault does not stop the conveyor. The conveyors must continue to run.
7. Communication Fault
- a. Communication Faults include (but not limited to) communication module faults and network failures in the field.
 - b. Fault display must indicate specific equipment and location associated with the failure.
8. Fail-safe Detection
- a. Fail-safe functionality must be programmed at all Level 1 and Level 2 decision points to prevent non-cleared bags from being diverted to a clear line.
 - b. In the event that a non-clear bag is diverted to a clear line it is considered a fail-safe condition.
 - c. If HSU is used at Level 1 or Level 2 decision points, a fail-safe is activated when there is a “missing bag” on the first conveyor of the non-clear line after the divert point.
 - d. Any bag that has increased in length by 12 inches or more at the decision photoeye upstream of the diverter must be conveyed to the CBRA with a status of “Length Change”. The change in length measured at the photoeye prior to the divert point must be checked against the baseline length measured at the light curtain upstream of the EDS.
 - e. When a fail-safe occurs, two clear line conveyors downstream of the divert point must stop immediately, and an alarm must sound notifying the TSA of a security fault.
 - f. The misdirected bag must stop at the head-end photoeye on the clear conveyor. The audible alarm and indication remain until this photoeye is cleared.
 - g. When a fail-safe occurs, the pre-EDS sorter for that individual SS line will stop feeding bags to that line. Bags already on that line will be directed to the OSR line. A clear bag sent to the OSR line will be directed to the clear line at the Level 2 decision point.
 - h. The fail-safe function must be activated by less than 0.5% of the total daily bag volume, measured by the number of individual bags tripping the fail-safe.

D. Baggage Tracking

- 1. All bag tracking must utilize PLC logic.
- 2. PLCs must use photoeyes to detect bag presence, and shaft encoders to monitor belt travel.
- 3. There are two system tracking zones: the BHS matrix and the make-up sortation.
 - a. BHS matrix bag tracking must begin at the photoeye prior to the ATR or BMA, and continue through the BHS matrix until the bag has been diverted to a clear line.
 - b. Make-up sortation tracking, if required, must begin at the clear line ATR and end at the sort destination.
- 4. Bag tracking statistics must be maintained for each tracking photoeye.

5. Tracking Faults

a. Lost-In-Track (Missing Bag)

- 1) A bag becomes 'Lost-In-Track' if it fails to appear at the next scheduled photoeye within its time window and number of pulses from the shaft encoder.
- 2) This condition is also marked as a 'missing bag'.

b. Unknown Bag

- 1) If a bag appears at a photoeye unexpectedly, the bag is identified as an 'Unknown Bag'.

c. Change in Length

- 1) 'Change in Length' is when a bag's length has changed by 12" or more between two adjacent tracking photoeyes on straight conveyors.
- 2) Bags identified as 'Change in Length' must be treated as an 'Unknown' bag.
- 3) 'Change in Length' measurements must be excluded from tracked merges and HSU diverts.

E. Merge Control

1. The merge control must be programmed to establish dynamic merge windows with the consideration of the bag length and throughput requirements.
2. Low Volume Merging
 - a. Low volume merging occurs when each ticket counter conveyor and associated merge can freely merge onto the mainline/transport conveyor with limited or no metering of the bags, provided bags are not inducted onto the mainline/transport conveyor closer than the specified window, but may merge at various time intervals.
 - b. Merge conveyors must not stop a bag to create a merge window when the mainline conveyor is clear. Similarly, the mainline conveyor must not stop a bag for a merge window when no bag is coming from the merging line.
3. High Volume Merging
 - a. High volume merging onto the mainline/transport conveyor occurs when the queues of the merging line start to back up and before the standard transport conveyors shut down.
 - b. The induction of bags onto the mainline/transport conveyor must be metered to release a bag from the furthest upstream merge and only on the specified time intervals creating one and two bag merge windows for the downstream merges.
 - c. Each merge must be monitored based on the number of queue conveyors available. The merging line with the most bags must have priority over the other merging lines. This process must continue until all merge lines are free to merge without dieback.
4. Only one bag must be staged on a merge conveyor at a time. Merge conveyors may receive a bag while releasing a bag at the same time, provided the merge conveyor retains the integrity of staging only one bag at a time.
5. Maintain positive belt tracking through the merge.
 - a. Merge conveyor belt speeds must be equal to or greater than the mainline take-away conveyor.
 - b. Merge logic must consist of a minimum of three photoeyes:
 - 1) One head end photoeye located on the merge for properly staging the bag without obstructing or interfering with the bags traveling on the mainline transport conveyor.

- 2) One photoeye located upstream of the merge on the mainline take-away conveyor (distance upstream must be belt speed dependent) for setting the merge window on the mainline take-away conveyor.
- 3) One photoeye located a maximum of 1'-0" downstream of the merge for jam detection.

F. Control Stations

1. EMERGENCY STOP (E-STOP) Push-Pull Button

- a. Activation of this button must remove power from the PLC outputs that control the associated motor starters and all associated components, which will in turn stop all component motion for its control zone area. E-Stop interlock must not drop power to the photoeyes/encoders. The E-Stop auxiliary interface contact must isolate controls power for input and outputs.
- b. Operates as described in the Section 4.02.

2. START/RESET Push Button (SPB)

- a. Ticket Counter Control Stations SPB
 - 1) The button must be illuminated when the permissive/interlock is 'Enabled'.
 - 2) The button must be extinguished when the permissive/interlock is 'Disabled'.
- b. Operates as described in the Section 4.02.

3. STOP Push Button

- a. Operates as described in the Section 4.01G.

4. Jam Indicator

- a. Baggage Jam
 - 1) The light must illuminate steady when a jam is detected at the associated photoeye.
 - 2) It starts flashing when the photoeye has been cleared.
 - 3) The light extinguishes when the SPB is depressed.
- b. Missing Bag Jam
 - 1) The light must flash until the SPB is pressed.

5. ADVANCE Push Button

- a. The button advances the conveyor at the manual encoding station to the merge conveyor to the mainline.
- b. Bag tag information is transferred so that tracking can be maintained.

6. JOG Push Button

- a. The JOG push button must only be active when the AUTO/MAINTENANCE selector switch is in the 'MANUAL' position. The device must run as long as the JOG push button is pressed, but once the JOG push button is released, the operator must wait five seconds before pressing it again to allow the soft start to properly control the operation of the device.
- b. Use of the JOG push button to run the device must bypass the start alarm and start delay timers.

7. Door OPEN/CLOSE Push Buttons (OPB or CLB)

- a. Operation of the button is enabled when the AUTO/MAINTENANCE switch on the same control station is 'MAINTENANCE' position.

- b. Activation of the OPB must open the door.
 - c. Activation of the CLB must close the door.
8. ENABLE/DISABLE Switch
- a. In the left position, it enables all SPBs associated with the make-up unit or the load conveyors.
9. AUTO/MAINTENANCE Switch
- a. In the left position, it enables the maintenance push button station associated with the make-up unit/baggage claim device.
10. HAND/OFF/AUTO (HOA) Selector Switch
- a. Motors must be equipped with an integral or separate HOA switch.
 - b. The stations must be located such as to be able to overlook the elements which are to be controlled by the HOA station.
 - 1) The HAND (H) position must bypass the control circuit and run the conveyor regardless of jam conditions or surrounding conveyor status. Do not bypass E-stop.
 - 2) The OFF (O) position must stop the conveyor.
 - 3) The AUTO (A) position must run the conveyor under normal PLC control, and must initiate the normal start up alarm sequence followed by the restarting of the conveyor if the downstream conveyors are running.

G. Stack/Warning Light

1. Type SL-1
- a. This is used to indicate security status of the bag.
 - b. The stack lights are triggered when a bag blocks the head end photoeye of the first exit queue conveyor.
 - c. Green indicates a clear decision from the machine for the bag.
 - d. Red indicates an alarm decision from the machine for the bag.
 - e. Clear/ White indicates any other status such as an “Error” or “Lost-In-Track”.
 - f. The lights extinguish after the bag is no longer blocking the exit conveyor photoeye.
2. Type SL-2
- a. This is used to indicate the system start-up and the system faults.
 - b. Functionalities of visual and audible alarm must be as follows:

Event Type	Light		Audible Alarm (long tone: 3 sec, short tone: 1 sec, break: 1 sec)	Priority
	Red	Amber		
E-Stop	x		3 long tones - 3 short tones - 3 long tones (repeat 3 times)	1
Start-up	x		Half second on and off (for 8 seconds)	2
Jam/ Missing Bag Jam		x	1 long tone – break (repeat 3 times)	3
Other Faults		x	3 long tones – break (repeat 3 times)	4
Communication		x	2 short tones – break (repeat 3 times)	5

Event Type	Light		Audible Alarm (long tone: 3 sec, short tone: 1 sec, break: 1 sec)	Priority
	Red	Amber		
Faults				

Table 13: Type SL-2 Functions

- c. Follow the priority in the table if multiple events occur simultaneously.
 - d. The light indicator for faults must remain on until the fault is resolved.
3. Type SL-3
 - a. This is used to indicate fail-safe alarm.
 - b. The stack light and the audible alarm are triggered when a bag blocks the tail end photoeye of the first exit conveyor on the clear line.
 - c. The audible alarm is deactivated after a predetermined amount of time.
 - d. The light extinguishes when the fail-safe condition is cleared.
 4. Type SL-4
 - a. This is used to indicate the system start-up of the specified sub-system(s) in public area.
 5. Type SL-5
 - a. This is used to indicate the system start-up and the system faults of the sub-systems associated with the MCP.

H. Sortation

1. The system must sort the baggage by flights or carriers to the designated make-up device or sort pier based on the characters utilized in the 10-digit IATA bag tag.
2. The sortation must be PLC base sortation with ATR directly communicating with PLC. Sort Allocation Controller (SAC) must not manage bag IDs.
3. No-read bags and bags missing diverts to their respective make-up device must be routed to a default destination or a manual encode station specified on the plans.
4. The system must be able to utilize fall back sortation (IATA fall back or pier tag fall back) in case of SAC failure

4.03 EQUIPMENT CONTROL DESCRIPTIONS

A. Fire/Security Doors

The controls for the two types of doors are functionally the same, with the exception of how the door behaves during a fire emergency.

1. Normal Operation

a. Door Opening

- 1) Fire security doors and conveyor start interlocked to a permissive card swipe. Only authorized personnel can start specified load belts. A dry contact or 24v signal will be provided by the General Contractor to provide a valid swipe signal. When a valid swipe signal is received, the CS must be activated for a period of no more than 10 seconds.
- 2) Once a system is commanded to start, the conveyors must begin the startup sequence, sounding the warning alarm, and the door must begin to open. After the door is in the fully open position, the conveyor system must cascade start.

- 3) The conveyor must be prohibited from running until the door is detected to be fully open.
 - 4) If the door does not fully open, a 'Door Failed to Open' fault must be generated and the system must not start.
 - 5) The door is fully open when the associated 'Door Open' photoeye or limit switch is engaged.
 - 6) Once the 'Door Open' photoeye or proximity switch becomes active, the open command must be deactivated.
 - 7) Once the door opens properly, the conveyor system must run normally.
- b. Door Closing
- 1) Once the conveyors have stopped, the door must close, provided that the 'Door Clear' photoeye is clear. If the 'Door Clear' photoeye is blocked, the conveyors must continue to run.
 - 2) The door must not be commanded to close until the 'Door Clear' photoeye has been cleared and the conveyor has stopped.
 - 3) If the door is commanded to close and the 'Door Open' photoeye remains on for more than five seconds, or the 'Door Closed' photoeye is not activated within 45 seconds, a 'Door Failed to Close' fault must be generated and a local alarm must be generated.
 - 4) If at any time during normal operation the 'Door Open' photoeye disengages, the system must be stopped and a 'Door Failed to Open' fault must be generated.
 - 5) Door position must be indicated on the BHS Control Room HMI graphics.
 - 6) Fire security doors must be specified with coiling self-closure upon loss of normal building power. Provide power to the door from the conveyor control panel. Upon loss of building power, the doors must close.
- c. Fire Input Signal
- 1) Upon receipt of an input from the fire safety system, the BHS PLC must perform the following steps:
 - a) Run the conveyor until the door clear photoeye is unblocked.
 - b) If the 'Door Clear' photoeye does not become clear after five seconds, then stop the conveyor(s) and close the door regardless of the photoeye status.
 - c) Close the door once the conveyor has stopped.
 - d) If the door disconnect is in the 'OFF' position, the PLC must not command it to close. Once the disconnect is returned to the 'ON' position, the door must be in a 'Door Failed to Close' fault.
 - e) Once the door is closed, or after 30 seconds if the door is not sensed closed, the PLC must shut down all the conveyors under the control of the associated MCP.
 - f) The fire alarm fault must be reset when the fire alarm input is deactivated. The system security input must be enabled and only the SPB at the associated load conveyor can be used to activate the start procedure.
- B. System Queue Conveyors
1. Use of a head-end photoeye must allow only one bag to be staged on a queue conveyor at a time. Queue conveyors must be able to receive a bag while releasing a bag at the same time, provided the queue conveyor retains the integrity of staging only one bag on it at a time.
- C. Merge Conveyors
1. Merge conveyors must be used to stage bags and control the induction of a bag onto a mainline/transport conveyor.

D. EDS Line Conveyors

1. Matrix bag distribution
 - a. See Section 1.17G.1
2. Pre EDS Queues
 - a. The EDS delivery queue, two gapping queues and two positioning queues comprise the delivery system to the EDS. The following listing is in order upstream of the EDS:
 - 1) The first queue (EDS delivery) must run at a speed equal to the EDS entrance tunnel conveyor and must not be used for gapping.
 - 2) The second and third queues (gapping queues) must run at variable speeds as called for in the design drawings.
 - 3) The fourth queue (positioning queue) must be the OTK input location and be supplied with a static deflector and low coefficient belting.
 - 4) The fifth queue (positioning queue) must be supplied with a static deflector and low coefficient belting for the positioning of bags.
 - b. Light curtain assemblies must be used on the second queue to detect the leading and trailing edges of the bags. The light curtain assemblies must be used to achieve the 12" spacing between bags.

E. CBRA Conveyors

1. Functionalities of CBRA conveyors must comply with PGDS.

F. Vertical Sortation Unit (VSU)

1. Each vertical sorter must track the bag through the sorter and confirm that each bag has been sorted to the correct take-away conveyor. A confirmation signal must be sent to the BDR.
2. The vertical sorter must remain in the last state until a divert signal has been received by the control system.
3. The vertical sorter must be equipped with sensors to detect both sort positions, and photoeyes at both discharge positions.
4. A mis-sort must be detected if any of the following events occur:
 - a. The 'Divert Confirm' photoeye located at the discharge end of the diverter is not activated with the proper sort destination, or the 'Divert Confirm' photoeye is not activated within the correct tracking window.
 - b. A jam or position failure must be detected when the conveyors are not in the proper position within the appropriate cycle time.
5. In the event of a baggage jam or mis-sort at the vertical sorter, the first conveyor downstream of each take-away conveyor must stop immediately while remaining upstream conveyors go into cascade mode.

G. Horizontal Sortation Unit (HSU)

1. The conveyor controls for the conveyors associated with each HSU location must be programmed to track the bag through the divert and confirm that each bag has been diverted to the correct take-away conveyor.
2. The divert decision must be made with both a divert photoeye (to confirm the physical location of the bag) and tracking information (to confirm where the bag is to be sorted).
3. The HSU must remain in the last state until a divert signal has been received by the control system.

4. The HSU must be equipped with sensors to detect both the home position and sort position. There must be photoeyes located on the conveyors at both discharge positions beyond the HSU.
5. A mis-sort must be detected when the 'Divert Confirm' photoeye located at the discharge end of the diverter is not activated with the proper sort destination, or the 'Divert Confirm' photoeye is not activated within the correct tracking window.
6. A jam or position failure must be detected when the conveyors are not in the proper position within the appropriate cycle time.
7. In the event of a baggage jam or mis-sort, the conveyor immediately downstream of each HSU take-away conveyor must stop, while the remaining upstream conveyors go into cascade mode.
8. The HSU must be adjusted to maintain bag orientation through the divert.
9. The take-away belt for HSU must have a photoeye installed six inches from the tail end of the conveyor for jam detection and divert confirmation.

H. Make-Up Units and Baggage Claims

1. Under normal operations, the device must run as long as any of the lines feeding it are running. Once all the feed lines have stopped, the device must continue to run for 20 minutes (adjustable) to allow baggage handlers/passengers to remove the baggage.
2. At make-up units if the period of time is not long enough to remove all of the baggage, the baggage handlers will be able to press one of the SPBs and restart the unit. The make-up unit must then run an additional 20 minutes (adjustable).
3. Pressing the SPB will cause the combination alarm and beacon to sound and start the device. No other conveyors must start.
4. The maintenance control station is to allow maintenance personnel to 'JOG' the device while they are making repairs.
5. Switching the selector switch from either 'AUTO' to 'MANUAL' or 'MANUAL' to 'AUTO' must cause the device to stop until the start pushbutton is pressed.

4.04 OPERATOR INTERFACE DESCRIPTIONS

A. Maintenance Diagnostic System (MDS)

1. MDS must serve as the gateway to present the BHS system graphically and allow an operator to monitor system status, alarm messages, and critical event occurrence.
2. MDS must be capable of generating Key Performance Indicator (KPI) dashboards to represent real time and historical data.

B. System Status and Fault Display

1. The System Status and Fault Display must display a graphical representation of the entire baggage handling system color coding the status of each component, i.e., Stopped, Running, Faulted, Overload, etc.
2. Status and Fault Messages must be shown when the fault occurred, when a startup has occurred, and when a fault has been reset.

C. Graphical Representation Color Codes

1. The graphical representation of each event must be color coded according to the following standards and they consist of three categories:
 - a. Category 1

- 1) The base color must be selected from aqua, blue, red, or yellow. Flashing color, if used any, must be selected from black, gray, or white.
 - 2) This category presents faults and failures that require further actions for resolution.
- b. Category 2
- 1) The base color must be selected from brown or orange. Flashing color, if used any, must be selected from black, gray, or white.
 - 2) This category presents manual intervene, faults, and warnings that may or may not require further actions for resolution.
- c. Category 3
- 1) The base color must be selected from black, green, magenta, or white. Flashing color, if used any, must be selected from black, gray, or white.
 - 2) This category presents equipment status.

Color			Condition
Description	Base	Flash	
Category 1			
Red		n/a	Equipment E-stop
Flashing Red/White			Equipment E-stop not Reset (Reset Request)
Flashing Red/Gray			Fire Alarm
Aqua		n/a	VFD Fault
Flashing Aqua/White			ATR/BMA Fault (faults not listed in other colors)
Flashing Aqua/Gray			EDS Fault (faults not listed in other colors)
Blue			Motor Overload/Start Fault
Flashing Blue/White			Fail-safe
Yellow		n/a	Equipment Jam
Flashing Yellow/White			Missing Bag Jam
Category 2			
Brown		n/a	Disconnect-Off, Equipment Maintenance Mode
Flashing Brown/White			Communication/Network Fault
Flashing Brown/Gray			UPS Fault (EDS UPS and BHS UPS)
Flashing Brown /Black			Equipment Over Temperature
Orange		n/a	Encoder Failure
Flashing Orange/White			EDS not in Normal Mode (including Bypass, OTK, Calibration, and Stand-by)
Category 3			

Color			Condition
Description	Base	Flash	
Green		n/a	Equipment Running
Flashing Green/White			Equipment Running Reverse
Flashing Green/Gray			Equipment Forced On (including divert-up and divert-all)
White		n/a	Equipment/Sub-system Full
Magenta			Equipment Cascade Stopped
Black		n/a	Equipment/Sub-system Time Out
Flashing Black/Gray			Equipment Forced Off (including divert-down and pass-all)

Table 14: Graphic Color Codes

2. The color of graphical representations must match to the standard RGB codes.

D. User Interface Stations and Human Machine Interface (HMIs)

1. HMI-1 (OTK)-Each EDS line must have an OTK HMI which display the Main Menu, allowing the operator to select one of the following screens:

a. “Auto-Test-Bypass” Mode Screen. This screen must allow the operator to place the EDS line in Auto, Test, or Bypass modes for EDS setup and inspection.

1) Auto Mode must place the EDS line in the normal operations mode.

2) Test Mode must place the EDS line in test operations mode and have the following features.

a) Inhibit bags from diverting onto the respective EDS line and stop baggage prior to the OTK Insertion point queue.

b) Allow the Image Quality Test (OTK) article to be placed safely and properly onto the OTK Test Insertion point queue.

c) Restart the EDS entrance conveyors and feed the OTK article into the EDS.

d) Stop the OTK article on the queue conveyor immediately after the EDS.

e) Allow repeat OTK as necessary.

3) Bypass Mode must place the EDS machine to be used without x-ray. Bags must go through the EDS machine without inspection. Refer to the EDS OEM manual and IRD for further requirements.

b. “EDS/BHS Communications Status” Screen. This menu displays the BHS tracking number transmitted to the EDS machine and updates with each new number transmitted.

c. “Baggage Status” Screen. This menu displays the bag ID number shared by the EDS and the BHS, plus the status assigned by the EDS or the BHS at the time the bag exits the machine, Level 1 Decision (Cleared, Alarmed or Decision Pending).

d. “BHS Status” Screen. This screen is a graphical representation of the BHS status of the conveying system from Area 2 Zone 3 - Zone 5 of related EDS line.

2. HMI-2 CBRA Bag Status Display (BSD) -Each BSD HMI must be installed per the location defined by PGDS. BSD HMIs must include all functions and format required by PGDS.

Coordinate communications of the transmittal of baggage ID information and the associated wiring with EDS OEM.

E. Sort Allocation Controller (SAC)

1. Sortation must be a carrier based sortation.
2. SAC must provide a sort allocation table for an operator to be able to modify sort destinations per carrier.

4.05 SYSTEM REPORTS

A. General

1. The BHS control system must be provided with standard reporting functions.
2. Refer to PGDS for TSA required format and contents.
3. All reports must show SSI markings when including data on EDS and OSR Alarm Rates, and bags tracked to CBRA.
4. Reporting must meet the following criteria:
 - a. Availability to generate report from the operator work station(s) during operational hours. Report process time must not affect operation.
 - b. Specified level of accessibilities/permissions
 - c. Storage capacity to be able to archive data for a minimum of a year
 - d. The results that can be exported to a different file format such as CSV, PDF, or/and EXCEL
 - e. Dashboard features per Key Performance Indicators (KPI)

B. Reporting Frequency

The system must be capable of recording the data in the following time frames. All reports must be in a format that can be searched, retrieved, and printed in the following time frames:

1. Real Time (+/- 60 seconds)
2. Hourly
3. Daily
4. Weekly
5. Monthly
6. Quarterly
7. Annually
8. Manually Entered Time Dates

C. Reporting Category

The system reports are categorized in three main areas:

1. Operation

The operational reports are featured to show the system performance such as equipment usage, equipment faults and events, system throughputs, tracking performance, and sortation. The reports are used to support daily operational activities. The system must generate the following operational reports with the detailed fields listed in each report.

a. Equipment Operational Summary

This report must show statistics of normal operation, events, faults, and malfunctions. Each category must be able to view per device. The report must be capable of showing at least the following information:

- 1) Time period (starting date/time and ending date/time)
 - 2) Equipment name
 - 3) Number of cycles
 - 4) Number of bags diverted/merged (to each direction)
 - 5) Number of faults (to be shown per fault)
 - 6) Tracking photoeye name
 - 7) Number of tracking malfunctions (to be shown per event such as missing bags, unknown bags, missing bag jams, etc.)
 - 8) Jam photoeye name
 - 9) Number of jams
- b. ATR Statistics
- This report must provide statistics related to ATR performance. The data must be shown per ATR. The report must include the following fields:
- 1) Time period (starting date/time and ending date/time)
 - 2) ATR name
 - 3) ATR Description (e.g., Tracking or Sortation)
 - 4) Number of bags seen by the ATR
 - 5) Number of bags read by the ATR
 - 6) Number of no-read
 - 7) Read rate
 - 8) Number of valid tags
 - 9) Number of conflict tags
 - 10) Number of tags without BSM information (if applicable)
 - 11) Total number of IATA tags that are read at ATR and passed to the EDS
 - 12) Total number of IATA tags that are sent to the EDS and reconciled at the EDS exit
- c. BMA Statistics
- This report must display statistics related to BMA performance including, but not limited to the following items:
- 1) Time period (starting date/time and ending date/time)
 - 2) BMA name
 - 3) Number of bags seen by the BMA
 - 4) Number of OOG bags
 - 5) Number of in-gauge bags
 - 6) Number of bags without BMA result
- d. Throughput
- This report must contain the overall system throughput and throughput for selected sub-systems such as input conveyors, SSM lines, SS lines, OSR lines, sortation lines, manual encode line, and CBRA. The system must be able to report throughput in user-selected time intervals.
- 1) Time interval (starting date/time and ending date/time)
 - 2) Name of the selected sub-system
 - 3) Throughput
- e. System Baggage Volumes
- The system must be capable of reporting the following System Baggage Volumes.
- 1) By Input Conveyors
 - 2) By Make-up Devices
 - 3) By Screening Areas

- 4) EDS
- 5) CBRA
- 6) CBRA Screening Stations

f. Day End Report (Executive Summary Report)

This report must provide the overall system performance. The information includes, but is not limited to the following:

- 1) Time period (starting date/time and ending date/time)
- 2) Input volume measured at input conveyor locations
- 3) Output volume measured at sort destinations
- 4) ATR statistics
- 5) EDS statistics
- 6) Tracking performance

g. Bag Trace (Bag Data) Report

This report is mainly used to trace a bag with its associated tracking ID during a specific time period. This report must include time stamps, critical events, and associated locations at where a bag traveled through the system. The following presents common fields for this report. The report is searchable per each field.

- 1) Time period (starting date/time and ending date/time)
- 2) Tracking ID (IATA or/and BHS tracking ID)
- 3) Time stamped at CBIS ATR/RFID
- 4) Name of the CBIS ATR/RFID
- 5) Time stamped at BMA
- 6) Name of BMA
- 7) Bag type
- 8) Name of EDS that a bag was screened
- 9) Time stamped when entering into the EDS
- 10) Time stamp when an OOG bag is diverted to OOG line
- 11) Level 1 screening status
- 12) Time stamped at level 1 screening decision
- 13) Level 2 screening status
- 14) Time stamped at level 2 screening decision
- 15) Time stamped when diverted to CBRA
- 16) Time stamped when diverted to a clear line
- 17) Time stamped at sortation ATR/RFID
- 18) Name of the sortation ATR/RFID
- 19) Time stamped when diverted to makeup unit, or received at run-out
- 20) Time stamped at last known tracked conveyor
- 21) Time stamped when an unknown bag is found
- 22) Location where the unknown bag is detected
- 23) Time stamped when a bag is detected as missing
- 24) Location where the missing bag is detected

h. Carrier Summary

This report must generate summaries of bags processed per carrier. The following data must be available on the report.

- 1) Time period (starting date/time and ending date/time)
- 2) Carrier Code
- 3) Name of the assigned destination

- 4) Number of total bags sorted to that carrier
- i. Sortation Issue Report

This report must show a list of bags that were not able to sort.

 - 1) Time period (starting date/time and ending date/time)
 - 2) Bags with sort destination issues
 - a) Bag tag number
 - b) Name of the event and the device caused the problem
 - c) Time stamp of the event caused the problem
 - d) Time stamped when the bag arrived at the run-out
 - e) Reasons of the sort failure
2. Maintenance

The maintenance reports assist maintenance activities and also used to identify equipment malfunctions. Malfunctions include both faults and events. A fault is defined as a “cause” (jams and motor overload). An event is defined as the “effect” of a fault (Fail-Safe) or the “effect” of human interaction in the system (E-Stop and disconnect off).

 - a. Equipment Malfunction and Correction

This report must show all equipment malfunctions that occurred and were cleared during a selected interval.

 - 1) Time period (starting date/time and ending date/time)
 - 2) Name of the device
 - 3) Description of the malfunction
 - 4) Time stamped when the malfunction occurred
 - 5) Time stamped when the malfunction was cleared
 - 6) Duration of the malfunction
 - b. Equipment Malfunction Summary

This report must generate summaries of the equipment malfunctions and corrections. It must contain at least the following items:

 - 1) Time period (starting date/time and ending date/time)
 - 2) Name of the device with malfunction
 - 3) Total number of occurrences for each malfunction
 - 4) Sum of all malfunction time
3. TSA
 - a. The TSA reports contain the information about baggage screening and the local TSA must have access to these reports.

PART 5 ACCEPTANCE TESTING AND TRAINING

5.01 TESTING

A. General

1. Prior to the BHS being approved and used for operations, the following must be completed, if applicable:
 - a. Factory Acceptance Test (FAT) - conducted by BHSC
 - b. BHSC Static, Dynamic, Functional and Load Testing

- c. Owner Static, Dynamic and Functional Testing
 - d. BHSC Pre-Integrated Site Acceptance Test (P-ISAT) to be conducted per SSTP. BHSC will submit documentation and results of each test, and inform VTC and Owner in writing as to the readiness for Owner P-ISAT testing.
 - e. Owner P-ISAT
 - f. Test Readiness Review (TRR) - conducted by BHSC, witnessed by TSA and Owners representative.
 - g. Integrated Site Acceptance Test (ISAT) - conducted by TSA with assistance from BHSC
 - h. Sortation Test
2. Test Equipment
- a. BHSC must provide all test bags and testing material in bags (i.e. clothing, packing material and material that will cause EDS to alarm).
 - b. All test bags must be clearly marked as test baggage.
 - c. Provide four hundred test bags (for systems less than four EDSs), or one hundred test bags per EDS (for systems exceeding four EDSs).
 - d. The test bags must be used for all baggage testing other than ISAT.
 - e. Alarm bags must have approved alarming material placed inside the bag, with three-inch metal numbers placed inside the bag to correspond with a permanent marked number on the outside of the bag, and easily identifiable as alarmed baggage (i.e. red in color).
 - f. Test bag set must consist of “stream of commerce” representative checked bags (see PGDS Appendix D for bag weight & dimensions). The bag set must comprise the variety of types (including but not limited to: totes, carry-on sized bags, soft sided bags, golf bags, hard sided bags, garment bags, duffel bags, military-style duffel bags, gun cases, coolers, etc.) of baggage expected to be checked. The clear or alarm bags will not contain more than 30% of a similar type bag.
 - g. Test bag set must consist of materials, condition, and sizes seen during typical BHS operations, including bags with straps, wheels, handles, tags, etc. An idealized bag set – for example, without handles or straps, or reinforced corners – will not be considered or accepted as valid.
 - h. Low profile tubs must also be used during testing as appropriate for bags that would be placed in tubs as outlined in the Owner’s tubbing policy.
 - i. The required test equipment must include, but not be limited to: clamp on type ammeter, direct FPM digital readout tachometer, radios, etc.
 - j. Provide any necessary test or measuring equipment required to demonstrate the characteristics and performance of the equipment prior to acceptance.
 - k. All the material and personnel required for load tests must be provided by the BHSC. The BHSC must have a representative on site during all periods of the system(s) conditional inspection, as well as final acceptance inspection and testing sessions.
3. Test Personnel
- a. Provide all labor and trades required to inspect both the mechanical and electrical systems of the BHS to the Owner, VTC, and Code Compliance inspector.
 - b. Provide all required personnel to support BHS testing (Owner, TRR and ISAT). The personnel include but not limited to:
 - 1) BHSC Controls Engineer
 - 2) Millwright
 - 3) Electrician
 - 4) Baggage Porters
 - 5) Jam Runners

- c. Provide qualified personnel on-site during the acceptance inspection and testing period(s) to service or adjust, as required, the BHS equipment as well as to open control boxes, control station covers, drive assembly chain/v-belt guards, covers, etc.
 - d. The BHSC must provide all necessary testing, measuring, and recording devices required to demonstrate the operational characteristics and performance of the equipment to the satisfaction of Owner.
4. Test Documentation
- a. All passed or failed tests must be documented. The documentation must include but not be limited to: BHS Reports, EDS reports, ATR reports and all handwritten forms from both OSR and CBRA workstations. Documentation from OSR and CBRA must be recorded on the forms provided within the BHS SSTP.
 - b. BHSC testing documentation must be submitted to Owner for review at least 72 hours prior to commencement of Owner's testing.
 - c. BHSC must respond to the QLR and TSR discrepancies with corrections and back up documentation.
5. Test Failure
- a. Failure during any test period will be defined as any design characteristic or malfunction of BHSC furnished equipment, or materials that damage baggage or degrade any operating rate to below specified levels.
 - b. Conditions resulting from improper loading of product or loading product of sizes not included in specifications requirements will be considered test failures.
 - c. At the discretion of the Owner, a test failure may result in a 24-hour suspension of further testing until documentation of corrections made to the system and a passed test has been presented to the Owner.
 - d. The BHSC must prove consistency and repeatability in passing all tests. If BHSC fails a single test more than twice, that test will not be accepted until BHSC passes that test two consecutive times.

B. FAT

1. The BHSC must demonstrate through emulation/simulation/analysis at the FAT that the system, as engineered by the BHSC, meets the minimum design and performance criteria identified in this specification.
2. The BHSC must invite the Owner and VTC to their facility for a demonstration and review of the BHSC's developed controls systems software, sortation and maintenance diagnostics computer software/hardware and operator interfaces, including but not limited to EDS interfaces and facility interfaces with other airport systems and devices (e.g., Fire Alarm and Airport Security Systems). The BHSC must conduct sortation demonstrations validating the system can effectively sort baggage as required by the specifications.
3. The BHSC must submit a detailed FAT agenda to the Owner and VTC for review and approval. The FAT must take place prior to the on-site installation of the BHS computer software and associated hardware.
4. All items identified during the FAT as being deficient must be rectified prior to installation on-site. The BHSC is solely responsible for any additional monies incurred regarding completion of this task and will not be granted any schedule variances.

C. BHSC Testing

1. General

- a. Perform system testing in accordance with the BHSC's Owner-approved test plan. The test plan must be submitted to the Owner and VTC for review and approval at least 45 days prior to the operation start-up date for the BHS(s). Testing must include static and dynamic electric, static and dynamic mechanical, functional testing and load test.
2. Static
 - a. Static testing must include, but not be limited to:
 - 1) Bolt torque verification
 - 2) Conveyor installation
 - 3) Belt tension
 - 4) Material and equipment verification
 - 5) Electrical wiring and cabling installation
 - 6) Control panel and control station installation
 - 7) Network validation and certification
 - b. BHSC must perform static testing and reconcile any noted deficiencies or discrepancies prior to start of dynamic testing.
 - c. Network Validation and Certification
 - 1) BHSC is responsible for having a network specialist to validate and certify the installed network prior to testing/commissioning.
 - 2) Any network cable that does not meet testing criteria must be re-terminated or re-pulled until passing test is achieved.
 - 3) The network specialist must supply certification sheets which include, at a minimum:
 - a) Copper Cables
 - (1) Cable ID
 - (2) Test Summary
 - (3) Headroom (proper bend radius for the cable)
 - (4) Wire Map
 - (5) Length (ft)
 - (6) Propagation Delay (ns)
 - (7) Delay Skew (ns)
 - (8) Insertion Loss Margin (dB)
 - (9) Frequency (MHz)
 - (10) Limit (dB)
 - b) Fiber Cables
 - (1) Cable ID
 - (2) Test Summary Headroom (proper bend radius for the cable)
 - (3) Test Limit
 - (4) Propagation Delay (ns)
 - (5) Length (ft)
 - (6) Loss (dB), Loss Limits (dB), and Loss Margin (dB) must be shown for all required wavelengths.
 - d. Perform a complete inspection of all mechanical aspects of the BHS(s).
3. Dynamic
 - a. Dynamic testing must include, but not be limited to:
 - 1) E-Stop functionality
 - 2) Load testing voltage
 - 3) Belt tracking
 - 4) Belt speeds

- 5) Photoeye alignment
 - 6) Motor rotation
 - b. BHSC must demonstrate that all E-Stop zones are operational and correct prior to load testing.
 - c. Load Test
 - 1) BHSC will provide VTC and the Owner a complete motor manifest showing no-load amps, along with their respective belt speeds prior to load testing.
 - 2) Perform 40-hours of break-in prior to system load test (this time may include run time during static, dynamic, and functional testing).
 - 3) Submit in writing to VTC and the Owner all “no load” amp, actual speeds, and full load motor current readings after the break-in period has been completed.
 - 4) All amp readings must be recorded from the load side of the starter on non-VFDs, and on the load side of VFDs.
 - 5) All amp readings must be conducted and recorded with weight using load specified by this document 1.14D.
 - 6) The recorded information will be considered as the system empirical readings, and will be included in the O&M Manuals for reference.
 - d. Inspect the BHS(s) and make adjustments to belts and programming as required. Such adjustments will be considered as fine tuning.
 - e. BHSC must perform dynamic testing and reconcile any noted deficiencies or discrepancies prior to start of functional testing.
 - f. BHSC must demonstrate the operating speed of each component of the system(s). Any component not operating within the acceptable limits of design speed will be reworked to bring it up to the proper speed.
 - g. Noise Level
 - 1) Fabricate and install the BHS to limit combined equipment and controlled ambient noise levels to the allowable maximum values as shown in Section 1.14K. The measurements will be taken at a maximum distance of 3 feet vertically or horizontally from noise producing components.
 - 2) BHSC must conduct baseline noise level readings during peak operating hours prior to any work done on the system. The BHSC must record the time, location and the noise level for each reading.
 - 3) Ambient noise level measurements will be taken during peak operating hours to establish a baseline prior to work being accomplished in an area. Equipment such as air-conditioning and heating equipment will be on and outside noise sources (from aircraft and mobile ground equipment) will be as normal.
 - 4) BHSC must conduct noise level readings after work is complete on the system at the same time and location for the same peak operating period.
 - 5) The noise level measurement will be accomplished utilizing a calibrated A-weighted sound level meter at slow response or a calibrated 1/3 band octave analyzer and converted to A-weighted sound pressure levels supplied by the BHSC.
 - 6) Where conveyors are located in the ceiling spaces of non-bag room areas, the noise measurements will be taken after the architectural ceilings are in place.
4. Functional
- a. Functional testing must include, but not be limited to:
 - 1) BHS full system testing
 - 2) Control Interfaces (Push button stations, HMI graphics, HMI interface, stack lights, etc.)
 - 3) Merge logic

- 4) Divert logic
- 5) Matrix distribution
- 6) Sortation
- 7) Controls Redundancy
- b. Demonstrate the capability of the system to handle the specified processing rates, using all components/units to achieve specified rates.
- c. Demonstrate the system(s) fault monitoring and system or status display panel graphics.
- d. Demonstrate controls functionality to include alarm tags, graphics, horns, and stack lights, etc.
- e. All tests must satisfy the criteria as stated in the latest revision of the SSTP.
- f. All system tests will be conducted with the EDSs placed in "Show Alarm" mode only.
- g. Mixed bag system test will be performed with a minimum of 1% of total bags used for testing considered Out-Of-Gauge.
- h. All items must be tagged with 10 digit IATA bar coded bag tags.
- i. Any system that is capable of using IATA, Non-IATA, and pier tags shall be tested using an even mixture of each style tag.
- j. System Sortation Test
 - 1) The sortation test must demonstrate the appropriate routing of Lost in Track and No Read baggage.
 - 2) The BHSC must demonstrate the read rate capacity of the scanner array with a minimum of 200 bags at each scanner array, while maintaining a 99% read rate accuracy.
 - 3) The BHSC must demonstrate to VTC and the Owner the ability of the BHS to properly and successfully process all aspects of sortation methods required in the specifications.
 - 4) The BHSC must validate interface with BSM, FIDS, and BPM (if required).
 - 5) The sortation test will require reconciliation of all bags with the sortation table(s) and reporting. Bags include but not limited to ones with IATA tag, without tag (no read bags), unknown bags, and bags are too close.
 - 6) The BHSC must demonstrate fall back sortation (IATA fall back or pier tag fall back) so that the system has a mechanism to sort bags in case of SAC failure.
- k. Controls Redundancy Testing
 - 1) PLC configuration
 - 2) Upper Level system configuration
 - 3) Network configuration

D. Owner (Pre-ISAT)Testing

BHSC must demonstrate the system in accordance with the approved SSTP to Owner or designated representative. Passage of this testing in no way relieves responsibility for corrections of noted discrepancies during this testing or subsequent testing. Upon successful completion of Pre-ISAT, Owner will inform TSA in writing as to the system readiness for the TRR.

E. TRR

BHSC must demonstrate the system in accordance with the approved SSTP to the TSA Pre-Certification test representative. Upon successful completion, TSA will be notified as to the system readiness for TSA ISAT.

F. ISAT

BHSC must provide personnel to support TSA ISAT.

5.02 SCHEDULED TRAINING

All training sessions must be digitally recorded by the BHSC with the Owner receiving two digital copies of the training sessions in either MP4 or AVI format.

The training sessions must be organized, using presentation materials, handouts, Power Point presentations and other training tools to thoroughly demonstrate and explain the operational, maintenance and safety characteristics of the system.

Training must include classroom and hands-on instruction.

Prior to the start of use, BHSC must provide the following training to Owner, TSA and tenant airline personnel:

A. Airport Operations Training

1. 16 total hours (separated into two sessions, am and pm) of training for the Carriers, Airport, and 3rd party operators, to cover the operational functions of all systems and all pertinent sections of the Operations Manual.

a. Operator training must include, but not be limited to:

- 1) BHS orientation and layout
- 2) System safety
- 3) Startup procedures
- 4) Upper level Menu and navigation
- 5) HMI alarms System Reporting
- 6) Manual encode
- 7) Controls functionality, Modes of operation, operational limitations
- 8) Any BHSC provided equipment
- 9) BHS control interface provided to conduct the OTK procedures
- 10) BHS orientation and layout
- 11) BHS Fail-Safe procedures and layout

b. All operators or individuals with access to either viewing or printing reports must be properly trained in SSI procedures prior to operation. The training sessions must be conducted prior to the operational startup of the respective BHS.

B. Airport Maintenance Training

1. Total eighty hours of training (separated into two sessions, am and pm as well as separated into electrical and mechanical), including classroom and hands-on type programs. Hands-on training includes actual troubleshooting, adjustment of equipment, and component removal/replacement.

a. Maintenance training must include, but not be limited to:

- 1) BHS orientation and layout
- 2) System safety
- 3) Startup procedures
- 4) Instruction on the routine and periodic maintenance required including component removal/replacement of the system.
- 5) HMI alarms System Reporting
- 6) Manual encode

- 7) Any BHSC provided equipment to include, but not limited to, PLC, network, field devices
 - b. All individuals with access to either viewing or printing reports must also be properly trained in SSI procedures by the BHSC prior to operation. The training sessions must be conducted prior to the operational startup of the respective BHSC.
- C. TSA Operations Training
 1. This training is distinct from maintenance training. It must be provided to TSA for mechanical, electrical, and computer functions required to properly operate the TSA staffed portions of the system.
 2. 16 total hours (separated into two sessions, am and pm) of training to cover the operational functions of all systems and all pertinent sections of the Operations Manual.
 - a. Training materials and documentation to be presented must be submitted to TSA for review prior to the first scheduled training session. All training sessions must be digitally recorded; two copies of which are to be provided to TSA prior to live bag screening.
 - b. TSA training must include, but not be limited to:
 - 1) BHS orientation and layout
 - 2) System safety
 - 3) Any BHSC provided equipment located in the CBRA
 - 4) Any BHSC provided equipment located in the OSR Room
 - 5) BHS control interface provided to conduct the OTK procedures
 - 6) BHS orientation and layout
 - 7) BHS Fail-Safe procedures and layout
 - 8) System safety
 - 9) BHS/TSA reporting
- D. Airline Operations Training
 1. 8 total hours (separated into two sessions, am and pm) of training for the Carriers, Airport, and 3rd party operators, to cover the operational functions of all systems and all pertinent sections of the Operations Manual.
 - a. Operator training must include, but not be limited to:
 - 1) System safety
 - 2) BHS orientation and layout
 - 3) Emphasis will be placed on baggage hygiene and areas of impact (i.e. ATR, BMA and jam points)
- E. Supplemental Training

Should Owner require supplemental training beyond that specified above, it must be provided by BHSC at a time and at rates as mutually agreed upon between Owner and BHSC.

OPERATION AND MAINTENANCE MANUAL
AIRPORT NAME HERE LOCATION

TITLE PAGE

MANUAL TABLE OF CONTENTS

CHAPTER 1 INTRODUCTION

General (Purpose and scope of the manual)

Field Return (Warranty) Procedure

Weight and Size Limitations

CHAPTER 2 SYSTEM DESCRIPTION AND OPERATION

Physical Description

(A concise physical description of the overall BHS/BHS, identifying each conveyor subsystem, its location and primary components, operator controls, and accessory components required for efficient operation of the total system. The overall system must be illustrated on an 11" x 17" fold-out. Reference to manufacturers' literature must be made where such descriptive material is presented by the manufacturer, such as for power turns, etc.)

Electrical Description

(A concise description of the control panels, each operator control, special switches, photo-detectors, audio visual alarms, and drive motors. Electrical installation must be referenced by drawing number. The drawings referenced must be included in a "Drawing Book" separate from the manual.)

Functional Description

(A Functional description of each conveyor subsystem must be given. Specific drawings for each electrical control schematic must be referenced. The drawings must be included in a "Drawings Book" separate from the manual.)

CHAPTER 3 OPERATING INSTRUCTIONS

(Safety precautions to be followed by operating personnel, specific operating procedures, and operating procedures (to include start-up, shutdown, special maintenance procedures, and emergency procedures). Reference each operator control to a specific drawing that illustrates the control. The drawings must be included in a "Drawing Book" separate from the manual.)

CHAPTER 4 PREVENTATIVE MAINTENANCE

(Include procedures for periodic inspection, lubrication, oil change, cleaning, conveyor belt checking, tensioning and tracking, and component adjustment in this chapter.)

CHAPTER 5 TROUBLESHOOTING

(Troubleshooting procedures to aid maintenance personnel in diagnosing conveyor system or subsystem malfunctions and isolating the trouble to a replaceable component or assembly.)

CHAPTER 6 REMOVAL AND INSTALLATION PROCEDURES

Safety Precautions

List pertinent safety precautions to be followed by maintenance personnel. An additional statement must inform personnel that ..."when a possibility exists that personnel could be injured when performing a procedural step, a WARNING must precede the procedural step wherein the injury could occur. If a possibility exists that equipment could be damaged when performing a procedural step, a CAUTION must be included preceding the step. A NOTE must call attention to special information that should be considered when performing a procedural step.)

Special Tools and Equipment

(List any special tools or equipment required for maintenance of the BHS/BHS by nomenclature and part number. The purpose of each tool or equipment must also be given. Include information on how the tool is used in the procedure where the tool is required.)

Component Removal and Installation

(Include procedures for removing and installing motors, brakes, reducers, pulleys, taper-lock bushings, sheaves, sprockets and other components together with any special disassembly and testing on reassembly before installation.)

CHAPTER 7 PARTS LIST/RECOMMENDED SPARES LIST

(This chapter must be an indentured parts listing of major mechanical, electrical, and electronic parts used in the system. Include exploded views of prime equipment. List recommended spare parts in numerical order following the indentured parts list. The suggested minimum stock quantity for each part spared must also be given. Include the Federal Supply Code Identification Number of the firm from which replacement or maintenance parts may be obtained.)

CHAPTER 8 GLOSSARY OF TERMS AND SYMBOLS

MANUFACTURERS' LITERATURE

(Include descriptive literature covering assemblies and major components not manufactured by the BHSC.)

CONSTRUCTION SAFETY AND PHASING PLAN
FOR
CONSTRUCT BAGGAGE HANDLING SYSTEM (BHS) AND
WEST TERMINAL EXPANSION
AT THE
DESTIN – FORT WALTON BEACH AIRPORT

INTRODUCTION

This Construction Safety and Phasing Plan (CSPP) has been prepared as a supplement to the contract documents for the Baggage Handling System/West Terminal Expansion project at the Destin – Fort Walton Beach Airport to set forth requirements for operational safety during the construction phase of the project. The contractor is required to become familiar with and follow the procedures set forth in this plan. In addition, the contractor must, after reviewing the CSPP and prior to receiving a Notice to Proceed (NTP), prepare a Safety Plan Compliance Document (SPCD) in accordance with FAA AC 150/5370-2F – Operational Safety on Airports During Construction, included herein as Appendix “A” of the bid documents, describing how the contractor will comply with the CSPP.

PROJECT DESCRIPTION

Okaloosa County (COUNTY) and the airport staff (AIRPORT) desire to construct a one-story baggage handling expansion with a checked baggage inspection system room, a checked baggage resolution area room, and support spaces. The project also includes a one-story terminal expansion with airline ticketing areas and restrooms. Impacts to existing airport facilities will be incurred including water, sewer, electrical, parking, site lighting, fencing, gates, security cameras, and covered walkways.

1. COORDINATION

a. Contractor Progress Meetings: Progress meetings shall be held on a weekly basis at the airport at which operational schedules of the contractor, airport, airlines and other tenants will be discussed. Additional meetings will be held when requested by the Owner or the Contractor. The contractor’s project manager and site superintendent shall be present at a minimum. Representatives of subcontractors and the Engineer will be asked to attend when the contractor feels their presence is needed or when the Owner requests their attendance.

b. Scope or Schedule Changes: Proposed scope and/or schedule changes will be discussed at each progress meeting along with their impact on the CSPP and the need to revise the CSPP.

c. FAA ATO Coordination Procedures: Work is entirely in a non-movement area of Eglin AFB. No communication with the ATCT will be required; however, the contractor shall coordinate with Airport Operations regarding the schedule of arriving/departing flights in order to safely pull back all men and equipment adjacent to existing Terminal Gate A-1 and future Concourse Gate C-1 as necessary.

2. PHASING

The project has 3 facility construction phases, none of which consist of work within the terminal apron taxilane object free area (TOFA), but some work will occur in the existing airfield operations areas adjacent to existing Terminal Gate A-1 and future Concourse Gate C-1. It is not anticipated that operations at existing Gate A-1 or future Gate C-1 will be impacted by the construction. The facility construction phases are shown on the Project Layout Plan Exhibit and generally described below:

Phase 1: Expansion of the baggage handling facility including new facility construction west of Grid Line C and south of Grid Line 7.

Phase 2: Expansion of the terminal including new facility construction west of Grid Line C and north of Grid Line 7. This work can be performed concurrently with Phase 1.

Phase 3: Modifications and enclosure of the existing baggage handling facility and terminal east of Grid Line C.

These facility construction phases are controlled by the phasing of the baggage handling systems construction, demolition, and switchovers. The baggage handling system phases can be seen in more detail on Sheets QM8-001 through QM8-004 of the construction documents.

Aircraft access to existing Terminal Gate A-1 and future Concourse Gate C-1 must be maintained at all times. Barricades will be placed along the edge of the work area separating it from the active airfield and airline ground service personnel and equipment. Barricades will be low profile and lighted with flags meeting the requirements of AC 150/5370-2G. Barricades are to be provided at the perimeter of the work area adjacent to the airfield operations area (AOA) and at specific locations determined by the Engineer and Owner.

The contractor shall submit a phasing plan 7 days prior to the pre-construction conference. During the weekly construction coordination meetings, the contractor will be required to identify upcoming work he will be working on for the following 2 weeks and to provide a plan of barricade locations.

3. AREAS AND OPERATIONS AFFECTED BY CONSTRUCTION ACTIVITIES

The only existing airfield operations areas affected by this project are the locations

directly adjacent to existing Terminal Gate A-1 and future Concourse Gate C-1 . These general areas are shown on the Project Layout Plan Exhibit included herein. Airport tenants will be briefed on the phasing plan. Construction equipment will not penetrate any taxilane object free area (TOFA) or runway obstacle free zone (OFZ). There are no permanent structures included in this project that penetrate the FAR Part 77 airspace.

4. PROTECTION OF NAVIGATION AIDS (NAVAIDS)

The project is not located in the area of any NAVAIDS, and the contractor is prohibited from entering areas outside the project limits or haul routes shown on the Project Layout Plan Exhibit. The contractor is subject to fines for entering AOA areas outside these limits.

5. CONTRACTOR ACCESS

a. The contractor's access points, access/haul routes, and possible staging areas are identified on the Project Layout Plan Exhibit. The contractor is not to use runways and taxiways as a haul routes.

b. The Contractor's employee personal vehicles will not be allowed in the AOA and will be required to park outside the airfield AOA security fence. The contractor's work vehicles must have company signs on each side of the vehicle. Additionally, any work vehicle operating on the airport AOA must also have a flashing yellow beacon.

c. Two-Way Radio Communication: All work for this project is located outside the movement area, so communications with the Air Traffic Control Tower is not needed or allowed. The contractor will be required to stay in contact with Airport Operations Communications Center (AOC) via cell phone.

6. WILDLIFE MANAGEMENT

There are no wildlife issues at the Destin – Fort Walton Beach Airport that this project will affect. The following wildlife attractant mitigation procedures are in place:

a. The contractor will be required to immediately collect and dispose of any food scraps from construction personnel activity.

7. FOREIGN OBJECT DEBRIS (FOD) MANAGEMENT

The contractor will be required to continuously clear the project site of any and all debris capable of being blown by wind onto active airfield areas. Any debris or dirt from the project site deposited on any airfield pavement shall be cleaned immediately by a motor driven sweeper or vacuum, which the contractor is required to have onsite at all times. Sweepers must be equipped with non-metallic bristles.

8. HAZARDOUS MATERIALS (HAZMAT) MANAGEMENT

The project site drains to an existing stormwater retention area which will prevent hazardous material spills from being discharged offsite; however, the contractor will not be required or allowed to bring hazardous materials onsite and will not be required to provide a plan for the management of such materials.

The project involves grading and excavation work and includes a Stormwater Pollution Prevention Plan for erosion and sediment control. The contractor will be required to file with the FDEP a Notice of Intent (NOI) to use the NPDES generic permit for stormwater discharges for large and small construction projects.

9. NOTIFICATION OF CONSTRUCTION ACTIVITIES

a. The Owner shall maintain and distribute a list of responsible representatives/points of contacts with phone numbers and e-mail addresses. For the Owner this shall include the Project Manager, Construction Manager, and the Engineer's Resident Project Representative (RPR). Contacts from the Contractor will include the Project Manager, Site Superintendant, Safety Officer, and any subcontractor representatives. It will also include representatives from the FAA ADO office, and the Engineer of Record. The Contractor's Safety Officer shall be on call 24 hours a day for emergency maintenance of airport hazard lighting, barricades, and other safety features.

b. The contractor shall notify the Airport's Project Manager, Operations Manager, or Inspector of upcoming work activity that will impact the active AOA not less than 48 hours prior to that activity.

c. The contractor will need to call the AOC for medical, firefighting, and police response who will notify the Aircraft Rescue and Fire Fighting (ARFF) facility and/or Airport Police. The Engineer's RPR is also to be immediately notified.

d. All the above information, including the appropriate phone numbers, will be distributed at the pre-construction conference.

e. The FAA will need to be notified of equipment and operations that affects navigable airspace. Upon notice of award, the contractor will be asked to provide the Owner with a list of equipment and their height, so this can be reported to the FAA using form 7460-1 and/or the FAA OE/AAA website.

f. None of the Airport's NAVAIDs will be affected by this project.

10. INSPECTION REQUIREMENTS

The Engineer's Resident Project Representative will conduct daily inspections at a

minimum. The Engineer of Record will make periodic inspections to verify compliance with the phasing and safety plan and as needed to resolve questions or disputes.

11. UNDERGROUND UTILITIES

The project will require relocation/extension of existing water lines, sanitary lines, and storm lines. These relocations/extensions will be completely within the airport property. No easements will be required.

12. PENALTIES

Any fines or assessments levied against the Sponsor as a result of unauthorized intrusions in the AOA, which include entering AOA areas outside the project limits, or other violations by the Contractor's personnel or those of his subcontractors will be passed on to the Contractor. In addition, the Contractor will be subject to a fine of \$1,000.00 per incident, assessed by the Sponsor.

13. SPECIAL CONDITIONS

The airport has not identified any special conditions requiring any special response/mitigation plan.

14. RUNWAY AND TAXIWAY/TAXILANE VISUAL AIDS

a. Taxiways/Taxilanes: Lighted low-profile barricades must be installed as described in Section 2 above or as directed by Airport Operations. There is no existing airfield lighting or lighted guidance signage affected by the project, and no new taxiway lighting or guidance signage is included in the project.

b. Runways and NAVAIDS: There is no work in this project that affects the runways or NAVAIDS on the airport.

15. MARKING AND SIGNS FOR ACCESS ROUTES

Access Routes will be staked and marked with "CONSTRUCTION HAUL ROUTE".

16. HAZARD MARKING AND LIGHTING

Airfield barricades will be required to have red flashing or steady burning lights. In the event night work is required, the Contractor's vehicles will be required to have yellow flashing beacons. Additional requirements are in AC 150/5210-5D – Painting, Marking, and Lighting of Vehicles used on Airports, attached herein as Appendix "B". The contractor's Safety Officer, as discussed in Section 9 above will be responsible for maintenance of barricades.

17. WORK ZONE LIGHTING FOR NIGHTTIME CONSTRUCTION

If lighting for nighttime construction is necessary, all lighting shall be directed towards

project area only, and no lighting shall be pointed southward in direction of adjacent taxiway or existing Terminal Gate A-1 or future Concourse Gate C-1.

18. PROTECTION OF RUNWAY AND TAXIWAY SAFETY AREAS AND OBJECT FREE AREAS.

a. Taxilanes: Barricades are to be provided at the perimeter of the work area adjacent to the AOA (end of existing taxilane) and at specific locations determined by the Engineer and Owner as described above in Section 2. There is no work in this project within the terminal apron taxilane object free area (TOFA).

b. Runways: There is no work in this project that affects any runway safety or object free area.

c. Penalties as discussed in Section 12 may be levied against the contractor for any entry into these areas.

19. OTHER LIMITATIONS ON CONSTRUCTION

There are no other limitations on construction.

APPENDIX A

FAA AC 150/5370-2G

OPERATIONAL SAFETY ON AIRPORTS DURING CONSTRUCTION

U.S. Department
of Transportation
**Federal Aviation
Administration**

Advisory Circular

Subject: Operational Safety on
Airports During Construction

Date: 12/13/2017
Initiated By: AAS-100

AC No: 150/5370-2G
Change:

1 **Purpose.**

This AC sets forth guidelines for operational safety on airports during construction.

2 **Cancellation.**

This AC cancels AC 150/5370-2F, *Operational Safety on Airports during Construction*, dated September 29, 2011.

3 **Application.**

This AC assists airport operators in complying with Title 14 Code of Federal Regulations (CFR) Part 139, *Certification of Airports*. For those certificated airports, this AC provides one way, but not the only way, of meeting those requirements. The use of this AC is mandatory for those airport construction projects receiving funds under the Airport Improvement Program (AIP). See Grant Assurance No. 34, *Policies, Standards, and Specifications*. While we do not require non-certificated airports without grant agreements or airports using Passenger Facility Charge (PFC) Program funds for construction projects to adhere to these guidelines, we recommend that they do so to help these airports maintain operational safety during construction.

4 **Related Documents.**

ACs and Orders referenced in the text of this AC do not include a revision letter, as they refer to the latest version. [Appendix A](#) contains a list of reading material on airport construction, design, and potential safety hazards during construction, as well as instructions for obtaining these documents.

5 **Principal Changes.**

The AC incorporates the following principal changes:

1. Notification about impacts to both airport owned and FAA-owned NAVAIDs was added. See paragraph [2.13.5.3](#), NAVAIDs.

2. Guidance for the use of orange construction signs was added. See paragraph 2.18.4.2, Temporary Signs.
3. Open trenches or excavations may be permitted in the taxiway safety area while the taxiway is open to aircraft operations, subject to restrictions. See paragraph 2.22.3.4, Excavations.
4. Guidance for temporary shortened runways and displaced thresholds has been enhanced. See Figure 2-1 and Figure 2-2.
5. Figures have been improved and a new Appendix F on the placement of orange construction signs has been added.

Hyperlinks (allowing the reader to access documents located on the internet and to maneuver within this document) are provided throughout this document and are identified with underlined text. When navigating within this document, return to the previously viewed page by pressing the “ALT” and “ ← ” keys simultaneously.

Figures in this document are schematic representations and are not to scale.

6 **Use of Metrics.**

Throughout this AC, U.S. customary units are used followed with “soft” (rounded) conversion to metric units. The U.S. customary units govern.

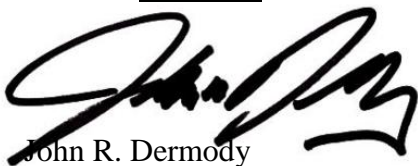

7 **Where to Find this AC.**

You can view a list of all ACs at

http://www.faa.gov/regulations_policies/advisory_circulars/. You can view the Federal Aviation Regulations at http://www.faa.gov/regulations_policies/faa_regulations/.

8 **Feedback on this AC.**

If you have suggestions for improving this AC, you may use the Advisory Circular Feedback form at the end of this AC.

John R. Dermody

Director of Airport Safety and Standards

CHAPTER 1. PLANNING AN AIRFIELD CONSTRUCTION PROJECT

1.1 Overview.

Airports are complex environments, and procedures and conditions associated with construction activities often affect aircraft operations and can jeopardize operational safety. Safety considerations are paramount and may make operational impacts unavoidable. However, careful planning, scheduling, and coordination of construction activities can minimize disruption of normal aircraft operations and avoid situations that compromise the airport's operational safety. The airport operator must understand how construction activities and aircraft operations affect one another to be able to develop an effective plan to complete the project. While the guidance in this AC is primarily used for construction operations, the concepts, methods and procedures described may also enhance the day-to-day airport maintenance operations, such as lighting maintenance and snow removal operations.

1.2 Plan for Safety.

Safety, maintaining aircraft operations, and construction costs are all interrelated. Since safety must not be compromised, the airport operator must strike a balance between maintaining aircraft operations and construction costs. This balance will vary widely depending on the operational needs and resources of the airport and will require early coordination with airport users and the FAA. As the project design progresses, the necessary construction locations, activities, and associated costs will be identified and their impact to airport operations must be assessed. Adjustments are made to the proposed construction activities, often by phasing the project, and/or to airport operations to maintain operational safety. This planning effort will ultimately result in a project Construction Safety and Phasing Plan (CSPP). The development of the CSPP takes place through the following five steps:

1.2.1 Identify Affected Areas.

The airport operator must determine the geographic areas on the airport affected by the construction project. Some, such as a runway extension, will be defined by the project. Others may be variable, such as the location of haul routes and material stockpiles.

1.2.2 Describe Current Operations.

Identify the normal airport operations in each affected area for each phase of the project. This becomes the baseline from which the impact on operations by construction activities can be measured. This should include a narrative of the typical users and aircraft operating within the affected areas. It should also include information related to airport operations: the Aircraft Approach Category (AAC) and Airplane Design Group (ADG) of the airplanes that operate on each runway; the ADG and Taxiway Design Group (TDG)¹ for each affected taxiway; designated approach visibility minimums;

¹ Find Taxiway Design Group information in [AC 150/5300-13, Airport Design](#).

available approach and departure procedures; most demanding aircraft; declared distances; available air traffic control services; airport Surface Movement Guidance and Control System (SMGCS) plan; and others. The applicable seasons, days and times for certain operations should also be identified as applicable.

1.2.3 Allow for Temporary Changes to Operations.

To the extent practical, current airport operations should be maintained during the construction. In consultation with airport users, Aircraft Rescue and Fire Fighting (ARFF) personnel, and FAA Air Traffic Organization (ATO) personnel, the airport operator should identify and prioritize the airport's most important operations. The construction activities should be planned, through project phasing if necessary, to safely accommodate these operations. When the construction activities cannot be adjusted to safely maintain current operations, regardless of their importance, then the operations must be revised accordingly. Allowable changes include temporary revisions to approach procedures, restricting certain aircraft to specific runways and taxiways, suspension of certain operations, decreased weights for some aircraft due to shortened runways, and other changes. An example of a table showing temporary operations versus current operations is shown in Appendix E.

1.2.4 Take Required Measures to Revise Operations.

Once the level and type of aircraft operations to be maintained are identified, the airport operator must determine the measures required to safely conduct the planned operations during the construction. These measures will result in associated costs, which can be broadly interpreted to include not only direct construction costs, but also loss of revenue from impacted operations. Analysis of costs may indicate a need to reevaluate allowable changes to operations. As aircraft operations and allowable changes will vary widely among airports, this AC presents general guidance on those subjects.

1.2.5 Manage Safety Risk.

The FAA is committed to incorporating proactive safety risk management (SRM) tools into its decision-making processes. FAA Order 5200.11, *FAA Airports (ARP) Safety Management System (SMS)*, requires the FAA to conduct a Safety Assessment for certain triggering actions. Certain airport projects may require the airport operator to provide a Project Proposal Summary to help the FAA determine whether a Safety Assessment is required prior to FAA approval of the CSPP. The airport operator must coordinate with the appropriate FAA Airports Regional or District Office early in the development of the CSPP to determine the need for a Safety Risk Assessment. If the FAA requires an assessment, the airport operator must at a minimum:

1. Notify the appropriate FAA Airports Regional or District Office during the project "scope development" phase of any project requiring a CSPP.
2. Provide documents identified by the FAA as necessary to conduct SRM.
3. Participate in the SRM process for airport projects.
4. Provide a representative to participate on the SRM panel.

5. Ensure that all applicable SRM identified risks elements are recorded and mitigated within the CSPP.

1.3 **Develop a Construction Safety and Phasing Plan (CSPP).**

Development of an effective CSPP will require familiarity with many other documents referenced throughout this AC. See Appendix A for a list of related reading material.

1.3.1 List Requirements.

A CSPP must be developed for each on-airfield construction project funded by the Airport Improvement Program (AIP) or located on an airport certificated under Part 139. For on-airfield construction projects at Part 139 airports funded without AIP funds, the preparation of a CSPP represents an acceptable method the certificate holder may use to meet Part 139 requirements during airfield construction activity. As per FAA Order 5200.11, projects that require Safety Assessments do not include construction, rehabilitation, or change of any facility that is entirely outside the air operations area, does not involve any expansion of the facility envelope and does not involve construction equipment, haul routes or placement of material in locations that require access to the air operations area, increase the facility envelope, or impact line-of-sight. Such facilities may include passenger terminals and parking or other structures. However, extraordinary circumstances may trigger the need for a Safety Assessment and a CSPP. The CSPP is subject to subsequent review and approval under the FAA's Safety Risk Management procedures (see paragraph 1.2.5).

1.3.2 Prepare a Safety Plan Compliance Document (SPCD).

The Safety Plan Compliance Document (SPCD) details how the contractor will comply with the CSPP. Also, it will not be possible to determine all safety plan details (for example specific hazard equipment and lighting, contractor's points of contact, construction equipment heights) during the development of the CSPP. The successful contractor must define such details by preparing an SPCD that the airport operator reviews for approval prior to issuance of a notice-to-proceed. The SPCD is a subset of the CSPP, similar to how a shop drawing review is a subset to the technical specifications.

1.3.3 Assume Responsibility for the CSPP.

The airport operator is responsible for establishing and enforcing the CSPP. The airport operator may use the services of an engineering consultant to help develop the CSPP. However, writing the CSPP cannot be delegated to the construction contractor. Only those details the airport operator determines cannot be addressed before contract award are developed by the contractor and submitted for approval as the SPCD. The SPCD does not restate nor propose differences to provisions already addressed in the CSPP.

1.4 **Who Is Responsible for Safety During Construction?**

1.4.1 Establish a Safety Culture.

Everyone has a role in operational safety on airports during construction: the airport operator, the airport's consultants, the construction contractor and subcontractors, airport users, airport tenants, ARFF personnel, Air Traffic personnel, including Technical Operations personnel, FAA Airports Division personnel, and others, such as military personnel at any airport supporting military operations (e.g. national guard or a joint use facility). Close communication and coordination between all affected parties is the key to maintaining safe operations. Such communication and coordination should start at the project scoping meeting and continue through the completion of the project. The airport operator and contractor should conduct onsite safety inspections throughout the project and immediately remedy any deficiencies, whether caused by negligence, oversight, or project scope change.

1.4.2 Assess Airport Operator's Responsibilities.

An airport operator has overall responsibility for all activities on an airport, including construction. This includes the predesign, design, preconstruction, construction, and inspection phases. Additional information on the responsibilities listed below can be found throughout this AC. The airport operator must:

- 1.4.2.1 Develop a CSPP that complies with the safety guidelines of Chapter 2, Construction Safety and Phasing Plans, and Chapter 3, Guidelines for Writing a CSPP. The airport operator may develop the CSPP internally or have a consultant develop the CSPP for approval by the airport operator. For tenant sponsored projects, approve a CSPP developed by the tenant or its consultant.
- 1.4.2.2 Require, review and approve the SPCD by the contractor that indicates how it will comply with the CSPP and provides details that cannot be determined before contract award.
- 1.4.2.3 Convene a preconstruction meeting with the construction contractor, consultant, airport employees and, if appropriate, tenant sponsor and other tenants to review and discuss project safety before beginning construction activity. The appropriate FAA representatives should be invited to attend the meeting. See AC 150/5370-12, Quality Management for Federally Funded Airport Construction Projects. (Note “FAA” refers to the Airports Regional or District Office, the Air Traffic Organization, Flight Standards Service, and other offices that support airport operations, flight regulations, and construction/environmental policies.)
- 1.4.2.4 Ensure contact information is accurate for each representative/point of contact identified in the CSPP and SPCD.
- 1.4.2.5 Hold weekly or, if necessary, daily safety meetings with all affected parties to coordinate activities.
- 1.4.2.6 Notify users, ARFF personnel, and FAA ATO personnel of construction and conditions that may adversely affect the operational safety of the airport via Notices to Airmen (NOTAM) and other methods, as appropriate. Convene a meeting for review and discussion if necessary.
- 1.4.2.7 Ensure construction personnel know applicable airport procedures and changes to those procedures that may affect their work.
- 1.4.2.8 Ensure that all temporary construction signs are located per the scheduled list for each phase of the project.
- 1.4.2.9 Ensure construction contractors and subcontractors undergo training required by the CSPP and SPCD.
- 1.4.2.10 Ensure vehicle and pedestrian operations addressed in the CSPP and SPCD are coordinated with airport tenants, the airport traffic control tower (ATCT), and construction contractors.
- 1.4.2.11 At certificated airports, ensure each CSPP and SPCD is consistent with Part 139.

- 1.4.2.12 Conduct inspections sufficiently frequently to ensure construction contractors and tenants comply with the CSPP and SPCD and that there are no altered construction activities that could create potential safety hazards.
 - 1.4.2.13 Take immediate action to resolve safety deficiencies.
 - 1.4.2.14 At airports subject to 49 CFR Part 1542, *Airport Security*, ensure construction access complies with the security requirements of that regulation.
 - 1.4.2.15 Notify appropriate parties when conditions exist that invoke provisions of the CSPP and SPCD (for example, implementation of low-visibility operations).
 - 1.4.2.16 Ensure prompt submittal of a Notice of Proposed Construction or Alteration (Form 7460-1) for conducting an aeronautical study of potential obstructions such as tall equipment (cranes, concrete pumps, other), stock piles, and haul routes. A separate form may be filed for each potential obstruction, or one form may be filed describing the entire construction area and maximum equipment height. In the latter case, a separate form must be filed for any object beyond or higher than the originally evaluated area/height. The FAA encourages online submittal of forms for expediency at <https://oeaaa.faa.gov/oeaaa/external/portal.jsp>. The appropriate FAA Airports Regional or District Office can provide assistance in determining which objects require an aeronautical study.
 - 1.4.2.17 Ensure prompt transmission of the Airport Sponsor Strategic Event Submission, FAA Form 6000-26, located at https://oeaaa.faa.gov/oeaaa/external/content/AIRPORT_SPONSOR_STRATEGIC_EVENT_SUBMISSION_FORM.pdf, to assure proper coordination for NAS Strategic Interruption per Service Level Agreement with ATO.
 - 1.4.2.18 Promptly notify the FAA Airports Regional or District Office of any proposed changes to the CSPP prior to implementation of the change. Changes to the CSPP require review and approval by the airport operator and the FAA. The FAA Airports Regional or District office will determine if further coordination within the FAA is needed. Coordinate with appropriate local and other federal government agencies, such as Environmental Protection Agency (EPA), Occupational Safety and Health Administration (OSHA), Transportation Security Administration (TSA), and the state environmental agency.
- 1.4.3 Define Construction Contractor's Responsibilities.
The contractor is responsible for complying with the CSPP and SPCD. The contractor must:

- 1.4.3.1 Submit a Safety Plan Compliance Document (SPCD) to the airport operator describing how it will comply with the requirements of the CSPP and supply any details that could not be determined before contract award. The SPCD must include a certification statement by the contractor, indicating an understanding of the operational safety requirements of the CSPP and the assertion of compliance with the approved CSPP and SPCD unless written approval is granted by the airport operator. Any construction practice proposed by the contractor that does not conform to the CSPP and SPCD may impact the airport's operational safety and will require a revision to the CSPP and SPCD and re-coordination with the airport operator and the FAA in advance.
- 1.4.3.2 Have available at all times copies of the CSPP and SPCD for reference by the airport operator and its representatives, and by subcontractors and contractor employees.
- 1.4.3.3 Ensure that construction personnel are familiar with safety procedures and regulations on the airport. Provide a point of contact who will coordinate an immediate response to correct any construction-related activity that may adversely affect the operational safety of the airport. Many projects will require 24-hour coverage.
- 1.4.3.4 Identify in the SPCD the contractor's on-site employees responsible for monitoring compliance with the CSPP and SPCD during construction. At least one of these employees must be on-site when active construction is taking place.
- 1.4.3.5 Conduct sufficient inspections to ensure construction personnel comply with the CSPP and SPCD and that there are no altered construction activities that could create potential safety hazards.
- 1.4.3.6 Restrict movement of construction vehicles and personnel to permitted construction areas by flagging, barricading, erecting temporary fencing, or providing escorts, as appropriate, and as specified in the CSPP and SPCD.
- 1.4.3.7 Ensure that no contractor employees, employees of subcontractors or suppliers, or other persons enter any part of the air operations area (AOA) from the construction site unless authorized.
- 1.4.3.8 Ensure prompt submittal through the airport operator of Form 7460-1 for the purpose of conducting an aeronautical study of contractor equipment such as tall equipment (cranes, concrete pumps, and other equipment), stock piles, and haul routes when different from cases previously filed by the airport operator. The FAA encourages online submittal of forms for expediency at <https://oeaaa.faa.gov/oeaaa/external/portal.jsp>.

- 1.4.3.9 Ensure that all necessary safety mitigations are understood by all parties involved, and any special requirements of each construction phase will be fulfilled per the approved timeframe.
- 1.4.3.10 Participate in pre-construction meetings to review construction limits, safety mitigations, NOTAMs, and understand all special airport operational needs during each phase of the project.

1.4.4 Define Tenant's Responsibilities.

If planning construction activities on leased property, Airport tenants, such as airline operators, fixed base operators, and FAA ATO/Technical Operations sponsoring construction are strongly encouraged to:

1. Develop, or have a consultant develop, a project specific CSPP and submit it to the airport operator. The airport operator may forgo a complete CSPP submittal and instead incorporate appropriate operational safety principles and measures addressed in the advisory circular within their tenant lease agreements.
2. In coordination with its contractor, develop an SPCD and submit it to the airport operator for approval issued prior to issuance of a Notice to Proceed.
3. Ensure that construction personnel are familiar with safety procedures and regulations on the airport during all phases of the construction.
4. Provide a point of contact of who will coordinate an immediate response to correct any construction-related activity that may adversely affect the operational safety of the airport.
5. Identify in the SPCD the contractor's on-site employees responsible for monitoring compliance with the CSPP and SPCD during construction. At least one of these employees must be on-site when active construction is taking place.
6. Ensure that no tenant or contractor employees, employees of subcontractors or suppliers, or any other persons enter any part of the AOA from the construction site unless authorized.
7. Restrict movement of construction vehicles to construction areas by flagging and barricading, erecting temporary fencing, or providing escorts, as appropriate, as specified in the CSPP and SPCD.
8. Ensure prompt submittal through the airport operator of Form 7460-1 for conducting an aeronautical study of contractor equipment such as tall equipment (cranes, concrete pumps, other), stock piles, and haul routes. The FAA encourages online submittal of forms for expediency at <https://oeaaa.faa.gov/oeaaa/external/portal.jsp>.
9. Participate in pre-construction meetings to review construction limits, safety mitigations, NOTAMs, and understand all special airport operational needs during each phase of the project.

CHAPTER 2. CONSTRUCTION SAFETY AND PHASING PLANS

2.1 **Overview.**

Aviation safety is the primary consideration at airports, especially during construction. The airport operator's CSPP and the contractor's Safety Plan Compliance Document (SPCD) are the primary tools to ensure safety compliance when coordinating construction activities with airport operations. These documents identify all aspects of the construction project that pose a potential safety hazard to airport operations and outline respective mitigation procedures for each hazard. They must provide information necessary for the Airport Operations department to conduct airfield inspections and expeditiously identify and correct unsafe conditions during construction. All aviation safety provisions included within the project drawings, contract specifications, and other related documents must also be reflected in the CSPP and SPCD.

2.2 **Assume Responsibility.**

Operational safety on the airport remains the airport operator's responsibility at all times. The airport operator must develop, certify, and submit for FAA approval each CSPP. It is the airport operator's responsibility to apply the requirements of the FAA approved CSPP. The airport operator must revise the CSPP when conditions warrant changes and must submit the revised CSPP to the FAA for approval. The airport operator must also require and approve a SPCD from the project contractor.

2.3 **Submit the CSPP.**

Construction Safety and Phasing Plans should be developed concurrently with the project design. Milestone versions of the CSPP should be submitted for review and approval as follows. While these milestones are not mandatory, early submission will help to avoid delays. Submittals are preferred in 8.5 × 11 inch or 11 × 17 inch format for compatibility with the FAA's Obstruction Evaluation / Airport Airspace Analysis (OE / AAA) process.

2.3.1 Submit an Outline/Draft.

By the time approximately 25% to 30% of the project design is completed, the principal elements of the CSPP should be established. Airport operators are encouraged to submit an outline or draft, detailing all CSPP provisions developed to date, to the FAA for review at this stage of the project design.

2.3.2 Submit a CSPP.

The CSPP should be formally submitted for FAA approval when the project design is 80 percent to 90 percent complete. Since provisions in the CSPP will influence contract costs, it is important to obtain FAA approval in time to include all such provisions in the procurement contract.

2.3.3 Submit an SPCD.

The contractor should submit the SPCD to the airport operator for approval to be issued prior to the Notice to Proceed.

2.3.4 Submit CSPP Revisions.

All revisions to a previously approved CSPP must be re-submitted to the FAA for review and approval/disapproval action.

2.4 **Meet CSPP Requirements.**

2.4.1 To the extent possible, the CSPP should address the following as outlined in Chapter 3, Guidelines for Writing a CSPP. Details that cannot be determined at this stage are to be included in the SPCD.

1. Coordination.
 - a. Contractor progress meetings.
 - b. Scope or schedule changes.
 - c. FAA ATO coordination.
2. Phasing.
 - a. Phase elements.
 - b. Construction safety drawings.
3. Areas and operations affected by the construction activity.
 - a. Identification of affected areas.
 - b. Mitigation of effects.
4. Protection of navigation aids (NAVAIDs).
5. Contractor access.
 - a. Location of stockpiled construction materials.
 - b. Vehicle and pedestrian operations.
6. Wildlife management.
 - a. Trash.
 - b. Standing water.
 - c. Tall grass and seeds.
 - d. Poorly maintained fencing and gates.
 - e. Disruption of existing wildlife habitat.
7. Foreign Object Debris (FOD) management.
8. Hazardous materials (HAZMAT) management.
9. Notification of construction activities.

- a. Maintenance of a list of responsible representatives/ points of contact.
 - b. NOTAM.
 - c. Emergency notification procedures.
 - d. Coordination with ARFF Personnel.
 - e. Notification to the FAA.
10. Inspection requirements.
 - a. Daily (or more frequent) inspections.
 - b. Final inspections.
 11. Underground utilities.
 12. Penalties.
 13. Special conditions.
 14. Runway and taxiway visual aids. Marking, lighting, signs, and visual NAVAIDs.
 - a. General.
 - b. Markings.
 - c. Lighting and visual NAVAIDs.
 - d. Signs, temporary, including orange construction signs, and permanent signs.
 15. Marking and signs for access routes.
 16. Hazard marking and lighting.
 - a. Purpose.
 - b. Equipment.
 17. Work zone lighting for nighttime construction (if applicable).
 18. Protection of runway and taxiway safety areas, object free areas, obstacle free zones, and approach/departure surfaces.
 - a. Runway Safety Area (RSA).
 - b. Runway Object Free Area (ROFA).
 - c. Taxiway Safety Area (TSA). Provide details for any adjustments to Taxiway Safety Area width to allow continued operation of smaller aircraft. See paragraph 2.22.3.
 - d. Taxiway Object Free Area (TOFA). Provide details for any continued aircraft operations while construction occurs within the TOFA. See paragraph 2.22.4.
 - e. Obstacle Free Zone (OFZ).
 - f. Runway approach/departure surfaces.
 19. Other limitations on construction.
 - a. Prohibitions.

b. Restrictions.

2.4.2 The Safety Plan Compliance Document (SPCD) should include a general statement by the construction contractor that he/she has read and will abide by the CSPP. In addition, the SPCD must include all supplemental information that could not be included in the CSPP prior to the contract award. The contractor statement should include the name of the contractor, the title of the project CSPP, the approval date of the CSPP, and a reference to any supplemental information (that is, “I, (Name of Contractor), have read the (Title of Project) CSPP, approved on (Date), and will abide by it as written and with the following additions as noted:”). The supplemental information in the SPCD should be written to match the format of the CSPP indicating each subject by corresponding CSPP subject number and title. If no supplemental information is necessary for any specific subject, the statement, “No supplemental information,” should be written after the corresponding subject title. The SPCD should not duplicate information in the CSPP:

1. Coordination. Discuss details of proposed safety meetings with the airport operator and with contractor employees and subcontractors.
2. Phasing. Discuss proposed construction schedule elements, including:
 - a. Duration of each phase.
 - b. Daily start and finish of construction, including “night only” construction.
 - c. Duration of construction activities during:
 - i. Normal runway operations.
 - ii. Closed runway operations.
 - iii. Modified runway “Aircraft Reference Code” usage.
3. Areas and operations affected by the construction activity. These areas and operations should be identified in the CSPP and should not require an entry in the SPCD.
4. Protection of NAVAIDs. Discuss specific methods proposed to protect operating NAVAIDs.
5. Contractor access. Provide the following:
 - a. Details on how the contractor will maintain the integrity of the airport security fence (gate guards, daily log of construction personnel, and other).
 - b. Listing of individuals requiring driver training (for certificated airports and as requested).
 - c. Radio communications.
 - i. Types of radios and backup capabilities.
 - ii. Who will be monitoring radios.
 - iii. Who to contact if the ATCT cannot reach the contractor’s designated person by radio.

- d. Details on how the contractor will escort material delivery vehicles.
6. Wildlife management. Discuss the following:
 - a. Methods and procedures to prevent wildlife attraction.
 - b. Wildlife reporting procedures.
7. Foreign Object Debris (FOD) management. Discuss equipment and methods for control of FOD, including construction debris and dust.
8. Hazardous Materials (HAZMAT) management. Discuss equipment and methods for responding to hazardous spills.
9. Notification of construction activities. Provide the following:
 - a. Contractor points of contact.
 - b. Contractor emergency contact.
 - c. Listing of tall or other requested equipment proposed for use on the airport and the timeframe for submitting 7460-1 forms not previously submitted by the airport operator.
 - d. Batch plant details, including 7460-1 submittal.
10. Inspection requirements. Discuss daily (or more frequent) inspections and special inspection procedures.
11. Underground utilities. Discuss proposed methods of identifying and protecting underground utilities.
12. Penalties. Penalties should be identified in the CSPP and should not require an entry in the SPCD.
13. Special conditions. Discuss proposed actions for each special condition identified in the CSPP.
14. Runway and taxiway visual aids. Including marking, lighting, signs, and visual NAVAIDs. Discuss proposed visual aids including the following:
 - a. Equipment and methods for covering signage and airfield lights.
 - b. Equipment and methods for temporary closure markings (paint, fabric, other).
 - c. Temporary orange construction signs.
 - d. Types of temporary Visual Guidance Slope Indicators (VGSI).
15. Marking and signs for access routes. Discuss proposed methods of demarcating access routes for vehicle drivers.
16. Hazard marking and lighting. Discuss proposed equipment and methods for identifying excavation areas.
17. Work zone lighting for nighttime construction (if applicable). Discuss proposed equipment, locations, aiming, and shielding to prevent interference with air traffic control and aircraft operations.

18. Protection of runway and taxiway safety areas, object free areas, obstacle free zones, and approach/departure surfaces. Discuss proposed methods of identifying, demarcating, and protecting airport surfaces including:
 - a. Equipment and methods for maintaining Taxiway Safety Area standards.
 - b. Equipment and methods to ensure the safe passage of aircraft where Taxiway Safety Area or Taxiway Object Free Area standards cannot be maintained.
 - c. Equipment and methods for separation of construction operations from aircraft operations, including details of barricades.
19. Other limitations on construction should be identified in the CSPP and should not require an entry in the SPCD.

2.5 **Coordination.**

Airport operators, or tenants responsible for design, bidding and conducting construction on their leased properties, should ensure at all project developmental stages, such as predesign, prebid, and preconstruction conferences, they capture the subject of airport operational safety during construction (see [AC 150/5370-12, *Quality Management for Federally Funded Airport Construction Projects*](#)). In addition, the following should be coordinated as required:

2.5.1 Progress Meetings.

Operational safety should be a standing agenda item for discussion during progress meetings throughout the project developmental stages.

2.5.2 Scope or Schedule Changes.

Changes in the scope or duration at any of the project stages may require revisions to the CSPP and review and approval by the airport operator and the FAA (see paragraph [1.4.2.17](#)).

2.5.3 FAA ATO Coordination.

Early coordination with FAA ATO is highly recommended during the design phase and is required for scheduling Technical Operations shutdowns prior to construction. Coordination is critical to restarts of NAVAID services and to the establishment of any special procedures for the movement of aircraft. Formal agreements between the airport operator and appropriate FAA offices are recommended. All relocation or adjustments to NAVAIDs, or changes to final grades in critical areas, should be coordinated with FAA ATO and may require an FAA flight inspection prior to restarting the facility. Flight inspections must be coordinated and scheduled well in advance of the intended facility restart. Flight inspections may require a reimbursable agreement between the airport operator and FAA ATO. Reimbursable agreements should be coordinated a minimum of 12 months prior to the start of construction. (See paragraph [2.13.5.3.2](#) for required FAA notification regarding FAA-owned NAVAIDs.)

2.6 **Phasing.**

Once it has been determined what types and levels of airport operations will be maintained, the most efficient sequence of construction may not be feasible. In this case, the sequence of construction may be phased to gain maximum efficiency while allowing for the required operations. The development of the resulting construction phases should be coordinated with local Air Traffic personnel and airport users. The sequenced construction phases established in the CSPP must be incorporated into the project design and must be reflected in the contract drawings and specifications.

2.6.1 Phase Elements.

For each phase the CSPP should detail:

- Areas closed to aircraft operations.
- Duration of closures.
- Taxi routes and/or areas of reduced TSA and TOFA to reflect reduced ADG use.
- ARFF access routes.
- Construction staging, disposal, and cleanout areas.
- Construction access and haul routes.
- Impacts to NAVAIDs.
- Lighting, marking, and signing changes.
- Available runway length and/or reduced RSA and ROFA to reflect reduced ADG use.
- Declared distances (if applicable).
- Required hazard marking, lighting, and signing.
- Work zone lighting for nighttime construction (if applicable).
- Lead times for required notifications.

2.6.2 Construction Safety Drawings.

Drawings specifically indicating operational safety procedures and methods in affected areas (i.e., construction safety drawings) should be developed for each construction phase. Such drawings should be included in the CSPP as referenced attachments and should also be included in the contract drawing package.

2.7 **Areas and Operations Affected by Construction Activity.**

Runways and taxiways should remain in use by aircraft to the maximum extent possible without compromising safety. Pre-meetings with the FAA ATO will support operational simulations. See Appendix E for an example of a table showing temporary operations versus current operations. The tables in Appendix E can be useful for coordination among all interested parties, including FAA Lines of Business.

2.7.1 Identification of Affected Areas.

Identifying areas and operations affected by the construction helps to determine possible safety problems. The affected areas should be identified in the construction safety drawings for each construction phase. (See paragraph 2.6.2.) Of particular concern are:

2.7.1.1 **Closing, or Partial Closing, of Runways, Taxiways and Aprons, and Displaced Thresholds.**

When a runway is partially closed, a portion of the pavement is unavailable for any aircraft operation, meaning taxiing, landing, or takeoff in either direction on that pavement is prohibited. A displaced threshold, by contrast, is established to ensure obstacle clearance and adequate safety area for landing aircraft. The pavement prior to the displaced threshold is normally available for take-off in the direction of the displacement and for landing and takeoff in the opposite direction. Misunderstanding this difference, may result in issuance of an inaccurate NOTAM, and can lead to a hazardous condition.

2.7.1.1.1 Partially Closed Runways.

The temporarily closed portion of a partially closed runway will generally extend from the threshold to a taxiway that may be used for entering and exiting the runway. If the closed portion extends to a point between taxiways, pilots will have to back-taxi on the runway, which is an undesirable operation. See Figure 2-1 for a desirable configuration.

2.7.1.1.2 Displaced Thresholds.

Since the portion of the runway pavement between the permanent threshold and a standard displaced threshold is available for takeoff and for landing in the opposite direction, the temporary displaced threshold need not be located at an entrance/exit taxiway. See Figure 2-2.

2.7.1.2 Closing of aircraft rescue and fire fighting access routes.

2.7.1.3 Closing of access routes used by airport and airline support vehicles.

2.7.1.4 Interruption of utilities, including water supplies for fire fighting.

2.7.1.5 Approach/departure surfaces affected by heights of objects.

2.7.1.6 Construction areas, storage areas, and access routes near runways, taxiways, aprons, or helipads.

Figure 2-1. Temporary Partially Closed Runway

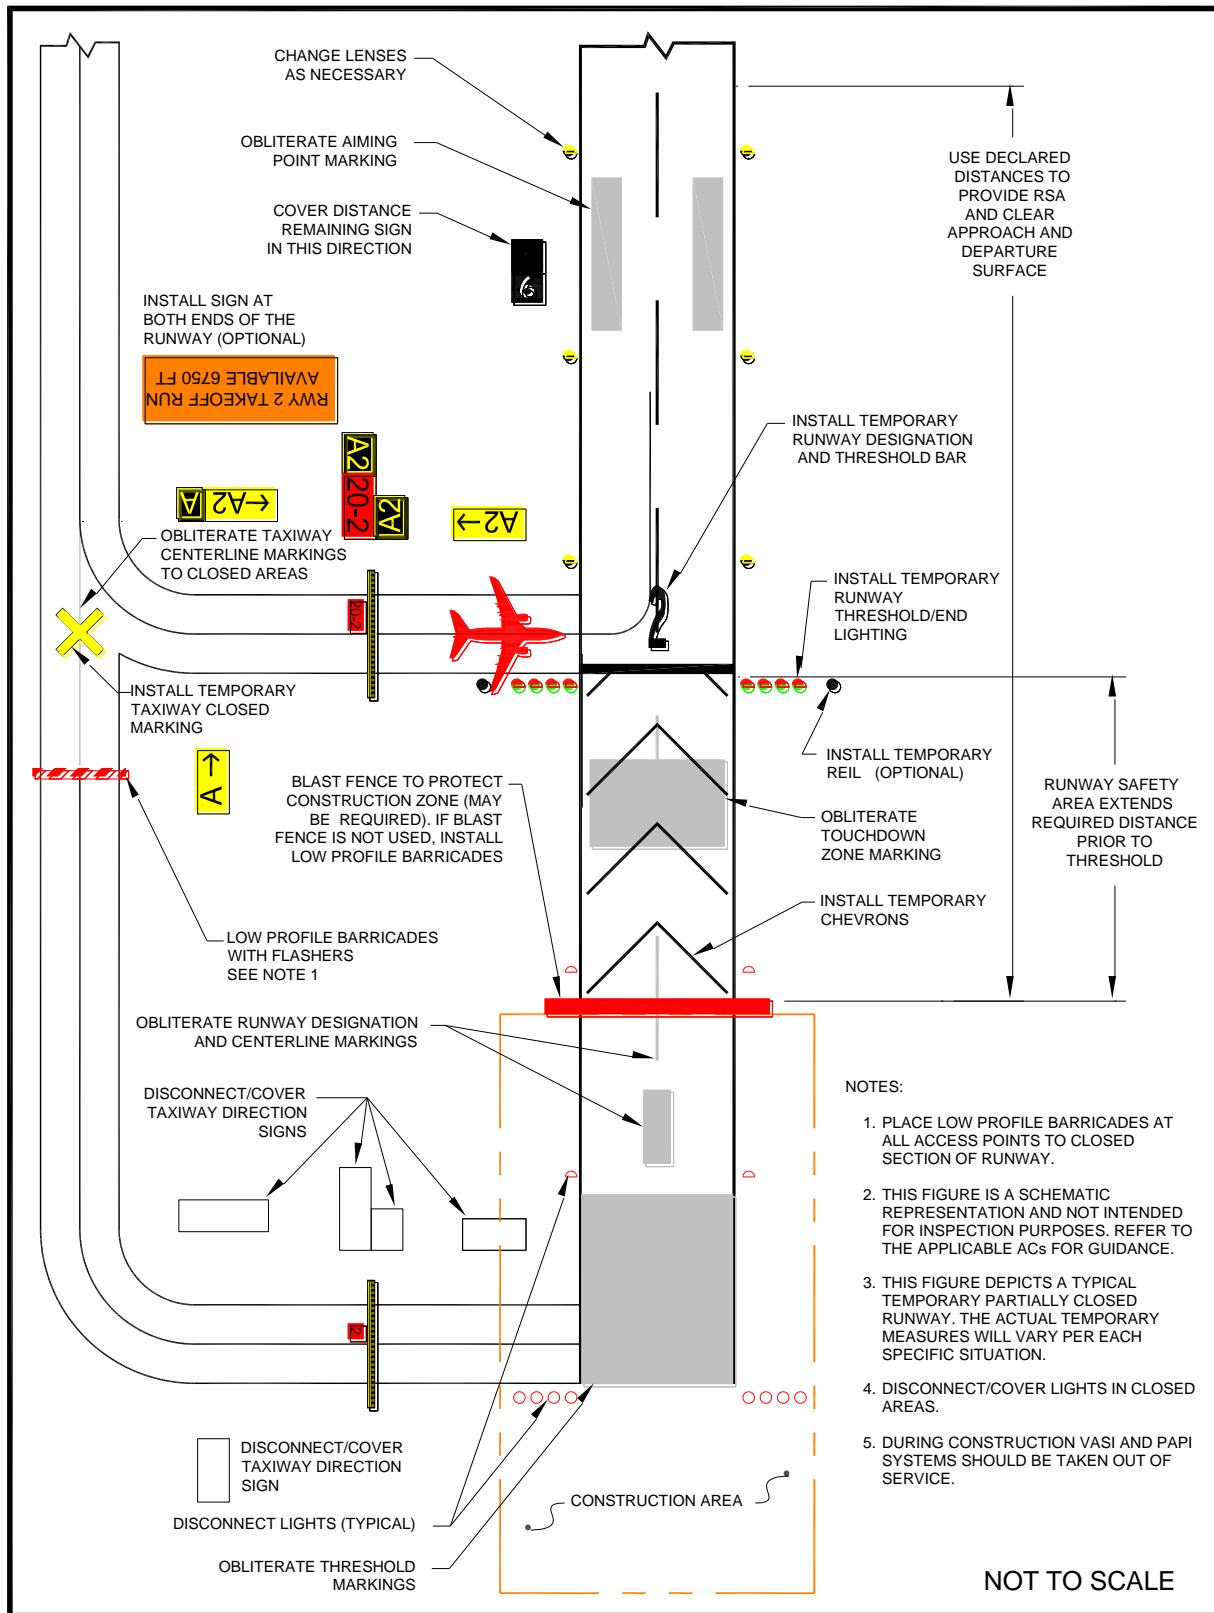

Figure 2-2. Temporary Displaced Threshold

Note: See paragraph 2.18.2.5.

2.7.2 Mitigation of Effects.

Establishment of specific procedures is necessary to maintain the safety and efficiency of airport operations. The CSPP must address:

- 2.7.2.1 Temporary changes to runway and/or taxi operations.
- 2.7.2.2 Detours for ARFF and other airport vehicles.
- 2.7.2.3 Maintenance of essential utilities.
- 2.7.2.4 Temporary changes to air traffic control procedures. Such changes must be coordinated with the ATO.

2.8 **Navigation Aid (NAVAID) Protection.**

Before commencing construction activity, parking vehicles, or storing construction equipment and materials near a NAVAID, coordinate with the appropriate FAA ATO/Technical Operations office to evaluate the effect of construction activity and the required distance and direction from the NAVAID. (See paragraph 2.13.5.3.) Construction activities, materials/equipment storage, and vehicle parking near electronic NAVAIDs require special consideration since they may interfere with signals essential to air navigation. If any NAVAID may be affected, the CSPP and SPCD must show an understanding of the “critical area” associated with each NAVAID and describe how it will be protected. Where applicable, the operational critical areas of NAVAIDs should be graphically delineated on the project drawings. Pay particular attention to stockpiling material, as well as to movement and parking of equipment that may interfere with line of sight from the ATCT or with electronic emissions. Interference from construction equipment and activities may require NAVAID shutdown or adjustment of instrument approach minimums for low visibility operations. This condition requires that a NOTAM be filed (see paragraph 2.13.2.) Construction activities and materials/equipment storage near a NAVAID must not obstruct access to the equipment and instruments for maintenance. Submittal of a 7460-1 form is required for construction vehicles operating near FAA NAVAIDs. (See paragraph 2.13.5.3.)

2.9 **Contractor Access.**

The CSPP must detail the areas to which the contractor must have access, and explain how contractor personnel will access those areas. Specifically address:

2.9.1 Location of Stockpiled Construction Materials.

Stockpiled materials and equipment storage are not permitted within the RSA and OFZ, and if possible should not be permitted within the Object Free Area (OFA) of an operational runway. Stockpiling material in the OFA requires submittal of a 7460-1 form and justification provided to the appropriate FAA Airports Regional or District Office for approval. The airport operator must ensure that stockpiled materials and equipment adjacent to these areas are prominently marked and lighted during hours of restricted visibility or darkness. (See paragraph 2.18.2.) This includes determining and

verifying that materials are stabilized and stored at an approved location so as not to be a hazard to aircraft operations and to prevent attraction of wildlife and foreign object damage from blowing or tracked material. See paragraphs [2.10](#) and [2.11](#).

2.9.2 Vehicle and Pedestrian Operations.

The CSPP should include specific vehicle and pedestrian requirements. Vehicle and pedestrian access routes for airport construction projects must be controlled to prevent inadvertent or unauthorized entry of persons, vehicles, or animals onto the AOA. The airport operator should coordinate requirements for vehicle operations with airport tenants, contractors, and the FAA air traffic manager. In regard to vehicle and pedestrian operations, the CSPP should include the following, with associated training requirements:

2.9.2.1 **Construction Site Parking.**

Designate in advance vehicle parking areas for contractor employees to prevent any unauthorized entry of persons or vehicles onto the AOA. These areas should provide reasonable contractor employee access to the job site.

2.9.2.2 **Construction Equipment Parking.**

Contractor employees must park and service all construction vehicles in an area designated by the airport operator outside the OFZ and never in the safety area of an active runway or taxiway. Unless a complex setup procedure makes movement of specialized equipment infeasible, inactive equipment must not be parked on a closed taxiway or runway. If it is necessary to leave specialized equipment on a closed taxiway or runway at night, the equipment must be well lighted. Employees should also park construction vehicles outside the OFA when not in use by construction personnel (for example, overnight, on weekends, or during other periods when construction is not active). Parking areas must not obstruct the clear line of sight by the ATCT to any taxiways or runways under air traffic control nor obstruct any runway visual aids, signs, or navigation aids. The FAA must also study those areas to determine effects on airport design criteria, surfaces established by 14 CFR Part 77, Safe, Efficient Use, and Preservation of the Navigable Airspace (Part 77), and on NAVAIDs and Instrument Approach Procedures (IAP). See paragraph [2.13.1](#) for further information.

2.9.2.3 **Access and Haul Roads.**

Determine the construction contractor's access to the construction sites and haul roads. Do not permit the construction contractor to use any access or haul roads other than those approved. Access routes used by contractor vehicles must be clearly marked to prevent inadvertent entry to areas open to airport operations. Pay special attention to ensure that if construction traffic is to share or cross any ARFF routes that ARFF right of way is not impeded at any time, and that construction traffic on haul

roads does not interfere with NAVAIDs or approach surfaces of operational runways. Address whether access gates will be blocked or inoperative or if a rally point will be blocked or inaccessible.

- 2.9.2.4 Marking and lighting of vehicles in accordance with AC 150/5210-5, *Painting, Marking, and Lighting of Vehicles Used on an Airport*.
- 2.9.2.5 Description of proper vehicle operations on various areas under normal, lost communications, and emergency conditions.
- 2.9.2.6 Required escorts.
- 2.9.2.7 **Training Requirements for Vehicle Drivers to Ensure Compliance with the Airport Operator's Vehicle Rules and Regulations.**
Specific training should be provided to vehicle operators, including those providing escorts. See AC 150/5210-20, *Ground Vehicle Operations on Airports*, for information on training and records maintenance requirements.
- 2.9.2.8 **Situational Awareness.**
Vehicle drivers must confirm by personal observation that no aircraft is approaching their position (either in the air or on the ground) when given clearance to cross a runway, taxiway, or any other area open to airport operations. In addition, it is the responsibility of the escort vehicle driver to verify the movement/position of all escorted vehicles at any given time. At non-towered airports, all aircraft movements and flight operations rely on aircraft operators to self-report their positions and intentions. However, there is no requirement for an aircraft to have radio communications. Because aircraft do not always broadcast their positions or intentions, visual checking, radio monitoring, and situational awareness of the surroundings is critical to safety.
- 2.9.2.9 **Two-Way Radio Communication Procedures.**
- 2.9.2.9.1 General.
The airport operator must ensure that tenant and construction contractor personnel engaged in activities involving unescorted operation on aircraft movement areas observe the proper procedures for communications, including using appropriate radio frequencies at airports with and without ATCT. When operating vehicles on or near open runways or taxiways, construction personnel must understand the critical importance of maintaining radio contact, as directed by the airport operator, with:
1. Airport operations
 2. ATCT

3. Common Traffic Advisory Frequency (CTAF), which may include UNICOM, MULTICOM.
4. Automatic Terminal Information Service (ATIS). This frequency is useful for monitoring conditions on the airport. Local air traffic will broadcast information regarding construction related runway closures and “shortened” runways on the ATIS frequency.

2.9.2.9.2 Areas Requiring Two-Way Radio Communication with the ATCT.

Vehicular traffic crossing active movement areas must be controlled either by two-way radio with the ATCT, escort, flagman, signal light, or other means appropriate for the particular airport.

2.9.2.9.3 Frequencies to be Used.

The airport operator will specify the frequencies to be used by the contractor, which may include the CTAF for monitoring of aircraft operations. Frequencies may also be assigned by the airport operator for other communications, including any radio frequency in compliance with Federal Communications Commission requirements. At airports with an ATCT, the airport operator will specify the frequency assigned by the ATCT to be used between contractor vehicles and the ATCT.

2.9.2.9.4 Proper radio usage, including read back requirements.

2.9.2.9.5 Proper phraseology, including the International Phonetic Alphabet.

2.9.2.9.6 Light Gun Signals.

Even though radio communication is maintained, escort vehicle drivers must also familiarize themselves with ATCT light gun signals in the event of radio failure. See the FAA safety placard “Ground Vehicle Guide to Airport Signs and Markings.” This safety placard may be downloaded through the Runway Safety Program Web site at http://www.faa.gov/airports/runway_safety/publications/ (see “Signs & Markings Vehicle Dashboard Sticker”) or obtained from the FAA Airports Regional Office.

2.9.2.10 **Maintenance of the secured area of the airport, including:**

2.9.2.10.1 Fencing and Gates.

Airport operators and contractors must take care to maintain security during construction when access points are created in the security fencing to permit the passage of construction vehicles or personnel. Temporary gates should be equipped so they can be securely closed and locked to prevent access by animals and unauthorized people. Procedures should be in place to ensure that only authorized persons and vehicles have access to the AOA and to prohibit “piggybacking” behind another person or vehicle. The Department of Transportation (DOT) document DOT/FAA/AR-

00/52, *Recommended Security Guidelines for Airport Planning and Construction*, provides more specific information on fencing. A copy of this document can be obtained from the Airport Consultants Council, Airports Council International, or American Association of Airport Executives.

2.9.2.10.2 Badging Requirements.

Airports subject to 49 CFR Part 1542, *Airport Security*, must meet standards for access control, movement of ground vehicles, and identification of construction contractor and tenant personnel.

2.10 **Wildlife Management.**

The CSPP and SPCD must be in accordance with the airport operator's wildlife hazard management plan, if applicable. See AC 150/5200-33, *Hazardous Wildlife Attractants On or Near Airports*, and CertAlert 98-05, *Grasses Attractive to Hazardous Wildlife*. Construction contractors must carefully control and continuously remove waste or loose materials that might attract wildlife. Contractor personnel must be aware of and avoid construction activities that can create wildlife hazards on airports, such as:

2.10.1 Trash.

Food scraps must be collected from construction personnel activity.

2.10.2 Standing Water.

2.10.3 Tall Grass and Seeds.

Requirements for turf establishment can be at odds with requirements for wildlife control. Grass seed is attractive to birds. Lower quality seed mixtures can contain seeds of plants (such as clover) that attract larger wildlife. Seeding should comply with the guidance in AC 150/5370-10, *Standards for Specifying Construction of Airports*, Item T-901, Seeding. Contact the local office of the United States Department of Agriculture Soil Conservation Service or the State University Agricultural Extension Service (County Agent or equivalent) for assistance and recommendations. These agencies can also provide liming and fertilizer recommendations.

2.10.4 Poorly Maintained Fencing and Gates.

See paragraph 2.9.2.10.1.

2.10.5 Disruption of Existing Wildlife Habitat.

While this will frequently be unavoidable due to the nature of the project, the CSPP should specify under what circumstances (location, wildlife type) contractor personnel should immediately notify the airport operator of wildlife sightings.

2.11 Foreign Object Debris (FOD) Management.

Waste and loose materials, commonly referred to as FOD, are capable of causing damage to aircraft landing gears, propellers, and jet engines. Construction contractors must not leave or place FOD on or near active aircraft movement areas. Materials capable of creating FOD must be continuously removed during the construction project. Fencing (other than security fencing) or covers may be necessary to contain material that can be carried by wind into areas where aircraft operate. See AC 150/5210-24, *Foreign Object Debris (FOD) Management*.

2.12 Hazardous Materials (HAZMAT) Management.

Contractors operating construction vehicles and equipment on the airport must be prepared to expeditiously contain and clean-up spills resulting from fuel or hydraulic fluid leaks. Transport and handling of other hazardous materials on an airport also requires special procedures. See AC 150/5320-15, *Management of Airport Industrial Waste*.

2.13 Notification of Construction Activities.

The CSPP and SPCD must detail procedures for the immediate notification of airport users and the FAA of any conditions adversely affecting the operational safety of the airport. It must address the notification actions described below, as applicable.

2.13.1 List of Responsible Representatives/points of contact for all involved parties, and procedures for contacting each of them, including after hours.

2.13.2 NOTAMs.

Only the airport operator may initiate or cancel NOTAMs on airport conditions, and is the only entity that can close or open a runway. The airport operator must coordinate the issuance, maintenance, and cancellation of NOTAMs about airport conditions resulting from construction activities with tenants and the local air traffic facility (control tower, approach control, or air traffic control center), and must either enter the NOTAM into NOTAM Manager, or provide information on closed or hazardous conditions on airport movement areas to the FAA Flight Service Station (FSS) so it can issue a NOTAM. The airport operator must file and maintain a list of authorized representatives with the FSS. Refer to AC 150/5200-28, *Notices to Airmen (NOTAMs) for Airport Operators*, for a sample NOTAM form. Only the FAA may issue or cancel NOTAMs on shutdown or irregular operation of FAA owned facilities. Any person having reason to believe that a NOTAM is missing, incomplete, or inaccurate must notify the airport operator. See paragraph 2.7.1.1 about issuing NOTAMs for partially closed runways versus runways with displaced thresholds.

2.13.3 Emergency notification procedures for medical, fire fighting, and police response.

2.13.4 Coordination with ARFF.

The CSPP must detail procedures for coordinating through the airport sponsor with ARFF personnel, mutual aid providers, and other emergency services if construction requires:

1. The deactivation and subsequent reactivation of water lines or fire hydrants, or
2. The rerouting, blocking and restoration of emergency access routes, or
3. The use of hazardous materials on the airfield.

2.13.5 Notification to the FAA.

2.13.5.1 **Part 77.**

Any person proposing construction or alteration of objects that affect navigable airspace, as defined in Part 77, must notify the FAA. This includes construction equipment and proposed parking areas for this equipment (i.e., cranes, graders, other equipment) on airports. FAA Form 7460-1, *Notice of Proposed Construction or Alteration*, can be used for this purpose and submitted to the appropriate FAA Airports Regional or District Office. See Appendix A to download the form. Further guidance is available on the FAA web site at oeaaa.faa.gov.

2.13.5.2 **Part 157.**

With some exceptions, Title 14 CFR Part 157, *Notice of Construction, Alteration, Activation, and Deactivation of Airports*, requires that the airport operator notify the FAA in writing whenever a non-Federally funded project involves the construction of a new airport; the construction, realigning, altering, activating, or abandoning of a runway, landing strip, or associated taxiway; or the deactivation or abandoning of an entire airport. Notification involves submitting FAA Form 7480-1, *Notice of Landing Area Proposal*, to the nearest FAA Airports Regional or District Office. See Appendix A to download the form.

2.13.5.3 **NAVAIDs.**

For emergency (short-notice) notification about impacts to both airport owned and FAA owned NAVAIDs, contact: 866-432-2622.

2.13.5.3.1 Airport Owned/FAA Maintained.

If construction operations require a shutdown of 24 hours or greater in duration, or more than 4 hours daily on consecutive days, of a NAVAID owned by the airport but maintained by the FAA, provide a 45-day minimum notice to FAA ATO/Technical Operations prior to facility shutdown, using Strategic Event Coordination (SEC) Form 6000.26 contained within FAA Order 6000.15, *General Maintenance Handbook for National Airspace System (NAS) Facilities*.

2.13.5.3.2 FAA Owned.

1. The airport operator must notify the appropriate FAA ATO Service Area Planning and Requirements (P&R) Group a minimum of 45 days prior to implementing an event that causes impacts to NAVAIDs, using SEC Form 6000.26.
2. Coordinate work for an FAA owned NAVAID shutdown with the local FAA ATO/Technical Operations office, including any necessary reimbursable agreements and flight checks. Detail procedures that address unanticipated utility outages and cable cuts that could impact FAA NAVAIDs. Refer to active Service Level Agreement with ATO for specifics.

2.14 **Inspection Requirements.**

2.14.1 Daily Inspections.

Inspections should be conducted at least daily, but more frequently if necessary to ensure conformance with the CSPP. A sample checklist is provided in Appendix D, Construction Project Daily Safety Inspection Checklist. See also AC 150/5200-18, Airport Safety Self-Inspection. Airport operators holding a Part 139 certificate are required to conduct self-inspections during unusual conditions, such as construction activities, that may affect safe air carrier operations.

2.14.2 Interim Inspections.

Inspections should be conducted of all areas to be (re)opened to aircraft traffic to ensure the proper operation of lights and signs, for correct markings, and absence of FOD. The contractor should conduct an inspection of the work area with airport operations personnel. The contractor should ensure that all construction materials have been secured, all pavement surfaces have been swept clean, all transition ramps have been properly constructed, and that surfaces have been appropriately marked for aircraft to operate safely. Only if all items on the list meet with the airport operator's approval should the air traffic control tower be notified to open the area to aircraft operations. The contractor should be required to retain a suitable workforce and the necessary equipment at the work area for any last minute cleanup that may be requested by the airport operator prior to opening the area.

2.14.3 Final Inspections.

New runways and extended runway closures may require safety inspections at certificated airports prior to allowing air carrier service. Coordinate with the FAA Airport Certification Safety Inspector (ACSI) to determine if a final inspection will be necessary.

2.15 Underground Utilities.

The CSPP and/or SPCD must include procedures for locating and protecting existing underground utilities, cables, wires, pipelines, and other underground facilities in excavation areas. This may involve coordinating with public utilities and FAA ATO/Technical Operations. Note that “One Call” or “Miss Utility” services do not include FAA ATO/Technical Operations.

2.16 Penalties.

The CSPP should detail penalty provisions for noncompliance with airport rules and regulations and the safety plans (for example, if a vehicle is involved in a runway incursion). Such penalties typically include rescission of driving privileges or access to the AOA.

2.17 Special Conditions.

The CSPP must detail any special conditions that affect the operation of the airport and will require the activation of any special procedures (for example, low-visibility operations, snow removal, aircraft in distress, aircraft accident, security breach, Vehicle / Pedestrian Deviation (VPD) and other activities requiring construction suspension/resumption).

2.18 Runway and Taxiway Visual Aids.

This includes marking, lighting, signs, and visual NAVAIDs. The CSPP must ensure that areas where aircraft will be operating are clearly and visibly separated from construction areas, including closed runways. Throughout the duration of the construction project, verify that these areas remain clearly marked and visible at all times and that marking, lighting, signs, and visual NAVAIDs that are to continue to perform their functions during construction remain in place and operational. Visual NAVAIDs that are not serving their intended function during construction must be temporarily disabled, covered, or modified as necessary. The CSPP must address the following, as appropriate:

2.18.1 General.

Airport markings, lighting, signs, and visual NAVAIDs must be clearly visible to pilots, not misleading, confusing, or deceptive. All must be secured in place to prevent movement by prop wash, jet blast, wing vortices, and other wind currents and constructed of materials that will minimize damage to an aircraft in the event of inadvertent contact. Items used to secure such markings must be of a color similar to the marking.

2.18.2 Markings.

During the course of construction projects, temporary pavement markings are often required to allow for aircraft operations during or between work periods. During the design phase of the project, the designer should coordinate with the project manager,

airport operations, airport users, the FAA Airports project manager, and Airport Certification Safety Inspector for Part 139 airports to determine minimum temporary markings. The FAA Airports project manager will, wherever a runway is closed, coordinate with the appropriate FAA Flight Standards Office and disseminate findings to all parties. Where possible, the temporary markings on finish grade pavements should be placed to mirror the dimensions of the final markings. Markings must be in compliance with the standards of AC 150/5340-1, *Standards for Airport Markings*, except as noted herein. Runways and runway exit taxiways closed to aircraft operations are marked with a yellow X. The preferred visual aid to depict temporary runway closure is the lighted X signal placed on or near the runway designation numbers. (See paragraph 2.18.2.1.2.)

2.18.2.1 **Closed Runways and Taxiways.**

2.18.2.1.1 Permanently Closed Runways.

For runways, obliterate the threshold marking, runway designation marking, and touchdown zone markings, and place an X at each end and at 1,000-foot (300 m) intervals. For a multiple runway environment, if the lighted X on a designated number will be located in the RSA of an adjacent active runway, locate the lighted X farther down the closed runway to clear the RSA of the active runway. In addition, the closed runway numbers located in the RSA of an active runway must be marked with a flat yellow X.

2.18.2.1.2 Temporarily Closed Runways.

For runways that have been temporarily closed, place an X at each end of the runway directly on or as near as practicable to the runway designation numbers. For a multiple runway environment, if the lighted X on a designated number will be located in the RSA of an adjacent active runway, locate the lighted X farther down the closed runway to clear the RSA of the active runway. In addition, the closed runway numbers located in the RSA of an active runway must be marked with a flat yellow X. See Figure 2-3. See also paragraph 2.18.3.3.

2.18.2.1.3 Partially Closed Runways and Displaced Thresholds.

When threshold markings are needed to identify the temporary beginning of the runway that is available for landing, the markings must comply with AC 150/5340-1. An X is not used on a partially closed runway or a runway with a displaced threshold. See paragraph 2.7.1.1 for the difference between partially closed runways and runways with displaced thresholds. Because of the temporary nature of threshold displacement due to construction, it is not necessary to re-adjust the existing runway centerline markings to meet standard spacing for a runway with a visual approach. Some of the requirements below may be waived in the cases of low-activity airports and/or short duration changes that are measured in days rather than weeks. Consider whether the presence of an airport traffic

control tower allows for the development of special procedures. Contact the appropriate FAA Airports Regional or District Office for assistance.

Figure 2-3. Markings for a Temporarily Closed Runway

1. **Partially Closed Runways.** Pavement markings for temporary closed portions of the runway consist of a runway threshold bar, runway designation, and yellow chevrons to identify pavement areas that are unsuitable for takeoff or landing (see [AC 150/5340-1](#)). Obliterate or cover markings prior to the moved threshold. Existing touchdown zone markings beyond the moved threshold may remain in place. Obliterate aiming point markings. Issue appropriate NOTAMs regarding any nonstandard markings. See [Figure 2-4](#).
2. **Displaced Thresholds.** Pavement markings for a displaced threshold consist of a runway threshold bar, runway designation, and white arrowheads with and without arrow shafts. These markings are required to identify the portion of the runway before the displaced threshold to provide centerline guidance for pilots during approaches, takeoffs, and landing rollouts from the opposite direction. See [AC 150/5340-1](#). Obliterate markings prior to the displaced threshold. Existing touchdown zone markings beyond the displaced threshold may remain in place. Obliterate aiming point markings. Issue appropriate NOTAMs regarding any nonstandard markings. See [Figure 2-2](#).

2.18.2.1.4 Taxiways.

1. **Permanently Closed Taxiways.** *AC 150/5300-13 Airport Design*, notes that it is preferable to remove the pavement, but for pavement that is to remain, place an X at the entrance to both ends of the closed section. Obliterate taxiway centerline markings, including runway leadoff lines, leading to the closed taxiway. See [Figure 2-4](#).

Figure 2-4. Temporary Taxiway Closure

2. **Temporarily Closed Taxiways.** Place barricades outside the safety area of intersecting taxiways. For runway/taxiway intersections, place an X at the entrance to the closed taxiway from the runway. If the taxiway will be closed for an extended period, obliterate taxiway centerline markings, including runway leadoff lines and taxiway to taxiway turns, leading to the closed section. Always obliterate runway lead-off lines for high speed exits, regardless of the duration of the closure. If the centerline markings will be reused upon reopening the taxiway, it is preferable to paint over the marking. This will result in less damage to the pavement when the upper layer of paint is ultimately removed. See Figure 2-4.

2.18.2.1.5 Temporarily Closed Airport.

When the airport is closed temporarily, mark all the runways as closed.

- 2.18.2.2 If unable to paint temporary markings on the pavement, construct them from any of the following materials: fabric, colored plastic, painted sheets of plywood, or similar materials. They must be properly configured and appropriately secured to prevent movement by prop wash, jet blast, or other wind currents. Items used to secure such markings must be of a color similar to the marking.

- 2.18.2.3 It may be necessary to remove or cover runway markings, including but not limited to, runway designation markings, threshold markings, centerline markings, edge stripes, touchdown zone markings and aiming point markings, depending on the length of construction and type of activity at the airport. When removing runway markings, apply the same treatment to areas between stripes or numbers, as the cleaned area will appear to pilots as a marking in the shape of the treated area.

- 2.18.2.4 If it is not possible to install threshold bars, chevrons, and arrows on the pavement, “temporary outboard white threshold bars and yellow arrowheads”, see Figure 2-5, may be used. Locate them outside of the runway pavement surface on both sides of the runway. The dimensions must be as shown in Figure 2-5. If the markings are not discernible on grass or snow, apply a black background with appropriate material over the ground to ensure they are clearly visible.

- 2.18.2.5 The application rate of paint to mark a short-term temporary runway and taxiway markings may deviate from the standard (see Item P-620, “Runway and Taxiway Painting,” in AC 150/5370-10), but the dimensions must meet the existing standards. When applying temporary markings at night, it is recommended that the fast curing, Type II paint be used to help offset the higher humidity and cooler temperatures often experienced at night. Diluting the paint will substantially increase cure time and is not recommended. Glass beads are not recommended for temporary markings. Striated markings may also be used for certain temporary markings. AC

150/5340-1, *Standards for Airport Markings*, has additional guidance on temporary markings.

Figure 2-5. Temporary Outboard White Threshold Bars and Yellow Arrowheads

2.18.3 Lighting and Visual NAVAIDs.

This paragraph refers to standard runway and taxiway lighting systems. See below for hazard lighting. Lighting installation must be in conformance with AC 150/5340-30, *Design and Installation Details for Airport Visual Aids*, and fixture design in conformance with AC 150/5345-50, *Specification for Portable Runway and Taxiway Lights*. When disconnecting runway and taxiway lighting fixtures, disconnect the associated isolation transformers. See AC 150/5340-26, *Maintenance of Airport Visual Aid Facilities*, for disconnect procedures and safety precautions. Alternately, cover the light fixture in such a way as to prevent light leakage. Avoid removing the lamp from energized fixtures because an excessive number of isolation transformers with open secondaries may damage the regulators and/or increase the current above its normal value. Secure, identify, and place any above ground temporary wiring in conduit to prevent electrocution and fire ignition sources. Maintain mandatory hold signs to operate normally in any situation where pilots or vehicle drivers could mistakenly be in that location. At towered airports certificated under Part 139, holding position signs are required to be illuminated on open taxiways crossing to closed or inactive runways. If the holding position sign is installed on the runway circuit for the closed runway, install a jumper to the taxiway circuit to provide power to the holding position sign for nighttime operations. Where it is not possible to maintain power to signs that would normally be operational, install barricades to exclude aircraft. Figure 2-1, Figure 2-2, Figure 2-3, and Figure 2-4 illustrate temporary changes to lighting and visual NAVAIDs.

2.18.3.1 **Permanently Closed Runways and Taxiways.**

For runways and taxiways that have been permanently closed, disconnect the lighting circuits.

2.18.3.2 **Temporarily Closed Runways and New Runways Not Yet Open to Air Traffic.**

If available, use a lighted X, both at night and during the day, placed at each end of the runway on or near the runway designation numbers facing the approach. (Note that the lighted X must be illuminated at all times that it is on a runway.) The use of a lighted X is required if night work requires runway lighting to be on. See AC 150/5345-55, *Specification for L-893, Lighted Visual Aid to Indicate Temporary Runway Closure*. For runways that have been temporarily closed, but for an extended period, and for those with pilot controlled lighting, disconnect the lighting circuits or secure switches to prevent inadvertent activation. For runways that will be opened periodically, coordinate procedures with the FAA air traffic manager or, at airports without an ATCT, the airport operator. Activate stop bars if available. Figure 2-6 shows a lighted X by day. Figure 2-7 shows a lighted X at night.

Figure 2-6. Lighted X in Daytime**Figure 2-7. Lighted X at Night**

2.18.3.3 **Partially Closed Runways and Displaced Thresholds.**

When a runway is partially closed, a portion of the pavement is unavailable for any aircraft operation, meaning taxiing and landing or taking off in either direction. A displaced threshold, by contrast, is put in place to ensure obstacle clearance by landing aircraft. The pavement prior to the displaced threshold is available for takeoff in the direction of the displacement, and for landing and takeoff in the opposite direction. Misunderstanding this difference and issuance of a subsequently inaccurate NOTAM can result in a hazardous situation. For both partially

closed runways and displaced thresholds, approach lighting systems at the affected end must be placed out of service.

- 2.18.3.3.1 Partially Closed Runways.
Disconnect edge and threshold lights on that part of the runway at and behind the threshold (that is, the portion of the runway that is closed). Alternately, cover the light fixtures in such a way as to prevent light leakage. See Figure 2-1.
- 2.18.3.3.2 Temporary Displaced Thresholds.
Edge lighting in the area of the displacement emits red light in the direction of approach and yellow light (white for visual runways) in the opposite direction. If the displacement is 700 feet or less, blank out centerline lights in the direction of approach or place the centerline lights out of service. If the displacement is over 700 feet, place the centerline lights out of service. See AC 150/5340-30 for details on lighting displaced thresholds. See Figure 2-2.
- 2.18.3.3.3 Temporary runway thresholds and runway ends must be lighted if the runway is lighted and it is the intended threshold for night landings or instrument meteorological conditions.
- 2.18.3.3.4 A temporary threshold on an unlighted runway may be marked by retroreflective, elevated markers in addition to markings noted in paragraph 2.18.2.1.3. Markers seen by aircraft on approach are green. Markers at the rollout end of the runway are red. At certificated airports, temporary elevated threshold markers must be mounted with a frangible fitting (see 14 CFR Part 139.309). At non-certificated airports, the temporary elevated threshold markings may either be mounted with a frangible fitting or be flexible. See AC 150/5345-39, *Specification for L-853, Runway and Taxiway Retroreflective Markers*.
- 2.18.3.3.5 Temporary threshold lights and runway end lights and related visual NAVAIDs are installed outboard of the edges of the full-strength pavement only when they cannot be installed on the pavement. They are installed with bases at grade level or as low as possible, but not more than 3 inch (7.6 cm) above ground. (The standard above ground height for airport lighting fixtures is 14 inches (35 cm)). When any portion of a base is above grade, place properly compacted fill around the base to minimize the rate of gradient change so aircraft can, in an emergency, cross at normal landing or takeoff speeds without incurring significant damage. See AC 150/5370-10.
- 2.18.3.3.6 Maintain threshold and edge lighting color and spacing standards as described in AC 150/5340-30. Battery powered, solar, or portable lights that meet the criteria in AC 150/5345-50 may be used. These systems are intended primarily for visual flight rules (VFR) aircraft operations but may

be used for instrument flight rules (IFR) aircraft operations, upon individual approval from the Flight Standards Division of the applicable FAA Regional Office.

- 2.18.3.3.7 When runway thresholds are temporarily displaced, reconfigure yellow lenses (caution zone), as necessary, and place the centerline lights out of service.
- 2.18.3.3.8 Relocate the Visual Glide Slope Indicator (VGSI), such as Visual Approach Slope Indicator (VASI) and Precision Approach Path Indicator (PAPI); other airport lights, such as Runway End Identifier Lights (REIL); and approach lights to identify the temporary threshold. Another option is to disable the VGSI or any equipment that would give misleading indications to pilots as to the new threshold location. Installation of temporary visual aids may be necessary to provide adequate guidance to pilots on approach to the affected runway. If the FAA owns and operates the VGSI, coordinate its installation or disabling with the local ATO/Technical Operations Office. Relocation of such visual aids will depend on the duration of the project and the benefits gained from the relocation, as this can result in great expense. See FAA JO 6850.2, *Visual Guidance Lighting Systems*, for installation criteria for FAA owned and operated NAVAIDs.
- 2.18.3.3.9 Issue a NOTAM to inform pilots of temporary lighting conditions.

2.18.3.4 **Temporarily Closed Taxiways.**

If possible, deactivate the taxiway lighting circuits. When deactivation is not possible (for example other taxiways on the same circuit are to remain open), cover the light fixture in a way as to prevent light leakage.

2.18.4 Signs.

To the extent possible, signs must be in conformance with AC 150/5345-44, *Specification for Runway and Taxiway Signs*, and AC 150/5340-18, *Standard for Airport Sign Systems*.

2.18.4.1 **Existing Signs.**

Runway exit signs are to be covered for closed runway exits. Outbound destination signs are to be covered for closed runways. Any time a sign does not serve its normal function or would provide conflicting information, it must be covered or removed to prevent misdirecting pilots. Note that information signs identifying a crossing taxiway continue to perform their normal function even if the crossing taxiway is closed. For long term construction projects, consider relocating signs, especially runway distance remaining signs.

2.18.4.2 **Temporary Signs.**

Orange construction signs comprise a message in black on an orange background. Orange construction signs may help pilots be aware of changed conditions. The airport operator may choose to introduce these signs as part of a movement area construction project to increase situational awareness when needed. Locate signs outside the taxiway safety limits and ahead of construction areas so pilots can take timely action. Use temporary signs judiciously, striking a balance between the need for information and the increase in pilot workload. When there is a concern of pilot “information overload,” the applicability of mandatory hold signs must take precedence over orange construction signs recommended during construction. Temporary signs must meet the standards for such signs in Engineering Brief 93, *Guidance for the Assembly and Installation of Temporary Orange Construction Signs*. Many criteria in AC 150/5345-44, *Specification for Runway and Taxiway Signs*, are referenced in the Engineering Brief. Permissible sign legends are:

1. CONSTRUCTION AHEAD,
2. CONSTRUCTION ON RAMP, and
3. RWY XX TAKEOFF RUN AVAILABLE XXX FT.

Phasing, supported by drawings and sign schedule, for the installation of orange construction signs must be included in the CSPP or SPCD.

2.18.4.2.1 Takeoff Run Available (TORA) signs.

Recommended: Where a runway has been shortened for takeoff, install orange TORA signs well before the hold lines, such as on a parallel taxiway prior to a turn to a runway hold position. See EB 93 for sign size and location.

2.18.4.2.2 Sign legends are shown in Figure F-1.

Note: See Figure E-1, Figure E-2, Figure E-3, Figure F-2, and Figure F-3 for examples of orange construction sign locations.

2.19 **Marking and Signs for Access Routes.**

The CSPP should indicate that pavement markings and signs for construction personnel will conform to AC 150/5340-18 and, to the extent practicable, with the Federal Highway Administration Manual on Uniform Traffic Control Devices (MUTCD) and/or State highway specifications. Signs adjacent to areas used by aircraft must comply with the frangibility requirements of AC 150/5220-23, *Frangible Connections*, which may require modification to size and height guidance in the MUTCD.

2.20 **Hazard Marking, Lighting and Signing.**

2.20.1 Hazard marking, lighting, and signing prevent pilots from entering areas closed to aircraft, and prevent construction personnel from entering areas open to aircraft. The CSPP must specify prominent, comprehensible warning indicators for any area affected by construction that is normally accessible to aircraft, personnel, or vehicles. Hazard marking and lighting must also be specified to identify open manholes, small areas under repair, stockpiled material, waste areas, and areas subject to jet blast. Also consider less obvious construction-related hazards and include markings to identify FAA, airport, and National Weather Service facilities cables and power lines; instrument landing system (ILS) critical areas; airport surfaces, such as RSA, OFA, and OFZ; and other sensitive areas to make it easier for contractor personnel to avoid these areas.

2.20.2 Equipment.

2.20.2.1 **Barricades.**

Low profile barricades, including traffic cones, (weighted or sturdily attached to the surface) are acceptable methods used to identify and define the limits of construction and hazardous areas on airports. Careful consideration must be given to selecting equipment that poses the least danger to aircraft but is sturdy enough to remain in place when subjected to typical winds, prop wash and jet blast. The spacing of barricades must be such that a breach is physically prevented barring a deliberate act. For example, if barricades are intended to exclude aircraft, gaps between barricades must be smaller than the wingspan of the smallest aircraft to be excluded; if barricades are intended to exclude vehicles, gaps between barricades must be smaller than the width of the excluded vehicles, generally 4 feet (1.2 meters). Provision must be made for ARFF access if necessary. If barricades are intended to exclude pedestrians, they must be continuously linked. Continuous linking may be accomplished through the use of ropes, securely attached to prevent FOD.

2.20.2.2 **Lights.**

Lights must be red, either steady burning or flashing, and must meet the luminance requirements of the State Highway Department. Batteries powering lights will last longer if lights flash. Lights must be mounted on barricades and spaced at no more than 10 feet (3 meters). Lights must be operated between sunset and sunrise and during periods of low visibility whenever the airport is open for operations. They may be operated by photocell, but this may require that the contractor turn them on manually during periods of low visibility during daytime hours.

2.20.2.3 **Supplement Barricades with Signs (for example) As Necessary.**

Examples are “No Entry” and “No Vehicles.” Be aware of the increased effects of wind and jet blast on barricades with attached signs.

2.20.2.4 **Air Operations Area – General.**

Barricades are not permitted in any active safety area or on the runway side of a runway hold line. Within a runway or taxiway object free area, and on aprons, use orange traffic cones, flashing or steady burning red lights as noted above, highly reflective collapsible barricades marked with diagonal, alternating orange and white stripes; and/or signs to separate all construction/maintenance areas from the movement area. Barricades may be supplemented with alternating orange and white flags at least 20 by 20 inch (50 by 50 cm) square and securely fastened to eliminate FOD. All barricades adjacent to any open runway or taxiway / taxilane safety area, or apron must be as low as possible to the ground, and no more than 18 inches high, exclusive of supplementary lights and flags. Barricades must be of low mass; easily collapsible upon contact with an aircraft or any of its components; and weighted or sturdily attached to the surface to prevent displacement from prop wash, jet blast, wing vortex, and other surface wind currents. If affixed to the surface, they must be frangible at grade level or as low as possible, but not to exceed 3 inch (7.6 cm) above the ground. [Figure 2-8](#) and [Figure 2-9](#) show sample barricades with proper coloring and flags.

Figure 2-8. Interlocking Barricades

Figure 2-9. Low Profile Barricades**2.20.2.5 Air Operations Area – Runway/Taxiway Intersections.**

Use highly reflective barricades with lights to close taxiways leading to closed runways. Evaluate all operating factors when determining how to mark temporary closures that can last from 10 to 15 minutes to a much longer period of time. However, even for closures of relatively short duration, close all taxiway/runway intersections with barricades. The use of traffic cones is appropriate for short duration closures.

2.20.2.6 Air Operations Area – Other.

Beyond runway and taxiway object free areas and aprons, barricades intended for construction vehicles and personnel may be many different shapes and made from various materials, including railroad ties, sawhorses, jersey barriers, or barrels.

2.20.2.7 Maintenance.

The construction specifications must include a provision requiring the contractor to have a person on call 24 hours a day for emergency maintenance of airport hazard lighting and barricades. The contractor must file the contact person's information with the airport operator. Lighting should be checked for proper operation at least once per day, preferably at dusk.

2.21 Work Zone Lighting for Nighttime Construction.

Lighting equipment must adequately illuminate the work area if the construction is to be performed during nighttime hours. Refer to [AC 150/5370-10](#) for minimum illumination levels for nighttime paving projects. Additionally, it is recommended that all support equipment, except haul trucks, be equipped with artificial illumination to safely

illuminate the area immediately surrounding their work areas. The lights should be positioned to provide the most natural color illumination and contrast with a minimum of shadows. The spacing must be determined by trial. Light towers should be positioned and adjusted to aim away from ATCT cabs and active runways to prevent blinding effects. Shielding may be necessary. Light towers should be removed from the construction site when the area is reopened to aircraft operations. Construction lighting units should be identified and generally located on the construction phasing plans in relationship to the ATCT and active runways and taxiways.

2.22 **Protection of Runway and Taxiway Safety Areas.**

Runway and taxiway safety areas, OFZs, OFAs, and approach surfaces are described in AC 150/5300-13. Protection of these areas includes limitations on the location and height of equipment and stockpiled material. An FAA airspace study may be required. Coordinate with the appropriate FAA Airports Regional or District Office if there is any doubt as to requirements or dimensions (see paragraph 2.13.5) as soon as the location and height of materials or equipment are known. The CSPP should include drawings showing all safety areas, object free areas, obstacle free zones and approach departure surfaces affected by construction.

2.22.1 Runway Safety Area (RSA).

A runway safety area is the defined surface surrounding the runway prepared or suitable for reducing the risk of damage to airplanes in the event of an undershoot, overshoot, or excursion from the runway (see AC 150/5300-13). Construction activities within the existing RSA are subject to the following conditions:

- 2.22.1.1 No construction may occur within the existing RSA while the runway is open for aircraft operations. The RSA dimensions may be temporarily adjusted if the runway is restricted to aircraft operations requiring an RSA that is equal to the RSA width and length beyond the runway ends available during construction. (See AC 150/5300-13). The temporary use of declared distances and/or partial runway closures may provide the necessary RSA under certain circumstances. Coordinate with the appropriate FAA Airports Regional or District Office to have declared distances information published, and appropriate NOTAMs issued. See AC 150/5300-13 for guidance on the use of declared distances.
- 2.22.1.2 The airport operator must coordinate the adjustment of RSA dimensions as permitted above with the appropriate FAA Airports Regional or District Office and the local FAA air traffic manager and issue a NOTAM.
- 2.22.1.3 The CSPP and SPCD must provide procedures for ensuring adequate distance for protection from blasting operations, if required by operational considerations.

2.22.1.4 Excavations.

2.22.1.4.1 Open trenches or excavations are not permitted within the RSA while the runway is open. Backfill trenches before the runway is opened. If backfilling excavations before the runway must be opened is impracticable, cover the excavations appropriately. Covering for open trenches must be designed to allow the safe operation of the heaviest aircraft operating on the runway across the trench without damage to the aircraft.

2.22.1.4.2 Construction contractors must prominently mark open trenches and excavations at the construction site with red or orange flags, as approved by the airport operator, and light them with red lights during hours of restricted visibility or darkness.

2.22.1.5 Erosion Control.

Soil erosion must be controlled to maintain RSA standards, that is, the RSA must be cleared and graded and have no potentially hazardous ruts, humps, depressions, or other surface variations, and capable, under dry conditions, of supporting snow removal equipment, aircraft rescue and fire fighting equipment, and the occasional passage of aircraft without causing structural damage to the aircraft.

2.22.2 Runway Object Free Area (ROFA).

Construction, including excavations, may be permitted in the ROFA. However, equipment must be removed from the ROFA when not in use, and material should not be stockpiled in the ROFA if not necessary. Stockpiling material in the OFA requires submittal of a 7460-1 form and justification provided to the appropriate FAA Airports Regional or District Office for approval.

2.22.3 Taxiway Safety Area (TSA).

2.22.3.1 A taxiway safety area is a defined surface alongside the taxiway prepared or suitable for reducing the risk of damage to an airplane unintentionally departing the taxiway. (See AC 150/5300-13.) Since the width of the TSA is equal to the wingspan of the design aircraft, no construction may occur within the TSA while the taxiway is open for aircraft operations. The TSA dimensions may be temporarily adjusted if the taxiway is restricted to aircraft operations requiring a TSA that is equal to the TSA width available during construction. Give special consideration to TSA dimensions at taxiway turns and intersections. (see AC 150/5300-13).

2.22.3.2 The airport operator must coordinate the adjustment of the TSA width as permitted above with the appropriate FAA Airports Regional or District Office and the FAA air traffic manager and issue a NOTAM.

2.22.3.3 The CSPP and SPCD must provide procedures for ensuring adequate distance for protection from blasting operations.

2.22.3.4 **Excavations.**

1. Curves. Open trenches or excavations are not permitted within the TSA while the taxiway is open. Trenches should be backfilled before the taxiway is opened. If backfilling excavations before the taxiway must be opened is impracticable, cover the excavations appropriately. Covering for open trenches must be designed to allow the safe operation of the heaviest aircraft operating on the taxiway across the trench without damage to the aircraft.
2. Straight Sections. Open trenches or excavations are not permitted within the TSA while the taxiway is open for unrestricted aircraft operations. Trenches should be backfilled before the taxiway is opened. If backfilling excavations before the taxiway must be opened is impracticable, cover the excavations to allow the safe passage of ARFF equipment and of the heaviest aircraft operating on the taxiway across the trench without causing damage to the equipment or aircraft. In rare circumstances where the section of taxiway is indispensable for aircraft movement, open trenches or excavations may be permitted in the TSA while the taxiway is open to aircraft operations, subject to the following restrictions:
 - a. Taxiing speed is limited to 10 mph.
 - b. Appropriate NOTAMs are issued.
 - c. Marking and lighting meeting the provisions of paragraphs 2.18 and 2.20 are implemented.
 - d. Low mass, low-profile lighted barricades are installed.
 - e. Appropriate temporary orange construction signs are installed.
3. Construction contractors must prominently mark open trenches and excavations at the construction site with red or orange flags, as approved by the airport operator, and light them with red lights during hours of restricted visibility or darkness.

2.22.3.5 **Erosion control.**

Soil erosion must be controlled to maintain TSA standards, that is, the TSA must be cleared and graded and have no potentially hazardous ruts, humps, depressions, or other surface variations, and capable, under dry conditions, of supporting snow removal equipment, aircraft rescue and firefighting equipment, and the occasional passage of aircraft without causing structural damage to the aircraft.

2.22.4 Taxiway Object Free Area (TOFA).

Unlike the Runway Object Free Area, aircraft wings regularly penetrate the taxiway object free area during normal operations. Thus, the restrictions are more stringent. Except as provided below, no construction may occur within the taxiway object free area while the taxiway is open for aircraft operations.

- 2.22.4.1 The taxiway object free area dimensions may be temporarily adjusted if the taxiway is restricted to aircraft operations requiring a taxiway object free area that is equal to the taxiway object free area width available. Give special consideration to TOFA dimensions at taxiway turns and intersections.
- 2.22.4.2 Offset taxiway centerline and edge pavement markings (do not use glass beads) may be used as a temporary measure to provide the required taxiway object free area. Where offset taxiway pavement markings are provided, centerline lighting, centerline reflectors, or taxiway edge reflectors are required. Existing lighting that does not coincide with the temporary markings must be taken out of service.
- 2.22.4.3 Construction activity, including open excavations, may be accomplished without adjusting the width of the taxiway object free area, subject to the following restrictions:
 - 2.22.4.3.1 Taxiing speed is limited to 10 mph.
 - 2.22.4.3.2 NOTAMs issued advising taxiing pilots of hazard and recommending reduced taxiing speeds on the taxiway.
 - 2.22.4.3.3 Marking and lighting meeting the provisions of paragraphs 2.18 and 2.20 are implemented.
 - 2.22.4.3.4 If desired, appropriate orange construction signs are installed. See paragraph 2.18.4.2 and Appendix F.
 - 2.22.4.3.5 Five-foot clearance is maintained between equipment and materials and any part of an aircraft (includes wingtip overhang). If such clearance can only be maintained if an aircraft does not have full use of the entire taxiway width (with its main landing gear at the edge of the usable pavement), then it will be necessary to move personnel and equipment for the passage of that aircraft.
 - 2.22.4.3.6 Flaggers furnished by the contractor must be used to direct and control construction equipment and personnel to a pre-established setback distance for safe passage of aircraft, and airline and/or airport personnel. Flaggers must also be used to direct taxiing aircraft. Due to liability issues, the airport operator should require airlines to provide flaggers for directing taxiing aircraft.

2.22.5 Obstacle Free Zone (OFZ).

In general, personnel, material, and/or equipment may not penetrate the OFZ while the runway is open for aircraft operations. If a penetration to the OFZ is necessary, it may be possible to continue aircraft operations through operational restrictions. Coordinate with the FAA through the appropriate FAA Airports Regional or District Office.

2.22.6 Runway Approach/Departure Areas and Clearways.

All personnel, materials, and/or equipment must remain clear of the applicable threshold siting surfaces, as defined in AC 150/5300-13. Objects that do not penetrate these surfaces may still be obstructions to air navigation and may affect standard instrument approach procedures. Coordinate with the FAA through the appropriate FAA Airports Regional or District Office.

2.22.6.1 Construction activity in a runway approach/departure area may result in the need to partially close a runway or displace the existing runway threshold. Partial runway closure, displacement of the runway threshold, as well as closure of the complete runway and other portions of the movement area also require coordination through the airport operator with the appropriate FAA air traffic manager (FSS if non-towered) and ATO/Technical Operations (for affected NAVAIDS) and airport users.

2.22.6.2 **Caution About Partial Runway Closures.**

When filing a NOTAM for a partial runway closure, clearly state that the portion of pavement located prior to the threshold is not available for landing and departing traffic. In this case, the threshold has been moved for both landing and takeoff purposes (this is different than a displaced threshold). There may be situations where the portion of closed runway is available for taxiing only. If so, the NOTAM must reflect this condition).

2.22.6.3 **Caution About Displaced Thresholds.**

Implementation of a displaced threshold affects runway length available for aircraft landing over the displacement. Depending on the reason for the displacement (to provide obstruction clearance or RSA), such a displacement may also require an adjustment in the landing distance available and accelerate-stop distance available in the opposite direction. If project scope includes personnel, equipment, excavation, or other work within the existing RSA of any usable runway end, do not implement a displaced threshold unless arrivals and departures toward the construction activity are prohibited. Instead, implement a partial closure.

2.23 **Other Limitations on Construction.**

The CSPP must specify any other limitations on construction, including but not limited to:

2.23.1 Prohibitions.

- 2.23.1.1 No use of tall equipment (cranes, concrete pumps, and so on) unless a 7460-1 determination letter is issued for such equipment.
- 2.23.1.2 No use of open flame welding or torches unless fire safety precautions are provided and the airport operator has approved their use.
- 2.23.1.3 No use of electrical blasting caps on or within 1,000 feet (300 meters) of the airport property. See AC 150/5370-10.

2.23.2 Restrictions.

- 2.23.2.1 Construction suspension required during specific airport operations.
- 2.23.2.2 Areas that cannot be worked on simultaneously.
- 2.23.2.3 Day or night construction restrictions.
- 2.23.2.4 Seasonal construction restrictions.
- 2.23.2.5 Temporary signs not approved by the airport operator.
- 2.23.2.6 Grades changes that could result in unplanned effects on NAVAIDs.

CHAPTER 3. GUIDELINES FOR WRITING A CSPP

3.1 **General Requirements.**

The CSPP is a standalone document written to correspond with the subjects outlined in paragraph 2.4. The CSPP is organized by numbered sections corresponding to each subject listed in paragraph 2.4, and described in detail in paragraphs 2.5 - 2.23. Each section number and title in the CSPP matches the corresponding subject outlined in paragraph 2.4 (for example, 1. Coordination, 2. Phasing, 3. Areas and Operations Affected by the Construction Activity, and so on). With the exception of the project scope of work outlined in Section 2. Phasing, only subjects specific to operational safety during construction should be addressed.

3.2 **Applicability of Subjects.**

Each section should, to the extent practical, focus on the specific subject. Where an overlapping requirement spans several sections, the requirement should be explained in detail in the most applicable section. A reference to that section should be included in all other sections where the requirement may apply. For example, the requirement to protect existing underground FAA ILS cables during trenching operations could be considered FAA ATO coordination (Coordination, paragraph 2.5.3), an area and operation affected by the construction activity (Areas and Operations Affected by the Construction Activity, paragraph 2.7.1.4), a protection of a NAVAID (Protection of Navigational Aids (NAVAIDs), paragraph 2.8), or a notification to the FAA of construction activities (Notification of Construction Activities, paragraph 2.13.5.3.2). However, it is more specifically an underground utility requirement (Underground Utilities, paragraph 2.15). The procedure for protecting underground ILS cables during trenching operations should therefore be described in 2.4.2.11: “The contractor must coordinate with the local FAA System Support Center (SSC) to mark existing ILS cable routes along Runway 17-35. The ILS cables will be located by hand digging whenever the trenching operation moves within 10 feet of the cable markings.” All other applicable sections should include a reference to 2.4.2.11: “ILS cables shall be identified and protected as described in 2.4.2.11” or “See 2.4.2.11 for ILS cable identification and protection requirements.” Thus, the CSPP should be considered as a whole, with no need to duplicate responses to related issues.

3.3 **Graphical Representations.**

Construction safety drawings should be included in the CSPP as attachments. When other graphical representations will aid in supporting written statements, the drawings, diagrams, and/or photographs should also be attached to the CSPP. References should be made in the CSPP to each graphical attachment and may be made in multiple sections.

3.4 **Reference Documents.**

The CSPP must not incorporate a document by reference unless reproduction of the material in that document is prohibited. In that case, either copies of or a source for the referenced document must be provided to the contractor. Where this AC recommends references (e.g. as in paragraph 3.9) the intent is to include a reference to the corresponding section in the CSPP, not to this Advisory Circular.

3.5 **Restrictions.**

The CSPP should not be considered as a project design review document. The CSPP should also avoid mention of permanent (“as-built”) features such as pavements, markings, signs, and lighting, except when such features are intended to aid in maintaining operational safety during the construction.

3.6 **Coordination.**

Include in this section a detailed description of conferences and meetings to be held both before and during the project. Include appropriate information from AC 150/5370-12. Discuss coordination procedures and schedules for each required FAA ATO Technical Operations shutdown and restart and all required flight inspections.

3.7 **Phasing.**

Include in this section a detailed scope of work description for the project as a whole and each phase of work covered by the CSPP. This includes all locations and durations of the work proposed. Attach drawings to graphically support the written scope of work. Detail in this section the sequenced phases of the proposed construction. Include a reference to paragraph 3.8, as appropriate.

3.8 **Areas and Operations Affected by Construction.**

Focus in this section on identifying the areas and operations affected by the construction. Describe corresponding mitigation that is not covered in detail elsewhere in the CSPP. Include references to paragraphs below as appropriate. Attach drawings as necessary to graphically describe affected areas and mechanisms proposed. See Appendix F for sample operational effects tables and figures.

3.9 **NAVAID Protection.**

List in this section all NAVAID facilities that will be affected by the construction. Identify NAVAID facilities that will be placed out of service at any time prior to or during construction activities. Identify individuals responsible for coordinating each shutdown and when each facility will be out of service. Include a reference to paragraph 3.6 for FAA ATO NAVAID shutdown, restart, and flight inspection coordination. Outline in detail procedures to protect each NAVAID facility remaining in service from interference by construction activities. Include a reference to paragraph 3.14 for the

issuance of NOTAMs as required. Include a reference to paragraph 3.16 for the protection of underground cables and piping serving NAVAIDs. If temporary visual aids are proposed to replace or supplement existing facilities, include a reference to paragraph 3.19. Attach drawings to graphically indicate the affected NAVAIDs and the corresponding critical areas.

3.10 **Contractor Access.**

This will necessarily be the most extensive section of the CSPP. Provide sufficient detail so that a contractor not experienced in working on airports will understand the unique restrictions such work will require. Due to this extent, it should be broken down into subsections as described below:

3.10.1 Location of Stockpiled Construction Materials.

Describe in this section specific locations for stockpiling material. Note any height restrictions on stockpiles. Include a reference to paragraph 3.21 for hazard marking and lighting devices used to identify stockpiles. Include a reference to paragraph 3.11 for provisions to prevent stockpile material from becoming wildlife attractants. Include a reference to paragraph 3.12 for provisions to prevent stockpile material from becoming FOD. Attach drawings to graphically indicate the stockpile locations.

3.10.2 Vehicle and Pedestrian Operations.

While there are many items to be addressed in this major subsection of the CSPP, all are concerned with one main issue: keeping people and vehicles from areas of the airport where they don't belong. This includes preventing unauthorized entry to the AOA and preventing the improper movement of pedestrians or vehicles on the airport. In this section, focus on mechanisms to prevent construction vehicles and workers traveling to and from the worksite from unauthorized entry into movement areas. Specify locations of parking for both employee vehicles and construction equipment, and routes for access and haul roads. In most cases, this will best be accomplished by attaching a drawing. Quote from AC 150/5210-5 specific requirements for contractor vehicles rather than referring to the AC as a whole, and include special requirements for identifying HAZMAT vehicles. Quote from, rather than incorporate by reference, AC 150/5210-20 as appropriate to address the airport's rules for ground vehicle operations, including its training program. Discuss the airport's recordkeeping system listing authorized vehicle operators.

3.10.3 Two-Way Radio Communications.

Include a special section to identify all individuals who are required to maintain communications with Air Traffic (AT) at airports with active towers, or monitor CTAF at airports without or with closed ATCT. Include training requirements for all individuals required to communicate with AT. Individuals required to monitor AT frequencies should also be identified. If construction employees are also required to communicate by radio with Airport Operations, this procedure should be described in detail. Usage of vehicle mounted radios and/or portable radios should be addressed. Communication procedures for the event of disabled radio communication (that is, light

signals, telephone numbers, others) must be included. All radio frequencies should be identified (Tower, Ground Control, CTAF, UNICOM, ATIS, and so on).

3.10.4 Airport Security.

Address security as it applies to vehicle and pedestrian operations. Discuss TSA requirements, security badging requirements, perimeter fence integrity, gate security, and other needs. Attach drawings to graphically indicate secured and/or Security Identification Display Areas (SIDA), perimeter fencing, and available access points.

3.11 **Wildlife Management.**

Discuss in this section wildlife management procedures. Describe the maintenance of existing wildlife mitigation devices, such as perimeter fences, and procedures to limit wildlife attractants. Include procedures to notify Airport Operations of wildlife encounters. Include a reference to paragraph 3.10 for security (wildlife) fence integrity maintenance as required.

3.12 **FOD Management.**

In this section, discuss methods to control and monitor FOD: worksite housekeeping, ground vehicle tire inspections, runway sweeps, and so on. Include a reference to paragraph 3.15 for inspection requirements as required.

3.13 **HAZMAT Management.**

Describe in this section HAZMAT management procedures: fuel deliveries, spill recovery procedures, Safety Data Sheet (SDS), Material Safety Data Sheet (MSDS) or Product Safety Data Sheet (PSDS) availability, and other considerations. Any specific airport HAZMAT restrictions should also be identified. Include a reference to paragraph 3.10 for HAZMAT vehicle identification requirements. Quote from, rather than incorporate by reference, AC 150/5320-15.

3.14 **Notification of Construction Activities.**

List in this section the names and telephone numbers of points of contact for all parties affected by the construction project. We recommend a single list that includes all telephone numbers required under this section. Include emergency notification procedures for all representatives of all parties potentially impacted by the construction. Identify individual representatives – and at least one alternate – for each party. List both on-duty and off-duty contact information for each individual, including individuals responsible for emergency maintenance of airport construction hazard lighting and barricades. Describe procedures to coordinate immediate response to events that might adversely affect the operational safety of the airport (such as interrupted NAVAID service). Explain requirements for and the procedures for the issuance of Notices to Airmen (NOTAMs), notification to FAA required by 14 CFR Part 77 and Part 157 and in the event of affected NAVAIDs. For NOTAMs, identify an individual, and at least one alternate, responsible for issuing and cancelling each specific type of Notice to

Airmen (NOTAM) required. Detail notification methods for police, fire fighting, and medical emergencies. This may include 911, but should also include direct phone numbers of local police departments and nearby hospitals. Identify the E911 address of the airport and the emergency access route via haul roads to the construction site. Require the contractor to have this information available to all workers. The local Poison Control number should be listed. Procedures regarding notification of Airport Operations and/or the ARFF Department of such emergencies should be identified, as applicable. If airport radio communications are identified as a means of emergency notification, include a reference to paragraph 3.10. Differentiate between emergency and nonemergency notification of ARFF personnel, the latter including activities that affect ARFF water supplies and access roads. Identify the primary ARFF contact person and at least one alternate. If notification is to be made through Airport Operations, then detail this procedure. Include a method of confirmation from the ARFF department.

3.15 Inspection Requirements.

Describe in this section inspection requirements to ensure airfield safety compliance. Include a requirement for routine inspections by the resident engineer (RE) or other airport operator's representative and the construction contractors. If the engineering consultants and/or contractors have a Safety Officer who will conduct such inspections, identify this individual. Describe procedures for special inspections, such as those required to reopen areas for aircraft operations. Part 139 requires daily airfield inspections at certificated airports, but these may need to be more frequent when construction is in progress. Discuss the role of such inspections on areas under construction. Include a requirement to immediately remedy any deficiencies, whether caused by negligence, oversight, or project scope change.

3.16 Underground Utilities.

Explain how existing underground utilities will be located and protected. Identify each utility owner and include contact information for each company/agency in the master list. Address emergency response procedures for damaged or disrupted utilities. Include a reference to paragraph 3.14 for notification of utility owners of accidental utility disruption as required.

3.17 Penalties.

Describe in this section specific penalties imposed for noncompliance with airport rules and regulations, including the CSPP: SIDA violations, VPD, and others.

3.18 Special Conditions.

Identify any special conditions that may trigger specific safety mitigation actions outlined in this CSPP: low visibility operations, snow removal, aircraft in distress, aircraft accident, security breach, VPD, and other activities requiring construction suspension/resumption. Include a reference to paragraph 3.10 for compliance with airport safety and security measures and for radio communications as required. Include

a reference to paragraph 3.14 for emergency notification of all involved parties, including police/security, ARFF, and medical services.

3.19 Runway and Taxiway Visual Aids.

Include marking, lighting, signs, and visual NAVAIDS. Detail temporary runway and taxiway marking, lighting, signs, and visual NAVAIDS required for the construction. Discuss existing marking, lighting, signs, and visual NAVAIDS that are temporarily, altered, obliterated, or shut down. Consider non-federal facilities and address requirements for reimbursable agreements necessary for alteration of FAA facilities and for necessary flight checks. Identify temporary TORA signs or runway distance remaining signs if appropriate. Identify required temporary visual NAVAIDS such as REIL or PAPI. Quote from, rather than incorporate by reference, AC 150/5340-1, Standards for Airport Markings; AC 150/5340-18, Standards for Airport Sign Systems; and AC 150/5340-30, as required. Attach drawings to graphically indicate proposed marking, lighting, signs, and visual NAVAIDS.

3.20 Marking and Signs for Access Routes.

Detail plans for marking and signs for vehicle access routes. To the extent possible, signs should be in conformance with the Federal Highway Administration MUTCD and/or State highway specifications, not hand lettered. Detail any modifications to the guidance in the MUTCD necessary to meet frangibility/height requirements.

3.21 Hazard Marking and Lighting.

Specify all marking and lighting equipment, including when and where each type of device is to be used. Specify maximum gaps between barricades and the maximum spacing of hazard lighting. Identify one individual and at least one alternate responsible for maintenance of hazard marking and lighting equipment in the master telephone list. Include a reference to paragraph 3.14. Attach drawings to graphically indicate the placement of hazard marking and lighting equipment.

3.22 Work Zone Lighting for Nighttime Construction.

If work is to be conducted at night, specify all lighting equipment, including when and where each type of device is to be used. Indicate the direction lights are to be aimed and any directions that aiming of lights is prohibited. Specify any shielding necessary in instances where aiming is not sufficient to prevent interference with air traffic control and aircraft operations. Attach drawings to graphically indicate the placement and aiming of lighting equipment. Where the plan only indicates directions that aiming of lights is prohibited, the placement and positioning of portable lights must be proposed by the Contractor and approved by the airport operator's representative each time lights are relocated or repositioned.

3.23 Protection of Runway and Taxiway Safety Areas.

This section should focus exclusively on procedures for protecting all safety areas, including those altered by the construction: methods of demarcation, limit of access, movement within safety areas, stockpiling and trenching restrictions, and so on. Reference AC 150/5300-13, as required. Include a reference to paragraph 3.10 for procedures regarding vehicle and personnel movement within safety areas. Include a reference to paragraph 3.10 for material stockpile restrictions as required. Detail requirements for trenching, excavations, and backfill. Include a reference to paragraph 3.21 for hazard marking and lighting devices used to identify open excavations as required. If runway and taxiway closures are proposed to protect safety areas, or if temporary displaced thresholds and/or revised declared distances are used to provide the required Runway Safety Area, include a reference to paragraphs 3.14 and 3.19. Detail procedures for protecting the runway OFZ, runway OFA, taxiway OFA and runway approach surfaces including those altered by the construction: methods of demarcation, limit of cranes, storage of equipment, and so on. Quote from, rather than incorporate by reference, AC 150/5300-13, as required. Include a reference to paragraph 3.24 for height (i.e., crane) restrictions as required. One way to address the height of equipment that will move during the project is to establish a three-dimensional “box” within which equipment will be confined that can be studied as a single object. Attach drawings to graphically indicate the safety area, OFZ, and OFA boundaries.

3.24 Other Limitations on Construction.

This section should describe what limitations must be applied to each area of work and when each limitation will be applied: limitations due to airport operations, height (i.e., crane) restrictions, areas which cannot be worked at simultaneously, day/night work restrictions, winter construction, and other limitations. Include a reference to paragraph 3.7 for project phasing requirements based on construction limitations as required.

APPENDIX B. TERMS AND ACRONYMS**Table B-1. Terms and Acronyms**

Term	Definition
Form 7460-1	Notice of Proposed Construction or Alteration. For on-airport projects, the form submitted to the FAA regional or airports division office as formal written notification of any kind of construction or alteration of objects that affect navigable airspace, as defined in 14 CFR Part 77, <i>Safe, Efficient Use, and Preservation of the Navigable Airspace</i> . (See guidance available on the FAA web site at https://oeaaa.faa.gov .) The form may be downloaded at http://www.faa.gov/airports/resources/forms/ , or filed electronically at: https://oeaaa.faa.gov .
Form 7480-1	Notice of Landing Area Proposal. Form submitted to the FAA Airports Regional Division Office or Airports District Office as formal written notification whenever a project without an airport layout plan on file with the FAA involves the construction of a new airport; the construction, realigning, altering, activating, or abandoning of a runway, landing strip, or associated taxiway; or the deactivation or abandoning of an entire airport The form may be downloaded at http://www.faa.gov/airports/resources/forms/ .
Form 6000-26	Airport Sponsor Strategic Event Submission Form
AC	Advisory Circular
ACSI	Airport Certification Safety Inspector
ADG	Airplane Design Group
AIP	Airport Improvement Program
ALECP	Airport Lighting Equipment Certification Program
ANG	Air National Guard
AOA	Air Operations Area, as defined in 14 CFR Part 107. Means a portion of an airport, specified in the airport security program, in which security measures are carried out. This area includes aircraft movement areas, aircraft parking areas, loading ramps, and safety areas, and any adjacent areas (such as general aviation areas) that are not separated by adequate security systems, measures, or procedures. This area does not include the secured area of the airport terminal building.
ARFF	Aircraft Rescue and Fire Fighting
ARP	FAA Office of Airports
ASDA	Accelerate-Stop Distance Available
AT	Air Traffic
ATCT	Airport Traffic Control Tower
ATIS	Automatic Terminal Information Service
ATO	Air Traffic Organization
Certificated Airport	An airport that has been issued an Airport Operating Certificate by the FAA under

Term	Definition
	the authority of 14 CFR Part 139, <i>Certification of Airports</i> .
CFR	Code of Federal Regulations
Construction	The presence of construction-related personnel, equipment, and materials in any location that could infringe upon the movement of aircraft.
CSPP	Construction Safety and Phasing Plan. The overall plan for safety and phasing of a construction project developed by the airport operator, or developed by the airport operator's consultant and approved by the airport operator. It is included in the invitation for bids and becomes part of the project specifications.
CTAF	Common Traffic Advisory Frequency
Displaced Threshold	A threshold that is located at a point on the runway other than the designated beginning of the runway. The portion of pavement behind a displaced threshold is available for takeoffs in either direction or landing from the opposite direction.
DOT	Department of Transportation
EPA	Environmental Protection Agency
FAA	Federal Aviation Administration
FOD	Foreign Object Debris/Damage
FSS	Flight Service Station
GA	General Aviation
HAZMAT	Hazardous Materials
HMA	Hot Mix Asphalt
IAP	Instrument Approach Procedures
IFR	Instrument Flight Rules
ILS	Instrument Landing System
LDA	Landing Distance Available
LOC	Localizer antenna array
Movement Area	The runways, taxiways, and other areas of an airport that are used for taxiing or hover taxiing, air taxiing, takeoff, and landing of aircraft, exclusive of loading aprons and aircraft parking areas (reference 14 CFR Part 139).
MSDS	Material Safety Data Sheet
MUTCD	Manual on Uniform Traffic Control Devices
NAVAID	Navigation Aid
NAVAID Critical Area	An area of defined shape and size associated with a NAVAID that must remain clear and graded to avoid interference with the electronic signal.
Non-Movement Area	The area inside the airport security fence exclusive of the Movement Area. It is important to note that the non-movement area includes pavement traversed by aircraft.

Term	Definition
NOTAM	Notices to Airmen
Obstruction	Any object/obstacle exceeding the obstruction standards specified by 14 CFR Part 77, subpart C.
OCC	Operations Control Center
OE / AAA	Obstruction Evaluation / Airport Airspace Analysis
OFA	Object Free Area. An area on the ground centered on the runway, taxiway, or taxi lane centerline provided to enhance safety of aircraft operations by having the area free of objects except for those objects that need to be located in the OFA for air navigation or aircraft ground maneuvering purposes. (See AC 150/5300-13 for additional guidance on OFA standards and wingtip clearance criteria.)
OFZ	Obstacle Free Zone. The airspace below 150 ft (45 m) above the established airport elevation and along the runway and extended runway centerline that is required to be clear of all objects, except for frangible visual NAVAIDs that need to be located in the OFZ because of their function, in order to provide clearance protection for aircraft landing or taking off from the runway and for missed approaches. The OFZ is subdivided as follows: Runway OFZ, Inner Approach OFZ, Inner Transitional OFZ, and Precision OFZ. Refer to AC 150/5300-13 for guidance on OFZ.
OSHA	Occupational Safety and Health Administration
OTS	Out of Service
P&R	Planning and Requirements Group
NPI	NAS Planning & Integration
PAPI	Precision Approach Path Indicator
PFC	Passenger Facility Charge
PLASI	Pulse Light Approach Slope Indicator
Project Proposal Summary	A clear and concise description of the proposed project or change that is the object of Safety Risk Management.
RA	Reimbursable Agreement
RE	Resident Engineer
REIL	Runway End Identifier Lights
RNAV	Area Navigation
ROFA	Runway Object Free Area
RSA	Runway Safety Area. A defined surface surrounding the runway prepared or suitable for reducing the risk of damage to airplanes in the event of an undershoot, overshoot, or excursion from the runway, in accordance with AC 150/5300-13 .
SDS	Safety Data Sheet
SIDA	Security Identification Display Area
SMS	Safety Management System

Term	Definition
SPCD	Safety Plan Compliance Document. Details developed and submitted by a contractor to the airport operator for approval providing details on how the performance of a construction project will comply with the CSPP.
SRM	Safety Risk Management
SSC	System Support Center
Taxiway Safety Area	A defined surface alongside the taxiway prepared or suitable for reducing the risk of damage to an airplane unintentionally departing the taxiway, in accordance with AC 150/5300-13 .
TDG	Taxiway Design Group
Temporary	Any condition that is not intended to be permanent.
Temporary Runway End	The beginning of that portion of the runway available for landing and taking off in one direction, and for landing in the other direction. Note the difference from a displaced threshold.
Threshold	The beginning of that portion of the runway available for landing. In some instances, the landing threshold may be displaced.
TODA	Takeoff Distance Available
TOFA	Taxiway Object Free Area
TORA	Takeoff Run Available. The length of the runway less any length of runway unavailable and/or unsuitable for takeoff run computations. See AC 150/5300-13 for guidance on declared distances.
TSA	Taxiway Safety Area, or Transportation Security Administration
UNICOM	A radio communications system of a type used at small airports.
VASI	Visual Approach Slope Indicator
VGSI	Visual Glide Slope Indicator. A device that provides a visual glide slope indicator to landing pilots. These systems include precision approach path indicator (PAPI), visual approach slope indicator (VASI), and pulse light approach slope indicator (PLASI).
VFR	Visual Flight Rules
VOR	Very High Frequency Omnidirectional Radio Range
VPD	Vehicle / Pedestrian Deviation

APPENDIX C. SAFETY AND PHASING PLAN CHECKLIST

This appendix is keyed to Chapter 2. In the electronic version of this AC, clicking on the paragraph designation in the Reference column will access the applicable paragraph. There may be instances where the CSPP requires provisions that are not covered by the list in this appendix.

This checklist is intended as an aid, not a required submittal.

Table C-1. CSPP Checklist

Coordination	Reference	Addressed?			Remarks
		Yes	No	NA	
General Considerations					
Requirements for predesign, prebid, and preconstruction conferences to introduce the subject of airport operational safety during construction are specified.	<u>2.5</u>				
Operational safety is a standing agenda item for construction progress meetings.	<u>2.5</u>				
Scheduling of the construction phases is properly addressed.	<u>2.6</u>				
Any formal agreements are established.	<u>2.5.3</u>				
Areas and Operations Affected by Construction Activity					
Drawings showing affected areas are included.	<u>2.7.1</u>				
Closed or partially closed runways, taxiways, and aprons are depicted on drawings.	<u>2.7.1.1</u>				
Access routes used by ARFF vehicles affected by the project are addressed.	<u>2.7.1.2</u>				
Access routes used by airport and airline support vehicles affected by the project are addressed.	<u>2.7.1.3</u>				
Underground utilities, including water supplies for firefighting and drainage.	<u>2.7.1.4</u>				

Coordination	Reference	Addressed?			Remarks
		Yes	No	NA	
Approach/departure surfaces affected by heights of temporary objects are addressed.	<u>2.7.1.5</u>				
Construction areas, storage areas, and access routes near runways, taxiways, aprons, or helipads are properly depicted on drawings.	<u>2.7.1</u>				
Temporary changes to taxi operations are addressed.	<u>2.7.2.1</u>				
Detours for ARFF and other airport vehicles are identified.	<u>2.7.2.2</u>				
Maintenance of essential utilities and underground infrastructure is addressed.	<u>2.7.2.3</u>				
Temporary changes to air traffic control procedures are addressed.	<u>2.7.2.4</u>				
NAVAIDs					
Critical areas for NAVAIDs are depicted on drawings.	<u>2.8</u>				
Effects of construction activity on the performance of NAVAIDs, including unanticipated power outages, are addressed.	<u>2.8</u>				
Protection of NAVAID facilities is addressed.	<u>2.8</u>				
The required distance and direction from each NAVAID to any construction activity is depicted on drawings.	<u>2.8</u>				
Procedures for coordination with FAA ATO/Technical Operations, including identification of points of contact, are included.	<u>2.8, 2.13.1, 2.13.5.3.1, 2.18.1</u>				
Contractor Access					
The CSPP addresses areas to which contractor will have access and how	<u>2.9</u>				

Coordination	Reference	Addressed?			Remarks
		Yes	No	NA	
the areas will be accessed.					
The application of 49 CFR Part 1542 Airport Security, where appropriate, is addressed.	<u>2.9</u>				
The location of stockpiled construction materials is depicted on drawings.	<u>2.9.1</u>				
The requirement for stockpiles in the ROFA to be approved by FAA is included.	<u>2.9.1</u>				
Requirements for proper stockpiling of materials are included.	<u>2.9.1</u>				
Construction site parking is addressed.	<u>2.9.2.1</u>				
Construction equipment parking is addressed.	<u>2.9.2.2</u>				
Access and haul roads are addressed.	<u>2.9.2.3</u>				
A requirement for marking and lighting of vehicles to comply with <i>AC 150/5210-5, Painting, Marking and Lighting of Vehicles Used on an Airport</i> , is included.	<u>2.9.2.4</u>				
Proper vehicle operations, including requirements for escorts, are described.	<u>2.9.2.5, 2.9.2.6</u>				
Training requirements for vehicle drivers are addressed.	<u>2.9.2.7</u>				
Two-way radio communications procedures are described.	<u>2.9.2.9</u>				
Maintenance of the secured area of the airport is addressed.	<u>2.9.2.10</u>				
Wildlife Management					
The airport operator's wildlife management procedures are addressed.	<u>2.10</u>				

Coordination	Reference	Addressed?			Remarks
		Yes	No	NA	
Foreign Object Debris Management					
The airport operator's FOD management procedures are addressed.	<u>2.11</u>				
Hazardous Materials Management					
The airport operator's hazardous materials management procedures are addressed.	<u>2.12</u>				
Notification of Construction Activities					
Procedures for the immediate notification of airport user and local FAA of any conditions adversely affecting the operational safety of the airport are detailed.	<u>2.13</u>				
Maintenance of a list by the airport operator of the responsible representatives/points of contact for all involved parties and procedures for contacting them 24 hours a day, seven days a week is specified.	<u>2.13.1</u>				
A list of local ATO/Technical Operations personnel is included.	<u>2.13.1</u>				
A list of ATCT managers on duty is included.	<u>2.13.1</u>				
A list of authorized representatives to the OCC is included.	<u>2.13.2</u>				
Procedures for coordinating, issuing, maintaining and cancelling by the airport operator of NOTAMS about airport conditions resulting from construction are included.	<u>2.8, 2.13.2, 2.18.3.3.9</u>				
Provision of information on closed or hazardous conditions on airport movement areas by the airport operator to the OCC is specified.	<u>2.13.2</u>				
Emergency notification procedures for medical, fire fighting, and police	<u>2.13.3</u>				

Coordination	Reference	Addressed?			Remarks
		Yes	No	NA	
response are addressed.					
Coordination with ARFF personnel for non-emergency issues is addressed.	<u>2.13.4</u>				
Notification to the FAA under 14 CFR parts 77 and 157 is addressed.	<u>2.13.5</u>				
Reimbursable agreements for flight checks and/or design and construction for FAA owned NAVAIDs are addressed.	<u>2.13.5.3.2</u>				
Inspection Requirements					
Daily and interim inspections by both the airport operator and contractor are specified.	<u>2.14.1, 2.14.2</u>				
Final inspections at certificated airports are specified when required.	<u>2.14.3</u>				
Underground Utilities					
Procedures for protecting existing underground facilities in excavation areas are described.	<u>2.15</u>				
Penalties					
Penalty provisions for noncompliance with airport rules and regulations and the safety plans are detailed.	<u>2.16</u>				
Special Conditions					
Any special conditions that affect the operation of the airport or require the activation of any special procedures are addressed.	<u>2.17</u>				
Runway and Taxiway Visual Aids - Marking, Lighting, Signs, and Visual NAVAIDs					
The proper securing of temporary airport markings, lighting, signs, and visual NAVAIDs is addressed.	<u>2.18.1</u>				
Frangibility of airport markings, lighting, signs, and visual NAVAIDs is specified.	<u>2.18.1, 2.18.3, 2.18.4.2, 2.20.2.4</u>				

Coordination	Reference	Addressed?			Remarks
		Yes	No	NA	
The requirement for markings to be in compliance with <u>AC 150/5340-1</u> , <i>Standards for Airport Markings</i> , is specified.	<u>2.18.2</u>				
Detailed specifications for materials and methods for temporary markings are provided.	<u>2.18.2</u>				
The requirement for lighting to conform to <u>AC 150/5340-30</u> , <i>Design and Installation Details for Airport Visual Aids</i> ; <u>AC 150/5345-50</u> , <i>Specification for Portable Runway and Taxiway Lights</i> ; and <u>AC 150/5345-53</u> , <i>Airport Lighting Certification Program</i> , is specified.	<u>2.18.3</u>				
The use of a lighted X is specified where appropriate.	<u>2.18.2.1.2</u> , <u>2.18.3.2</u>				
The requirement for signs to conform to <u>AC 150/5345-44</u> , <i>Specification for Runway and Taxiway Signs</i> ; <u>AC 150/5340-18</u> , <i>Standards for Airport Sign Systems</i> ; and <u>AC 150/5345-53</u> , <i>Airport Lighting Certification Program</i> , is specified.	<u>2.18.4</u>				
Marking and Signs For Access Routes					
The CSPP specifies that pavement markings and signs intended for construction personnel should conform to <u>AC 150/5340-18</u> and, to the extent practicable, with the MUTCD and/or State highway specifications.	<u>2.18.4.2</u>				
Hazard Marking and Lighting					
Prominent, comprehensible warning indicators for any area affected by construction that is normally accessible to aircraft, personnel, or vehicles are specified.	<u>2.20.1</u>				

Coordination	Reference	Addressed?			Remarks
		Yes	No	NA	
Hazard marking and lighting are specified to identify open manholes, small areas under repair, stockpiled material, and waste areas.	<u>2.20.1</u>				
The CSPP considers less obvious construction-related hazards.	<u>2.20.1</u>				
Equipment that poses the least danger to aircraft but is sturdy enough to remain in place when subjected to typical winds, prop wash and jet blast is specified.	<u>2.20.2.1</u>				
The spacing of barricades is specified such that a breach is physically prevented barring a deliberate act.	<u>2.20.2.1</u>				
Red lights meeting the luminance requirements of the State Highway Department are specified.	<u>2.20.2.2</u>				
Barricades, temporary markers, and other objects placed and left in areas adjacent to any open runway, taxiway, taxi lane, or apron are specified to be as low as possible to the ground, and no more than 18 inch high.	<u>2.20.2.3</u>				
Barricades are specified to indicate construction locations in which no part of an aircraft may enter.	<u>2.20.2.3</u>				
Highly reflective barriers with lights are specified to barricade taxiways leading to closed runways.	<u>2.20.2.5</u>				
Markings for temporary closures are specified.	<u>2.20.2.5</u>				
The provision of a contractor's representative on call 24 hours a day for emergency maintenance of airport hazard lighting and barricades is specified.	<u>2.20.2.7</u>				

Coordination	Reference	Addressed?			Remarks
		Yes	No	NA	
Work Zone Lighting for Nighttime Construction					
If work is to be conducted at night, the CSPP identifies construction lighting units and their general locations and aiming in relationship to the ATCT and active runways and taxiways.	<u>2.21</u>				
Protection of Runway and Taxiway Safety Areas					
The CSPP clearly states that no construction may occur within a safety area while the associated runway or taxiway is open for aircraft operations.	<u>2.22.1.1,</u> <u>2.22.3.1</u>				
The CSPP specifies that the airport operator coordinates the adjustment of RSA or TSA dimensions with the ATCT and the appropriate FAA Airports Regional or District Office and issues a local NOTAM.	<u>2.22.1.2,</u> <u>2.22.3.2</u>				
Procedures for ensuring adequate distance for protection from blasting operations, if required by operational considerations, are detailed.	<u>2.22.3.3</u>				
The CSPP specifies that open trenches or excavations are not permitted within a safety area while the associated runway or taxiway is open, subject to approved exceptions.	<u>2.22.1.4</u>				
Appropriate covering of excavations in the RSA or TSA that cannot be backfilled before the associated runway or taxiway is open is detailed.	<u>2.22.1.4</u>				
The CSPP includes provisions for prominent marking of open trenches and excavations at the construction site.	<u>2.22.1.4</u>				
Grading and soil erosion control to maintain RSA/TSA standards are	<u>2.22.3.5</u>				

Coordination	Reference	Addressed?			Remarks
		Yes	No	NA	
addressed.					
The CSPP specifies that equipment is to be removed from the ROFA when not in use.	<u>2.22.2</u>				
The CSPP clearly states that no construction may occur within a taxiway safety area while the taxiway is open for aircraft operations.	<u>2.22.3</u>				
Appropriate details are specified for any construction work to be accomplished in a taxiway object free area.	<u>2.22.4</u>				
Measures to ensure that personnel, material, and/or equipment do not penetrate the OFZ or threshold siting surfaces while the runway is open for aircraft operations are included.	<u>2.22.4.3.6</u>				
Provisions for protection of runway approach/departure areas and clearways are included.	<u>2.22.6</u>				
Other Limitations on Construction					
The CSPP prohibits the use of open flame welding or torches unless adequate fire safety precautions are provided and the airport operator has approved their use.	<u>2.23.1.2</u>				
The CSPP prohibits the use of electrical blasting caps on or within 1,000 ft (300 m) of the airport property.	<u>2.23.1.3</u>				

APPENDIX D. CONSTRUCTION PROJECT DAILY SAFETY INSPECTION CHECKLIST

The situations identified below are potentially hazardous conditions that may occur during airport construction projects. Safety area encroachments, unauthorized and improper ground vehicle operations, and unmarked or uncovered holes and trenches near aircraft operating surfaces pose the most prevalent threats to airport operational safety during airport construction projects. The list below is one tool that the airport operator or contractor may use to aid in identifying and correcting potentially hazardous conditions. It should be customized as appropriate for each project including information such as the date, time and name of the person conducting the inspection.

Table D-1. Potentially Hazardous Conditions

Item	Action Required (Describe)	No Action Required (Check)
Excavation adjacent to runways, taxiways, and aprons improperly backfilled.		
Mounds of earth, construction materials, temporary structures, and other obstacles near any open runway, taxiway, or taxi lane; in the related Object Free area and aircraft approach or departure areas/zones; or obstructing any sign or marking.		
Runway resurfacing projects resulting in lips exceeding 3 inch (7.6 cm) from pavement edges and ends.		
Heavy equipment (stationary or mobile) operating or idle near AOA, in runway approaches and departures areas, or in OFZ.		
Equipment or material near NAVAIDs that may degrade or impair radiated signals and/or the monitoring of navigation and visual aids. Unauthorized or improper vehicle operations in localizer or glide slope critical areas, resulting in electronic interference and/or facility shutdown.		
Tall and especially relatively low visibility units (that is, equipment with slim profiles) — cranes, drills, and similar objects — located in critical areas, such as OFZ and		

Item	Action Required (Describe)	No Action Required (Check)
approach zones.		
Improperly positioned or malfunctioning lights or unlighted airport hazards, such as holes or excavations, on any apron, open taxiway, or open taxi lane or in a related safety, approach, or departure area.		
Obstacles, loose pavement, trash, and other debris on or near AOA. Construction debris (gravel, sand, mud, paving materials) on airport pavements may result in aircraft propeller, turbine engine, or tire damage. Also, loose materials may blow about, potentially causing personal injury or equipment damage.		
Inappropriate or poorly maintained fencing during construction intended to deter human and animal intrusions into the AOA. Fencing and other markings that are inadequate to separate construction areas from open AOA create aviation hazards.		
Improper or inadequate marking or lighting of runways (especially thresholds that have been displaced or runways that have been closed) and taxiways that could cause pilot confusion and provide a potential for a runway incursion. Inadequate or improper methods of marking, barricading, and lighting of temporarily closed portions of AOA create aviation hazards.		
Wildlife attractants — such as trash (food scraps not collected from construction personnel activity), grass seeds, tall grass, or standing water — on or near airports.		
Obliterated or faded temporary markings on active operational areas.		
Misleading or malfunctioning obstruction lights. Unlighted or unmarked obstructions in the approach to any open runway pose aviation hazards.		

Item	Action Required (Describe)	No Action Required (Check)
Failure to issue, update, or cancel NOTAMs about airport or runway closures or other construction related airport conditions.		
Failure to mark and identify utilities or power cables. Damage to utilities and power cables during construction activity can result in the loss of runway / taxiway lighting; loss of navigation, visual, or approach aids; disruption of weather reporting services; and/or loss of communications.		
Restrictions on ARFF access from fire stations to the runway / taxiway system or airport buildings.		
Lack of radio communications with construction vehicles in airport movement areas.		
Objects, regardless of whether they are marked or flagged, or activities anywhere on or near an airport that could be distracting, confusing, or alarming to pilots during aircraft operations.		
Water, snow, dirt, debris, or other contaminants that temporarily obscure or derogate the visibility of runway/taxiway marking, lighting, and pavement edges. Any condition or factor that obscures or diminishes the visibility of areas under construction.		
Spillage from vehicles (gasoline, diesel fuel, oil) on active pavement areas, such as runways, taxiways, aprons, and airport roadways.		
Failure to maintain drainage system integrity during construction (for example, no temporary drainage provided when working on a drainage system).		

Item	Action Required (Describe)	No Action Required (Check)
Failure to provide for proper electrical lockout and tagging procedures. At larger airports with multiple maintenance shifts/workers, construction contractors should make provisions for coordinating work on circuits.		
Failure to control dust. Consider limiting the amount of area from which the contractor is allowed to strip turf.		
Exposed wiring that creates an electrocution or fire ignition hazard. Identify and secure wiring, and place it in conduit or bury it.		
Site burning, which can cause possible obscuration.		
Construction work taking place outside of designated work areas and out of phase.		

APPENDIX E. SAMPLE OPERATIONAL EFFECTS TABLE

E.1 Project Description.

Runway 15-33 is currently 7820 feet long, with a 500 foot stopway on the north end. This project will remove the stopway and extend the runway 1000 feet to the north and 500 feet to the south. Finally, the existing portion of the runway will be repaved. The runway 33 glide slope will be relocated. The new runway 33 localizer has already been installed by FAA Technical Operations and only needs to be switched on. Runway 15 is currently served only by a localizer, which will remain in operation as it will be beyond the future RSA. Appropriate NOTAMS will be issued throughout the project.

E.1.1 During Phase I, the runway 15 threshold will be displaced 1000 feet to keep construction equipment below the approach surface. The start of runway 15 takeoff and the departure end of runway 33 will also be moved 500 feet to protect workers from jet blast. Declared distances for runway 33 will be adjusted to provide the required RSA and applicable departure surface. Excavation near Taxiway G will require its ADG to be reduced from IV to III. See Figure E-1.

Figure E-1. Phase I Example

Note 1: Where hold signs are installed on both sides of a taxiway, install the TORA sign on the left side of the taxiway before the final turn to the runway intersection.

Note 2: Based on the declared distances for Runway 33 departures, the maximum equipment height in the construction area is 12.5 feet (500/40 = 12.5).

E.2 During Phase II, the runway 33 threshold will be displaced 1000 feet to keep construction equipment below the approach surface. The start of runway 33 takeoff and the departure end of runway 15 will also be moved 500 feet to protect workers from jet blast. Declared distances for runway 15 will be adjusted to provide the required RSA and applicable departure surface. See Figure E-2.

Figure E-2. Phase II Example

Note 1: Where hold signs are installed on both sides of a taxiway, install the TORA sign on the left side of the taxiway before the final turn to the runway intersection.

Note 2: Based on the declared distances for Runway 15 departures, the maximum equipment height in the construction area is 12.5 feet ($500/40 = 12.5$).

- E.3 During Phase III, the existing portion of the runway will be repaved with Hot Mix Asphalt (HMA) and the runway 33 glide slope will be relocated. Construction will be accomplished between the hours of 8:00 pm and 5:00 am, during which the runway will be closed to operations.

Figure E-3. Phase III Example

Table E-1. Operational Effects Table

Project	Runway 15-33 Extension and Repaving			
Phase	Normal (Existing)	Phase I: Extend Runway 15 End	Phase II: Extend Runway 33 End	Phase III: Repave Runway
Scope of Work	N/A	Extend Runway 15-33 1,000 ft on north end with Hot Mix Asphaltic Concrete (HMA).	Extend Runway 15-33 500 ft on south end with Hot Mix Asphaltic Concrete (HMA).	Repave existing runway with HMA Relocate Runway 33 Glide Slope
Effects of Construction Operations	N/A	Existing North 500 ft closed	Existing South 500 ft closed	Runway closed between 8:00 pm and 5:00 am Edge lighting out of service
Construction Phase	N/A	Phase I (Anticipated)	Phase II (Anticipated)	Phase III (Anticipated)
Runway 15 Average Aircraft Operations	Carrier: 52 /day GA: 26 /day Military: 11 /day	Carrier: 40 /day GA: 26 /day Military: 0 /day	Carrier: 45 /day GA: 26 /day Military: 5 /day	Carrier: 45 / day GA: 20 / day Military: 0 /day

APPENDIX B

FAAAC 150/5210-5D

PAINING, MARKING, AND LIGHTING OF VEHICLES USED ON AIRPORTS

U.S. Department
of Transportation

Federal Aviation
Administration

Advisory Circular

Subject: Painting, Marking, and Lighting of
Vehicles Used on an Airport

Date: April 1, 2010

AC No: AC 150/5210-5D

Initiated by: AAS-100

Change:

1. **PURPOSE.** This advisory circular (AC) provides guidance, specifications, and standards for painting, marking, and lighting of vehicles operating in the airport air operations area (AOA). The approved lights, colors, and markings herein assure the conspicuity of vehicles operating in the AOA from both the ground and the air.

2. **CANCELLATION.** This AC cancels AC 150/5210-5C, Painting, Marking, and Lighting of Vehicles Used on an Airport, dated August 31, 2007.

3. **APPLICATION.** The Federal Aviation Administration (FAA) recommends the guidelines and standards in this Advisory Circular for vehicles operating in the airport AOA. In general, use of this AC is not mandatory. *However*, use of this AC is mandatory for vehicles funded with federal grant monies through the Airport Improvement Program (AIP) and/or with revenue from the Passenger Facility Charges (PFC) Program. See Grant Assurance No. 34, "Policies, Standards, and Specifications," and PFC Assurance No. 9, "Standard and Specifications."

Vehicles covered by this AC that do not meet this standard may be used until the vehicle is repainted or replaced, but no later than **December 31, 2010**.

4. **PRINCIPAL CHANGES.** This AC contains new specifications and recommendations for the painting, marking, and lighting of Towbarless Tow Vehicles (TLTVs).

5. **METRIC UNITS.** To promote an orderly transition to metric units, this AC includes both English and metric dimensions. The metric conversions may not be exact equivalents, and until there is an official changeover to the metric system, the English dimensions will govern.

6. **COMMENTS OR SUGGESTIONS** for improvements to this AC should be sent to:

Manager, Airport Engineering Division
Federal Aviation Administration
ATTN: AAS-100
800 Independence Avenue, S.W.
Washington, DC 20591

Michael J. O'Donnell
Director of Airport Safety and Standards

Intentionally left blank.

2. DEFINITIONS. The following definitions apply in this AC:

- a. Vehicle** – All conveyances, except aircraft, used on the ground to transport persons, cargo, equipment or those required to perform maintenance, construction, service, and security duties.
- b. Air Operations Area (AOA)** – The portion of airport that encompasses the landing, take off, taxiing, and parking areas for aircraft.
- c. Airport Emergency Vehicles** – Vehicles that are authorized in the AOA for emergency purposes (e.g., ambulances, aircraft rescue and fire fighting (ARFF) vehicles and emergency response vehicles) as authorized by the airport traffic control tower (ATCT) or an authorized on-site accident/incident commander.
- d. Airport Operations Vehicles** – Vehicles routinely used by airport operations personnel for airport inspection and duties associated with airfield operations (such as airfield condition reporting and Incident Command) on the AOA and Movement Area.
- e. Airport Security Vehicles** – Vehicles that are authorized in the AOA for security purposes, as needed (e.g. police cars).

- f. Airfield Service Vehicles** – Vehicles that are routinely used in the AOA for airfield service, maintenance, or construction (e.g. snow blowers, snowplows, maintenance trucks, and tractors).
- g. Aircraft Support Vehicles** – Vehicles that are routinely used in the AOA to support aircraft operations (e.g. aircraft pushback tractors, baggage/cargo tractors or trucks, air conditioning and aviation fuel trucks). These vehicles are typically owned by airlines, vendors, or contractors and are not eligible for Federal funding.
- h. Reduced Visibility** – Prevailing visibility is less than one statute mile (1609 meters) and/or the runway visual range (RVR) is less than 6,000 feet (1830 meters).
- i. Movement Area** – The runways, taxiways, and other areas of an airport/heliport that are used for taxiing/hover taxiing, air taxiing, takeoff, and landing of aircraft, exclusive of loading ramps and parking areas. At those airports/heliports with an operating airport traffic control tower (ATCT), specific approval for entry onto the movement area must be obtained from air traffic control (ATC).
- j. Other Vehicles** – Vehicles that are not routinely authorized in the AOA (e.g. construction vehicles). These vehicles are typically owned by airlines, vendors, or contractors and are not eligible for Federal funding.
- k. Peak Intensity** – Peak intensity, for purposes of this document, means the maximum magnitude of luminescence as measured in candela.
- l. Towbarless Tow Vehicle (TLTV)** – a type of aircraft support vehicle whose main purpose is to tow aircraft in the AOA by way of nose gear capture.

3. VEHICLE PAINTING.

NOTE: *Airport vehicle paint and markings are a safety of flight requirement. The approved colors/markings herein assure conspicuity of vehicles operating in the AOA from both the ground and air.*

a. Airport Emergency Vehicles.

(1) Ambulances. Ambulance vehicles are painted per the most current version of Federal Specification KKK-A-1822, *Federal Specification for the Star-of-Life Ambulance*. Ambulances are not considered vehicles routinely operating on the AOA.

(2) Aircraft Rescue and Fire Fighting (ARFF) Vehicles. Yellowish-green is the vehicle color standard. Color specifications are per Appendix A.

NOTE: *A yellowish-green color provides optimum visibility during all light levels encountered during a 24-hour day and under variations of light that result from weather and seasonal changes.*

b. Airport Operations Vehicles. Airport operations vehicles may be painted in colors designated by the airport operator. The characteristics must be coordinated with the respective ATCT and identified in the tower letter of agreement.

c. Airport Security Vehicles. Comply with specific state or local requirements.

d. Airfield Service Vehicles. Chrome yellow is the vehicle color standard. Color specifications are per Appendix A. When vehicles are equipped with bumper bars 8 inches (200 mm) or more in depth, the bars must be painted in alternate stripes 4 inches (100 mm) in width of chrome yellow and black inclined 45° to the vertical.

e. Aircraft Support Vehicles.

(1) Any color or combination of colors other than yellowish-green or chrome yellow. The bumper bar paint scheme in paragraph 3.d (of alternating chrome yellow and black stripe) is recommended.

(2) **TLTVs.** International orange is the vehicle color standard. Retroreflective tape covering more than 25 percent of the vehicle's vertical surfaces may be used as a temporary measure to meet this standard prior to scheduled vehicle painting.

f. Other Vehicles. Any color or combination of colors other than solid black or white.

4. VEHICLE MARKING.

a. Airport Emergency Vehicles.

(1) **Ambulances.** Ambulances are marked per the most current version of Federal Specification KKK-A-1822.

(2) **ARFF Vehicles.** Emergency rescue and fire fighting vehicles are marked with the letters "ARFF," "Fire," or "Rescue" and in accordance with 4.c.(1)-(5) of this AC.

b. Airport Operations Vehicles. Airport operations vehicles may be marked as designated by the airport operator. Marking must be coordinated with the respective ATCT and identified in the tower letter of agreement.

c. Airfield Service Vehicles and Aircraft Support Vehicles.

(1) Airport operator owned vehicles must display an identification number on each side and on the roof (the hood should be used if the vehicle has no roof).

(2) Side numbers will be a minimum of 16 inches (410 mm) in height and conspicuously located.

(3) Roof numbers will be a minimum of 24 inches (610 mm) in height and affixed with their bases toward the front of the vehicle. The identification numbers should provide sharp color contrast to the vehicle color.

(4) In addition to the identification numbers, airport operator-owned vehicles must display either the name of the airport and/or the airport insignia.

(5) To further improve night-time recognition of vehicles, a minimum 8 inch (200 mm) wide horizontal band of high gloss white paint or white reflective tape (Retroreflective, ASTM-D 4956-09, *Standard Specification for Retroreflective Sheeting for Traffic Control*, Type III & above) must be used around the vehicle's surface. Figures 1, 2, and 3 show suggested locations for the horizontal reflective band.

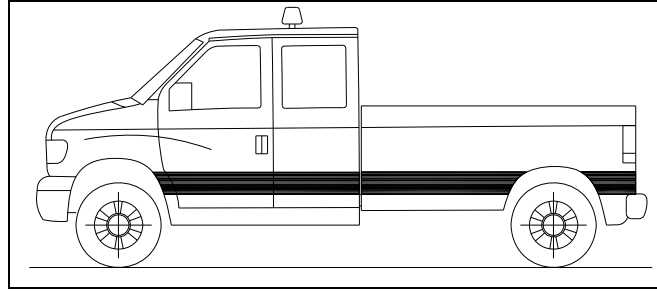

Figure 1: Suggested location for the horizontal reflective band, Option 1

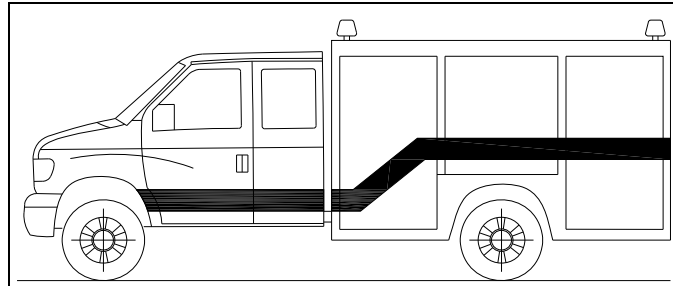

Figure 2: Suggested location for the horizontal reflective band, Option 2

Figure 3: Suggested location for the horizontal reflective band, Option 3

(6) **TLTVs.** Retroreflective tape is used to outline the shape of a TLTV. If the vertical edge of the vehicle is rounded, the tape should be placed on the rounded portion to reflect light in both the horizontal and vertical planes. Where the placement of the tape may interfere with, or may be worn down by, maintenance or operational activities, tape is not required. Suggested locations for the retroreflective bands are shown in Figure 4.

Figure 4: Suggested placement of retroreflective tape on a TLTV

d. Airport Security and Other Vehicles.

- (1) Vehicles other than those that routinely traverse any portion of the AOA under the control of ATC, which are not escorted by a vehicle in constant two-way radio communication with ATC and properly equipped and authorized to operate in the AOA, must be provided with a flag on a staff attached to the vehicle so that the flag will be readily visible.
- (2) At airports without air traffic control facilities, flags must be provided on all vehicles.
- (3) The flag must be at least a 3-foot by 3-foot (0.9 meter by 0.9 meter) square having a checkered pattern of international orange and white squares at least 1 foot (300 mm) on each side (see Appendix A for the fabric color specification).

5. VEHICLE LIGHTING.

a. Airfield Service, Aircraft Support, and Airport Operations Vehicles.

- (1) The standard for identification lighting is a yellow flashing light that is mounted on the uppermost part of the vehicle structure. A steady yellow light designates vehicles limited to non-movement areas.
- (2) The light must be visible from any direction, day and night, including from the air.
- (3) Color specifications for vehicle identification lights are per Appendix B.
- (4) **TLTVs.** An LED light bar placed above the operator's cab may be used in place of the rotating yellow flashing light. In addition, a yellow flashing light (of any type) must be installed on the upper left-rear and right-rear corners of the TLTV, and must be activated when an aircraft is in tow. The size of the rear flashing lights must be large enough to meet the requirements of Section 5.c, but not so large as to interfere with the normal or towing operations of the TLTV.

b. Airport Emergency, Security, and Other Vehicles, which are not escorted by a properly lighted vehicle, must be identified during periods of low visibility by a light.

c. Characteristics of Flashing Lights:

- (1) Ambulance lights must meet the specifications in the most current version of Federal Specification KKK-A-1822, and ARFF vehicles must meet NFPA, state, and local requirements.
- (2) Lights must have peak intensity within the range of 40 to 400 candelas (effective) from 0° (horizontal) up to 10° above the horizontal and for 360° horizontally. The upper limit of 400 candelas (effective) is necessary to avoid damage to night vision.
- (3) From 10° to 15° above the horizontal plane, the light output must be 1/10th of peak intensity or between 4 and 40 candelas (effective).

- (4) Lights must flash at 75 ± 15 flashes per minute.

NOTES:

1. *The effective intensity of a flashing light is equal to the intensity of a steady-burning (fixed) light of the same color that produces the same visual range under identical conditions of observation.*

2. *If xenon flashtubes are used, refer to AC 150/5345-43, Specification for Obstruction Lighting Equipment, for guidance concerning methods of calculating effective intensity.*

d. Light Colors.

(1) Airport Emergency Vehicles.

(a) **Ambulances.** Per the most current version of Federal Specification KKK-A-1822.

(b) **ARFF Vehicles.** Red or a combination of red-and-white flashing lights per the chromaticity requirements in Appendix B.

(2) Airport Security Vehicles. Signal blue or a combination of red and signal blue flashing light per the chromaticity requirements in Appendix B.

(3) Airfield Service, Aircraft Support, Airport Operations, and Other Vehicles. Yellow flashing light per the chromaticity requirements in Appendix B.

APPENDIX A. COLOR SPECIFICATIONS

A-1. SPECIFICATIONS. Colors specified in Table A-1 are per the Commission Internationale de l'Eclairage (CIE) L*a*b* system of color specification. For a description of this system, refer to American Society for Testing & Materials (ASTM) D 2244, *Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates*.

Table A-1. Specification for vehicle and flag colors

Standard Illuminant D65 Usage	Chrome Yellow			Yellowish-Green			International Orange		
	Vehicle Paint			Vehicle Paint			Vehicle Paint / Flag Fabric		
CIELAB DATA	L*	a*	b*	L*	a*	b*	L*	a*	b*
Centroid Color	72.8	24.4	77.6	78.3	-10.2	80.4	45.0	53.5	52.0
Point 1	72.8	31.8	82.9	78.3	-9.0	92.0	45.0	61.4	47.8
Point 2	72.8	25.5	66.7	78.3	-7.6	73.2	45.0	53.9	41.4
Point 3	72.8	18.0	69.3	78.3	-11.0	69.3	45.0	53.5	53.4
Point 4	72.8	22.4	86.0	78.3	-13.4	86.2	45.0	49.7	60.4
Light Limit	77.8			83.3			49.9		
Dark Limit	67.8			73.3			41.6		
Max ΔE	11.1			11.7			10.7		

A-2. COLOR TESTS. Acceptable colors are those that meet the gloss rating test and either a visual or an instrumental color test as follows:

NOTE: *Flag fabric colors must meet either the instrumental tests in Table A-1 or the visual method described in paragraph A-2b(1).*

a. Gloss Rating Test. This test is performed per ASTM D 523, *Standard Test Method for Specular Gloss*, on a paint sample of the color to be applied on the vehicle. An acceptable color sample is high gloss with a minimum gloss rating of 70 units, for 60° geometry.

b. Color Test Methods:

(1) Visual. Prepare a master specimen of the color (per Table A-1) and gloss (per paragraph A-2a). This specimen will be the master color and be used as the basis of comparison per ASTM D 5531-05, *Standard Guide for the Preparation, Maintenance, and Distribution of Physical Product Standards for Color and Geometric Appearance of Coatings*. To verify the paint color of a vehicle visually, vehicle paint samples must be

prepared and viewed per ASTM D 1729-96 (Reapproved 2009), *Standard Practice for Visual Appraisal of Colors and Color Differences of Diffusely-Illuminated Opaque Materials*.

(2) Instrumental. This test requires a test specimen sample and reference to Table A-1. All test specimen measurements should be conducted per ASTM E 1164-09a *Standard Practice for Obtaining Spectrometric Data for Object-Color Evaluation*. Test specimen tolerances must be per Table A-1 per the following:

(a) Plot the centroid color using the a* and b* CIELAB coordinate data from Table A-1 on graph paper or by entry of the coordinate data into a computer program. Plot and connect points 1 through 4 from the same table to form a quadrilateral; noting that the centroid color is within this figure. See Figure A-1 for plots of all three color specifications in Table A-1.

(b) Perform color sample measurements per ASTM E 1164-09a. If necessary, convert measurements to CIELAB L*, a*, and b* color space. See ASTM E 308-08, *Standard Practice for Computing the Colors of Objects by Using the CIE System*, for color space conversion formulae.

(c) An acceptable color is one that meets:

(i) the chromaticity requirements of the color samples a* and b* CIELAB coordinate data by falling within the quadrilateral;

(ii) the L* data lightness requirement by falling within the range defined by the light and dark data of Table A-1;

(iii) the total color difference (ΔE) by not exceeding the limits in Table A-1 when the CIELAB data are computed in the following formula:

$$\Delta E = (\Delta L^{*2} + \Delta a^{*2} + \Delta b^{*2})^{\frac{1}{2}}$$

where ΔL^* , Δa^* , and Δb^* values are the differences between those values for the centroid color in Table A-1 and those of the color sample measurements.

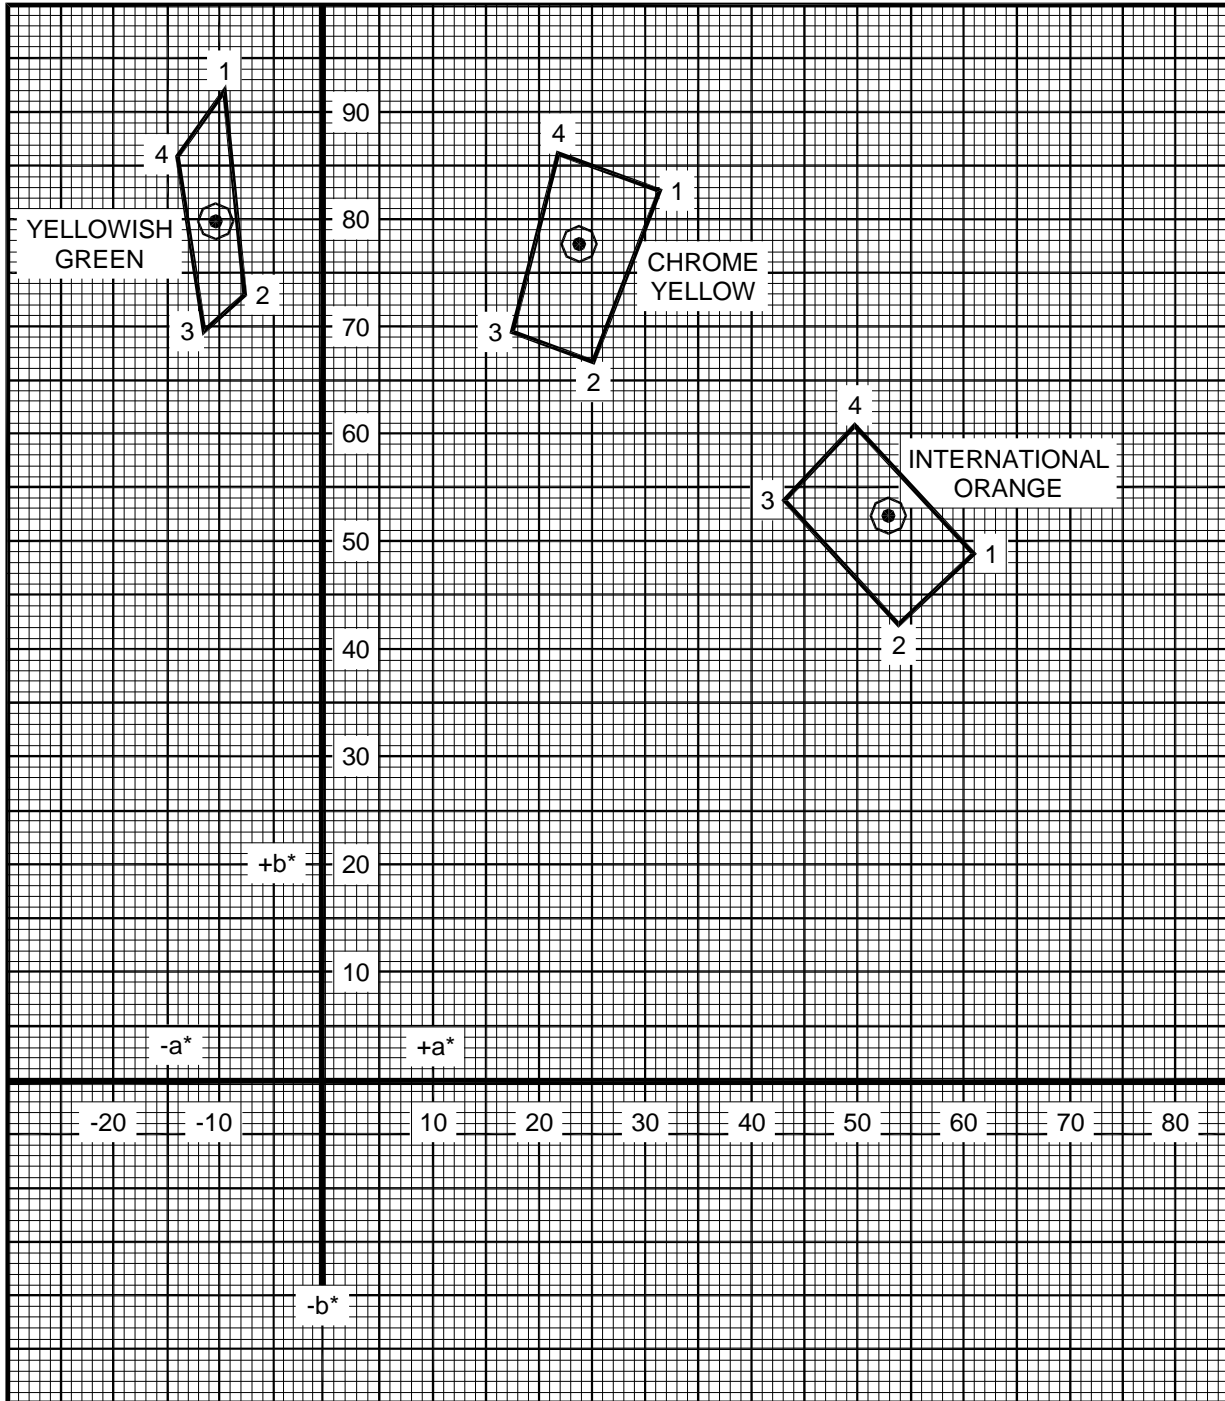

Figure A-1. Plot of selected color paint specifications

Intentionally left blank.

APPENDIX B. COLOR SPECIFICATIONS FOR VEHICLE IDENTIFICATION LIGHTS

B-1. SPECIFICATIONS. The Society of Automotive Engineers (SAE) Standard J578 Revised December 2006, *Color Specification*, defines the acceptable color boundary limits and measurement of emitted red, white, signal blue, and yellow light for vehicle lights. This standard applies to the overall emitted color of light from the device in lieu of emitted light from any small area of the lens. The color of emitted light must fall within the color boundaries per SAE J578 Revised December 2006 (color boundary equations are in the standard) using color measurement methods detailed in the standard. See FAA Engineering Brief #67, *Light Sources Other Than Incandescent and Xenon for Airport and Obstruction Lighting Fixtures*, for additional information and *Alternative Lighting Devices*.

Intentionally left blank.

APPENDIX C

FAA AC 150/5200-18C

AIRPORT SAFETY SELF INSPECTION

U.S. Department
of Transportation
**Federal Aviation
Administration**

Advisory Circular

**Subject: AIRPORT SAFETY
SELF-INSPECTION**

Date: 04/23/04

AC No: 150/5200-18C

Initiated by: AAS-300 **Change:**

- 1. PURPOSE.** This Advisory Circular (AC) provides information to airport operators on airport self-inspection programs and identifies items that airport operators should include in such a program.
- 2. FOCUS.** Development of a self-inspection program in accordance with this AC represents an acceptable means of compliance with the 14 Code of Federal Regulations (CFR) Part 139 (Part 139) requirements.
- 3. CANCELLATION.** Advisory Circular 150/5200-18B, Airport Safety Self-Inspection, dated 5/2/88, is cancelled.
- 4. RELATED READING MATERIAL.**
 - a. 14 CFR Part 139, Certification of Airports.** While Part 139 requirements are mandatory for a holder of a Part 139 Airport Operating Certificate, the regulation contains many safety practices that the Federal Aviation Administration recommends for use at all airports.
 - b.** 14 CFR Part 77, Objects Affecting Navigable Airspace.
 - c.** Current editions of the following advisory circulars:
 - (1)** AC 150/5200-33, Hazardous Wildlife Attractants on or near Airports
 - (2)** AC 150/5210-21, Airport Certification Manual (ACM). This reference is pertinent for certificated airports only.
 - (3)** AC 150/5210-20, Ground Vehicle Operations on Airports.
 - (4)** AC 150/5200-28, Notices to Airmen (NOTAMs) for Airport Operators.
 - (5)** AC 150/5200-30, Airport Winter Safety and Operations.
 - (6)** AC 150/5210-5, Painting, Marking, and Lighting of Vehicles Used on an Airport.
 - (7)** AC 150/5230-4, Aircraft Fuel Storage, Handling, and Dispensing on Airports.
 - (8)** AC 150/5300-13, Airport Design.
 - (9)** AC 150/5340-1, Standards for Airport Markings.
 - (10)** AC 150/5340-18, Standards for Airport Sign Systems.
 - (11)** AC 150/5340-21, Airport Miscellaneous Lighting Visual Aids.
 - (12)** AC 150/5340-24, Runway and Taxiway Edge Lighting System.

- (13) AC 150/5340-26, Maintenance of Airport Visual Aid Facilities.
- (14) AC 150/5370-2, Operational Safety on Airports During Construction.
- (15) AC 150/5370-10, Standards for Specifying Construction of Airports.

d. Obtain the latest version of the free Advisory Circular publications from the FAA on its Web site at www.faa.gov/arp/. In addition, these ACs are available by contacting the U.S. Department of Transportation, Subsequent Distribution Office, SVC-121.23, Ardmore East Business Center, 3341 Q 75th Avenue, Landover, MD 20785. All FAA ACs are listed in the Advisory Circular Checklist, AC 00-2.1, which is available on the internet. The Checklist also explains how to obtain the circulars.

5. BACKGROUND.

a. While some hazardous airport conditions develop virtually instantaneously, others are gradual. It is important that the airport operator have an airport safety self-inspection program that monitors specific airport conditions in order to identify unsatisfactory conditions for prompt corrective actions. A number of airport operators have some form of a safety self-inspection program. The programs vary in scope and effectiveness from verbal instructions and unscheduled and unrecorded inspections to very comprehensive inspection programs with multiple daily schedules and widely distributed responsibilities.

b. At airports certificated under 14 CFR Part 139, the self-inspection program is a key component of an airport operator's airport certification program and required under §139.327. An effective self-inspection program enables an airport operator to operate in compliance to Part 139 standards on a day-to-day basis. In accordance with Part 139, all airports must have an Airport Operating Certificate if serving—

(1) Scheduled or unscheduled passenger operations of an air carrier with aircraft having a seating capacity of more than 30 passengers, or

(2) Scheduled passenger operations with aircraft having a seating capacity of more than 9 and less than 31 passengers.¹

One of the requirements of Part 139 is that the operator of each certificated airport regularly conduct a daily safety self-inspection to ensure that prompt corrective action is taken to eliminate unsafe conditions on the airport. The specific requirements of the self-inspection program at each certificated airport are addressed in the airport certification manual.

c. This AC suggests components, responsibilities, and items for regularly scheduled, continuous surveillance, periodic condition and special inspections, and checklists for use during any of these airport safety self-inspections. This guidance can be modified as necessary to meet local situations. The information and guidance in this publication serve as a basis by which airports operators may develop their own safety self-inspection programs.

6. RESPONSIBILITIES.

a. **Safety Self-Inspection.** Self-inspection is a primary responsibility of the airport owner, operator, or a duly authorized representative. It is customary to assign the job of assuring overall airport ground safety to the airport manager or operations supervisor. Primary attention should be given to such operational items as pavement areas, safety areas, markings, signs, lighting, aircraft rescue and fire fighting, fueling operations, navigational aids, ground vehicles, obstructions, public protection, wildlife

¹ Part 139 is only applicable in the State of Alaska to airport operators serving scheduled or unscheduled passenger operations of an air carrier with aircraft having a seating capacity of more than 30 passengers.

hazard management, construction, and snow and ice control. Inspection of areas that have been assigned to individual air carriers, fixed base operators, or other tenants can be made the responsibility of the user. However, at Part 139 airports, the FAA will hold the certificate holder ultimately responsible for operating the airport safely.

b. Recommended Inspection Frequency.

(1) **Regularly scheduled inspection.** The airport should be inspected at least daily during times when aircraft activity is minimal in order to create the least impact on airport operations. Part of this inspection should be done during the hours of darkness at those airports that serve air carriers after dark.

(2) **Continuous surveillance inspection.** Those activities and facilities that have been identified to require continuous surveillance should be inspected any time personnel are in the air operations area. Hazardous conditions can occur at any time and in a short period of time.

(3) **Periodic condition inspection.** Periodic condition inspection of activities and facilities can be conducted on a regularly scheduled basis but less frequently than daily. The time interval could be weekly, monthly, or quarterly, depending on the activity or facility.

(4) **Special inspection.** Special inspections of activities and facilities should be conducted after receipt of a complaint or when an unusual condition or unusual event occurs on the airport, such as a significant meteorological event or an accident or incident. Special inspections should also be conducted at the end of construction activity to ensure that there are no unsafe conditions present related to the construction activity. A special inspection should be conducted prior to construction personnel leaving the airport in the event that corrective actions are necessary. Special inspections should be documented on the appropriate portions of the regularly scheduled inspection checklist.

c. Inspection Records. An effective safety self-inspection program includes procedures for reporting and correcting deficiencies. This means that the airport operator should have a work order system in place so that deficiencies can be corrected in an expeditious manner.

(1) The operator should issue a Notice to Airmen (NOTAM), as appropriate, through the appropriate Flight Service Station (FSS) reporting deficient conditions that could have an immediate and critical impact on the safety of aircraft operations. When corrective actions have been taken, the NOTAM should be cancelled. At Part 139 airports, other similar systems and procedures may be used if approved by the FAA.

(2) For even the smallest airport, it is desirable to use a safety self-inspection checklist that constitutes a written record of conditions noted, and acts as a check on follow-up actions taken. The scheduled use of a dated checklist will assure the regularity and thoroughness of safety inspections and follow-up. The checklist can be an important administrative tool for airport management. It can provide a snapshot of the condition of the airport, indicating trends, defining problem areas, indicating systems that are beginning to deteriorate and helping to define budgetary requirements. It is most desirable to use a format (see examples, Appendices 1–5) in which each inspected area of the airport complex is positively noted. Retain the checklist until indicated actions are completed. Airports certificated under Part 139 must retain the regularly scheduled inspection checklist for 12 months. Airports may use additional, specialized materials and forms, such as maintenance work orders, NOTAMs, fire station and first aid reports, etc. Some airport operators use computerized versions specifically designed to meet their self-inspection requirements. There are several vendors that have developed these computer programs that can use laptops and Personal Data Assistants (PDAs). However, the regularly scheduled inspection checklist should be the basic log documenting that safety inspection responsibilities are being met.

d. Follow-up. The airport operator should follow up on complaints or requests for corrective action and on all deficient items or problem areas noted during the daily inspection. Determine which problems

require immediate attention and treat those with highest priority, including developing appropriate NOTAM notification.

7. INSPECTION TECHNIQUES.

Inspectors should vary the pattern of the inspection. Fixed inspection patterns, while easy to learn, do not provide for an adequate inspection. The use of such fixed inspection patterns can lead to complacency and to the possibility of missing items that are in need of correction. When conducting an inspection on a runway and when there is time to do only one pass on that runway, inspection personnel, whenever practical, should drive towards the direction of landing aircraft with high intensity flashing beacon and headlights on day and night. This practice will enable self-inspection personnel to see approaching aircraft and improve visibility of the vehicle to pilots. However, it is recommended that a runway inspection be done in both directions. Inspection personnel should also drive the stub taxiways between the runway and parallel taxiway as these areas are commonly overlooked.

8. KNOWLEDGE AND EQUIPMENT FOR SELF-INSPECTION.

a. Airport personnel who conduct safety self-inspections (referred to as inspectors in this AC) should receive training in at least the following areas:

b. Inspectors should know the location and types of airport facilities, airport rules and regulations and, at Part 139 airports, be familiar with the FAA-approved Airport Certification Manual.

- (1) Airport familiarization, including airport signs, marking, and lighting;
- (2) Airport Emergency Plan (if the airport has one);
- (3) Notice to Airmen (NOTAM) notification procedures;
- (4) Procedures for pedestrians and ground vehicles in movement areas and safety areas;
- (5) Airport inspection procedures and techniques; and
- (6) Discrepancy reporting procedures.

c. Inspectors should know the FAA Advisory Circular standards applicable to the airport and have access to copies for reference. Some applicable standards can be found in the FAA Advisory Circulars listed in paragraph 3c. (This is not an all-inclusive list.). They can also be found on the Internet at www.faa.gov.

d. Inspectors should have a vehicle equipped with:

- (1) a two-way ground control radio capable of communicating with the Airport Traffic Control Tower on controlled airports and on the Common Traffic Advisory Frequency (CTAF) or UNICOM at uncontrolled airports (or at controlled airports when the tower is closed);
- (2) a beacon for nighttime (or inclement weather conditions) inspections; and
- (3) either a beacon or checkered flag for daytime inspections.

e. Inspectors should know and use correct radio communication phraseology, procedures and techniques, as specified in the Aeronautical Information Manual. If the airport operator uses airport police to do all or part of the self-inspection, the police should use aviation terminology and not 10-4 codes.

f. Inspectors should be supplied with checklists covering the various inspection areas (sample airport safety self-inspection checklists are contained in Appendices 1–5). While format of checklists vary, it is important to develop a checklist that is useful for the airport and its operation. If certain

inspectors will be responsible for only certain items, separate checklists pertinent to those areas may be developed. A sketch of the airport should accompany the checklist so that the location of problems can be marked for easy identification.

g. Inspectors should review the most recently completed checklist from the previous inspection cycle prior to beginning the inspection.

h. If construction is in progress, inspectors should be familiar with the safety plan for the project.

i. If the airport is certificated under Part 139, inspectors should be familiar with the airport certification manual requirements concerning training and self-inspection.

9. COMPONENTS OF A SAFETY SELF-INSPECTION PROGRAM. A successful safety self-inspection program has four components:

a. A regularly scheduled inspection of physical facilities (which must be conducted daily at airports certificated under Part 139 or in accordance with the FAA-approved airport certification manual). If the airport serves air carriers after dark, there should also be a nighttime inspection of lighting;

b. Continuous surveillance inspection of certain airport activities, such as fueling operations, construction, airfield maintenance;

c. A periodic condition inspection program for such things as surveying approach slopes, obstructions, etc.; and

d. Special condition inspections during unusual conditions or situations, such as changing weather or days of unusually high number of aircraft operations.

10. REGULARLY SCHEDULED INSPECTION.

The regularly scheduled inspection consists of specific observations of airport physical facilities on at least a daily basis. This inspection should concentrate on the areas described in this section, which are also included in Appendix 1. If deficiencies exist, the inspector should indicate the deficient item and identify its location on a airport sketch, providing dimensions and depths, as necessary. If appropriate, the inspector should take photographs to document the condition.

a. Pavement Areas. The condition of pavement surfaces is an important part of airport safety. Pavement inspection should be conducted daily before flight operations commence to ensure pavement surfaces are clear. As a minimum, a daily inspection should be performed of all paved areas that are the responsibility of the airport operator or as specified in the FAA-approved Airport Certification Manual. During the pavement inspection, the inspector should:

(1) Check the pavement lips—the area between full-strength pavement and shoulders or paved shoulders and safety areas—to assure that they are no greater than necessary to allow water to drain off the pavement. A lip height no greater than 1 1/2 inches is usually sufficient to allow proper drainage. (At airports certificated under Part 139, pavement lips shall not exceed 3 inches as stated in § 139.305.)

(2) Determine if there are any cracks wide enough to cause directional control problems for an aircraft. Report and monitor these cracks.

(3) Determine if there are any holes that could cause directional control problems for an aircraft. (At airports subject to Part 139, any hole that cannot be covered by a 5-inch circle, and the side slope at any point in the hole that exceeds 3 inches in depth and is 45 degrees or greater, is a discrepancy. If the hole cannot be covered by a 5-inch circle but the side slope at any point in the hole that exceeds 3

inches in depth or is less than 45 degrees, it may be a discrepancy if it is determined to be a surface variation that could impair directional control of an air carrier aircraft.)

(4) Check the condition of pavement areas for cracks, scaling, spalling, bumps, low spots, and for debris that could cause foreign object damage to aircraft.

(5) Check for vegetation growth along runway and taxiway edges that may impede drainage from the pavement surface.

(6) Check for vegetation growth in cracks.

(7) Report and monitor any cracks, holes, variations and vegetation that can cause loss of aircraft directional control or may cause pavement damage, including damaged caused by damming or ponding water.

b. Safety Areas. The inspector should know the dimensions of the runway and taxiway safety areas at the airport. At airports certificated under Part 139, the dimensions of the safety areas should be documented in the airport certification manual. During the safety area inspection, the inspector should:

(1) Determine if there are any hazardous ruts, depressions, humps or variations from the normal smooth surface.

(2) Check to ensure no object is located in a safety area, except objects that must be in the safety areas because of their functions (such as runway lights, signs, or navigational aids). These objects must be constructed on frangibly mounted structures of the lowest practical height. At Part 139 airports, the frangible point must be no higher than 3 inches above grade.

(3) Determine if the base for any equipment in safety areas is at grade level (especially during the winter thaw) and equipment and NAVAIDs mounted on frangible couplings.

(4) Check to ensure that manhole and handhole covers are at grade level and can support vehicles and aircraft. Check to ensure that mounts for light fixtures are at grade level.

(5) Check for surface variation and other damage caused by rodents or other animals.

(6) Report any objects that are not frangible or not at grade level. Also report extraneous equipment and objects, such construction equipment, and surface variations that would cause damage to an aircraft or impede emergency response vehicles. At airports certificated under Part 139, issue a NOTAM regarding objects in the safety area contrary to § 139.309 (see § 139.339)

c. Markings. Airport markings provide important information to pilots during takeoff, landing, and taxiing. To avoid confusion and disorientation, airport markings should be in compliance with FAA marking standards specified in AC 150/5340-1, Standards for Airport Markings. (Compliance with these standards is mandatory for operators of airports certificated under Part 139 and for airport operators that have accepted Federal funds for runway and taxiway construction/rehabilitation.) The inspector should know the appropriate markings required at the airport. During the marking inspection, the inspector should:

(1) Check markings for correct color-coding, peeling, blistering, chipping, fading, and obscurity due to rubber buildup.

(2) Check to see if all runway hold position markings are clearly visible.

(3) During and after construction projects, check new markings for compliance with FAA marking standards.

(4) If the markings have glass beads, check markings during periods of darkness to determine if the reflectivity of glass beads is adequate at night.

(5) Report and monitor any nonstandard marking or markings that are obscured, faded or deteriorating.

d. Signs. Signs provide important information to pilots while taxiing. To avoid pilot confusion and disorientation, airport signs should be in accordance with FAA sign standards specified in AC 150/5340-18, Standards for Airport Sign Systems. (Compliance with these standards is mandatory for operators of airports certificated under Part 139 and for airport operators that have accepted Federal funds for runway and taxiway construction/rehabilitation.) The inspector should know the appropriate sign standards and specifications at the airport and at a Part 139 certificated airport, ensure signs comply with the FAA-approved Sign Plan.

(1) Check signs to ensure they are easy to read, in accordance with color standards, retro-reflective, and that all lighted signs are working and not obscured by vegetation, dirt, snow, etc.

(2) Check signs to ensure they are frangibly mounted and concrete bases are properly maintained at grade level.

(3) Check to see that sign panels are not missing or damaged, that they have the correct legend and arrow orientation, and that they are not cracked or broken.

(4) During and after construction projects, check new signs for compliance to FAA sign standards and, at Part 139 airports, in accordance with the FAA-approved Sign Plan.

(5) During periods of darkness, check signs to ensure they are properly illuminated. Ensure mandatory instruction signs are illuminated with the associated runway lighting system. Check signs for correct operations; that they are on the correct circuits, they do not flicker and that they follow the intensity setting of the runway or taxiway lights.

(6) Report and monitor any nonstandard sign or any sign that is not functioning, is faded or damaged. At airports certificated under Part 139, issue a NOTAM regarding any malfunctioning holding position sign or ILS critical are sign, as specified under § 139.339

e. Lighting. At night and during periods of low visibility, lighting is important for safe airport operations. Lights come in different shapes, sizes, colors, and configurations and can be located either in the pavement or along its edges. Inspection of lighting is best accomplished during periods of darkness in order to evaluate lighting systems when they provide the primary visual aid for pilots. The inspection should concentrate on the lighting owned by the airport operator. However, the inspector should observe any lighting owned or operated by others and report any observed problems immediately to the appropriate responsible owner. During the lighting inspection, the inspector should:

(1) Check to ensure that the following are operable, if installed, and that vegetation or deposits of foreign material do not obscure the light fixture.

(i) Runway and taxiway edge lights;

(ii) Apron edge lights;

(iii) Runway centerline and touchdown zone lights;

(iv) Taxiway centerline lights or centerline reflectors;

(v) Runway threshold/end lights; and

(vi) Runway guard lights (both elevated and in-pavement, if installed).

(2) Check that the following are operable, if installed:

(i) Ramp lights and floodlights used in construction to ensure they are properly shielded);

- (ii) Obstruction lights; and
- (iii) Lighting in fuel storage areas.
- (3) Report all fixtures missing and lights that are not working or appear dim.
- (4) Report any missing or broken light fixture lenses.
- (5) Ensure that runway and taxiway lights and runway threshold lights are the proper color and are oriented correctly.
- (6) Check that lights function properly through the manual or radio control features, and that photocell controls function properly.
- (7) Check the lights for proper alignment, aiming and correct changes in intensity, for correct height, erosion around the bases and the height of frangibility.

f. Navigational Aids (NAVAIDs). The inspection of NAVAIDs should concentrate on the visual navigational aids owned by the airport operator. However, the inspector should observe any navigational aids owned or operated by others, such as the FAA, and report any observed problems immediately to the NAVAID owner. During the inspection of NAVAIDs, the inspector should:

- (1) Determine if the segmented circle is clear of vegetation and that it can be seen easily from the air.
- (2) Determine if the airport rotating beacon is visible and working properly.
- (3) Check the wind cone(s) to ensure that it swings freely, the cone fabric is not faded or frayed, and, if lighted, that all lights are operating.
- (4) Determine if the Runway End Lights (RENs, formerly known as Runway End Identifier Lights) are flashing in proper sequence and mounted on frangible couplings.
- (5) Check Visual Glide Slope Indicators (VASIs, PLASIs, or PAPIs) to ensure that their lights are working and mounted on frangible couplings.
- (6) Determine if the Approach Lighting systems are functioning properly.
- (7) Report and monitor any NAVAID that is malfunctioning, inoperable or misaligned, damaged or missing.

g. Obstructions. The inspection of obstructions should concentrate on a visual check of construction underway on or near the airport that could affect aircraft operations. This also includes checking for any vegetation, especially, trees, that may penetrate the Part 77 surfaces. During the inspection of obstructions, the inspector should:

- (1) Check to ensure that construction equipment, especially tall cranes being used at construction sites, are not an obstruction. If construction is found and thought to create an obstruction, the airport operator should determine if proper notification to FAA, such as is required through Part 77 or Airport Layout Plan review, has been provided.
- (2) Determine if obstructions are properly marked and lighted.
- (3) Direct any person proposing construction near a public-use airport meeting the notice requirements contained in Part 77, Objects Affecting Navigable Airspace, to the Air Traffic Division or Airports District Office immediately if their construction has not been reported to the FAA.
- (4) Report and monitor any obstruction light that is missing, inoperative or damaged, and any object that appears to be an obstruction and is not properly marked or lit.

h. Fueling Operations. The daily inspection on aircraft fueling operations should concentrate on a quick inspection for the most common problems concerning compliance with local fire safety codes at fuel storage areas and with mobile fuelers. The inspection should also include security, fire protection, general housekeeping, and fuel dispensing facilities and procedures. A more detailed fueling operation inspection should be scheduled quarterly (see Quarterly Fueling Operations under Periodic Condition Inspection). During the daily inspection of aircraft fueling operations, the inspector should:

- (1) Determine if the fueling operator is permitting any unsafe fueling practices or is in violation of local fire code, such as failure to bond aircraft with the mobile fuelers during fueling operations or fueling personnel smoking while fueling aircraft.
- (2) Check to ensure that the appropriate signs for the fuel farm are installed and that all gates are locked except when the facility is occupied by an authorized user.
- (3) Report and monitor any unsafe fueling practices and violation of local fire codes. At Part 139 airports, report any noncompliance with fuel fire safety procedures specified in the FAA-approved Airport Certification Manual.

i. Snow and Ice. The inspector should be familiar with the airport's snow and ice removal procedures and guidance provided in AC 150/5200-30, Airport Winter Safety and Operations. At Part 139 certificated airports, the inspector should be familiar with the airport's FAA-approved Snow and Ice Control Plan. During the snow and ice control inspection, the inspector should:

- (1) Determine if any lights and signs are obscured by snow or damaged by snow removal operations.
- (2) Check to ensure that snow banks and drifts next to the runway and taxiways provide clearance for aircraft wing tips, engines, and propellers.
- (3) Check to ensure that snow is not piled across the runway threshold or across runway/runway intersections.
- (4) Check to be sure that no foreign objects are left on the pavement from snow removal operations.
- (5) Check to ensure that snow removal operations have not blocked any taxiways or access routes dedicated for aircraft rescue and fire fighting equipment.
- (6) Check to ensure that snow is not accumulated or piled in the critical areas for electronic NAVAIDs.
- (7) Check for and report slippery pavement conditions in terms of either braking action or MU values. If a friction measurement device is available, issue the appropriate numbers obtained from the equipment. (Do not attempt to correlate friction measurement numbers with braking action reports.)
- (8) Report and monitor any snow and ice accumulation that has been missed by the snow and ice removal operation, and any dangerous condition created by such operations, such as obscured signs or lights. At airports certificated under Part 139, issue a NOTAM regarding snow, ice, slush or water on the movement area or loading ramps, and parking areas, as specified under § 139.339.

j. Construction. The inspector should be familiar with the airport's construction safety procedures and guidance provided in AC 150/5370-2, Operational Safety on Airports During Construction. At Part 139 certificated airports, the inspector should be familiar with the airport's FAA-approved Construction Safety Plan. During the construction inspection, the inspector should:

- (1) Determine if stockpiled material and construction materials are properly stored to keep them from being moved by wind, jet blast, or prop wash, and is not left in safety areas or movement area.

- (2) Check all construction adjacent to movement areas to ensure areas are identified with conspicuous marking and lighting.
- (3) Determine if construction equipment (such as bulldozers, cranes, etc.) are marked and lighted and parked clear of the safety areas.
- (4) Ensure construction barricades are properly positioned to define the limits of construction and hazardous areas and, if barricades are lighted, check to ensure lights are working properly and are positioned correctly.
- (5) Check to ensure that debris and foreign objects are continuously being picked up around construction areas.
- (6) Check for open trenches in the safety areas or adjacent to movement areas.
- (7) Check operation of lighting in areas adjacent to construction daily before the construction crews depart for the day. In particular, ensure that mandatory instruction signs remain lit with the associated runway lights, even on taxiways that have been closed for construction.
- (8) Check NOTAMs daily during construction projects to ensure they accurately reflect the conditions on the airport.
- (9) Verify that closed taxiways or runways are properly marked and lighted.
- (10) Report and monitor any dangerous condition created by construction activity, including damage to signs, lights, markings and NAVAIDS or equipment and supplies left in movement areas and safety areas.

k. Aircraft Rescue and Fire Fighting. During the inspection of aircraft rescue and fire fighting (ARFF) capabilities, the inspector should:

- (1) Check the status of ARFF response, including the availability of equipment, fire fighters and extinguishing agent. At Part 139 airports, ensure that such ARFF capabilities comply with the FAA-approved Airport Certification Manual and that the airport's ARFF Index is still appropriate for air carrier aircraft served.
- (2) Ensure alarm and emergency notification communication systems are operable.
- (3) Determine the adequacy of available fire extinguishing agents.
- (4) Check for construction or maintenance activity on the movement area that could affect ARFF response routes. Ensure that the ARFF Department has been notified if construction or maintenance activity could affect emergency response routes.
- (5) Report and monitor any ARFF vehicle, equipment or extinguishing agent that is not available or inoperative; any ARFF personnel that are not available; and any changes to aircraft that may require a change to ARFF capabilities. At Part 139 airports, notify the FAA if ARFF vehicles is inoperative and cannot be replaced immediately, as specified under § 139.319(g) and issue a NOTAM regarding non-availability of any rescue and firefighting capability, as specified under § 139.339.

l. Public Protection. During the public protection inspection, check gates, fencing, locks, and other safeguards are in place and functioning properly to prevent inadvertent entry to movement areas by unauthorized persons and vehicles and offer protection from jet blast. Report and monitor any safeguards that are damaged or missing. In accordance with the airport's security plan, report unauthorized persons or vehicles in the movement area (airports regulated by the Transportation Security Administration may have additional requirements for reporting and responding to unauthorized persons and vehicles).

m. Wildlife Hazard Management. During the wildlife hazard inspection, the inspector should check for evidence of birds or animals on the runways, taxiways, aprons, and ramps or other signs that

wildlife problems may have developed - such as large flocks of birds on or adjacent to the airport. Wildlife hazards found during the daily self-inspection should be properly documented. All dead wildlife found and all wildlife aircraft strikes should be reported to the FAA on the FAA Form 5200-7, Bird/Other Wildlife Strike Report. This form may be obtained from the FAA Internet site, at www.faa.gov. Additionally, the inspector should check fencing and gates for wildlife accessibility and should ensure that wildlife control equipment is available and operational.

11. CONTINUOUS SURVEILLANCE INSPECTION. Continuous surveillance inspection consists of general observation of activities for compliance with regulations, procedures, etc., as well as abnormalities with physical facilities that are readily apparent. This is performed any time inspection personnel are on the air operations area. Continuous surveillance of airport physical facilities and activities should cover at least the areas described in this section, which are also included in Appendix 2.

a. Ground Vehicles. During the continuous surveillance inspection of ground vehicles, the inspector should:

(1) Determine if vehicle drivers are following the airport's procedures and arrangements for the orderly operations of ground vehicles (including mowing machines or other maintenance vehicles in the safety areas). Extra attention should be paid to ground vehicle activity during construction, winter operations, and other special events.

(2) Report and monitor any vehicle operator that is not complying with the airport's vehicle procedures and arrangements.

(3) Report any ground vehicle accident observed and any ground vehicle signs and markings that are damaged, missing or obscured.

b. Fueling Operations. The inspector should:

(1) Emphasize fire and explosion hazards inherent in aircraft refueling.

(2) Ensure proper bonding is being used, deadman controls are not blocked, and no smoking prohibitions are being observed, and aircraft are not being fueled inside hangars.

(3) Check for proper parking of mobile fuelers to ensure these vehicles are at least 10' apart and 50' from buildings.

(4) Check for fuel leaks or spills in the fuel storage area and around mobile fuelers.

(5) Determine if the fuel farm is free of flammable materials, including litter and vegetation.

(6) Report and monitor any of unsafe fueling conditions discussed above and other obvious violations of local fire code and airport fuel fire safety procedures.

c. Snow and Ice. During the continuous surveillance inspection of snow and ice removal operations, the inspector should check snow or ice covered pavements and report and monitor any surfaces where snow and ice may affect the safety of aircraft operations. In addition, the inspector should monitor snow and ice removal NOTAMS to ensure they remain current and issue timely corrections, as necessary. If the airport uses other means to notify tenants of snow and ice removal operations, e.g., faxed or electronic messages, the inspector should also monitor this information for accuracy. Check to ensure that snow or ice on pavement surfaces does not affect the safety of aircraft operations and that NOTAMS are current.

d. Construction. The Inspector should check construction projects to ensure that the contractor is following the construction safety plan. During the continuous surveillance inspection of construction activity, the inspector should check for, and report, any of the following conditions:

- (1) Unauthorized use of runways, taxiways, and aprons by construction personnel and equipment.
- (2) Conditions that may result in runway incursions and other irregularities. This includes ensuring that construction areas are delineated appropriately with barricades, cones, markings, etc.
- (3) Construction equipment is not operated in ILS/MLS critical areas unless coordination with FAA has been accomplished.
- (4) Perimeter gates are left open and unattended, unlocked or construction vehicles and personnel are not following access and escort procedures.
- (5) Construction vehicles not properly marked or missing appropriate flags and/or beacons.
- (6) Foreign object debris on haul roads adjacent to movement areas that can be tracked onto taxiways, aprons, and ramp areas.
- (7) Confusing or missing signs, markings or lighting that could potentially confuse or mislead pilots.
- (8) Barricades and lighting are in place and operational.

e. Public Protection. Pay special attention to public protection during construction and special events. During the continuous surveillance inspection of safeguards used to protect the public, the inspector should check for, and report, any of the following conditions:

- (1) Unauthorized personnel, vehicles, and animals, particularly in areas aircraft passengers and the general public are present on the air carrier ramp and other portions of the movement area, i.e, remote aircraft parking locations.
- (2) Inoperable or blocked gates, particularly those that would impede access by aircraft rescue and fire fighting equipment.
- (3) Open or unlocked gates and missing or damaged signs posted to prevent unauthorized access to the airfield.
- (4) Damaged or missing jet blast fences.

f. Wildlife Hazard Management. During the continuous surveillance inspection of wildlife hazards, the inspector should check for, and report, any of the following conditions:

- (1) Birds or animals, such as dogs, deer, etc., on or adjacent to the runways, taxiways, aprons, and ramps to determine if there is a potential wildlife hazard problem.
- (2) Potential hazard created by birds on or adjacent to the airport.
- (3) Wildlife strikes and carcasses found on the runways. Report these on FAA Form 5200-7, Bird/Other Wildlife Strike Report. This form may be obtained from the FAA Internet site at www.faa.gov.

g. Foreign Object Debris (FOD). The inspector should continuously check for, and remove any FOD in movement areas, aircraft parking areas and loading ramps.

12. PERIODIC CONDITION INSPECTION. Periodic condition inspections consist of specific checks of physical facilities on a regularly scheduled basis (but less frequently than daily). Checks may require use of equipment (e.g., Walker Bar to measure VASI glide slope angles or transit to survey approach slopes, or continuous friction measurement equipment) or checking specific features of physical facilities. Periodic inspection of airport physical facilities and activities should cover at least the areas described in this section, which are also included in Appendix 3.

a. Pavement Areas. The inspector should check pavement surfaces for rubber buildup, polishing, or other items affecting friction.

b. Markings. The inspector should:

(1) Check pavement markings to ensure they are correct and clearly visible. Markings on concrete and faded asphalt should be outlined with a black border.

(2) Determine if markings are visible at night, especially examine for rubber buildup in the touchdown zone areas.

c. Signs. The inspector should check signs faces for peeling and for fading or faded colors.

d. Quarterly Fueling Inspections. Airports certificated under Part 139 are required to establish fire safety standards for safe fueling operations and conduct quarterly inspections of the fueling facilities. The inspection procedures in this section are based on the NFPA 407 fire code for airport fueling operations, which is one of the more common fire codes in effect at certificated airports. The fire safety standards for fueling operations should be listed in the Airport Certification Manual (ACM) and the quarterly inspections should be conducted for compliance to the fueling fire safety standards listed in the ACM. Sample quarterly inspection checklists for fuel storage areas and mobile fuelers are included in Appendix 5. Typical fire safety standards to inspect quarterly are listed below. Airports certificated under Part 139 are required to maintain a record of this inspection for at least 12 months.

(1) **Fuel storage areas and loading/unloading stations.** The inspector should:

(i) Check fuel storage areas for adequate fencing and security to prevent unauthorized access or tampering.

(ii) Check for “No Smoking” signs that are clearly visible.

(iii) Check fuel storage areas for materials such as trash or vegetation that could contribute to the spread of fire. Also check for equipment, functions or activities that could be ignition sources.

(iv) Note if fueling equipment appears to be in good operating condition and free of fuel leaks.

(v) Check piping for reasonable protection from damage by vehicles if piping is above ground.

(vi) Check fuel storage areas for at least two accessible and serviceable fire extinguishers. Where the open hose discharge capacity of the equipment is more than 200 gallons per minute, at least one wheeled extinguisher with at least 125 lbs of agent is also required.

(vii) Check for explosion proof equipment, switches and wiring that is reasonably protected from heat, abrasion or impact, which could cause an ignition source.

(viii) Check for piping, filters, tanks and pumps being electrically bonded together and interconnected to an adequate grounding rod.

(ix) Check for a serviceable bond/ground wire with clip at each loading/unloading facility for grounding tankers and mobile fuelers.

(x) Check loading stations for deadman control features.

(xi) Look for a boldly marked emergency cutoff capable of stopping all fuel flow with one physical movement. The emergency cutoff should be located outside the probable fuel spill area near the route that normally is used to leave the spill area or to reach the fire extinguishers.

(2) **Mobile fuelers.** At least once every 3 months, inspect all fuel trucks to ensure they meet fire safety standards. The inspector should:

(i) Note if mobile fuelers appear to be in good operating condition and free of fuel leaks.

(ii) Check mobile fuelers for parking at least 50 feet from a building and at least 10 feet from each other. Note: Some airports have a mobile fueller maintenance building that is approved by the local fire marshal.

(iii) Check for flammability decals on all sides. Lettering should be at least 3 inches high. Also check for hazardous materials placards on all sides. The Hazmat number for Jet A trucks should be #1863 and #1203 for 100LL trucks.

(iv) Check the cab for a “No Smoking” sign and the presence of smoking equipment. Ashtrays and cigarette lighters are not to be provided.

(v) Check for two fire extinguishers, accessible from each side of the mobile fueller. Fire extinguishers should be charged, sealed and tagged from the last fire extinguisher inspection. Check dry chemical extinguishers to ensure they are only B-C rated. ABC rated multi-purpose dry chemical extinguishers are not to be used on mobile fuelers as they are highly corrosive to aircraft and can cause significant damage to aircraft engines.

(vi) Check emergency fuel cutoffs to ensure they are boldly marked and operable. There should be an emergency fuel cutoff accessible from each side.

(vii) Check electrical equipment, switches, wiring and tail light lens covers for explosion proof construction and reasonable protection from heat, abrasion or impact which could be an ignition source.

(viii) Check for serviceable bonding wires and clamps.

(ix) Check nozzles for deadman control feature.

(x) Check the vehicle exhaust system for exhaust leaks and for adequate shielding if it extends under the fuel tank portion of the vehicle.

e. Navigational Aids. Periodically check the aiming of REILs and Visual Glide Slope Indicators owned by the airport.

f. Lighting. The inspector should:

(1) Determine that power generator and circuit resistance tests are being conducted.

(2) Ensure lights with adjustable optical systems are checked for proper aiming.

g. Obstructions. The inspector should:

(1) Check to ensure there are no overhead power lines in the aircraft parking areas.

(2) Annually survey trees and other structures near the airport that could affect glide path angles, approach light lanes, or be an obstruction to Part 77 surfaces.

h. Aircraft Rescue and Fire Fighting. The inspector should:

(1) Periodically determine if the aircraft rescue and fire fighting equipment is capable of meeting response times, if it is required under Part 139.

- (2) Ensure that recurrent training and hot-fire drills are being conducted as required by Part 139.
- (3) Check to ensure the availability of adequate entry tools.

13. SPECIAL CONDITION INSPECTIONS. Special condition inspections occur after receipt of a complaint or as triggered by an unusual condition or event. A special inspection should be conducted after an accident or incident. Depending upon circumstances, special condition inspections may include the inspection of any of the specific facilities or activities under the other three components. A special condition inspection of airport physical facilities and activities should cover at least the areas described in this section, which are also included in Appendix 4.

a. Pavement Areas. After a rain or thunderstorm, the inspector should check the pavement areas for ponding and edge damming.

b. Markings and Signs. The inspector should:

(1) Determine if markings are visible at night especially when the pavement is wet following a rain.

(2) After construction or maintenance operations, ensure that pavement markings are correct.

c. Safety Areas. The inspector should:

(1) Ensure that the storm sewer system is checked to verify that inlets are not clogged and drainage channels are free of debris. Note any standing water.

(2) Ensure all inlet covers are in place and sewer covers are at grade level.

(3) Conduct a special inspection before reopening a runway or taxiway following any construction or maintenance that has been performed in or around that safety area.

(4) Any time an aircraft has left the pavement and entered a safety area, check to ensure that no ruts or holes have been made by the aircraft tires or by personnel and equipment during the recovery operation.

(5) Check for construction and maintenance activities to ensure that no hazardous conditions have been created (equipment left in safety areas, unacceptable pavement lips created by ground alteration work, ruts from mowing equipment, etc.).

(6) Inspect engineered materials arresting system (EMAS), if installed, for damage and for deterioration.

(7) Physically drive or walk the safety areas to check for any discrepancies.

d. Snow and Ice. Several special inspections may be needed during a winter storm until the airport is back to a normal operation. The inspector should:

(1) Check to ensure that all foreign objects have been picked up after snow and ice removal operations.

(2) If a friction measurement device is available, issue the appropriate numbers obtained from the equipment. Do not attempt to correlate friction measurement numbers with braking action reports. If a friction measurement device is not available, issue to Air Traffic braking action reports.

(3) Conduct a special sign inspection after snowstorms for signs that may have been damaged by plows or by snow thrown by blowers.

e. Construction. The inspector should:

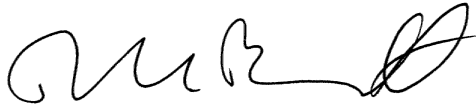

(1) Ensure that construction areas are barricaded and lighted properly.

- (2) Check construction equipment to ensure that they are parked within the pre-arranged areas.
- (3) Conduct night inspections to ensure that barricades, warning lighting, and reflectors are adequate to keep aircraft away from the construction area.
- (4) Check the location of construction material and stockpiles to ensure that they are outside of safety areas and do not block any signs.
- (5) Check any movement areas adjacent to construction areas or movement areas traversed by construction vehicles to ensure there is no FOD present.
- (6) Check movement areas around construction sites for potentially confusing marking, lighting, and signs that could cause pilot confusion or result in a runway incursion.

f. Surface Movement Guidance and Control Systems (SMGCS).

- (1) For operations below 1,200 feet runway visual range, the inspector should conduct an initial inspection of stop bar lights, runway guard lights, clearance bar lights, taxiway centerline lights, and taxiway edge lights installed on the low visibility routes in accordance with the airport's SMGCS plan.
- (2) SMGCS lighting systems that are not electronically monitored should be periodically inspected every 2 to 4 hours for during operations below 1,200 feet to 600 feet. For operations below 600 feet, these inspections should take place every 2 hours. Such inspections should be detailed in the airport's SMGCS plan.

14. CONDITION REPORTING. Alert users of the airport to any unsafe conditions that exists and that could affect their operations. Ensure appropriate NOTAMS are issued for unsafe conditions that are identified during an inspection but cannot be corrected immediately. After reporting NOTAMS to the Flight Service Station, follow-up to ensure that the NOTAMS were processed and transmitted.

David L. Bennett
Director, Office of Airport Safety and Standards

APPENDICES 1–4**SUGGESTED AIRPORT SAFETY SELF-INSPECTION CHECKLISTS**

An airport safety self-inspection checklist should cover the condition of the facilities and equipment on the airport for it to be a part of a good safety inspection program. The checklist should be developed so that it is useful for the airport and its operation. A sketch of the airport is highly recommended to readily identify the location of problems found during the daily inspection.

The suggested checklists consist of a listing of facilities and equipment and a series of conditions that are inspected.

The blank squares indicate the conditions to be evaluated for each facility. A check (✓) in one of these squares would indicate that the condition of the facility and equipment was found to be satisfactory. On the other hand, an “x” in one of these squares would indicate that the condition of the facility and equipment was found to be unsatisfactory.

When an unsatisfactory condition is found:

1. An “x” for each applicable square should be entered;
2. A note provided in the Remark/Action Taken section;
3. The location of the condition should be identified in the airport sketch; and
4. Appropriate follow-up action including NOTAMs should be initiated. Corrective action should be documented on either the self-inspection checklists or on a separate work order system.

These checklists are ideal for electronic conversion to PDAs and laptop computers.

- ### PAVING-GRADING-DRAINAGE NOTES
- HORIZONTAL AND VERTICAL CONTROL POINTS SHALL BE PROVIDED BY THE CONTRACTOR. ALL CONSTRUCTION LAYOUT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR. IN THE EVENT THAT CONTROL POINTS ARE DISTURBED BY CONTRACTOR, CONTRACTOR SHALL PAY FOR ALL RESETTING OF CONTROL POINTS.
 - GRADING SHALL CONSIST OF ALL EXCAVATION, FILLING, SHAPING AND SLOPING NECESSARY FOR THE CONSTRUCTION, PREPARATION AND COMPLETION OF ALL SUBGRADES SHOULDERS, SLOPES, INTERSECTIONS, PAVEMENTS AND OTHER AREAS, ALL IN ACCORDANCE WITH THE ALIGNMENTS AND GRADES SHOWN IN THESE DRAWINGS. DRAINAGE STRUCTURES SHALL BE AS DETAILED IN THESE DRAWINGS.
 - DRAINAGE PIPE TO BE HIGH DENSITY POLYETHYLENE, OR APPROVED EQUAL. MUST BE COMPLIANT WITH VPS AIRPORT AND OKALOOSA COUNTY SPECIFICATIONS.
 - ASPHALTIC PAVEMENTS SHALL CONSIST OF COMPACTED SUBGRADE, COMPACTED LIMEROCK SUBBASE AND TYPE S-3 ASPHALTIC CONCRETE, AS SHOWN IN THESE DRAWINGS.
 - WHERE APPLICABLE, SAWCUT ALL PAVEMENT EDGES WHERE EXISTING PAVEMENT IS TO REMAIN.
 - CONCRETE CURB, SIDEWALK AND SLABS SHALL CONSIST OF 3,000 PSI PORTLAND CEMENT CONCRETE, AS SHOWN IN THESE DRAWINGS.
 - ALL REINFORCING, ALL SIZES, SHALL CONFORM TO ASTM A615, GRADE 60.
 - ALL EXPOSED CONCRETE SURFACES SHALL RECEIVE A LIGHT BROOM FINISH, UNLESS OTHERWISE DIRECTED. SEE ARCHITECTURAL DRAWINGS FOR WALKWAY FINISHES.
 - FINAL GRADING OF LANDSCAPING AREAS SHALL BE COORDINATED IN THE FIELD WITH ENGINEER/LANDSCAPE ARCHITECT. COMPACTED FILL IN LANDSCAPED AREAS SHALL BE PLACED SUCH THAT 12 INCHES OF TOP SOIL MAY BE PLACED BETWEEN THE COMPACTED FILL AND FINISHED GRADE.
 - TESTING LABORATORY SHALL BE RETAINED BY THE CONTRACTOR TO VERIFY SPECIFIED COMPACTION DENSITY AND CONCRETE STRENGTH. FAILURE OF ANY TESTING TO MEET SPECIFIED REQUIREMENTS SHALL BE DEEMED NON-COMPLYING.

DRAINAGE STRUCTURE SCHEDULE

ID	TYPE	RIM/GRATE	PIPE INVERT	STRUCTURE INVERT	POLLUTION BAFFLE
A	CATCH BASIN	87.66	80.54	78.54	0
B	CATCH BASIN	88.08	80.30	78.30	0
C	CATCH BASIN	87.77	80.14(N,S) 81.95(E,W)	78.14	0
D	CATCH BASIN	88.04	82.17	82.48	0
E	MANHOLE	86.44	79.72	77.72	0

MILLING & RESURFACING PROCEDURE

- MILL, 1" THICKNESS
- REPAIR (WHERE REQUIRED, SEE DETAIL)
- RESURFACE, 1" THICKNESS

- A ASPHALTIC CONCRETE RESURFACE COURSE 1" THICK
- B CONTRACTOR SHALL CLEAN ALL DEPRESSIONS, POTHOLES AND OTHER IRREGULARITIES OF ALL LOOSE MATERIALS; TACK COAT THESE AREAS; AND, FILL WITH ASPHALTIC CONCRETE, COMPACTED IN 1" LIFTS TO GENERATE UNIFORM SURFACE
- C EXISTING ASPHALTIC CONCRETE
- D EXISTING BASE COURSE

POTHOLE REPAIR DETAIL

N.T.S.

CONNECTION DETAIL AT EXISTING ASPHALT PAVEMENT

SCALE: 1" = 1'-0"

NOTE:
PAVEMENT RESTORATION/MILLING/RESURFACING SHALL BE IN STRICT CONFORMANCE WITH OKALOOSA PUBLIC WORKS STANDARDS, AS APPLICABLE; AND, ALL GENERAL AND SPECIAL CONDITIONS OF PERMITS ISSUED BY OKALOOSA COUNTY. CONTRACTOR SHALL REPLACE ALL STRIPING, PAVEMENT MARKINGS, SIGNAGE AND ROADWAY PAVEMENT MARKERS (RPM'S) TO MATCH THE CONDITIONS PRIOR TO CONSTRUCTION, TO COMPLY WITH THESE CONSTRUCTION DRAWINGS AND/OR AS DIRECTED BY OKALOOSA COUNTY PWD INSPECTOR AND/OR VPS AIRPORT INSPECTOR.

PAVING-GRADING-DRAINAGE PLAN, DETAILS AND NOTES

SHEET NUMBER: CP1-100

THRESHOLD INSPECTION PLAN

PART 1 ADMINISTRATION

1.1 GENERAL INFORMATION

- A. SPECIAL INSPECTIONS NOT BY GRAEF.
B. THIS IS A THRESHOLD BUILDING AS DEFINED BY CHAPTER 553 OF THE FLORIDA STATUTES AND THEREFORE REQUIRES THE OWNER TO RETAIN A SPECIAL INSPECTOR.
C. THE SPECIAL INSPECTOR SHALL ENSURE THAT THE STRUCTURAL PORTIONS OF THE BUILDING CONSTRUCTION ARE EXECUTED IN SUBSTANTIAL CONFORMANCE WITH THE OFFICIAL CONTRACT DOCUMENTS.
D. THE SPECIAL INSPECTOR SHALL NOT MAKE DESIGN DECISIONS, DIRECT THE CONTRACTOR'S WORK, NOR BE RESPONSIBLE FOR THE CONSTRUCTION MEANS AND METHODS.
E. PROPOSALS FOR SPECIAL INSPECTION SERVICES ARE TO BE SEPARATE AND INDEPENDENT FROM OTHER MATERIAL TESTING AND QUALITY ASSURANCE SERVICES.

1.2 QUALIFICATIONS OF THE SPECIAL INSPECTOR

- A. THE SPECIAL INSPECTOR SHALL BE A REGISTERED ENGINEER WITH SPECIAL INSPECTOR CERTIFICATION BY THE FLORIDA BOARD OF PROFESSIONAL ENGINEERS. ANY FUTURE REQUIREMENTS, IF ENACTED BY LAW, WILL ALSO BE APPLICABLE.
B. THE SPECIAL INSPECTOR SHALL ENSURE THAT HIS AUTHORIZED REPRESENTATIVE IS EXPERIENCED IN THE STRUCTURAL SYSTEM BEING INSPECTED.
C. AS USED IN THIS PLAN, THE TERM SPECIAL INSPECTOR SHALL INCLUDE HIS REPRESENTATIVE UNLESS OTHERWISE STATED.

1.3 RESPONSIBILITIES AND LIMITATIONS

- A. THE SPECIAL INSPECTOR DOES NOT SURROGATE THE OWNER'S REPRESENTATIVE OR THE ARCHITECT/ENGINEER-OF-RECORD'S RESPONSIBILITIES.
B. IT IS NOT INTENDED THAT THE CONTRACTOR'S CONTRACTUAL OR STATUTORY OBLIGATIONS ARE IN ANY WAY RELIEVED OR FOREGONE BY THE PRESENCE OF THE SPECIAL INSPECTOR.
C. THE SPECIAL INSPECTOR IS TO PROVIDE SERVICES ONLY WITH REGARD TO THE STRUCTURAL FRAME OF THE BUILDING INCLUDING FOUNDATION, PRIMARY AND SECONDARY FRAMING SYSTEMS, EXTERIOR WALL GLASS AND STOREFRONT SYSTEMS, PRECAST CONCRETE PANELS AND ANY OTHER ITEMS SPECIFICALLY INCLUDED IN THE SPECIAL INSPECTION GUIDELINES.
D. THE SPECIAL INSPECTOR IS NOT RESPONSIBLE FOR THE INSPECTION OF ANY SAFETY PROVISIONS TO COMPLY WITH OSHA REQUIREMENTS OR OTHER SAFETY STANDARDS WHICH APPLY DURING THE CONSTRUCTION PERIOD.
E. ALL SPECIAL INSPECTIONS SHALL BE IN ACCORDANCE WITH THE PROVISIONS OF THE THRESHOLD INSPECTOR LAW, CHAPTER 553.79 OF THE FLORIDA STATUTES.
F. IT SHALL BE THE RESPONSIBILITY OF THE SPECIAL INSPECTOR TO OBSERVE THE CONSTRUCTION OF STRUCTURAL COMPONENTS ONLY, AND TO REPORT TO THE CONCERNED PARTIES THAT THE STRUCTURE IS BUILT IN GENERAL CONFORMANCE WITH THE OFFICIAL CONTRACT DOCUMENTS.
G. SINCE THE SPECIAL INSPECTOR DOES NOT CERTIFY THAT THE OFFICIAL CONTRACT DOCUMENTS ARE, IN THEMSELVES, IN COMPLIANCE WITH THE GOVERNING BUILDING CODE, ALL CERTIFICATIONS ISSUED WILL REFER TO COMPLETED WORK BEING IN SUBSTANTIAL CONFORMANCE WITH THE OFFICIAL CONTRACT DOCUMENTS, RATHER THAN THE APPLICABLE BUILDING CODES.
H. AT THE COMPLETION OF STRUCTURAL WORK, THE SPECIAL INSPECTOR SHALL CERTIFY THAT "TO THE BEST OF MY KNOWLEDGE AND BELIEF, THE STRUCTURE (ADD PROJECT DESCRIPTION HERE) AND THE CONSTRUCTION OF ALL LOAD BEARING COMPONENTS COMPLIES WITH THE OFFICIAL CONTRACT DOCUMENTS".

1.4 DUTIES OF THE SPECIAL INSPECTOR

- A. THE SPECIAL INSPECTOR IS RESPONSIBLE TO THE OWNER AND THE ENFORCING AGENCY HAVING JURISDICTION FOR THIS PROJECT.
B. THE SPECIAL INSPECTOR IS RESPONSIBLE FOR THOROUGH KNOWLEDGE OF THE CONTRACT DOCUMENTS INCLUDING THE SPECIFICATIONS AND APPROPRIATE PORTIONS OF THE GOVERNING CODES.
C. PRIOR TO PERFORMING INSPECTIONS, HE SHALL ALSO OBTAIN COPIES OF PROPERLY RECORDED RFIS RELATED TO THE WORK FROM THE CONTRACTOR.
D. THE SPECIAL INSPECTOR SHALL OBSERVE AND RECORD THE CONDITIONS OF THE WORK BEING INSPECTED, THE PROGRESS OF WORK, ANY DEVIATIONS OF THE STRUCTURAL COMPONENTS FROM THE OFFICIAL CONTRACT DOCUMENTS AND ANY VERBAL INSTRUCTIONS GIVEN TO THE CONTRACTOR SHALL BE NOTED AND REPORTED.
E. THE SPECIAL INSPECTOR IS RESPONSIBLE FOR VERIFYING THAT THE TESTING AGENCY COMPLIES WITH THE CONTRACT DOCUMENTS.
F. THE SPECIAL INSPECTOR SHALL VISIT THE SITE WITH ENOUGH FREQUENCY TO ENSURE THAT HIS AUTHORIZED REPRESENTATIVE IS COMPLYING WITH THIS PLAN.

1.5 REPORTING

- A. THE SPECIAL INSPECTOR SHALL RECORD PROGRESS, CONDITIONS, OBSERVATIONS, TESTING AND ANY DEVIATION FROM THE CONTRACT DOCUMENTS.
B. IT IS THE RESPONSIBILITY OF THE SPECIAL INSPECTOR OR HIS AUTHORIZED REPRESENTATIVE TO IMMEDIATELY NOTIFY THE CONTRACTOR, ARCHITECT/ENGINEER OF RECORD OF THE FOLLOWING:
1. THE USE OF MATERIALS, EQUIPMENT OR WORKMANSHIP THAT DOES NOT CONFORM TO THE OFFICIAL CONTRACT DOCUMENTS, GOVERNING BUILDING CODES OR GENERALLY ACCEPTED INDUSTRY STANDARDS THAT MAY CAUSE IMPROPER CONSTRUCTION.
2. ANY STRUCTURAL COMPONENTS THAT HAVE BEEN CONSTRUCTED WITHOUT TESTING OR INSPECTIONS PRIOR TO OR DURING THE CONSTRUCTION AND THAT CANNOT BE INSPECTED OR TESTED IN PLACE USING NON-DESTRUCTIVE METHODS.
C. THE SPECIAL INSPECTOR SHALL MAINTAIN A LOG OF SUCH NON-CONFORMING ITEMS WITH THE DESCRIPTION OF THE ITEM, DATE FIRST OBSERVED, AND DATE THE DEFICIENCY WAS CORRECTED. THE LOG SHALL BE DISTRIBUTED TO THE CONTRACTOR, THE OWNER'S REPRESENTATIVE, THE ARCHITECT AND THE STRUCTURAL ENGINEER OF RECORD ON A WEEKLY BASIS.
D. INSPECTION REPORTS SHALL BE WRITTEN AFTER EACH INSPECTION. THE SPECIAL INSPECTOR IS RESPONSIBLE FOR MAINTAINING A LOG OF INSPECTIONS AND COPIES OF INSPECTION REPORTS AVAILABLE AT THE JOBSITE. THE REPORTS SHALL CONSIST OF SOME OR ALL OF THE FOLLOWING:
1. NAME AND LOCATION OF THE PROJECT.
2. NAME OF THE INSPECTOR.
3. DATE AND TIME OF INSPECTIONS.
4. WEATHER CONDITIONS DURING INSPECTION.
5. NAME OF THE CONTRACTOR'S REPRESENTATIVE OR OWNER'S REPRESENTATIVE PRESENT DURING INSPECTIONS.
6. DESCRIPTIONS OF THE PORTIONS OF STRUCTURE BEING INSPECTED.
7. CHANGES MADE DURING OBSERVATIONS.
8. ANY PART OF THE STRUCTURAL COMPONENT THAT IS NOT IN COMPLIANCE WITH THE OFFICIAL CONTRACT DOCUMENTS.
9. COMMENTS ON OTHER REPORTS SUCH AS TESTING REPORTS, GEOTECHNICAL ENGINEERS' INSPECTION REPORTS, SHORING AND RE-SHORING ENGINEERS' INSPECTION REPORTS WHEN APPLICABLE.
10. PHOTOGRAPHS.
E. FIELD REPORTS SHALL BE SIGNED BY THE PERSON PERFORMING THE INSPECTION. WEEKLY SUMMARY OF INSPECTIONS AND REPORTS SHALL BE SUBMITTED TO THE OWNER, ENFORCING AGENCY, ARCHITECT AND STRUCTURAL ENGINEER UNDER A COVER LETTER SIGNED AND SEALED BY THE SPECIAL INSPECTOR.
F. PRIOR TO THE ISSUANCE OF A CERTIFICATE OF OCCUPANCY, THE SPECIAL INSPECTOR SHALL ISSUE TO THE OWNER, ENFORCING AGENCY, ARCHITECT AND STRUCTURAL ENGINEER A SIGNED AND SEALED LETTER STATING THAT THE STRUCTURE HAS BEEN CONSTRUCTED IN SUBSTANTIAL CONFORMANCE WITH THE OFFICIAL CONTRACT DOCUMENTS. THIS STATEMENT SHALL BE IN CONFORMANCE WITH SECTION 553.79(7)(A) OF THE FLORIDA STATUTES.

1.6 OWNER REQUIREMENTS

- A. THE OWNER SHALL PROVIDE THE SPECIAL INSPECTOR A COMPLETE SET OF THE OFFICIAL CONTRACT DOCUMENTS INCLUDING DRAWINGS, SPECIFICATIONS AND THE GEOTECHNICAL REPORT WHEN CONSTRUCTION BEGINS. THE OWNER SHALL ALSO ARRANGE THROUGH HIS AUTHORIZED REPRESENTATIVE, TO PROVIDE ANY REVISIONS TO THE CONTRACT DOCUMENTS, INCLUDING RFIS, ADDENDUMS, ETC. AND COPIES OF THE APPROVED SHOP DRAWINGS.
B. THE OWNER SHALL ALSO ARRANGE FOR ALL NECESSARY CONSTRUCTION RECORDS TO BE FURNISHED TO THE SPECIAL INSPECTOR IN A TIMELY MANNER. SUCH RECORDS INCLUDE CONCRETE CYLINDER TEST REPORTS, SOIL DENSITY TEST REPORTS, MILL RECORDS, SHOP DRAWINGS, PILE INSTALLATION RECORDS, ETC.
C. THE OWNER SHALL REQUIRE IN THE CONTRACT WITH THE CONTRACTOR TO PROVIDE THE SPECIAL INSPECTOR TO HAVE ADEQUATE ACCESS TO PERFORM THE INSPECTIONS AND REQUEST THE INSPECTIONS IN A TIMELY MANNER.

1.7 CONTRACTOR REQUIREMENTS

- A. THE CONTRACTOR SHALL PROVIDE THE SPECIAL INSPECTOR A WORK SPACE AT THE PROJECT SITE FOR KEEPING INSPECTION RECORDS, CONTRACT DOCUMENTS AND TELEPHONE/FAX/INTERNET CONNECTIONS.
B. THE CONTRACTOR SHALL COOPERATE AND ASSIST THE SPECIAL INSPECTOR WITH PERFORMING INSPECTION DUTIES AND WILL PROVIDE ACCESS TO THE WORK DURING ALL WORKING HOURS.
C. THE INSPECTOR MAY MAKE SPOT INSPECTIONS OF THE WORK IN PROGRESS IN ORDER FOR EARLY DETECTION OF ANY DEVIATIONS FROM THE CONTRACT DOCUMENTS. HOWEVER, THIS DOES NOT RELIEVE THE CONTRACTOR OF THE RESPONSIBILITY OF CORRECTING DEVIATIONS FROM THE CONTRACT DOCUMENTS DISCOVERED AT ANY TIME.
D. THE CONTRACTOR SHALL PROVIDE A MINIMUM OF 24 HOUR NOTICE FOR ALL INSPECTIONS.
E. IF ANY OF THE CONTRACTOR'S WORK IS NOT IN COMPLIANCE WITH THE CONTRACT DOCUMENTS, THE WORK MAY EITHER BE CORRECTED OR THE CONTRACTOR MAY SUBMIT TO THE ARCHITECT/ENGINEER A REQUEST TO ACCEPT THE DEVIATION.
F. CONSTRUCTION THAT HAS NOT BEEN INSPECTED MAY REQUIRE TESTING OR REMOVAL AS DECIDED BY THE STRUCTURAL ENGINEER.

PART 2 INSPECTIONS

2.1 GENERAL

- A. SPECIAL INSPECTIONS REQUIRED FOR THE FOLLOWING MATERIALS, SYSTEMS, COMPONENTS AND WORK IN ACCORDANCE WITH THE THRESHOLD INSPECTION PLAN.
1. CAST-IN-PLACE CONCRETE
2. STEEL FRAMING
3. WELDING/BOLTING
4. REINFORCED CONCRETE MASONRY
5. REINFORCING STEEL
6. FOUNDATIONS - SOIL
B. THE STRUCTURE IS DEPICTED ON STRUCTURAL PLANS THAT ARE PART OF THE OFFICIAL CONTRACT DOCUMENTS. ALL SPECIFICATION SECTIONS RELATED TO THE STRUCTURE, ALL APPLICABLE ADDENDA, APPROVED SHOP DRAWINGS AND PROPERLY RECORDED RESPONSES TO THE RFIS (REQUESTS FOR INFORMATION) SHALL GOVERN THE REQUIREMENTS OF THE WORK.
C. FOR REQUIRED FREQUENCY OF INSPECTIONS, REFER TO CHAPTER 17 OF THE 2009 INTERNATIONAL BUILDING CODE.

2.2 SUBSURFACE PREPARATIONS

- A. THE GEOTECHNICAL TESTING AGENCY RETAINED BY THE OWNER SHALL MONITOR AND TEST BACKFILL AND COMPACTIONS OPERATIONS AS DESCRIBED IN THE GEOTECHNICAL ENGINEERING REPORT. THE SPECIAL INSPECTOR SHALL ENSURE THAT THE TESTING AGENCY IS ONSITE MONITORING THE SUBSURFACE PREPARATION.
B. THE SPECIAL INSPECTOR SHALL BE FURNISHED WITH THE TESTING AGENCY'S DAILY REPORTS AS WELL AS THE COMPLETION REPORT TO BE REVIEWED AND MAINTAINED IN HIS FILE.
C. VERIFY THAT ANY SUB-GRADE DISTURBED BY OTHER TRADES HAS BEEN PROPERLY RE-COMPACTED.

2.3 CAST-IN-PLACE REINFORCED CONCRETE

- A. THE CONTRACTOR SHALL NOTIFY THE SPECIAL INSPECTOR A MINIMUM OF 24 HOURS PRIOR TO THE PLACEMENT OF ANY STRUCTURAL CONCRETE.
B. SHORING
1. VERIFY THAT THE SHORING AND RE-SHORING ENGINEER HAS CONFIRMED THAT THE SHORING AND RE-SHORING ARE IN COMPLIANCE WITH HIS DRAWINGS.
2. CHECK LOCATION, SPACING, SUITABILITY, GENERAL SIZE AND QUALITY OF SHORING FOR CONFORMANCE WITH THE SHORING AND RE-SHORING PLANS SUBMITTED.
3. CONFIRM THE TIMING OF SHORING, RE-SHORING AND FORMWORK REMOVAL COMPLY WITH THE CONTRACT DOCUMENTS AND THE SHORING AND RE-SHORING DRAWINGS.
C. FORMWORK
1. INSPECT FORMS FOR THEIR CORRECT LOCATIONS, REQUIRED DIMENSIONS, ALIGNMENT, BRACING, FORM TIES AND SPACERS.
2. VERIFY THAT THE FORM IS CLEAN AND ALL FOREIGN MATERIALS HAVE BEEN REMOVED.
3. VERIFY THAT THE FORMS HAVE BEEN PROPERLY COATED.
4. AFTER FORMWORK REMOVAL, SPOT CHECK CONCRETE SURFACES FOR HONEYCOMBING OR VOIDS.

D. JOINTS

- 1. REVIEW LOCATIONS OF ALL JOINTS SUCH AS EXPANSION, CONTRACTION AND CONSTRUCTION JOINTS AS SHOWN ON THE CONSTRUCTION DOCUMENTS OR OTHERWISE APPROVED DOCUMENT SUCH AS THE CONTRACTOR'S CONSTRUCTION JOINT PLAN.
2. VERIFY THAT THE PREPARATION OF JOINTS AS REQUIRED BY THE DRAWINGS AND/OR SPECIFICATIONS, SUCH AS WET SAND BLASTING, ROUGHENING, WETTING, ETC. CONFORMS TO CONTRACT DOCUMENTS OR MANUFACTURER RECOMMENDATIONS.
3. VERIFY THAT SAW CUT JOINTS ARE TO THE PROPER DEPTH AND HAVE BEEN PROVIDED IN THE TIME FRAME INDICATED ON THE CONTRACT DOCUMENTS.
4. VERIFY THAT DOWELS, KEYS, AND BULKHEADS IN STRUCTURAL MEMBERS COMPLY WITH CONTRACT DOCUMENTS.
5. EXPANSION JOINTS SHOULD BE FREE FROM DEBRIS OR IRREGULARITIES THAT WOULD INTERFERE WITH FREE MOVEMENT.
6. CHECK IF FILLER HAS BEEN INSTALLED AND SECURELY FASTENED IN EXPANSION JOINTS IN ACCORDANCE WITH THE SPECIFICATIONS AND/OR MANUFACTURER'S RECOMMENDATIONS.

E. REINFORCING

- 1. CHECK IF ALL REINFORCEMENT IS IN PLACE IN ACCORDANCE WITH THE STRUCTURAL DRAWINGS. IN THE EVENT OF ANY CONFLICT BETWEEN THE CONTRACT DOCUMENTS AND SUPPLIER'S SHOP DRAWINGS, NOTIFY THE ENGINEER OF RECORD IMMEDIATELY. THE FOLLOWING ITEMS MUST BE CHECKED BY THE SPECIAL INSPECTOR PRIOR TO THE PLACEMENT OF CONCRETE:
a. CHECK REINFORCEMENT FOR SIZE, QUANTITY, BENDING, GRADE AND BAR-TO-BAR SPACING.
b. CHECK IF REINFORCEMENT HAS BEEN CLEANED OF ALL LOOSE, FLAKY RUST AND SCALE, GREASE OR OTHER FOREIGN MATERIALS WHICH WOULD REDUCE OR PREVENT BOND.
c. CHECK TO ENSURE THAT THE REINFORCEMENT IS TIED AND SUPPORTED SECURELY SO THAT IT WILL NOT BE DISPLACED DURING CONCRETE PLACEMENT.
d. CHECK CONCRETE COVER OF ALL REINFORCEMENT FOR COMPLIANCE WITH SPECIFICATIONS AND CONTRACT DOCUMENTS.
e. CHECK EMBEDMENT LENGTH, SPICE LOCATIONS AND LENGTHS, AND LAP LENGTHS FOR COMPLIANCE. NO SPLICES SHOULD BE MADE WITHOUT THE APPROVAL OF THE ENGINEER.
f. VERIFY APPROVAL OF MECHANICAL COUPLERS AND PROPER INSTALLATION PER MANUFACTURER'S SPECIFICATIONS.
g. CHECK ADDITIONAL REINFORCING REQUIRED AT OPENINGS.
h. CHECK FOR PROPER LAYERING OF MAIN REINFORCING VERSUS TEMPERATURE REINFORCING STEEL IN ONE-WAY SLABS.
i. VERIFY SIZE AND SPACING OF WELDED WIRE FABRIC, THAT IT IS ADEQUATELY SUPPORTED AND TIED TO RESIST DISPLACEMENT DURING CONCRETE PLACEMENT, AND THAT ITS SPLICES ARE OF ADEQUATE LENGTH AND PROPERLY TIED.

F. EMBEDDED FIXTURES

- 1. UNLESS OTHERWISE PROVIDED OR APPROVED, ANCHOR BOLTS, INSERTS, PIPE SLEEVES, PIPES, CONDUIT, WIRING, FLASHING, INSTRUMENTS, AND OTHER EMBEDDED FIXTURES SHOULD BE FIXED FIRMLY IN CORRECT POSITION BEFORE CONCRETE IS PLACED.
2. IF EMBEDDED ITEMS ARE IN CONFLICT WITH EACH OTHER OR WITH REINFORCING STEEL, THE RELOCATION OF THESE ITEMS AND/OR CUTTING, BENDING, DISPLACEMENT OR OMISSION OF STEEL REINFORCING BARS SHALL NOT BE ALLOWED EXCEPT AS APPROVED BY THE ENGINEER.
3. CHECK IF ALL EMBEDDED ITEMS ARE IN PLACE AS SHOWN ON THE APPROVED CONTRACT DOCUMENTS.

G. OPENINGS

- 1. LOCATIONS OF ALL OPENINGS SHALL BE CHECKED.
2. ADDITIONAL OPENINGS THAT ARE NOT SHOWN IN THE CONTRACT DOCUMENTS THAT ARE GREATER IN SIZE THAN 12" X 12" SHALL BE APPROVED BY THE ENGINEER.

H. CONCRETE PLACEMENT

- 1. THE SPECIAL INSPECTOR SHALL BE PRESENT ON THE SITE FOR ALL CONCRETE POURS.
2. VERIFY THAT ALL REINFORCING CORRECTIONS HAVE BEEN COMPLETED PRIOR TO CONCRETE PLACEMENT.
3. VERIFY THAT THE NECESSARY CONSOLIDATION AND PLACING TECHNIQUES ARE BEING USED.
4. VERIFY THAT THE PROPER MIXES ARE BEING DELIVERED TO EACH AREA AND THAT THE BATCH TIME LEAVES SUFFICIENT TIME TO POUR ALL CONCRETE FROM THE TRUCK.
5. VERIFY THAT ANY CONCRETE MIX WHICH HAS ADDED WATER AT THE SITE HAS BEEN BROUGHT TO THE CONTRACTOR'S ATTENTION AND THAT A SET OF CONCRETE CYLINDERS IS TAKEN FROM THE MIX AFTER THE WATER IS ADDED. ADDING WATER TO A MIX WHICH HAS A SPECIFIC WATER/CEMENT RATIO REQUIREMENT IS NOT ALLOWED.
6. VERIFY THAT THE CONCRETE TESTING LAB TECHNICIAN IS PRESENT AT THE SITE.
7. VERIFY THAT THE SLUMP, AIR CONTENT, AND TEMPERATURE ARE WITHIN THE SPECIFIED RANGES.
8. VERIFY THAT CONCRETE IS PLACED IN A CONTINUOUS FASHION AND THAT NO CONCRETE HAS AGED PAST THE LIMITATIONS OF THE CONTRACT DOCUMENTS, DOCUMENT SPECIFICALLY WHERE ANY CONCRETE IS PLACED WHICH DOES NOT MEET THESE REQUIREMENTS.
9. THE UNIFORMITY OF FRESHLY MIXED CONCRETE SHALL BE VISUALLY CHECKED.
10. RECORD REJECTED BATCHES CAREFULLY, WITH REASONS FOR REJECTION AND REPORT PROMPTLY TO THE CONTRACTOR AND THE ARCHITECT/ENGINEER.
11. CHECK FOR HONEYCOMBING AND ROCK POCKETS OF CAST CONCRETE AFTER THE REMOVAL OF FORMS. DURING REPAIRS, CHECK IF THEY HAVE BEEN CUT BACK TO SOLID MATERIAL AND ALSO IF ALL LOOSE MATERIALS HAVE BEEN REMOVED. ANY LARGE AREAS SHOULD BE REPORTED TO THE ENGINEER OF RECORD.
12. CHECK THE CONTRACT DOCUMENTS FOR THE REQUIREMENTS OF TREATING DEFECTIVE AREAS OF CONCRETE.
13. CHECK FOR COMPLETE CURING OF AREAS OF CONCRETE THAT HAVE BEEN PATCHED.
14. VERIFY THAT THE VARIOUS CURING COMPOUNDS AND TOPPING HAVE BEEN PLACED AS REQUIRED BY THE CONTRACT DOCUMENTS.
15. VERIFY MAINTENANCE OF SPECIFIED CURING TEMPERATURE AND TECHNIQUES.

I. INSPECT EXPANSION ANCHORS AND CHEMICAL ADHESIVE ANCHORING USED TO SUPPORT WORK AS FOLLOWS:

- 1. VERIFY HOLE DIAMETER, DEPTH, LOCATION, SPACING AND EDGE DISTANCE. CONFIRM THAT THE HOLE HAS BEEN CLEANED AS REQUIRED BY THE MANUFACTURER.
2. VERIFY THAT EXPANSION ANCHORS ARE PROPERLY TIGHTENED.
3. VERIFY THAT THE EPOXY TYPE IS PROPER FOR THE APPLICATION. VERIFY EPOXY MIXING AND INSTALLATION COMPLIES WITH MANUFACTURER'S REQUIREMENTS.

PART 3 TESTING AND SUBMITTALS

3.1 MATERIAL TESTING

- A. TESTING AGENCY SHALL BE RETAINED BY THE OWNER TO PERFORM ALL TESTS DESCRIBED IN THE CONTRACT DOCUMENTS. THE TESTING AGENCY SHALL PROVIDE REPORTS FOR EACH TEST TO THE OWNER, CONTRACTOR, ARCHITECT/ENGINEER AND SPECIAL INSPECTOR.
B. THE SPECIAL INSPECTOR SHALL REVIEW ALL MATERIAL TEST REPORTS AND COMMENT ON ANY RESULTS THAT DO NOT COMPLY WITH THE CONTRACT DOCUMENTS.

3.2 STRUCTURAL SUBMITTALS

- A. THE SPECIAL INSPECTOR SHALL REVIEW AND BECOME FAMILIAR WITH ALL STRUCTURAL SUBMITTALS.
B. THE SPECIAL INSPECTOR SHALL BE GIVEN ONE COPY OF ALL STRUCTURAL SUBMITTALS, WITH EVIDENCE OF REVIEW BY THE CONTRACTOR AND ARCHITECT/ENGINEER, FOR HIS RECORD AND USE.
C. SUBMITTALS SHALL INCLUDE BUT ARE NOT LIMITED TO:
1. THE DELEGATED SHORING AND RE-SHORING ENGINEER'S SIGNED AND SEALED INSPECTION REPORTS SHALL BE RECEIVED PRIOR TO THE PLACEMENT OF CONCRETE.
2. REINFORCING STEEL FABRICATION AND PLACEMENT SHOP DRAWINGS AND BAR LISTS. MILL REPORTS FOR ALL REINFORCING STEEL TO BE INCORPORATED INTO THE WORK SHALL BE PROVIDED TO THE SPECIAL INSPECTOR.
3. CONCRETE MIX DESIGNS FOR ALL PROPOSED STRENGTHS AND GRADES OF CONCRETE.
4. FABRICATION AND ERECTION DRAWINGS FOR EMBEDDED PLATES, HANGERS AND ALL OTHER STRUCTURAL METALS.

PROJECT LOCATION

Destin-Fort Walton Beach Airport (VPS)

ACCESSIBILITY NOTES

- 01 EXTERIOR ROUTE CONSTRUCTION**
1. AN ACCESSIBLE ROUTE, IN THE DIRECTION OF TRAVEL, SHALL NOT HAVE A SLOPE EXCEEDING 1:20 (5/8" PER FOOT) EXCEPT AT A RAMP.
 2. AN ACCESSIBLE ROUTE CROSS SLOPE SHALL NOT EXCEED 1:48 (1/4" PER FOOT).
 3. ALL NEW PAVING AND WALKS FOR AN ACCESSIBLE ROUTE, SHALL NOT HAVE AN ABRUPT CHANGE IN SURFACE LEVEL (VERTICALLY) GREATER THAN 1/4" WHEN ABUTTING EITHER EXISTING OR OTHER NEW SURFACES DESIGNATED FOR AN ACCESSIBLE ROUTE.
 4. AN ACCESSIBLE ROUTE CROSSING OR PARALLELING A HAZARDOUS AREA, SHALL BE CLEARLY MARKED IN A CONTRASTING COLOR, WITH THE ROUTE LOCATION, MARKING MATERIALS AND COLOR SHOWN ON THE DRAWING.
 5. ANY OPENINGS THAT ARE CONSTRUCTED IN THE SURFACE OF AN ACCESSIBLE ROUTE SHALL HAVE THE OPENINGS DIRECTION PERPENDICULAR TO THE DIRECTION OF TRAVEL WITH THE OPENINGS DIMENSION NOT TO EXCEED 1/2" IN THE DIRECTION OF TRAVEL.
- 02 CURB RAMPS**
1. THE TOP AND BOTTOM OF THE RAMP, AT THE TRANSITION TO EITHER EXISTING OR NEW SURFACES, SHALL BE FLUSH AND FREE OF ANY ABRUPT VERTICAL CHANGES.
 2. THE SURFACE FINISH OF THE RAMP, EITHER RAISED OR RECESSED AS PERMITTED BY ACCESSIBILITY CODES AND GUIDELINES, SHALL BE INSTALLED TO PERMIT WATER DRAINAGE.
 3. THE RAMP CROSS SLOPE SHALL NOT EXCEED 1:48 (1/4" PER FOOT).
- 03 INTERIOR ROUTE CONSTRUCTION**
1. AN ACCESSIBLE ROUTE, IN THE DIRECTION OF TRAVEL, SHALL NOT HAVE A SLOPE EXCEEDING 1:20 (5/8" PER FOOT), EXCEPT AT A RAMP.
 2. AN ACCESSIBLE ROUTE CROSS SLOPE SHALL NOT EXCEED 1:48 (1/4" PER FOOT).
 3. ALL NEW FLOOR CONSTRUCTION AND FLOORING MATERIALS SHALL NOT HAVE AN ABRUPT VERTICAL CHANGE IN FINISH SURFACE LEVEL GREATER THAN 1/4" WHEN ABUTTING EITHER EXISTING OR NEW SURFACES DESIGNATED FOR AN ACCESSIBLE ROUTE.
- 04 DOORS**
1. ANY THRESHOLD SHALL NOT EXCEED 1/2" IN HEIGHT, NOR 1:2 SLOPE.
 2. ALL ACCESSIBLE HARDWARE OPERABLE BY THE DISABLED, SHALL NOT EXCEED A HEIGHT OF 4'-0" AFF AND SHALL BE EASILY OPERATED WITH ONE HAND WITHOUT GRASPING, PINCHING OR TWISTING OF THE WRIST.
 3. ALL ACCESSIBLE DOORS WITH CLOSERS SHALL HAVE THE CLOSER ADJUSTED SO THAT THE CLOSING TIME, FROM A 70 DEGREE OPEN ANGLE TO WITHIN 3" OF THE JAMB, IS NOT LESS THAN 3 SECONDS.
 4. THE OPENING FORCE OF ALL ACCESSIBLE DOORS, EXCEPT FIRE EXIT DOORS, SHALL NOT EXCEED 5 POUNDS IN THE DIRECTION OF TRAVEL FOR EXITING.
 5. THE OPERABLE HARDWARE ON A DOOR LEADING TO HAZARDOUS AREAS (E.G. BOILER ROOMS, MECHANICAL AND ELECTRICAL ROOMS, OTHER EQUIPMENT ROOMS, AND LOADING DOCK), SHALL HAVE A TEXTURED SURFACE ON THE TOUCHABLE AREA.
- 05 SIGNAGE**
1. ALL ACCESSIBLE PERMANENT ROOMS AND SPACES, EXIT WAYS AND EXIT STAIRWAYS, SHALL HAVE SIGNAGE THAT MEETS ACCESSIBLE SIGNAGE REQUIREMENTS FOR LETTER SIZE, LETTER AND NUMBER TYPESTYLE, RAISED LETTERS, GRADE 2 BRAILLE, COLOR/CONTRAST, AND LOCATION.

SHEET TITLE:
STANDARDS AND SYMBOLS

SHEET NUMBER:
AG0-001

GENERAL RCP NOTES

- CEILING HEIGHTS ARE 9'-0" A.F.F. UNLESS NOTED OTHERWISE.
- THE ROOM FINISH SCHEDULE TYPICALLY INDICATES CEILING MATERIALS AND FINISHES. MATERIALS OR FINISHES THAT VARY WITHIN A ROOM WILL BE INDICATED ON THE R.C.P. R.C.P.'S WILL TYPICALLY INDICATE:
 - LOCATIONS, DIMENSIONS AND HEIGHTS A.F.F. OR FURRED/DOWNS.
 - VARYING CEILING MATERIALS AND THEIR LOCATIONS.
 - HEIGHTS OF WALLS A.F.F. (FULL HEIGHT AND PARTIAL HEIGHT).
 - REQUIRED FIRE-RATINGS OF WALLS.
 - FINAL LOCATIONS OF CEILING MOUNTED FIXTURES/DEVICES.
- WHERE WALL TYPE FIRE-RATING DESIGNATIONS FROM THE FLOOR PLANS CONFLICT WITH THE FIRE-RATING DESIGNATIONS INDICATED ON THE R.C.P., THE MORE STRINGENT DESIGNATIONS SHALL APPLY.
- COORDINATE MEP/ETC. DRAWINGS FOR ALL FIXTURES/DEVICES MOUNTED IN, ABOVE, OR HUNG FROM THE CEILING. FINAL FIXTURE/DEVICE LOCATIONS ARE DETERMINED BY THE ARCHITECTURAL R.C.P. WHERE CONDITIONS DIFFER SIGNIFICANTLY BETWEEN THE PLANS, REQUEST CLARIFICATION FROM THE ARCHITECT BEFORE PROCEEDING. WHERE FIXTURES/DEVICES SHOWN OR SPECIFIED ON DRAWINGS OTHER THAN THE ARCHITECTURAL R.C.P.'S ARE VISIBLE AT THE CEILING PLANE, COORDINATE LOCATIONS WITH THE ARCHITECT.
- DO NOT INSTALL CEILING GRID UNTIL WORK ABOVE CEILING IS COORDINATED AND INSTALLED WITHIN AVAILABLE PLENUM SPACE.
- LOCATE CEILING MOUNTED FIXTURES/DEVICES IN THE CENTERS OF FULL CEILING PANELS U.N.O.
- LIGHT FIXTURES IN MECHANICAL AND EQUIPMENT ROOMS ARE SHOWN FOR QUANTITY ONLY. CONTRACTOR IS TO COORDINATE FIXTURE PLACEMENT WITH ALL MEP ITEMS AND SET FINAL FIXTURE LOCATIONS AS REQUIRED TO EVENLY AND FULLY LIGHT ACCESSIBLE AREAS OF THE ROOM WITH THE QUANTITY OF FIXTURES SHOWN.
- GYP. CEILINGS AND BULKHEADS TO BE PAINTED PER FINISH PLANS, U.N.O.
- ACCENT PAINT ON GYP. BOARD BULKHEADS TO BE ON BOTTOM AND SIDES OF BULKHEAD.
- ALL INTERIOR PARTITIONS ARE TO BE TO DECK, U.N.O.

KEYNOTE LEGEND

- 08-0119 AREA INDICATED BY HATCH IS OUT OF SCOPE. ELEMENTS SHOWN FOR REFERENCE ONLY. REFER TO X SERIES DRAWINGS FOR MORE INFORMATION.
- 08-0916 OPEN TO STRUCTURE ABOVE. INSTALL BIRD NETTING. COORDINATE HEIGHT/LOCATION TO MAXIMIZE PROTECTION FROM BIRDS WHILE NOT IMPACTING REQUIRED CLEARANCES ABOVE BAGGAGE SYSTEM CONVEYORS/EQUIPMENT.

- ### GENERAL FINISH NOTES
- UPON COMPLETION OF THE WORK, THE GEN. CONTRACTOR SHALL REMOVE FROM THE PREMISES ALL WASTE MATERIALS, RUBBISH, WRAPPINGS AND CARTONS, ETC. AS GENERATED BY FINISH MATERIALS.
 - ANY SURFACE MOUNTED PLUG MOLD AND CONDUIT TO BE PAINTED TO MATCH ADJACENT WALL.
 - ALL GENERAL WALL PAINT TO BE "P1" AND BASE "B1" UNLESS OTHERWISE NOTED. ONE PRIME COAT AND TWO FINISH COATS.
 - CONTRACTOR SHALL INSPECT ALL SURFACES TO RECEIVE PAINTING AND CORRECT ALL DEFECTS BEFORE START OF WORK.
 - CARPET INSTALLATION METHOD ACCORDANCE WITH MANUFACTURER'S SPECIFICATIONS. CUT AROUND ALL POWER IN FEEDS AS REQUIRED.
 - ALL CARPET INSTALLATIONS TO BE APPROVED BY THE ARCHITECT. ANY DOMING, CUPPING OR EXAGGERATED SEAMS ARE UNACCEPTABLE. GC TO SUBMIT SEAMING PLAN TO ARCHITECT FOR APPROVAL.
 - CARPET CONTRACTOR SHALL REMOVE ALL SPOTS AND ADHESIVE SMears FROM SURFACE WITH MANUFACTURER'S APPROVED CLEANING AGENT.
 - RESILIENT FLOORING TILES ARE TO BE ROTATED INSTALLATION METHOD U.N.O.
 - ALL RESILIENT FLOORING TO BE INSTALLED AS PER THE MANUFACTURER'S SPECIFIC REQUIREMENTS.
 - CONTRACTOR TO PROVIDE AND INSTALL VINYL REDUCING STRIPS TO MATCH CARPET BETWEEN THE CARPETED AND VINYL TILED AREAS. ARCHITECT TO APPROVE COLOR. JOHNSONITE OR EQUAL.
 - ALL BASE ON CARPET TO BE STRAIGHT. INSTALL COVE BASE ON V.C.T.
 - CONTRACTOR TO VERIFY STOCK OF ALL EXISTING FINISHES.
 - PAINTING CONTRACTOR TO TOUCH UP WORK AFTER ALL TRADES.
 - SUPPLY 10% ATTIC STOCK OF CARPET TO RE-CARPET AT FUTURE TIME AS REQUIRED. PROVIDE BREAKOUT COST OF ATTIC STOCK.
 - CONTRACTOR TO INCLUDE OVERTIME AS NECESSARY TO COMPLETE NOXIOUS WORK (FUMES) SO AS NOT TO DISRUPT OTHER TRADES/ ADJOINING OCCUPIED AREAS.
 - UNDERSIDE OF CONCRETE SLAB, EXPOSED BEAMS AND COLUMNS EQUIPMENT, ELECTRIC CONDUIT AND ANY MISCELLANEOUS ITEMS ARE TO BE PROPERLY PREPARED AND PRIMED TO RECEIVE A PAINT FINISH. SEE WALL AND CEILING/SLAB LEGEND.

NO SPRINKLERS UNDER CANOPY - NO STORAGE OF COMBUSTIBLES ALLOWED PER NFPA 13 - 8.15.7.1

LIGHT HAZARD

ORDINARY HAZARD - GROUP 2

ORDINARY HAZARD - GROUP 1 PREACTION SYSTEM

ORDINARY HAZARD - GROUP 2

LIGHT HAZARD

ORDINARY HAZARD - GROUP 2

DRY PIPE SYSTEM

GENERAL NOTES

- ALL WORK SHALL COMPLY WITH THE REQUIREMENT OF THE FLORIDA BUILDING CODE, NFPA-13, NFPA-415 AND THE AUTHORITY HAVING JURISDICTION.
- CONTRACTOR SHALL BE RESPONSIBLE FOR NOTIFYING THE OWNER WITH ADVANCED NOTICE BEFORE DISCONNECTING THE FIRE PROTECTION SYSTEM.
- ALL WORK SHALL BE COORDINATED WITH ALL TRADES.
- WHEN DISCONNECTING THE SYSTEM CONTRACTOR SHALL COORDINATE FIRE WASH REQUIREMENTS WITH THE OWNER AND THE AUTHORITY HAVING JURISDICTION.
- REFER TO DETAILS AND SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
- IF THERE IS ANY DISCREPANCY BETWEEN THE DRAWINGS AND SPECIFICATIONS THE MOST STRINGENT REQUIREMENTS SHALL APPLY.
- PROVIDE SPRINKLER COVERAGE BELOW BHS OBSTRUCTION LARGER THAN 4 FEET. PERFORATED CATWALK PLATFORM IS CONSIDER PART OF AN OBSTRUCTION.

KEYNOTE LEGEND

11.003 DRY PIPE FIRE PROTECTION VALVE IN FIRE CLOSET. PROVIDE TAMPER SWITCH AND CONNECT TO FIRE ALARM. PROVIDE UNIT HEATER TO PREVENT VALVE FREEZE. SEE MECHANICAL DRAWINGS FOR DETAILS

FIRE PROTECTION RENOVATION - LEVEL 01 - SECTOR 02

SHEET NUMBER:
F1-102

GENERAL NOTES

- ALL WORK SHALL COMPLY WITH THE REQUIREMENTS OF THE FLORIDA BUILDING CODE, FLORIDA MECHANICAL CODE, AND LOCAL ORDINANCES.
- CONTRACTOR SHALL COORDINATE WORK WITH ALL TRADES PRIOR TO COMMENCING ANY DEMOLITION.
- COORDINATE WITH OWNER PRIOR TO ANY UTILITY SHUT DOWN. DO NOT PROCEED WITHOUT OWNER'S AUTHORIZATION.
- REFER TO SPECIFICATIONS AND DETAILS FOR ADDITIONAL INFORMATION.
- IF THERE IS ANY DISCREPANCY BETWEEN DRAWINGS AND SPECIFICATIONS THE MOST STRINGENT REQUIREMENT SHALL APPLY.
- ANY EQUIPMENT REMOVED IS PROPERTY OF THE OWNER. CONSULT OWNER PRIOR TO EQUIPMENT DISPOSAL.
- CLEAN AND REBALANCE ALL EXISTING DIFFUSERS TO CFM VALUES LISTED ON PLANS.

KEYNOTE LEGEND

14.011 NEW MANCOOLERS TO BE WIRED ON ONE ON/OFF SWITCH. COORDINATE WITH ELECTRICAL PLANS.

14.040 INSTALL CONDENSING UNIT HIGH ON WALL.

TOTAL COGN. LOAD: 1263.0 KVA
TOTAL DEMAND LOAD: 1263.0 KVA
TOTAL DEMAND AMPS: 1521.0 AMPS
PERCENT... 4.4 %
PANEL EQUIPMENT:
PER NEC ARTICLE 220

Name: EL1A
Status: EXISTING
Project Name: VPS BHS/TERM...
Project Number: 2018-4115.00
Fed From: EH1A VIA T-ELTA

MAIN BREAKER: 225 AMPS
VOLTAGE: 208Y/120V
PHASE: 3
WIRE: 4

AIC: 10 K... FULLY RATED
MOUNTING: SURFACE
MANUFACTURER: SQUARE D
